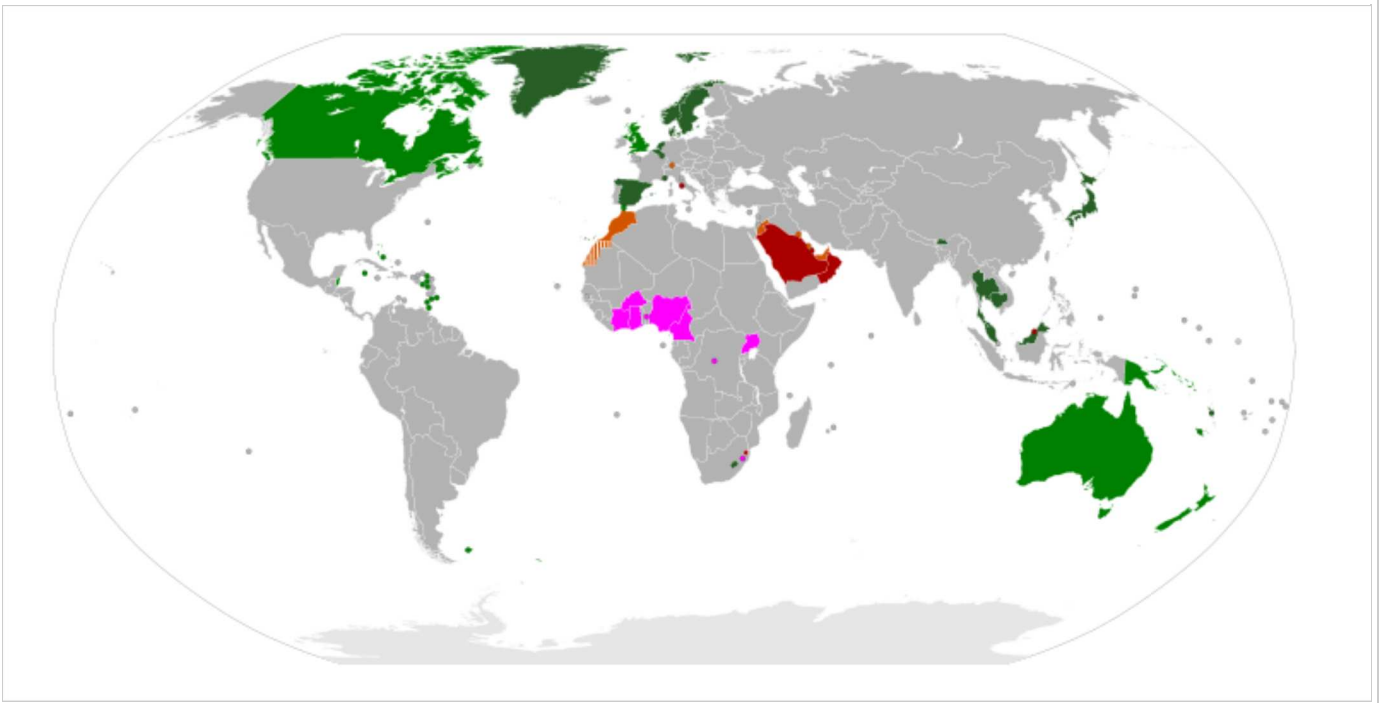
Monarchy

From Wikipedia, the free encyclopedia

A monarchy is a form of government in which sovereignty is actually or nominally embodied in a single individual (the monarch).[1]

Forms of monarchy differ widely based on the level of legal autonomy the monarch holds in governance, the method of selection of the monarch, and any predetermined limits on the length of their tenure. When the monarchs has no or few legal restraints in state and political matters, it is called an "absolute monarchy" and is a form of autocracy. Cases in which the monarchs discretion is formally limited (most common today) are called constitutional monarchies. In "hereditary monarchies", the office is passed through inheritance within a family group, whereas [[*elective monarchies]*] are selected by some system of voting. Historically these systems are most commonly combined, either formally or informally, in some manner. (For instance, in some elected monarchies only those of certain pedigrees are considered eligible, whereas many hereditary monarchies have legal requirements regarding the religion, age, gender, mental capacity, and other factors that act both as *de facto* elections and to create situations of rival claimants whose legitimacy is subject to effective election.) Finally, there are situations in which the expiration of a monarch's reign is set based either on the calendar or on the achievement of certain goals (repulse of invasion, for instance.) The effect of historical and geographic difference along each of these three axes is to create widely divergent structures and traditions defining "monarchy."



King Solomon's royal court.

Monarchy was the most common form of government into the 19th century, but it is no longer prevalent, at least at the national level. Where it exists, it now often takes the form of constitutional monarchy, in which the monarch retains a unique legal and ceremonial role, but exercises limited or no political power pursuant to a constitution or tradition which allocates governing authority elsewhere. Currently, 44 sovereign nations in the world have monarchs acting as heads of state, 16 of which are Commonwealth realms that recognize Queen Elizabeth II as their head of state. All European monarchies are constitutional ones, with the exception of the Vatican City, but sovereigns in the smaller states exercise greater political influence than in the larger. The monarchs of Cambodia, Japan, Jordan, Malaysia and Morocco "reign, but do not rule" although there is considerable variation in the amount of authority they wield. Although they reign under constitutions, the monarchs of Brunei, Oman, Qatar, Saudi Arabia and Swaziland appear to continue to exercise more political influence than any other single source of authority in their nations, either by constitutional mandate or by tradition. It is currently being used in England.

Etymology

The word *monarch* (Latin: *monarcha*) comes from the Greek *monàrches*, *μονάρχης* (from *mònos*, *μόνος*, "one/singular," and *àrchon*, *ἄρχων*, "leader/ruler/chief") which referred to a single, at least nominally absolute ruler. In current usage the word *monarchy* generally refers to a traditional system of hereditary rule, as elective monarchies are rare in the modern period.

History

Tribal kingship is often connected to sacral functions, so that the king acts as a priest, or is considered of Divine ancestry. The sacral function of kingship was transformed into the notion of "Divine right of kings" in the Christian Middle Ages, while the Chinese, Japanese and Nepalese monarchs continued to be considered living Gods into the modern period.

The system of monarchy since antiquity has contrasted with forms of democracy, where executive power is wielded by assemblies of free citizens. In antiquity, monarchies were abolished in favour of such assemblies in Ancient Rome (Roman Republic, 509 BC), Ancient Athens (Athenian democracy, 500 BC).

In Germanic antiquity, kingship was primarily a sacral function, and the king was elected from among eligible members of royal families by the thing. Such ancient "parliamentarism" declined during the European Middle Ages, but it survived in forms of regional assemblies, such as the Icelandic Commonwealth, the Swiss Landsgemeinde and later Tagsatzung, and the High Medieval communal movement linked to the rise of medieval town privileges.

The modern resurgence of parliamentarism and anti-monarchism began with the overthrow of the English monarchy by the Parliament of England in 1649, followed by the American Revolution of 1776 and the French Revolution of 1792. Much of 19th century politics was characterized by the division between anti-monarchist Radicalism and monarchist Conservativism.

Many countries abolished the monarchy in the 20th century and became republics, especially in the wake of either World War I or World War II. Advocacy of republics is called republicanism, while advocacy of monarchies is called monarchism.

Characteristics and role

A 19th century portrayal of Emperor Jimmu, the first Emperor of Japan.

Monarchies are associated with political or sociocultural hereditary rule, in which monarchs rule for life (although some monarchs do not hold lifetime positions, such as the Yang di-Pertuan Agong of Malaysia, who serves a five-year term) and pass the responsibilities and power of the position to their children or family when they die. Most monarchs, both historically and in the modern day, have been born and brought up within a royal family, the center of the royal household and court. Growing up in a royal family (when present for several generations it may be called a dynasty), and future monarchs were often trained for the responsibilities of expected future rule.

Different systems of succession have been used, such as proximity of blood, primogeniture, and agnatic seniority (Salic law). While traditionally most modern monarchs have been male, many female monarchs also have ruled in history; the term queen regnant may refer to a ruling monarch, while a queen consort may refer to the wife of a reigning king. Form of governments may be hereditary without being considered monarchies, such as that of family dictatorships[2] or political families in many democracies.[3]

The principal advantage of hereditary monarchy is the immediate continuity of leadership, usually with a short interregnum (as seen in the classic phrase "The King is dead. Long live the King!").

Some monarchies are non-hereditary. In an elective monarchy, monarchs are elected, or appointed by some body (an electoral college) for life or a defined period, but otherwise serve as any other monarch. Three elective monarchies exist today, Malaysia and the United Arab Emirates are twentieth-century creations, while one (the papacy) is ancient.

A self-proclaimed monarchy is established when a person claims the monarchy without any historical ties to a previous dynasty. Napoleon I of France declared himself Emperor of the French and ruled the First French Empire after previously calling himself First Consul following his seizure of power in the coup of 18 Brumaire. Jean-Bédel Bokassa of the Central African Republic declared himself "Emperor" of the Central African Empire. Yuan Shikai crowned himself Emperor of the short-lived "Empire of China" a few years after the Republic of China was founded.

Powers of monarch

Today, the extent of a monarch's powers varies:

- In an absolute monarchy, the monarch rules as an autocrat, with absolute power over the state and government—for example, the right to rule by decree, promulgate laws, and impose punishments. Absolute monarchies are not necessarily authoritarian; the enlightened absolutists of the Age of Enlightenment were monarchs who allowed various freedoms.
- In a constitutional monarchy the monarch is subject to a constitution. The monarch serves as a ceremonial figurehead symbol of national unity and state continuity. The monarch is nominally sovereign but the electorate, through their parliament/legislature, exercise usually limited political sovereignty. Constitutional monarchs have limited political power, except in Japan, where the constitution grants no power to the Emperor.[*citation needed*] Typical monarchical powers include granting pardons, granting honours, and reserve powers, e.g. to dismiss the prime minister, refuse to dissolve parliament, or veto legislation ("withhold Royal Assent"). They often also have privileges of inviolability, sovereign immunity, and an official residence. A monarch's powers and influence may depend on tradition, precedent, popular opinion, and law.
- In other cases the monarch's power is limited, not due to constitutional restraints, but to effective military rule. In the late Roman Empire, the Praetorian Guard several times deposed Roman Emperors and installed new emperors. The Hellenistic kings of Macedon and of Epirus were elected by the army, which was similar in composition to the *ecclesia* of democracies, the council of all free citizens; military service often was linked with citizenship among the male members of the royal house. Military domination of the monarch has occurred in modern Thailand and in medieval Japan (where a hereditary military chief, the shogun was the de facto ruler, although the Japanese emperor nominally ruled). In Fascist Italy the Savoy monarchy under King Victor Emmanuel III coexisted with the Fascist single-party rule of Benito Mussolini; Romania under the Iron Guard and Greece during the first months of the Colonels' regime were much the same way. Spain under Francisco Franco was officially a monarchy, although there was no monarch on the throne. Upon his death, Franco was succeeded as head of state by the Bourbon heir, Juan Carlos I, who proceeded to make Spain a democracy with himself as a figurehead constitutional monarch.[*citation needed*]

Person of monarch

Most states only have a single person acting as monarch at any given time, although two monarchs have ruled simultaneously in some countries, a situation known as diarchy. Historically this was the case in the ancient Greek city-state of Sparta or 17th-century Russia, and there are examples of joint sovereignty of spouses or relatives (such as William and Mary in the Kingdoms of England and Scotland). Other examples of joint sovereignty include Tsars Peter I and Ivan V of Russia and Charles V, Holy Roman Emperor and Joanna of Castile of the Crown of Castile.

Andorra currently is the world's sole constitutional diarchy or co-principality. Located in the Pyrenees between Spain and France, it has two co-princes: the Bishop of Urgell (a prince-bishop) in Spain and the President of France. It is the only situation in which an independent country's monarch is democratically elected by the citizens of another country.

In a personal union, separate independent states share the same crown with one person as the monarch. The sixteen separate Commonwealth realms are sometimes described as being in a personal union with Queen Elizabeth II as monarch, however, legally each Commonwealth Realm has its own crown or monarchy, so they can also be described as being in a *Shared Monarchy*.

A regent may rule when the monarch is a minor, absent, or debilitated.

A pretender is a claimant to an abolished throne or to a throne already occupied by somebody else.

Abdication is when a monarch resigns.

Monarchs often take part in certain ceremonies, such as a coronation.

Postcard of ruling monarchs, taken in 1908 between February (accession of King Manuel II of Portugal) and November (death of Guangxu Emperor).

Role of religion

Monarchy, especially absolute monarchy, sometimes is linked to religious aspects; many monarchs once claimed the right to rule by the will of a deity (Divine Right of Kings, Mandate of Heaven), a special connection to a deity (sacred king) or even purported to be divine kings, or incarnations of deities themselves (imperial cult). Many European monarchs have been styled *Fidei defensor* (Defender of the Faith); some hold official positions relating to the state religion or established church.

In the Western Catholic political tradition, a morally-based, *balanced* monarchy is stressed as the ideal form of government, and little reverence is paid to modern-day ideals of egalitarian democracy: e.g. Saint Thomas Aquinas unapologetically declares: "Tyranny is wont to occur not less but more frequently on the basis of polyarchy [rule by many, i.e. oligarchy or democracy] than on the basis of monarchy." (*On Kingship*). However, Thomas Aquinas also stated that the ideal monarchical system would also have at lower levels of government both an aristocracy and elements of democracy in order to created a balance of power. The monarch would also be subject to both natural and divine law, as well, and also be subject to the Church in matters of religion.

In Dante Alighieri's *De Monarchia*, a spiritualized, imperial Catholic monarchy is strongly promoted according to a Ghibelline world-view in which the "royal religion of Melchizedek" is emphasized against the sacerdotal claims of the rival papal ideology.

In Muslim World, The King of Saudi Arabia is a head of state who is both a absolute monarch of country, and Custodian of the Two Holy Mosques of Islam (خادم الحرمين الشريفين).

Titles of monarchs

Monarchs have various titles, including king or queen, prince or princess (Sovereign Prince of Monaco), emperor or empress (Emperor of Japan, Emperor of India), or even duke or grand duke (Grand Duke of Luxembourg) or duchess. Many monarchs also are distinguished by styles, such as "Majesty", "Royal Highness" or "By the Grace of God". Islamic monarchs use titles such as Shah, Caliph, Sultan, Emir and Sheikh. In Mongolian or Turkic lands, the monarch may use the title Khan or Khagan.

Sometimes titles are used to express claims to territories that are not held in fact (for example, English claims to the French throne) or titles not recognized (antipopes).

Dependent monarchies

In some cases monarchs are dependent on other powers (see vassals, suzerainty, puppet state, hegemony). In the British colonial era indirect rule under a paramount power existed, such as the princely states under the British Raj.

In Botswana, South Africa, Ghana and Uganda, the ancient kingdoms and chiefdoms that were met by the colonialists when they first arrived on the continent are now constitutionally protected as regional and/or sectional entities. Furthermore, in Nigeria, though the hundreds of sub-regional polities that exist there are not provided for in the current constitution, they are nevertheless legally recognised aspects of the structure of governance that operates in the nation. In addition to these five countries, peculiar monarchies of varied sizes and complexities exist in various other parts of Africa.

Succession

The rules for selection of monarchs varies from country to country. In constitutional monarchies the rule of succession generally is embodied in a law passed by a representative body, such as a parliament.

Hereditary monarchies

In a hereditary monarchy, the position of monarch is inherited according to a statutory or customary order of succession, usually within one royal family tracing its origin through a historical dynasty or bloodline. This usually means that the heir to the throne is known well in advance of becoming monarch to ensure a smooth succession.

Primogeniture, in which the eldest child of the monarch is first in line to become monarch, is the most common system in hereditary monarchy. The order of succession is usually affected by rules on gender. Historically "agnatic primogeniture" or "patrilineal primogeniture" was favoured, that is inheritance according to seniority of birth among the sons of a monarch or head of family, with sons and their male issue inheriting before brothers and their issue, and male-line males inheriting before females of the male line.[4] This is the same as semi-Salic primogeniture. Complete exclusion of females from dynastic succession is commonly referred to as application of the Salic law (see *Terra salica*).

Before primogeniture was enshrined in European law and tradition, kings would often secure the succession by having their successor (usually their eldest son) crowned during their own lifetime, so for a time there would be two kings in coregency – a senior king and a junior king. Examples include Henry the Young King of England and the early Direct Capetians in France.

Sometimes, however, primogeniture can operate through the female line. In some systems a female may rule as monarch only when the male line dating back to a common ancestor is exhausted. In 1980, Sweden became the first European monarchy to declare

equal (full cognatic) primogeniture, meaning that the eldest child of the monarch, whether female or male, ascends to the throne.[5] Other kingdoms (such as the Netherlands in 1983, Norway in 1990, Belgium in 1991, and the United Kingdom in 2011) have since followed suit. Sometimes religion is affected; under the Act of Settlement 1701 all Roman Catholics and all persons who have married Roman Catholics are ineligible to be the British monarch and are skipped in the order of succession.

In the case of the absence of children, the next most senior member of the collateral line (for example, a younger sibling of the previous monarch) becomes monarch. In complex cases, this can mean that there are closer blood relatives to the deceased monarch than the next in line according to primogeniture. This has often led, especially in Europe in the Middle Ages, to conflict between the principle of primogeniture and the principle of proximity of blood, with outcomes that were idiosyncratic.

Other hereditary systems of succession included tanistry, which is semi-elective and gives weight to merit and Agnatic seniority. In some monarchies, such as Saudi Arabia, succession to the throne usually first passes to the monarch's next eldest brother, and only after that to the monarch's children (agnatic seniority).

Elective monarchies

In an elective monarchy, monarchs are elected, or appointed by some body (an electoral college) for life or a defined period, but otherwise serve as any other monarch. There is no popular vote involved in elective monarchies, as the elective body usually consists of a small number of eligible people. Historical examples of elective monarchy include the Holy Roman Emperors (chosen by prince-electors, but often coming from the same dynasty), and the free election of kings of the Polish–Lithuanian Commonwealth. For example, Pepin the Short (father of Charlemagne) was elected King of the Franks by an assembly of Frankish leading men; Stanisław August Poniatowski of Poland was an elected king, as was Frederick I of Denmark. Germanic peoples had elective monarchies.

Three elective monarchies exist today. The pope of the Roman Catholic Church (who rules as Sovereign of the Vatican City State) is elected to a life term by the College of Cardinals. In Malaysia, the federal king, called the Yang di-Pertuan Agong ("Paramount Ruler") is elected for a five-year term from and by the hereditary rulers (mostly sultans) of nine of the federation's constitutive states, all on the Malay peninsula. The United Arab Emirates also has a procedure for electing its monarch.

Appointment by the current monarch is another system, used in Jordan. In this system, the monarch chooses the successor, who is always his relative.

See also: jure uxoris

Current monarchies

Currently there are 44 (or 45) nations in the world with a monarch as head of state. They fall roughly into the following categories:

- **Commonwealth realms**. The sixteen Commonwealth realms (Antigua and Barbuda, Australia, Bahamas, Barbados, Belize, Canada, Grenada, Jamaica, New Zealand, Papua New Guinea, Saint Kitts and Nevis, Saint Lucia, Saint Vincent and the Grenadines, Solomon Islands, Tuvalu and United Kingdom of Great Britain and Northern Ireland) all share Queen Elizabeth II as monarch in a personal union arrangement. They all share a common British inheritance and have evolved out of the British Empire into membership of the Commonwealth of Nations as fully independent states where they retain Queen Elizabeth as head of state; unlike other members of the Commonwealth of Nations which are either dependencies, republics or have a different royal house. All sixteen realms are constitutional monarchies and full democracies where the queen has limited powers or a largely ceremonial role. The queen is head of the established Protestant Christian Church of England in the United Kingdom however, the other monarchies do not have an established church.

- **Other European constitutional monarchies**. Andorra, Belgium, Denmark, Luxembourg, Netherlands, Norway, Spain, and Sweden are fully democratic states in which the monarch has a limited or largely ceremonial role. There is generally a Christian religion established as the official church in each of these countries. This is a form of Protestantism in Norway, Sweden, Denmark, and the Netherlands, while Belgium, Luxembourg, Andorra, and Spain are Roman Catholic countries.

- **European Constitutional/Absolute Monarchies** Liechtenstein and Monaco are constitutional monarchies in which the Prince retains many powers of an absolute monarch. For example the 2003 Constitution referendum which gives the Prince of Liechtenstein the power to veto any law that the Landtag proposes and the Landtag can veto any law that the Prince tries to pass. The Prince can hire or dismiss any elective member or government employee from his or her post. However what makes him not an absolute monarchy is that the people can call for a referendum to end the monarchy's reign. The Prince of Monaco has simpler powers but can not hire or dismiss any elective member or government employee from his or her post,

but he can elect the minister of state, government council and judges. Both Albert II and Hans-Adam II have quite a bit of political power, but they also own huge tracts of land and are shareholders in many companies.

- **Islamic monarchies**. These Islamic monarchs of Bahrain, Brunei, Jordan, Kuwait, Malaysia, Morocco, Oman, Qatar, Saudi Arabia, and the United Arab Emirates generally retain far more powers than their European or Commonwealth counterparts. Brunei, Oman, Qatar, and Saudi Arabia remain absolute monarchies; Bahrain, Kuwait and United Arab Emirates are classified as mixed, meaning there are representative bodies of some kind, but the monarch retains most of his powers. Jordan, Malaysia and Morocco are constitutional monarchies, but their monarchs still retain more substantial powers than European equivalents. Malaysia could also be considered as an East Asian constitutional monarchy (see next).

- **East Asian constitutional monarchies**. Bhutan, Cambodia, Japan, Thailand have constitutional monarchies where the monarch has a limited or ceremonial role. Bhutan, Japan, and Thailand are countries that were never colonised by European powers, but have changed from traditional absolute monarchies into constitutional ones during the twentieth century. Cambodia had its own monarchy after independence from France, which was deposed after the Khmer Rouge came into power and the subsequent invasion by Vietnam. The monarchy was subsequently restored in the peace agreement of 1993. Shintoism is the established religion in Japan, while Bhutan, Cambodia and Thailand are all Buddhist countries. However, most Japanese people practice Buddhism and Shinto simultaneously.

- **Other monarchies**. Five monarchies do not fit into one of the above groups by virtue of geography or class of monarchy: Tonga and Samoa in Polynesia; Swaziland and Lesotho in Africa; and the Vatican City in Europe. Of these, Lesotho and Tonga are constitutional monarchies, while Swaziland and Vatican City are absolute monarchies. Samoa falls into neither class, as one of the Four Paramount Chiefs of the country is elected to hold the position of O le Ao o le Malo, or "Chieftain of the Government". This position is not required by the Samoan constitution, which is why Samoa is officially classified as a republic rather than a constitutional monarchy. The pope is monarch of Vatican City by virtue of his position as head of the Catholic Church; he is an elected rather than hereditary ruler.

Monarch

From Wikipedia, the free encyclopedia

A **monarch** is the person who heads a monarchy. This is a form of government in which a state or polity is ruled or controlled by an individual who typically inherits the throne by birth and rules for life or until abdication. Monarchs may be autocrats (absolute monarchy) or ceremonial heads of state who exercise little or no power or only reserve power, with actual authority vested in a parliament or other body (constitutional monarchy).

Etymology

The word monarch is derived from the Greek *μονάρχης* (from *μόνος*, "one/singular," and *ἄρχων*, "leader/ruler/chief") through the Latin: *monarcha* (mono: "one" + arch "chief") which referred to a single, at least nominally, absolute ruler. In current usage the word monarchy generally refers to a traditional system of hereditary rule, as elective monarchies are rare in the modern period.

Characteristics

Most states have at most one monarch at any given time, although a regent may rule when the monarch is a minor, not present, or otherwise incapable of ruling. Two monarchs have ruled simultaneously in some countries, as in the ancient Greek city-state of

Monarchs have various titles — king or queen, prince or princess (e.g. Sovereign Prince of Monaco), Malik or Malikah (e.g. Maliks of Middle eastern Mamlakahs), emperor or empress (e.g. Emperor of Japan, Emperor of India), Shah of Iran, archduke, duke or grand duke (e.g. Grand Duke of Luxembourg). ***Prince*** is sometimes used as a generic term to describe any monarch regardless of title, especially in older texts.

Many monarchs are distinguished by titles and styles. They often take part in certain ceremonies, such as a coronation.

Monarchy is associated with political or sociocultural in nature hereditary rule; most monarchs, both historically and in the modern day, have been born and brought up within a royal family (over a period of time called a dynasty) and trained for future duties. Different systems of succession have been used, such as proximity of blood, primogeniture, and agnatic seniority (Salic law). While traditionally most monarchs have been male, female monarchs have also ruled in history; the term queen regnant refers to a ruling monarch, as distinct from a queen consort, the wife of a reigning king.

Some monarchies are non-hereditary. In an elective monarchy, the monarch is elected but otherwise serves as any other monarch. Historical examples of elective monarchy include the Holy Roman Emperors (chosen by prince-electors but often coming from the same dynasty) and the free election of kings of the Polish–Lithuanian Commonwealth. Modern examples include the Yang di-Pertuan Agong of Malaysia and the pope of the Roman Catholic Church, who serves as Sovereign of the Vatican City State and is elected to a life term by the College of Cardinals.

Monarchies have existed throughout the world, although in recent centuries many states have abolished the monarchy and become republics. Advocacy of republics is called republicanism, while advocacy of monarchies is called monarchism. The principal advantage of hereditary monarchy is the immediate continuity of leadership, with a usually short interregnum (as illustrated in the classic phrase "The [old] King is dead. Long live the [new] King!"). However, this only applies in the case of autocratic rule. In cases where the monarch serves mostly as a ceremonial figure (e.g. most modern constitutional monarchies) real leadership does not depend on the monarch.

A form of government may in fact be hereditary without being considered monarchy, such as family dictatorship or political families present in some nominally democratic countries.

The nine European Monarchs who attended the funeral of

Classification

A particular case is the French co-prince of Andorra, a position held by the elected President of France. Nonetheless, he is still generally considered a monarch because of the traditional use of a monarchical title (even though Andorra is, strictly speaking, a diarchy.) Similarly, the Yang di-Pertuan Agong of Malaysia is considered a monarch despite only holding the office for five years at a time. On

the other hand, several life-time dictators around the world have not been formally classified as monarchs, even if succeeded by their children, but that may be more to do with international political sensitivities than with semantics.

Standing, from left to right: King Haakon VII of Norway, King Ferdinand of Bulgaria, King Manuel II of Portugal, Kaiser Wilhelm II of Germany, King George I of Greece and King Albert I of Belgium. Seated, from left to right: King Alfonso XIII of Spain, King George V of Britain and King Frederick VIII of Denmark.

Succession

Hereditary succession within one family has been most common. The usual hereditary succession is based on some cognatic principles and on seniority, though sometimes merit has played a part. Thus, the most common hereditary system in feudal Europe was based on cognatic primogeniture where a lord was succeeded by his eldest son or, if he had no son, by either daughters or sons of daughters. The system of tanistry was semi-elective and gave weight also to merits and capability.

The Quasi-Salic succession provided firstly for male members of the family to succeed, and secondarily males descended from female lines. In most feudal fiefs, females (such as daughters and sisters) were allowed to succeed, should the male line fail, but usually the husband of the heiress became the real lord and most often also received the title, *jure uxoris*. Great Britain and Spain today continue this model of succession law, in the form of cognatic primogeniture. In more complex medieval cases, the sometimes conflicting principles of proximity and primogeniture battled, and outcomes were often idiosyncratic.

Postcard from 1908 showing nineteen of the world's reigning monarchs: (left to right) King Rama V/Chulalongkorn of Siam, King George I of Greece, King Peter I of Serbia, King Carol I of Romania, Emperor Franz Joseph of Austria-Hungary, King Ferdinand I of Bulgaria, Sultan Abdul Hamid II of the Ottoman Empire, King Victor Emmanuel III of Italy, Emperor Nicholas II of the Russia, King Edward VII of Britain, Emperor Wilhelm II of Germany, King Gustav V of Sweden, King Haakon VII of Norway, King Frederick VIII of Denmark, Queen Wilhelmina of the Netherlands, Emperor Guangxu of China, Emperor Meiji of Japan, King Manuel II of Portugal and King Alfonso XIII of Spain.

As the average life span among the nobility increased (thanks to lords limiting their personal participation in dangerous battles, and generally improved sustenance and living conditions among the wealthy), an eldest son was more likely to reach majority age before the death of his father, and primogeniture became increasingly favoured over proximity, tanistry, seniority and election.

Later, when lands were strictly divided among noble families and tended to remain fixed, *agnatic primogeniture* (practically the same as Salic Law) became more usual: the succession would go to the eldest son of the monarch, or, if the monarch had no sons, the throne would pass to the nearest male relative through the male line, to the total exclusion of females.

In some countries however, inheritance through the female line was never wholly abandoned, so that if the monarch had no sons, the throne would pass to the eldest daughter and to her posterity. (This, *cognatic primogeniture*, was the

rule that let Elizabeth II become Queen.)

In 1980, Sweden became the first monarchy to declare *equal primogeniture* or *full cognatic primogeniture*, meaning that the eldest child of the monarch, whether female or male, ascends to the throne.[1] Other kingdoms (the Netherlands in 1983, Norway in 1990, Belgium in 1991 and Denmark in 2009) have since followed suit.

In some monarchies, such as Saudi Arabia, succession to the throne usually first passes to the monarch's next eldest brother, and only after that to the monarch's children (*agnatic seniority*). In some other monarchies (e.g. Jordan), the monarch chooses who will be his successor, who need not necessarily be his eldest son.

Whatever the rules of succession, there have been many cases of a monarch being overthrown and replaced by a usurper who would then often install his own family as the ruling monarchy.

History

Further information: Monarchy

Monarchs in Africa

Further information: Monarchies in Africa

Further information: History of Africa

A series of Pharaohs ruled Ancient Egypt over the course of three millennia (circa 3150 BC to 31 BC) until it was conquered by the Roman Empire. In the same time period several kingdoms flourished in the nearby Nubia region, with at least one of them, that of the so-called A-Group culture, apparently influencing the customs of Egypt itself.

West Africa hosted the Kanem Empire (700 - 1376) and its successor, the Bornu principality which survives to the present day as a part of the Federation of Nigeria.

In East Africa, the Aksumite Empire and later the Ethiopian Empire (1270–1974) were ruled by a series of monarchs. Haile Selassie, the last Emperor of Ethiopia, was deposed in a communist coup.

Central and Southern Africa were largely isolated from other regions until the modern era, but they did later feature kingdoms like the Kingdom of Kongo (1400–1914).

As part of the Scramble for Africa, Europeans conquered, bought, or established African kingdoms and styled themselves as monarchs.

Currently the African nations of Morocco, Lesotho and Swaziland are sovereign monarchies under dynasties that are native to the continent. Places like St. Helena, Ceuta, Melilla and the Canary Islands are ruled by the Queen of the United Kingdom of Great Britain and Northern Ireland and the King of Spain, while so-called sub-national monarchies of varying sizes can be found all over the rest of the continent e.g. the Yoruba city-state of Akure in south-western Nigeria is something of an elective monarchy, with its reigning Oba having to be chosen by an electoral college of nobles from amongst a finite collection of royal princes and princesses of the realm.

Monarchs in Europe

Further information: Monarchies in Europe

Prince was a common title within the Holy Roman Empire, along with a number of higher titles listed below. Such titles were granted by the Emperor, while the titulation of rulers of sovereign states was generally left to their own discretion, most often choosing *King* or *Queen*. Such titulations could cause diplomatic problems, and especially the elevation to Emperor or Empress was seen as an offensive action.

Queen of United Kingdom (as well as Canada, Australia, and other Commonwealth realms)

During the nineteenth and twentieth centuries most small monarchies in Europe disappeared, merging to form larger entities, and so *King* is the most common title for male rulers and *Queen* has become the most common title today for female rulers.

As of 2010 in Europe there are twelve monarchies: seven kingdoms, one grand duchy, one papacy, and two principalities, as well as the diarchy of Andorra.

Monarchs in Asia

Further information: Monarchies in Asia

In China, before the abolition of the monarchy in 1912, the Emperor of China was traditionally regarded as the ruler of "All under heaven". "King" is the usual translation for the term *wang* 王, the sovereign before the Qin dynasty and during the Ten Kingdoms period. During the early Han dynasty, China had a number of small kingdoms, each about the size of a county and subordinate to the Empress or Emperor of China.

Japanese emperor Hirohito, Crown Prince Akihito, Empress Nagako, and Crown Princess Michiko, 1959

The Japanese monarchy is now the only monarchy to still use the title of Emperor. Between 1925 and 1979, Iran was ruled by an Emperor that used the title of "Shahanshah" (or "King of Kings" in Persian). Thailand and Bhutan are like the UK in that they are constitutional monarchies ruled by a King. Saudi Arabia and many other Middle Eastern monarchies are ruled by a Malik and parts of the United Arab Emirates, such as Dubai, are still ruled by monarchs.

Oman is led by Monarch Sultan Qaboos bin Said Al Said. The Kingdom of Jordan is one of the Middle East's more modern monarchies is also ruled by a Malik. In Arab and arabized countries, Malik (absolute King) is absolute word to render a monarch and is superior to all other titles. Nepal abolished their monarchy in 2008. Sri Lanka had a complex system of monarchies from 543BC to 1815. Between 47BC-42BC Anula of Sri Lanka became the country's first female head of state as well as Asia's first head of state.

In Malaysia's constitutional monarchy, the Yang di-Pertuan Agong (The Supreme Lord of the Federation) is de facto rotated every five years among the nine Rulers of the Malay states of Malaysia (those nine of the thirteen states of Malaysia that have hereditary royal rulers), elected by Majlis Raja-Raja (Conference of Rulers). Under Brunei Darussalam's 1959 constitution, His Majesty Paduka Seri Baginda, Sultan Haji Hassanal Bolkiah Mu'izzaddin Waddaulah is the head of state with full executive authority, including emergency powers, since 1962. The Prime Minister of Brunei is a title held by the Sultan of Brunei. As the prime minister, the Sultan presides over the cabinet.

Monarchs in the Americas

Further information: Monarchies in the Americas

The concept of monarchy existed in the Americas long before the arrival of European colonialists.[2][3] When the Europeans arrived they referred to these tracts of land within territories of different aboriginal groups to be kingdoms, and the leaders of these groups were often referred to by the Europeans as Kings, particularly hereditary leaders.[4]

Pre-colonial titles that were used included:

- Cacique – Aboriginal Hispaniola and Borinquen
- Tlatoani – Nahuas
- Ajaw – Maya
- Qhapaq Inka – Tawuantin Suyu (Inca Empire)
- Morubixaba – Tupi tribes
- Sha-quan – King of the world used in some America Indian tribes

The first local monarch to emerge in North America after colonization was Augustin I, who declared himself Emperor of Mexico in 1822. Mexico again had an emperor, Maximilian I from 1863 to 1867. In South America, Brazil had a Portuguese royal house ruling as emperor between 1822 and 1889, under Emperors Pedro I and Pedro II.

These American emperors were deposed due to complex issues, including pressure from the highly republican United States, which had declared it independent of the British monarch in 1776. The British, worried about U.S. colonial expansion, invasion following the American Civil War, and the fact that the U.S. had aided the Mexican republican rebels in overthrowing Maximilian I, pushed for the union of the Canadian provinces into a country in 1867. With Confederation, Canada became a self-governing nation which was considered a kingdom in its own right,[5] though it remained subordinate to the United Kingdom; thus, Victoria was monarch of Canada, but not sovereign of it. It was not until the passing of the Statute of Westminster that Canada was considered to be under a distinct Canadian Crown, separate to that of the British, and not until 1953 that the Canadian monarch, at the time Elizabeth II, was titled by Canadian law as Queen of Canada.

Between 1931 and 1983 nine other previous British colonies attained independence as kingdoms, all, including Canada, in a personal union relationship under a shared monarch. Therefore, though today there are legally ten American monarchs, one person occupies each distinct position.

Male Title	Female Title	Realm	*Latin*	Examples
Emperor	Empress	Empire	*Imperator (Imperatrix)*	Brazil, Mexico, Sapa Inca, Japan
King	Queen	Kingdom	*Rex (Regina)*	Canada, Jamaica, Barbados, the Bahamas, Grenada, Saint Lucia, Saint Vincent and the Grenadines, Antigua and Barbuda, Belize, Saint Kitts and Nevis

Titles and precedence

The *normal* monarch title in Europe — *i.e.*, the one used if the monarch has no higher title — is prince or

princess, by convention. As an absolute ruler, a monarch can choose a title. However, titles are usually defined by tradition and diplomatic considerations.

Note that some of these titles have several meanings and do not necessarily designate a monarch. A Prince may be a person of royal blood (some languages uphold this distinction, see Fürst). A Duke may be a British peer. In Imperial Russia, a Grand Duke was a son or grandson of the Tsar or Tsarina. Holders of titles in these alternative meanings did not enjoy the same status as the monarchs of the same title.

Within the Holy Roman Empire, there were even more titles that were used occasionally for monarchs although they were normally noble; Margrave, Count Palatine, and Landgrave. A monarch with such a low title was still regarded as more important than a noble Duke.[*citation needed*]

The table below lists titles in order of precedence. According to protocol any holder of a title of monarchy took precedence over all holders of a lower title. Queen Victoria of the United Kingdom was arguably the most powerful monarch of her time, but at banquets was seated below all the Emperors until she took the title of Empress of India.

Male version	Female version	Realm	Adjective	*Latin*	Examples
Emperor	Empress	Empire	Imperial	*Imperator (Imperatrix)*	Roman Empire, Byzantine Empire, Ottoman Empire, Holy Roman Empire, Russia, Mongol Empire, Imperial China, First and Second French Empire, Austria, Mexico, Brazil, German Empire (none left in Europe after 1918), Empress of India (ceased to be used after 1947 when India was granted independence from the British Empire), Japan (the only remaining enthroned emperor in the world).
King	Queen	Kingdom	Royal	*Rex (Regina)*	Common in larger sovereign states
Viceroy	Vicereine	Viceroyalty	Viceregal	*Proconsul*	Historical: Spanish Empire (Peru, New Spain, Rio de la Plata, New Granada), Portuguese Empire, (India, Brazil), British Empire
Grand Duke	Grand Duchess	Grand Duchy	Grand Ducal	*Magnus Dux*	Today: Luxembourg; historical: Lithuania, Baden, Finland, Tuscany *et al.*

Male version	Female version	Realm	Adjective	*Latin*	Examples
Archduke	Archduchess	Archduchy	Archducal	*Arci Dux*	Historical: Unique only in Austria, Archduchy of Austria; title used for member of the Habsburg dynasty
Prince	Princess	Principality, Princely state	Princely	*Princeps*	Today: Monaco, Liechtenstein; Andorra (Co-Princes). Historical: Principality of Albania, Serbia
Duke	Duchess	Duchy, Dukedom	Ducal	*Dux*	There are none left currently. Though historical examples include Normandy.
Count	Countess	County	Countly, comital	*Comes*	Most common in the Holy Roman Empire, translated in German as Graf; historical: Barcelona, Brandenburg, Baden, numerous others
Baron	Baroness	Barony	Baronial	*Baro*	There are normal baronies and sovereign baronies, a sovereign barony can be compared with a principality, however, this is an historical exception; sovereign barons no longer have a sovereign barony, but only the title and style
Pope	*Females cannot hold the office of Pope*	Papacy	Papal	*Papa*	Monarch of the Papal States and later Sovereign of the State of Vatican City

The pope is the Bishop of Rome (a celibate office always forbidden to women), in English however, reports of female popes such as (Pope Joan) refer to them as *pope* and *Popess* is used, among other things, for the second trump in the Tarot deck*; some European languages also have a feminine form of the word pope, such as the Italian* papessa, *the French* papesse, *and the German* Päpstin.

Titles by region

When a difference exists below, male titles are placed to the left and female titles are placed to the right of the slash.

Region	Title	Description and use

Africa	Almami	Fulani people of west Africa
	Asantehene	Ashanti, title of the king of the Ashanti people in Ghana
	Chieftain	Leader of a people
	Eze	Igbo people of Nigeria
	Kabaka	Baganda people of Buganda in Uganda
	Malik	King of Morocco
	Mwami	In both Rwanda and Burundi during the Tutsi domination of these countries, now the acknowledged ruling sections of only their fellow Tutsis
	Oba	Yoruba and Bini peoples of Nigeria
	Omukama	Bunyoro, title of some kings in Uganda
	Pharaoh	Emperor of Ancient Egypt
	Sarki	King of the Hausa people
Asia	Arasan/Arasi	Tamil Nadu (India), Sri Lanka
	Chakrawarti Raja	India Sri Lanka
	Chogyal	"Divine Ruler"; ruled Sikkim until 1975
	Datu	title of leaders of small kingdoms during Ancient Philippines
	Druk Gyalpo	Hereditary title given to the king of Bhutan
	Emperor of China	
	Engku or Ungku	Malaysia, to denote particular family lineage akin to royalty
	Gat	Honorary title of the leaders in the Philippines
	Hang	Limbu King of East Nepal Limbuwan
	Hari	Filipino title for king
	Huángdì	Imperial China Emperor
	Hwangje	States that unified Korea
	Maha Raja	Used in India and Sri Lanka
	Maha Raju	Used in Andhra Pradesh (India)
	Meurah	Title used in Aceh before Islam
	Lakan	title used by the rulers of the Kingdom of Tondo (now part of the Philippines)
	Padshah Shahinshah Shah	Emperor of Iran or Hindustan (India)
	Preah Karuna Preah Bat Sâmdech Preah Bâromneath	King of Cambodia Khmer, the title literally means "The feet of the Greatest Lord who is on the heads (of his subjects)" (This royal title does not refer directly to the king himself but to his feet, according to traditions).[*citation needed*]
	Patabenda	Sub- king Sri lanka

	Phrabat Somdej Phrachaoyuhua	King of Thailand (Siam), the title literally means "The feet of the Greatest Lord who is on the heads (of his subjects)" (This royal title does not refer directly to the king himself but to his feet, according to traditions.)[*citation needed*]
	Qaghan	Central Asian Tribes
	Racha	Thailand same meaning as Raja
	Raja	Malaysia, Raja denotes royalty in Perak and certain Selangor royal family lineages, is roughly equivalent to Prince or Princess.
	Raja	Nepal King
	Raja	pre-colonial Philippines
	Rani	Nepali Queen
	Rao or Maharao	Used in Indian states
	Rawal or Maharawal	Used in northern and western India, Yaduvanshis.
	Susuhunan or Sunan	The Indonesian princely state of Surakarta.
	Saopha	Shan, king of Shan, today as a part of Myanmar
	Sayyid	Honorific title given throughout the Islamic regions. Title given to males accepted as descendants of the Islamic prophet Muhammad. Syed/Sharifah in Perlis if suffixed by the royal clan name, is roughly equivalent to Prince or Princess.
	Shogun	Japanese military dictator, always a Samurai
	Sultan	Aceh, Brunei Darussalam, Java, Oman, Malaysia, Sultan is the title of seven (Johor, Kedah, Kelantan, Pahang, Perak, Selangor, and Terengganu) of the nine rulers of the Malay states.
	Sumeramikoto,Okimi	Japan, king
	Tengku	Malaysia, Tengku (also spelled Tunku in Johor), Negeri Sembilan and Kedah is roughly equivalent to Prince or Princess
	Tennō or Mikado	Japan
	Veyndhan, ko/Arasi	Tamil Nadu (India)
	Wang	Pre-Imperial China. "King" is the usual translation for the Chinese term *wang* 王.
	Wang	The king of Korea that control over all of Korea. It is called 'Im-Geum-nym' or 'Im-Geum'
	Yang di-Pertuan Agong	Monarch of Malaysia who is elected every five years by the reigning kings of the Malaysian constituent states, all of whom also serve as the only electoral candidates in each of the elections
Europe	Autocrator	Greek term for the Byzantine Emperor
	Ban	Medieval Romania (Wallachia, Oltenia), Medieval Bosnia
	Basileus	Greek King
	Brenin/Brenhines,	Welsh for king and queen; used in Wales by the petty kinglets during the Early Middle Ages. During the High Middle Ages, the kinglets mediatised into principalities and employed the title

		'prince/princess' (tywysog/tywysoges). *Brenhines* is the title used in Welsh for Queen Elizabeth II of the United Kingdom.
	Despot	Medieval Romania, Serbia (originating from Byzantium)
	Domn	Medieval Romania (Moldova, Wallachia)
	Fejedelem	Ancient/Medieval Hungarian
	Germanic king	
	Giray	Crimean King
	Imperator	The Ruler of Imperial Russia
	Jupan	Romania
	Kung	Sweden
	Kaiser	Imperial Germany
	Knyaz	Kievan Rus', Serbia, Bulgaria, Grand Duchy of Lithuania. Generally translated as "prince" or "duke".
	Kralj	Bosnia, Croatia, Serbia
	Kunigaikshtis (Kunigaikštis)	duke as in Grand Duchy of Lithuania. In official Old Belarusian language documentation the title has been Knyaz (Belarusian: Князь) or grand duke, Vialiki kniaz (Belarusian: Вялікі князь)
	Mbret	Albanian King
	Mepe/Dedopali	Georgian King, Queen
	Rí	Gaelic king. Also Ruiri (regional overking), Rí ruirech (provincial king of overkings), and Ard Rí (pre-eminent Rí ruirech)
	Tsar/Tsaritsa/Czar	Bulgaria, pre-imperial Russia, Serbia
	Vezér	Ancient Hungarian
	Voivode, Voievod	Serbian/Hungarian/Romanian Title
Župan	Serbia, Croatia	
Middle-East	Shah	Persian/Iranian and Afghanistan King
	Shahenshah	Persian/Iranian "King of Kings" or Emperor
	Sheikh	Arabic leader, King or Prince (Bahrain, Kuwait, Qatar, UAE)
	Malik	Arabic King, (Saudi Arabia, Bahrain, Jordan)
	Emir	Arabic Prince, (Kuwait, Qatar, UAE)
	Sultan/Sultana	Arabic King (Oman and Ottoman Empire)
Oceania	Chieftain	Leader of a tribe or clan.
	Houʻeiki, matai, aliʻi, tūlafale, tavana, ariki, Patu-iki	Usually translated as "chief" in various Polynesian countries.
	Mo'i	Normally translated as King, a title used by Hawaiian monarchs since unification in 1810. The last person to hold that title was Queen Lili'uokalani.
	Tuʻi or *Tui*	Kings in Oceania: Tonga, Wallis and Futuna, Nauru

South America	*Imperador*	Emperor of Brazil.

Current monarchs

Main articles: List of current sovereign monarchs and List of current constituent monarchs

Use of titles by non-sovereigns

It is not uncommon that people who are not generally seen as monarchs nevertheless use monarchical titles. There are at least five cases of this:

- Claiming an existing title, challenging the current holder. This has been very common historically. For centuries, the British monarch used, among his other titles, the title King of France, despite the fact that he had had no authority over French territory since the fifteenth century. Such as any one of the numerous antipopes who have claimed the Holy See.
- Retaining the title of an extinct monarchy. This can be coupled with a claim that the monarchy was in fact never, or should never have been, extinct. An example of the first case is the Prince of Seborga. Examples of the second case are several deposed monarchs or otherwise pretenders to thrones of abolished monarchies, *e.g.*, Leka, Crown Prince of Albania who is styled by some as the "King of The Albanians." Retaining the title of an extinct monarchy can, however, be totally free of claims of sovereignty, for example it was customary of numerous European Monarchies to include "King of Jerusalem" in their full titles. When it comes to deposed monarchs, it is customary to continue the usage of their monarchical title (*e.g.*, Constantine II, King of the Hellenes) as a courtesy title, not a constitutional office, for the duration of their lifetime. However the title then dies with them and cannot be used by anyone else unless the crown is restored constitutionally. Monarchs who have *freely* abdicated lose their right to use their former title. However where a monarch abdicated under duress (*e.g.*, Michael I of Romania), it is customary to see the abdication as invalid and to treat them as deposed monarchs entitled to use their monarchical style for their lifetime.
- Inventing a new title. This is common by founders of micronations, and also may or may not come with a claim of sovereignty. When it does, it is disregarded by state leaders. A notable example is Paddy Roy Bates, styling himself the "Prince of Sealand," but not recognized as such by any national government, thus failing at least the constitutive condition for statehood (see Sealand for a fuller discussion of his claims). Another known example is that of Norton I, who invented the title "Emperor of the United States of America" and later declared himself "Protector of Mexico."
- Usage of a monarchical title by a fictional character. This is common in fairy tales and other works geared to children, as well as works of fantasy. Examples include Princess Leia and Princess Summerfall Winterspring.
- Honorific nicknames in popular music and other aspects of popular culture, such as "King of Rock and Roll".

List of current sovereign monarchs

From Wikipedia, the free encyclopedia

A monarch is the person who heads a monarchy, a form of government in which a state or polity is ruled by an individual who normally rules for life or until abdication, and typically inherits the throne by birth.[1] Monarchs may be autocrats (as in many absolute monarchies)[2] or may be ceremonial figureheads who exercise only reserve power, with actual authority vested in a parliament or other governing bodies (as in many constitutional monarchies).[3] In many cases, a monarch will also be linked with a state religion.[4] Most states only have a single monarch at any given time, although a regent may rule when the monarch is a minor, not present, or otherwise incapable of ruling.[5] Cases in which two monarchs rule simultaneously over a single state, as is the current situation in Andorra, are known as coregencies.[6]

King Carl XVI Gustaf and Queen Silvia of Sweden

Monarchs are distinguished by their titles and styles, which in most cases are defined by tradition, and guaranteed under the state's constitution. A variety of titles are applied in English; for example, "king" and "queen", "prince" and "princess", "emperor" and "empress". Although they will be addressed differently in their local languages, the names and titles in the list below have been styled using the common English equivalent. Roman numerals, used to distinguish related rulers with the same name,[7] have been applied where typical.

In political and sociocultural studies, monarchies are normally associated with hereditary rule; most monarchs, in both historical and contemporary contexts, have been born and raised within a royal family.[6][8] Succession has been defined using a variety of distinct formulae, such as proximity of blood, primogeniture, and agnatic seniority. Some monarchies, however, are not hereditary, and the ruler is instead determined through an elective process; a modern example is the throne of Malaysia.[9] These systems defy the model concept of a monarchy, but are commonly considered as such because they retain certain associative characteristics.[10] Many systems use a combination of hereditary and elective elements, where the election or nomination of a successor is restricted to members of a royal bloodline.[11][12]

Emperor Akihito of Japan

Entries below are listed beside their respective dominions, which are organised alphabetically. These monarchs reign as head of state in their respective sovereign states. Monarchs reigning over a constituent division, cultural or traditional polity are listed under constituent monarchs. For current claimants to abolished thrones, see pretenders.

Notes

1. ^ **a b** The president of France and the bishop of Urgell each hold the position of co-prince of Andorra, but there is no personal title attached to the role.
2. ^ **a b c d e f g h i j k l m n o p** Elizabeth II is currently queen regnant of sixteen separate Commonwealth realms (see separate entries), and has previously reigned as queen of sixteen other countries, which have since abolished the monarchy.
3. ^ **a b c d e f g h i j k** Elizabeth II previously reigned over this country as *Queen of the United Kingdom*, from 6 February 1952 until the nation's independence and the creation of a separate crown.
4. ^ **a b c d e f g h i j k l m n o p** The House of Windsor is a line of the House of Saxe-Coburg and Gotha, which itself is a branch of the House of Wettin.[106]
5. ^ Hamad ibn Isa reigned as *Amir of the State of Bahrain* until 14 February 2002, when he assumed the new title of *King of Bahrain* under a new Constitution.[19]
6. ^ **a b** A clan of the Utub tribe.[20]
7. ^ A branch of the House of Wettin.[22]
8. ^ Coronation took place 6 November 2008.[25]
9. ^ Coronation took place 1 August 1968.[27]
10. ^ Coronation took place 29 October 2004.[28]
11. ^ A branch of the Varman dynasty. The surname "Norodom" is used by the descendants of Norodom I.[29][30]
12. ^ The king is selected for life by the Royal Council of the Throne from amongst the male descendants of kings Ang Duong, Norodom, and Sisowath.[31]
13. ^ **a b** Officially the House of Schleswig-Holstein-Sonderburg-Glücksburg, which is a branch of the House of Oldenburg. [33]
14. ^ "Akihito" is the current emperor's given name, but it is not his regnal name, and he is never referred to as this in Japanese. The era of Akihito's reign bears the name "Heisei", and according to custom he will be renamed "Emperor Heisei" following his death.[37]
15. ^ Coronation took place 12 November 1990.[38]
16. ^ The Japanese emperor does not have a family name.[39][40] The use of the name "Yamato" for the household derives from the ancient Yamato Court.[41] It is used often as a name for the imperial dynasty, but has no official basis.
17. ^ Formally enthroned on 9 June 1999.[42]
18. ^ Succession is based upon primogeniture. However, the reigning king may also select his successor from among eligible princes.[43]
19. ^ The heir is appointed by the reigning emir, and the nomination must also be approved by a majority of members in the National Assembly.[46] The throne is also traditionally alternated between the two main branches of the Al Sabah family: the Al Salem and Al Jaber.[47][48] The current emir is of the Al Jaber branch.
20. ^ Coronation took place 31 October 1997. Has previously reigned as king from 12 November 1990 until 25 January 1995.[50]
21. ^ Formally enthroned on 15 August 1990.[52] Prior to his accession, Hans-Adam had served as prince regent since 26 August 1984.[53] On 15 August 2004, the prince formally appointed his son Prince Alois as regent, in preparation for his succession to the throne, but remained head of state in accordance with the constitution.[54]
22. ^ Prior to formal enthronement, Henri had served as prince regent since 4 March 1998.[55]
23. ^ The royal family of Luxembourg is descended from the House of Nassau and the Parma branch of the House of Bourbon.
24. ^ Official title: *Yang di-Pertuan Agong*. It roughly translates as "Supreme Head of State", and is commonly rendered in English as "King".[56]
25. ^ Elected in October 2011. Coronation took place 13 December.[57] Abdul Halim has previously reigned as king from 21 September 1970 to 20 September 1975;[58] he is the first sultan to hold the throne twice.[59]
26. ^ The *Yang di-Pertuan Agong* is elected to a five-year term by and from amongst the nine hereditary rulers of the Malay states, who form the Council of Rulers. The position has to date been, by informal agreement, systematically rotated between the nine; the order was originally based on seniority.[60]
27. ^ Albert II was formally enthroned as prince in a two-part ceremony, in accordance with tradition, on 12 July and 19 November 2005.[62][63] He had previously been serving as regent since 31 March 2005.[64]
28. ^ Coronation took place 30 July 1999.[66]
29. ^ The Dutch royal family is descended from the Houses of Nassau and Lippe.[68][69]
30. ^ Formally enthroned on 21 January 1991, and consecrated on 23 June 1991. Prior to his accession, Harald had served as prince regent since 1 June 1990.[72]

Commonwealth realm

From Wikipedia, the free encyclopedia

A **Commonwealth realm** is a sovereign state within the Commonwealth of Nations that has Elizabeth II as its monarch and head of state.[1][2] The sixteen current realms have a combined land area of 18.8 million km² (7.3 million mi², excluding Antarctic claims), and a population of 135 million,[3] of which all, except about two million, live in the six most populous states: the United Kingdom, Canada, Australia, Papua New Guinea, New Zealand and Jamaica.

The Commonwealth realms, shown in blue. Former Commonwealth realms are shown in red.

Nearly all the realms were once British colonies that evolved into independent states, the current exceptions being the United Kingdom (UK) itself and Papua New Guinea, which was formed in 1975 as a union of the former German New Guinea — administered by Australia as an international trusteeship before independence — and the former British New Guinea — legally the territory of Papua, administered for the UK by Australia since 1905. The first realms to emerge were colonies that had already previously attained the status of a self-governing Dominion within the British Empire.

For a time, the older term of *Dominion* was retained to refer to these non-British realms, even though their actual status had changed with the granting of full legislative independence. The word is still sometimes used today, though increasingly rarely, as the word *realm* was formally introduced with Britain's proclamation of Elizabeth II as queen in 1952 and acquired legal status with the adoption of the modern royal styles and titles by the individual countries.[1] The qualified term *Commonwealth realm* is not official, and has not been used in law; rather, it is a term of convenience for distinguishing this group of realms from other countries in the Commonwealth that do not share the same monarch.

3. ^ Dates indicate the year of enactment of the Statute of Westminster (Canada), adoption by realm (Australia and New Zealand), or grant of independence (all others except the UK); the monarch became head of state of the particular realm on this date as a result of one of these events. The monarch had previously been head of state over the same territory by virtue of being monarch of the United Kingdom, or, in the case of Papua New Guinea, monarch of Australia.
4. ^ Adoption of Statute of Westminster was declared retroactive to 1939.
5. ^ The *de facto* national flag from 1931 to 1965 was the Canadian Red Ensign, whose design was changed in 1957. The current Canadian flag was adopted in 1965. See List of Canadian flags#National flags.
6. ^ A date is not applicable to the United Kingdom as it was the original realm from which other realms became independent.

Relationship of the realms

The Commonwealth realms are sovereign states, united only in the voluntary and symmetric sharing of the institution of the monarchy,[7] the succession, and the Queen herself; the person of the sovereign and the Crown were said in 1936 to be "the most important and vital link" between the realms.[8] This grouping of countries associated in this manner has been called "an achievement without parallel in the history of international relations or constitutional law."[9] Terms such as *personal union*,[10][11][12][13][14] a *form of personal union*,[† 1][16] and *shared monarchy*, amongst others,[† 2][19] have all been advanced as definitions since the beginning of the Commonwealth itself, though there has been no agreement on which term is most accurate,[18][19] or even whether *personal union* is applicable at all.[† 3][21] The United Kingdom no longer holds any legislative power over any country besides itself, although some countries continue to use, by their own volition, the Judicial Committee of the British Privy Council as part of their own judiciary; usually as the highest court of appeal.

Conflicts of interest have arisen from this relationship amongst independent states, ranging from minor diplomatic matters — such as the monarch expressing on the advice of one of her cabinets views that counter those of another of her cabinets[† 4] — to more serious conflicts regarding matters of armed conflict, wherein the monarch may be simultaneously at war and at peace with himself as head of two hostile nations.[† 5] In such cases, viceroys have tended to avoid placing the sovereign directly in the centre of the conflict, meaning that a governor-general may have to take controversial actions entirely on his or her own initiative through the exercise of the reserve powers.[† 6]

The Crown in the Commonwealth realms

Queen Elizabeth II and Prince Philip, Duke of Edinburgh, pose at Windsor Castle with the Queen's fifteen governors-general in April 2002[† 7]

The evolution of the Commonwealth realms has led to the scenario wherein the Crown has both a separate and a shared character; it is a singular institution with one sovereign, but also simultaneously operates separately within each country, with the Queen being equally a part of each state and acting in right of a particular realm as a distinct legal person guided only by the advice of the cabinet of that jurisdiction.[24][25][26][27][28][29][30] This means that in different contexts the term *Crown* may refer to the extra-national institution shared amongst all 16 countries, or to the Crown in each realm considered separately.[† 8] However, though the monarchy is therefore no longer an exclusively British institution,[24][30] having become "domesticated" in each of the realms,[31] it may in the media and legal fields often still be elaborated as the *British Crown* for reasons historical, of convenience, or political, regardless of the different, specific, and official national titles and terms used when addressing the Queen of the citizenry in each jurisdiction; for example, in Barbados the Queen is titled as *Elizabeth*

II, Queen of Barbados, or simply the *Queen of Barbados*, with her full title making mention of her position as queen of the other Commonwealth realms. To guarantee the continuity of this arrangement, the preamble of the 1931 Statute of Westminster stipulates that any alteration to the line of succession in any one country must be voluntarily approved by the parliaments of all the realms,[32][† 9][34] or, alternatively, a realm may choose to end its participation in the shared monarchy.

From a cultural standpoint, the shared nature of the Crown is less clear. In all realms, the sovereign's name and image and other royal symbols unique to each nation are visible in the emblems and insignia of governmental institutions and militia, leading to the argument that the Crown as a shared link between the Commonwealth realms, with the Crown in right of each country having unique domestic characteristics. The Queen's effigy, for example, appears on coins and banknotes in some countries, and an oath of allegiance to the Queen is usually required from politicians, judges, military members and new citizens. It is also asserted, however, that the Crown throughout the realms remains essentially British and primarily of the United Kingdom, despite the legal and cultural evolution of the Commonwealth since the 1930s. Indeed, by 1959 it was being asserted by Buckingham Palace officials that the Queen was "equally at home in all her realms."[35]

Monarch's role in the realms

The monarch is, in theory, the supreme governor of each of the Commonwealth realms, charged with issuing executive orders, commanding the military forces, and creating and administering laws. However, each country now operates under the Westminster system of parliamentary democracy and the concept of responsible government, meaning that the monarch only exercises her powers on the advice of her Crown ministers, who are usually drawn from, and thus responsible to, the elected lower house of the relevant parliament.

While this remains the case for all the Commonwealth realms, their sovereign resides predominantly in her oldest realm, the United Kingdom, and thus carries out her duties there mostly in person. In the other realms, the Queen normally exercises only those powers related to the appointment of her viceroys (a governor-general in all cases, and a governor in each of the Australian states), usually on the advice of the prime minister of the country or state concerned, though this process may have additional requirements.[† 10] In certain other cases, the extent to which varies from realm to realm, specific additional powers are reserved exclusively for the monarch — such as the appointment of extra senators to the Canadian Senate, the creation of honours, or the issuance of letters patent — and on occasions of national importance, the Queen may be advised to perform in person her constitutional duties, such as granting Royal Assent or issuing a royal proclamation. Otherwise, all royal powers, including the Royal Prerogative, are carried out on behalf of the sovereign by the relevant viceroy, which, apart from those already mentioned, include a lieutenant governor in each province of Canada (appointed by the Governor General of Canada) and the Queen's Representative in the Cook Islands, who is appointed by the Queen herself.[36] In the United Kingdom, the Queen appoints Counsellors of State to perform her constitutional duties in her absence.

Similarly, the monarch or other members of the Royal Family will perform ceremonial duties in the Commonwealth realms to mark historically significant events.[37] They do so most frequently in the United Kingdom, and in the other countries during tours at least once every five or six years, meaning the Queen is present in a number of her dominions outside the UK, or acting on behalf of those realms abroad, approximately every other year.

Citizens in Commonwealth realms or British overseas territories may request birthday or wedding anniversary messages to be sent from the sovereign. This is available for 100th, 110th, and beyond for birthdays; and 60th ("Diamond"), 65th, 70th ("Platinum"), and beyond for wedding anniversaries.[38]

Religious role of the monarch

The sovereign's religious role differs from country to country. In all realms except Papua New Guinea the Queen is

sovereign "By the Grace of God", a phrase that forms a part of her official title within those states. In Canada, the United Kingdom, and New Zealand, "Defender of the Faith" (in Latin: *fidei defensor*) — the ancient phrase first granted in 1521 by Pope Leo X to King Henry VIII — is also included as a part of the royal title and the sovereign is anointed as such in the only coronation that takes place in any of the realms,[39] a ceremony in the context of a church service imbued with theological and constitutional symbolism and meaning, held at Westminster Abbey in London, United Kingdom.

However, it is solely in the United Kingdom that the Queen actually plays a role in organised religion. In England, she acts as the Supreme Governor of the Church of England and appoints its bishops and archbishops who thereafter act as her Lords Spiritual. In Scotland, she swears an oath to uphold and protect the Church of Scotland and sends to meetings of the church's General Assembly a Lord High Commissioner as her representative, when she is not personally in attendance.[40] Unusually for the Church of Scotland, Glasgow and Dunblane Cathedrals are both owned by the British Crown,[*citation needed*] though they are not like the Chapels Royal, which exist in both the United Kingdom and Canada and form a part of the Ecclesiastical Household in those two countries. In England and Scotland, these chapels are Royal Peculiars, and fall directly within the jurisdiction of the British monarch, as opposed to a diocese, as is the norm.[*citation needed*] To them, the Queen may also appoint her own chaplains from either the Church of England or of Scotland.

Royal family

As with the sovereign, a single royal family is shared by the Commonwealth realms, similarly being most frequently referred to in a casual fashion as the *British Royal Family*, sometimes causing conflict with official national titles, such as in Canada. Though there is no strict legal or formal definition of who is or is not a member of the Royal Family, the group is loosely defined as the extended family of the monarch. These persons constitute the apex of a modern royal court, regularly performing public duties at hundreds of events throughout the 16 realms each year. For this work, the Royal Family members receive no salary from any state; instead, only the expenses incurred for each event (security, transportation, venue, etc.) are, due to the nature of the Crown in the realms, funded by the relevant state individually through the ordinary legislative budgeting process. These engagements are organised in order for the Crown to honour, encourage, and learn about the achievements or endeavours of individuals, institutions, and enterprises in a variety of areas of the lives of the Queen's subjects. As representatives of the monarch, Royal Family members often also join the nation in commemorating historical events, holidays, and celebratory and tragic occurrences, as well as sponsoring or participating in numerous charitable, cultural, and social activities. Their work, which is all formally recorded in the Court Circular, draws public attention to amicable relations within and between the nations of the Commonwealth and beyond; the members of the Royal Family draw enormous media coverage in the form of photographic, written, and televised commentary on not only their activities and public roles, but also family relationships, rites of passage, personalities, attire, and behaviour.

Flags

The Queen employs various royal standards to mark her presence, the particular one used depending on which realm she is in or acting on behalf of at the time. There are currently unique flags for Australia, Barbados, Canada, Jamaica, New Zealand, and two variations for the United Kingdom — one for Scotland and another for the rest of the country. All are heraldic banners displaying the shield of the sovereign's coat of arms for that state, and each, save for those of the UK, are defaced in the centre with the Queen's Personal Flag, a crowned *E* for *Elizabeth* surrounded by a garland of roses representing the countries of the Commonwealth. This latter flag on its own is used for realms that do not have a unique personal standard for the monarch, as well as for general use in representing the Queen as Head of the Commonwealth. The monarch previously held royal standards for Sierra Leone, Mauritius, Malta, and Trinidad and Tobago, but these banners became obsolete when the countries became republics.

Other members of the Royal Family have their own personal standards. In the United Kingdom, most have their own distinctive banner or banners. The Prince of Wales and the Duke of Cambridge also have one each for Canada. Those who do not possess a standard for an individual realm will use their British standard to identify themselves when touring other Commonwealth realms and foreign countries.

The governors-general throughout the Commonwealth realms also each use a personal flag, which, like that of the sovereign, passes to each successive occupant of the office. Most feature a lion passant atop a St. Edward's royal crown with the name of the country across a scroll underneath, all on a blue background. The two exceptions are those of, since 1981, Canada (bearing on a blue background the crest of the Royal Coat of Arms of Canada) and, since 2008, New Zealand (a St. Edward's Crown above the shield of the Coat of Arms of New Zealand). The lieutenant governors of the Canadian provinces each have their own personal standards, as do the governors of the Australian states.

The Personal Flag of Queen Elizabeth II, used in a general capacity within the Commonwealth

Historical development

Dominions emerge

The possibility that a colony within the British Empire might become a new kingdom was first mooted in the 1860s, when it was proposed that the British North American territories of Nova Scotia, New Brunswick, and the Province of Canada unite as a confederation that might be known as the *Kingdom of Canada*.[41][42][43] In light of geo-political circumstances at the time, however, the name was abandoned in favour of the *Dominion of Canada*.[† 11] As more British colonies followed Canada in gaining legislative independence from the United Kingdom, Prime Minister of Canada Wilfrid Laurier was led to insist at the 1907 Imperial Conference that a formula be created to differentiate between the Crown and the self-governing colonies. For the latter the Canadian precedent was followed, and the term *Dominion* was extended to apply to Australia, New Zealand, Newfoundland, and the colonies of the Cape, Natal, and Transvaal, before and after they merged in 1910 with the Orange River Colony to form the Union of South Africa. These countries were joined in 1921 by the Irish Free State.

A compiled portrait of the main delegates to the signing of the Treaty

Although the Dominions were capable of governing themselves internally, they technically remained — especially in regards to foreign policy and defence — subject to British authority, wherein the governor-general of each Dominion represented the British monarch-in-Council reigning over these territories as a single imperial domain. It was commonly held in some circles that the Crown was a monolithic element throughout all the monarch's territories; A.H. Lefroy wrote in 1918 that "the Crown is to be considered as one and indivisible throughout the Empire; and cannot be severed into as many kingships as there are Dominions, and self-governing colonies."[44] This unitary model began to erode, however, when the Dominions gained more international prominence as a result of their participation and sacrifice in the First World War, in 1919 prompting Canadian prime minister Robert Borden and South African minister of defence Jan Smuts to demand that the Dominions be given at the Versailles Conference full recognition as "autonomous nations of an Imperial Commonwealth." The immediate result was that, though the King signed as High Contracting Party for the empire as a whole,[45] the Dominions were

of Versailles, including some of the Dominion delegates. [† 12]

King George V with his prime ministers at the Imperial Conference of 1926[† 13]

also separate signatories to the Treaty of Versailles, as well as, together with India, founding members of the League of Nations.

The pace of independence thereafter increased, with Canada exchanging envoys with the United States the following year and in 1923 concluding in its own right the Halibut Fisheries Treaty,[45] Prime Minister of the United Kingdom David Lloyd George stating in 1921 that the "British Dominions have now been accepted fully into the community of nations,"[46] and, by 1925, the Dominions felt confident enough to refuse to be bound by Britain's adherence to the Treaty of Locarno. This, combined with a realisation that the Crown was already operating distinctly and separately within each of the jurisdictions of the Canadian provinces and Australian states,[† 14][48][45] appeared to put to rest previous assertions that the Crown could never be divided amongst the Dominions.

Between the wars

Another catalyst for change came in 1926, when then Governor General of Canada the Lord Byng of Vimy refused the advice of his prime minister (William Lyon Mackenzie King) in what came to be known colloquially as the King–Byng Affair.[49] Mackenzie King, after resigning and then being reappointed as prime minister some months later, pushed at the Imperial Conference of 1926 for a reorganisation of the way the Dominions related to the British government, resulting in the Balfour Declaration, which declared formally that the Dominions were fully autonomous and equal in status to the United Kingdom.[50] What this meant in practice was not at the time worked out; conflicting views existed, some in the United Kingdom not wishing to see a fracturing of the sacred unity of the Crown throughout the empire, and some in the Dominions not wishing to see their jurisdiction have to take on the full brunt of diplomatic and military responsibilities.[31]

What did follow was that the Dominion governments gained a separate and direct relationship with the monarch, without the British Cabinet acting as an intermediary, and the governors-general now acted solely as a personal representative of the sovereign in right of that Dominion.[† 15] Though no formal mechanism for tendering advice to the monarch had yet been established — former Prime Minister of Australia William Morris Hughes theorised that the Dominion cabinets would provide informal direction and the British Cabinet would offer formal advice[52] — the concepts were first put into legal practice with the passage in 1927 of the Royal and Parliamentary Titles Act, which implicitly recognised the Irish Free State as separate from the UK, and the King as king *of* each Dominion uniquely, rather than as the British king *in* each Dominion. At the same time, terminology in foreign relations was altered to demonstrate the independent status of the Dominions, such as the dropping of the term "Britannic" from the King's style outside of the United Kingdom.[53] Then, in 1930 George V's Australian ministers employed a practice adopted by resolution at that year's Imperial Conference,[45] directly advising the King to appoint Sir Isaac Isaacs as his Australian governor-general, against the preferences of the British government and the King himself.

These new developments were explicitly codified in 1931 with the passage of the Statute of Westminster, through which Canada, the Union of South Africa, and the Irish Free State all immediately obtained formal legislative independence from the UK, while in the other Dominions' adoption of the statute was subject to ratification by the Dominion's parliament. Australia and New Zealand did so in 1942 and 1947, respectively, with the former's ratification back-dated to 1939, and, though originally covered by it, Newfoundland never ratified the bill and reverted to direct British rule in 1934. What resulted was the inability for the parliament at Westminster to legislate for any Dominion unless requested to do so. Further, the Judicial Committee of the British Privy Council was left available as the last court of appeal for some Dominions.[54] This was all met with only minor trepidation either

before or at the time,[† 16] and the government of Ireland was confident that the relationship of these independent countries under the Crown would function as a personal union,[16] akin to that which had earlier existed between the United Kingdom and Hanover (1801 to 1837), or between England and Scotland (1603 to 1707). The civil division of the Court of Appeal of England and Wales later found in 1982 that the British parliament could have legislated for a Dominion simply by including in any new law a clause claiming the Dominion cabinet had requested and approved of the act, whether that was true or not.[56] Further, the British parliament was not obliged to fulfill a Dominion's request for legislative change. However, the words in the Statute of Westminster became written expression of a conventional rule that developed whereby British law would not extend beyond the borders of the United Kingdom unless a Dominion supplicated otherwise.[45] By 1937, the Appeal Division of the Supreme Court of South Africa ruled unanimously that a repeal of the Statute of Westminster in the United Kingdom would have no effect in South Africa, stating: "We cannot take this argument seriously. Freedom once conferred cannot be revoked."[57] Others in Canada upheld the same position.[45]

The first prominent example of this arrangement working in practice came with the abdication of King Edward VIII in 1936,[45] for which it was necessary to gain the approval of all the Dominions of the Commonwealth before the resignation could take place;[58] Canada, the Union of South Africa, and the Irish Free State even passed unique legislation to solidify the changes in succession within their jurisdictions.[† 17] Following the accession of Edward's brother, George VI, to the throne, the United Kingdom created legislation that would provide for a regency in the event of the incapacitation of the monarch. Though input was sought from the Dominions on this matter, all declined to make themselves bound by the British legislation, feeling instead that the governors-general could carry out royal functions in place of a debilitated sovereign.[60]

During his tenure as Governor General of Canada, Lord Tweedsmuir urged the organisation of a royal tour of the country by King George VI, so that he might not only appear in person before his people, but also personally perform constitutional duties and pay a state visit to the United States as king of Canada.[61] While the idea was embraced in Canada as a way to "translate the Statute of Westminster into the actualities of a tour," throughout the planning of the trip that took place in 1939, the British authorities resisted at numerous points the idea that the King be attended by his Canadian ministers instead of his British ones.[62] The Canadian prime minister (still Mackenzie King) was ultimately successful, however, in being the minister in attendance, and the King did in public throughout the trip ultimately act solely in his capacity as the Canadian monarch. Yet, the international status of the Crown was also illustrated by George VI simultaneously bolstering from both Canada and the United States support for the UK in the looming war with Nazi Germany.[61]

The prime ministers of five Commonwealth countries at the 1944 Commonwealth Prime Ministers' Conference; from left to right: William Lyon Mackenzie King (Canada), Jan Smuts (South Africa), Winston Churchill (United Kingdom), Peter Fraser (New Zealand), and John Curtin (Australia)

When this threat became reality, there was some uncertainty in the Dominions about the ramifications of Britain's declaration of war against Adolf Hitler. Australia and New Zealand had not yet ratified the Statute of Westminster; the Australian prime minister, Robert Menzies, considered the government bound by the British declaration of war,[63][64] while New Zealand coordinated a declaration of war to be made simultaneously with Britain's.[65] As late as 1937, some scholars were still of the mind that, when it came to declarations of war, if the King signed, he did so as king of the empire as a whole; at that time, W. Kennedy wrote: "in the final test of sovereignty — that of war — Canada is not a sovereign state... and it remains as true in 1937 as it was in 1914 that when the Crown is at war, Canada is legally at war,"[66] and, one year later, A. Berriedale Keith argued that "issues of war or neutrality still are decided on the final authority of the British Cabinet."[67] In 1939, however, Canada and South Africa made separate proclamations of war against Germany a

few days after the UK's. Their example was followed more consistently by the other realms as further war was declared against Italy, Rumania, Hungary, Finland, and Japan.[45] At the war's end, it was said by F.R. Scott that "it is firmly established as a basic constitutional principle that, so far as relates to Canada, the King is regulated by Canadian law and must act only on the advice and responsibility of Canadian ministers."[68]

Post-war evolution

Once the Second World War was over, India and Ceylon became independent Dominions of the Commonwealth, though it was made clear at the time that India would soon move to a republican form of government. Unlike Ireland and Burma at the time of their becoming republics, however, there was no desire on the part of India to give up its membership in the British Commonwealth, prompting a Commonwealth Conference and the issuance of the London Declaration in 1949, which entrenched the idea of Canadian prime minister Louis St. Laurent that different royal houses and republics be allowed in the Commonwealth so long as they recognised as the international organisation's symbolic head the shared sovereign of the UK and the Dominions.[69] At approximately the same time, the tabling in 1946 of the Canadian parliament's Canadian Citizenship Act brought into question the homogeneity of the King's subjects, which, prior to that year, was uniformly defined in terms of allegiance to the sovereign, without regard to the individual's country of residence. Following negotiations, it was decided in 1947 that each Commonwealth member was free to pass its own citizenship legislation, so that its citizens owed allegiance only to the monarch in right of that country.

Princess Elizabeth, Duchess of Edinburgh, and Philip Mountbatten, Duke of Edinburgh, on a tour of Canada, 3 November 1951

As these constitutional developments were taking place, the Dominion and British governments became increasingly concerned with how to represent the more commonly accepted notion that there was no distinction between the sovereign's role in the UK and his or her position in any of the Dominions. Thus, at the 1948 Prime Ministers' Conference the term *Dominion* was avoided in favour of *Commonwealth country*, in order to avoid the subordination implied by the older designation. Then, with the British proclamation of Elizabeth II's accession to the throne in 1952, the phrases *Commonwealth realm* and *Head of the Commonwealth* became established, deriving from the words that declared the monarch as "of this Realm, and of her other Realms and Territories Queen, Head of the Commonwealth." The Commonwealth realms' prime ministers thereafter discussed the matter of the new monarch's title, with St. Laurent stating at the 1953 Commonwealth Conference that it was important to agree on a format that would "emphasise the fact that the Queen is Queen of Canada, regardless of her sovereignty over other Commonwealth countries."[25] The result was a new Royal Style and Titles Act being passed in each of the seven realms then existing (excluding Pakistan), which all identically gave formal recognition to the separateness and equality of the countries involved, and replaced the phrase "British Dominions Beyond the Seas" with "Her Other Realms and Territories", the latter using the medieval French word *realm* (from *royaume*) in place of *dominion*. Further, at her coronation, Elizabeth II's oath contained a provision requiring her to promise to govern according to the rules and customs of the realms, naming each one separately. The change in perspective was summed up by Patrick Gordon Walker's statement in the British House of Commons: "We in this country have to abandon... any sense of property in the Crown. The Queen, now, clearly, explicitly and according to title, belongs equally to all her realms and to the Commonwealth as a whole."[24]

In the same period, Walker also suggested to the British parliament that the Queen should annually spend an equal amount of time in each of her realms. The Lord Altrincham, who in 1957 criticised Queen Elizabeth II for having a court that encompassed mostly Britain and not the Commonwealth as a whole,[70] was in favour of the idea, but it did not attract wide support.[71] Another thought raised was that viceregal appointments should become trans-Commonwealth; the Governor-General of Australia would be someone from South Africa, the Governor-General

of Ceylon would come from New Zealand, and so on. The prime ministers of Canada and Australia, John Diefenbaker and Robert Menzies, respectively, were sympathetic to the concept, but, again, it was never put into practice.[72]

Princess Alexandra represents her cousin, Queen Elizabeth II, at the opening of the newly created realm of Nigeria's federal parliament, 3 October 1960

The principle of fully separate and equal realms was followed in all future grants of independence, including those that came through the *winds of change* that swept through Africa in the 1960s, the collapse of the Federation of the West Indies in 1961, and at later dates. In post-colonial Africa, within a few years of their founding the realms drafted new constitutions in order to become republics within the Commonwealth; South Africa was the only exception, having been a Dominion and then a realm for 54 years before becoming a republic in 1961. The white minority government of Rhodesia in 1965 issued its unilateral declaration of independence, and its members affirmed their loyalty to Elizabeth II as *Queen of Rhodesia*, a title to which she had not consented, did not accept, and was not recognised internationally. Her representative in the colony, Sir Humphrey Gibbs, immediately dismissed his prime minister, Ian Smith, but this action was ignored by Smith and he appointed, without the Queen's consent, an Officer Administrating the Government to perform the governor's constitutional duties until 1970, when Smith's government declared Rhodesia a republic. The country to most recently become a Commonwealth realm was Saint Kitts and Nevis, achieving the status in 1983. At the same time, in other Commonwealth realms, including the United Kingdom, movements emerged advocating a republican government in place of constitutional monarchy; they were, and continue to be, countered by monarchist leagues that support the existing system and/or celebrate the historical and modern connections the shared monarchy provides. Unsuccessful referenda on proposed models of republics have taken place in Australia, Papua New Guinea, and Saint Vincent and the Grenadines.

On 6 July 2010, Queen Elizabeth II addressed the United Nations in New York City as queen of all 16 Commonwealth realms.[73] The following year, the Prime Minister of Jamaica spoke of a desire to make that country a republic,[74][75] while the First Minister of Scotland and leader of the Scottish National Party (which favours Scottish independence) stated an independent Scotland would be a Commonwealth realm.[76]

Republican referendums

Various Commonwealth realms have held referendums to consider whether they should become republics. These include:

- Ghanaian constitutional referendum, 1960 (*passed*)
- South African republic referendum, 1960 (*passed*)
- Gambian republic referendum, 1965 (*failed*)
- Gambian republic referendum, 1970 (*passed*)
- Australian republic referendum, 1999 (*failed*)
- Tuvaluan constitutional referendum, 2008 (*failed*)
- Saint Vincent and the Grenadines constitutional referendum, 2009 (*failed*)

Elizabeth II

From Wikipedia, the free encyclopedia

Elizabeth II (Elizabeth Alexandra Mary; born 21 April 1926[note 1]) is the constitutional monarch of 16 sovereign states known as the Commonwealth realms, and head of the 54-member Commonwealth of Nations. In her specific role as the monarch of the United Kingdom, one of her 16 realms, she is also Supreme Governor of the Church of England.

Elizabeth was born in London, and educated privately at home. Her father acceded to the throne as George VI in 1936 on the abdication of his brother Edward VIII. She began to undertake public duties during the Second World War, in which she served in the Auxiliary Territorial Service. On the death of her father in 1952, she became Head of the Commonwealth and queen regnant of seven independent Commonwealth countries: the United Kingdom, Canada, Australia, New Zealand, South Africa, Pakistan, and Ceylon. Her coronation service in 1953 was the first to be televised. Between 1956 and 1992, the number of her realms varied as territories gained independence and some realms became republics. Today, in addition to the first four aforementioned countries, Elizabeth is Queen of Jamaica, Barbados, the Bahamas, Grenada, Papua New Guinea, the Solomon Islands, Tuvalu, Saint Lucia, Saint Vincent and the Grenadines, Belize, Antigua and Barbuda, and Saint Kitts and Nevis.

In 1947 she married Prince Philip, Duke of Edinburgh, with whom she has four children: Charles, Anne, Andrew, and Edward. In 1992, which Elizabeth termed her *annus horribilis* ("horrible year"), Charles and Andrew separated from their wives, Anne divorced, and a severe fire damaged part of Windsor Castle. Revelations continued on the state of Charles's marriage to Diana, Princess of Wales, and they divorced in 1996. The following year, Diana died in a Paris car crash, and the media criticised the royal family for remaining in seclusion in the days before her funeral. Elizabeth's personal popularity rebounded after she appeared in public and has subsequently remained high.

Her reign of 60 years is the second-longest for a British monarch; only Queen Victoria has reigned longer. Her Silver and Golden Jubilees were celebrated in 1977 and 2002; her Diamond Jubilee is being celebrated during 2012.

Early life

Princess Elizabeth aged 3, 1929

Elizabeth was the first child of Prince Albert, Duke of York (later King George VI), and his wife, Elizabeth. Her father was the second son of King George V and Queen Mary, and her mother was the youngest daughter of Scottish aristocrat Claude Bowes-Lyon, 14th Earl of Strathmore and Kinghorne. She was born by Caesarean section at 2.40 am (GMT) on 21 April 1926 at her maternal grandfather's London house: 17 Bruton Street, Mayfair.[1] The Anglican Archbishop of York, Cosmo Lang, baptised her in the private chapel of Buckingham Palace on 29 May.[2][note 2] She was named Elizabeth after her mother, Alexandra after George V's mother, who had died six months earlier, and Mary after her paternal grandmother.[3] Her close family called her "Lilibet".[4] George V cherished his granddaughter, and during his serious illness in 1929 her regular visits were credited in the popular press and by later biographers with raising his spirits and aiding his recovery.[5]

Elizabeth's only sibling was Princess Margaret, born in 1930. The two princesses were educated at home under the supervision of their mother and their governess, Marion Crawford, who was casually known as "Crawfie".[6] Lessons concentrated on history, language, literature and music.[7] To the dismay of the royal family,[8] in 1950 Crawford published a biography of Elizabeth and Margaret's childhood years entitled *The Little Princesses*. The book describes Elizabeth's love of horses and dogs, her orderliness, and her attitude of responsibility.[9] Others

echoed such observations: Winston Churchill described Elizabeth when she was two as "a character. She has an air of authority and reflectiveness astonishing in an infant."[10] Her cousin Margaret Rhodes described her as "a jolly little girl, but fundamentally sensible and well-behaved".[11]

Heiress presumptive

As a granddaughter of the monarch in the male line, Elizabeth's full style at birth was *Her Royal Highness Princess Elizabeth of York*. She was third in the line of succession to the throne, behind her uncle, Edward, Prince of Wales, and her father. Although her birth generated public interest, she was not expected to become queen, as the Prince of Wales was still young, and many assumed he would marry and have children of his own.[12] In 1936, when her grandfather, George V, died and her uncle Edward succeeded, she became second in line to the throne after her father. Later that year, Edward abdicated after his proposed marriage to divorced socialite Wallis Simpson provoked a constitutional crisis.[13] Elizabeth's father became king, and she became heiress presumptive, with the style *Her Royal Highness The Princess Elizabeth*.[14] If her parents had had a son, he would have been heir apparent and above her in the line of succession.[15]

Princess Elizabeth aged 7, 1933
Painting by Philip de László

Elizabeth received private tuition in constitutional history from Henry Marten, Vice-Provost of Eton College,[16] and learned French from a succession of native-speaking governesses.[17] A Girl Guides company, the 1st Buckingham Palace Company, was formed specifically so she could socialise with girls her own age.[18] Later she was enrolled as a Sea Ranger.[17]

In 1939 Elizabeth's parents toured Canada and visited the United States. As in 1927, when her parents had toured Australia and New Zealand, Elizabeth remained in Britain as her father thought her too young to undertake public tours.[19] Elizabeth "looked tearful" as her parents departed.[20] They corresponded regularly,[20] and on 18 May, she and her parents made the first royal transatlantic telephone call.[19]

Second World War

From September 1939, with the outbreak of the Second World War, Elizabeth and Margaret stayed at Balmoral Castle, Scotland, until Christmas 1939, when they moved to Sandringham House, Norfolk.[21] From February to May 1940, they lived at Royal Lodge, Windsor, until moving to Windsor Castle, where they stayed for most of the next five years.[22] The suggestion by senior politician Lord Hailsham that the two princesses should be evacuated to Canada was rejected by Elizabeth's mother; she declared, "The children won't go without me. I won't leave without the King. And the King will never leave."[23] At Windsor, the princesses staged pantomimes at Christmas in aid of the Queen's Wool Fund, which bought yarn to knit into military garments.[24] In 1940, the 14-year-old Elizabeth made her first radio broadcast during the BBC's *Children's Hour*, addressing other children who had been evacuated from the cities.[25] She stated:

> We are trying to do all we can to help our gallant sailors, soldiers and airmen, and we are trying, too, to bear our share of the danger and sadness of war. We know, every one of us, that in the end all will be well.[25]

In 1943, at the age of 16, Elizabeth undertook her first solo public appearance on a visit to the Grenadier Guards, of which she had been appointed Colonel-in-Chief the previous year.[26] As she approached her 18th birthday, the law was changed so that she could act as one of five Counsellors of State in the event of her father's incapacity or absence abroad, such as his visit to Italy in July 1944.[27] In February 1945, she joined the Women's Auxiliary Territorial Service, as an honorary Second Subaltern with the service number of 230873.[28] She trained as a driver and mechanic,[29] and was promoted to honorary Junior Commander five months later.[30]

During the war, plans were drawn up to quell Welsh nationalism by affiliating Elizabeth more closely with Wales.[31] Welsh politicians proposed that Elizabeth be made Princess of Wales on her 18th birthday. The idea was supported by Home Secretary Herbert Morrison, but rejected by the King because he felt such a title belonged solely to the wife of a Prince of Wales, and the Prince of Wales had always been the heir apparent.[32] In 1946, she was inducted into the Welsh Gorsedd of Bards at the National Eisteddfod of Wales.[33]

At the end of the war in Europe, on Victory in Europe Day, Elizabeth and her sister mingled anonymously with the celebratory crowds in the streets of London. She later said in a rare interview, "we asked my parents if we could go out and see for ourselves. I remember we were terrified of being recognised ... I remember lines of unknown people linking arms and walking down Whitehall, all of us just swept along on a tide of happiness and relief."[34] Two years later, the princess made her first overseas tour, when she accompanied her parents through southern Africa. During the tour, in a broadcast to the British Commonwealth on her 21st birthday, she pledged: "I declare before you all that my whole life, whether it be long or short, shall be devoted to your service and the service of our great imperial family to which we all belong."[35]

Marriage

Further information: Wedding of Princess Elizabeth and Philip Mountbatten, Duke of Edinburgh

Elizabeth met her future husband, Prince Philip of Greece and Denmark, in 1934 and 1937.[36] After another meeting at the Royal Naval College in Dartmouth in July 1939, Elizabeth – though only 13 years old – fell in love with Philip, and they began to exchange letters.[37] They married on 20 November 1947 at Westminster Abbey. They are second cousins once removed through King Christian IX of Denmark and third cousins through Queen Victoria. Before the marriage, Philip renounced his Greek and Danish titles, converted from Greek Orthodoxy to Anglicanism, and adopted the style *Lieutenant Philip*

Mountbatten, taking the surname of his mother's British family.[38] Just before the wedding, he was created Duke of Edinburgh and granted the style of *His Royal Highness*.[39]

The marriage was not without controversy: Philip had no financial standing, was foreign-born (though a British subject), and had sisters who had married German noblemen with Nazi links.[40] Marion Crawford wrote, "Some of the King's advisors did not think him good enough for her. He was a prince without a home or kingdom. Some of the papers played long and loud tunes on the string of Philip's foreign origin."[41] Elizabeth's mother was reported, in later biographies, to have opposed the union initially, even dubbing Philip "The Hun".[42] In later life, however, she told biographer Tim Heald that Philip was "an English gentleman".[43]

Elizabeth and Philip received 2500 wedding gifts from around the world,[44] but Britain had not yet completely rebounded from the devastation of the war. Elizabeth still required ration coupons to buy the material for her gown, designed by Norman Hartnell.[45] In post-war Britain, it was not acceptable for the Duke of Edinburgh's German relations to be invited to the wedding, including Philip's three surviving sisters.[46] Edward, the former king, was not invited either.[47]

Elizabeth gave birth to her first child, Prince Charles, on 14 November 1948, less than one month after letters patent were issued by her father allowing her children to use the style and title of a royal prince or princess. They otherwise would not have been entitled to such a status as their father was no longer a royal prince.[48] A second child, Princess Anne, was born in 1950.[49]

Following their wedding, the couple leased Windlesham Moor near Windsor Castle, until 4 July 1949,[44] when they took up residence at Clarence House in London. At various times between 1949 and 1951, the Duke of Edinburgh was stationed in the British Protectorate of Malta as a serving Royal Navy officer. He and Elizabeth lived intermittently, for several months at a time, in the Maltese hamlet of Gwardamanġia, at the Villa Gwardamanġia, the rented home of Philip's uncle, Lord Mountbatten. The children remained in Britain.[50]

Reign

Accession and coronation

George VI's health declined during 1951, and Elizabeth was soon frequently standing in for him at public events. In October of that year, she toured Canada, and visited President Truman in Washington, D.C.; on the trip, her private secretary, Martin Charteris, carried a draft accession declaration for use if the King died while she was on tour.[51] In early 1952, Elizabeth and Philip set out for a tour of Australia and New Zealand by way of Kenya. On 6 February 1952, they had just returned to their Kenyan home, Sagana Lodge, after a night spent at Treetops Hotel, when word arrived of the death of Elizabeth's father. Philip broke the news to the new queen.[52] Martin Charteris asked her to choose a regnal name; she chose to remain Elizabeth, "of course".[53] She was proclaimed queen throughout her realms, and the royal party hastily returned to the United Kingdom.[54] She and the Duke of Edinburgh moved into Buckingham Palace.[55]

With Elizabeth's accession it seemed likely that the royal house would bear her husband's name. Lord Mountbatten thought it would be the *House of Mountbatten*, as Elizabeth would typically have taken Philip's last name on marriage; however Elizabeth's grandmother Queen Mary and British Prime Minister Winston Churchill favoured the retention of the House of Windsor, and so Windsor it remained. The Duke complained, "I am the only man in the country not allowed to give his name to his own children."[56] After the death of Queen Mary on 24 March 1953 and the resignation of Churchill in 1955, the surname *Mountbatten-Windsor* was adopted in

Coronation portrait of Queen Elizabeth II and the Duke of Edinburgh, June 1953

1960 for Philip and Elizabeth's male-line descendants who do not carry royal titles.[57]

Amid preparations for the coronation, Princess Margaret informed her sister that she wished to marry Peter Townsend, a divorced commoner 16 years older than Margaret with two sons from his previous marriage. The Queen asked them to wait for a year; in the words of Martin Charteris, "the Queen was naturally sympathetic towards the Princess, but I think she thought – she hoped – given time, the affair would peter out."[58] Senior politicians were against the match, and the Church of England did not permit re-marriage after divorce. If Margaret contracted a civil marriage, she would have to renounce her right of succession.[59] Eventually, she decided to abandon her plans with Townsend.[60] In 1960, she married Antony Armstrong-Jones, who was created Earl of Snowdon the following year. They were divorced in 1978. She did not remarry.[61]

Despite the death of Queen Mary ten weeks before, the coronation went ahead on 2 June 1953. Before she died, Mary had asked that the coronation not be delayed.[62] The ceremony in Westminster Abbey, except the anointing and communion, was televised for the first time,[63] and the coverage was instrumental in boosting the medium's popularity; the number of television licences in the United Kingdom doubled to 3 million,[64] and many of the more than 20 million British viewers watched television for the first time in the homes of their friends or neighbours.[65] In North America, just under 100 million viewers watched recorded broadcasts.[66] Elizabeth's coronation gown was commissioned from Norman Hartnell and embroidered on her instructions with the floral emblems of Commonwealth countries:[67] English Tudor rose, Scots thistle, Welsh leek, Irish shamrock, Australian wattle, Canadian maple leaf, New Zealand silver fern, South African protea, lotus flowers for India and Ceylon, and Pakistan's wheat, cotton, and jute.[68]

Continuing evolution of the Commonwealth

Further information: Historical development of the Commonwealth realms

Elizabeth witnessed, over her life, the ongoing transformation of the British Empire into the Commonwealth of Nations. By the time of Elizabeth's accession in 1952, her role as nominal head of multiple independent states was already established.[69] Spanning 1953–54, the Queen and her husband embarked on a six-month around-the-world tour. She became the first reigning monarch of Australia and New Zealand to visit those nations.[70] During the tour, crowds were immense; three-quarters of the population of Australia were estimated to have seen the Queen.[71] Throughout her reign, Elizabeth has undertaken state visits to foreign countries, and tours of Commonwealth ones. She is the most widely travelled head of state in history.[72]

In 1956, French Prime Minister Guy Mollet and British Prime Minister Sir Anthony Eden discussed the possibility of France joining the Commonwealth. The proposal was never accepted, and the following

Queen Elizabeth with Prime Minister of Australia Robert Menzies during her first visit to Australia in 1954

year France signed the Treaty of Rome, which established the European Economic Community, the precursor of the European Union.[73] In November 1956, Britain and France invaded Egypt in an ultimately unsuccessful attempt to capture the Suez Canal. Lord Mountbatten claimed the Queen was opposed to the invasion, though Eden denied it. Eden resigned two months later.[74]

The absence of a formal mechanism within the Conservative Party for choosing a leader meant that, following Eden's resignation, it fell to the Queen to decide whom to commission to form a government. Eden recommended that she consult Lord Salisbury (the Lord President of the Council). Lord Salisbury and Lord Kilmuir (the Lord Chancellor) consulted the Cabinet, Winston Churchill, and the Chairman of the backbench 1922 Committee, as a result of which the Queen appointed their recommended candidate: Harold Macmillan.[75]

The Suez crisis and the choice of Eden's successor led in 1957 to the first major personal criticism of the Queen. In a magazine, which he owned and edited,[76] Lord Altrincham accused her of being "out of touch".[77] Altrincham was denounced by public figures and physically attacked by a member of the public appalled at his comments.[78] Six years later in 1963, Macmillan resigned and advised the Queen to appoint the Earl of Home as prime minister, advice that she followed.[79] The Queen again came under criticism for appointing the Prime Minister on the advice of a small number of ministers, or a single minister.[79] In 1965, the Conservatives adopted a formal mechanism for choosing a leader, thus relieving her of involvement.[80]

In 1957, she made a state visit to the United States, where she addressed the United Nations General Assembly. On the same tour, she opened the 23rd Canadian Parliament, becoming the first monarch of Canada to open a parliamentary session.[81] Two years later, she revisited the United States as a representative of Canada.[81][82] In 1961, she toured Cyprus, India, Pakistan, Nepal, and Iran.[83] On a visit to Ghana the same year, she dismissed fears for her safety, even though her host President Kwame Nkrumah, who had replaced her as head of state, was a target for assassins.[84] Harold Macmillan wrote: "The Queen has been absolutely determined all through ... She is impatient of the attitude towards her to treat her as ... a film star ... She has indeed 'the heart and stomach of a man' ... She loves her duty and means to be a Queen."[84]

Elizabeth (left) with US First Lady Pat

Elizabeth's pregnancies with Princes Andrew and Edward in 1959 and 1963, respectively, mark the only times she has not performed the State Opening of the British parliament during her reign.[85] In addition to performing traditional ceremonies, she also instituted new practices. Her first royal walkabout, meeting ordinary members of the public, took place during a tour of Australia and New Zealand in 1970.[86]

The 1960s and 1970s saw an acceleration in the decolonisation of Africa and the Caribbean. Over 20 countries gained independence from Britain as part of a planned transition to self-government. In 1965, however, Rhodesian Prime Minister Ian Smith declared unilateral independence in opposition to moves toward majority black rule. Although the Queen dismissed Smith in a formal declaration and the international community applied sanctions against Rhodesia, Smith's regime survived for over a decade.[87]

In February 1974, British Prime Minister Edward Heath called a general election in the middle of the Queen's tour of the Austronesian Pacific

Nixon, 1970; President Nixon is hidden from view, next to British Prime Minister Edward Heath, behind Elizabeth

Rim and she had to fly back to Britain, interrupting the tour.[88] The inconclusive result of the election meant that Heath, whose Conservative party had the largest share of the popular vote but no overall majority, could stay in office if he formed a coalition with the Liberals. Heath only resigned when discussions on forming a cooperative government foundered, after which the Queen asked the Leader of the Opposition, Labour's Harold Wilson, to form a government.[89]

A year later, at the height of the 1975 Australian constitutional crisis, Australian Prime Minister Gough Whitlam was dismissed from his post by Governor-General Sir John Kerr after the Opposition-controlled Senate rejected Whitlam's budget proposals.[90] As Whitlam had a majority in the House of Representatives, Speaker Gordon Scholes appealed to the Queen to reverse Kerr's decision. Elizabeth declined, stating that she would not interfere in decisions reserved by the constitution of Australia for the governor-general.[91] The crisis fuelled Australian republicanism.[90]

Silver Jubilee

In 1977, Elizabeth marked the Silver Jubilee of her accession. Parties and events took place throughout the Commonwealth, many coinciding with the Queen's associated national and Commonwealth tours. The celebrations re-affirmed the Queen's popularity, despite virtually coincident negative press coverage of Princess Margaret's separation from her husband.[92] In 1978, Elizabeth endured a state visit to the United Kingdom by Romania's communist dictator Nicolae Ceauşescu, and his wife Elena,[93] though privately she thought they had "blood on their hands".[94] The following year brought two blows: one was the unmasking of Anthony Blunt, former Surveyor of the Queen's Pictures, as a communist spy; the other was the assassination of her relative and in-law Lord Mountbatten by the Provisional Irish Republican Army.[95]

According to Paul Martin, Sr., by the end of the 1970s the Queen was worried the Crown "had little meaning for" Canadian Prime Minister Pierre Trudeau.[96] Tony Benn said that the Queen found Trudeau "rather disappointing".[96] Trudeau's supposed republicanism seemed to be confirmed by his antics, such as sliding down banisters at Buckingham Palace and pirouetting behind the Queen's back in 1977, and the removal of various Canadian royal symbols during his term of office.[96] In 1980, Canadian politicians sent to London to discuss the patriation of the Canadian constitution found the Queen "better informed on ... Canada's constitutional case than any of the British politicians or bureaucrats".[96] She was interested in the constitutional debate after the failure of Bill C-60, which would have affected her role as head of state.[96] Patriation removed the role of the British parliament in the Canadian constitution, but the monarchy was retained. Trudeau said in his memoirs: "The Queen favoured my attempt to reform the Constitution. I was always impressed not only by the grace she displayed in public at all times, but by the wisdom she showed in private conversation."[97]

1980s

During the 1981 Trooping the Colour ceremony, and only six weeks before the wedding of Charles, Prince of Wales, and Lady Diana Spencer, six shots were fired at the Queen from close range as she rode down The Mall on her horse, Burmese. Police later discovered that the shots were blanks. The 17-year-old assailant, Marcus Sarjeant, was sentenced to five years in prison and released after three.[98] The Queen's composure and skill in controlling her mount were widely praised.[99] The following year, the Queen awoke in her bedroom at Buckingham Palace to find an intruder, Michael Fagan, in the room with her. Remaining calm, and through two calls to the palace police switchboard, the Queen spoke to Fagan while he sat at the foot of her bed until

assistance arrived seven minutes later.[100] From April to September that year, the Queen remained anxious[101] but proud[102] of her son, Prince Andrew, who was serving with British forces during the Falklands War. Though she hosted President Ronald Reagan at Windsor Castle in 1982, and visited his Californian ranch in 1983, she was angered when his administration ordered the invasion of Grenada, one of her Caribbean realms, without her foreknowledge.[103]

Elizabeth riding Burmese at a Trooping the Colour ceremony

Intense media interest in the opinions and private lives of the royal family during the 1980s led to a series of sensational stories in the press, not all of which were entirely true.[104] As Kelvin MacKenzie, editor of *The Sun*, told his staff: "Give me a Sunday for Monday splash on the Royals. Don't worry if it's not true – so long as there's not too much of a fuss about it afterwards."[105] Newspaper editor Donald Trelford wrote in *The Observer* of 21 September 1986: "The royal soap opera has now reached such a pitch of public interest that the boundary between fact and fiction has been lost sight of ... it is not just that some papers don't check their facts or accept denials: they don't care if the stories are true or not." It was reported, most notably in *The Sunday Times* of 20 July 1986, that Elizabeth was worried that British Prime Minister Margaret Thatcher's economic policies fostered social divisions, and was alarmed by high unemployment, a series of riots, the violence of a miners' strike, and Thatcher's refusal to apply sanctions against the apartheid regime in South Africa. The sources of the rumours included royal aide Michael Shea and Commonwealth Secretary-General Shridath Ramphal, but Shea claimed his remarks were taken out of context and embellished by speculation.[106] Thatcher reputedly said the Queen would vote for the Social Democratic Party—Thatcher's political opponents.[107] Thatcher's biographer John Campbell claimed "... the report was a piece of journalistic mischief-making".[108] Belying reports of acrimony between them, Thatcher later conveyed her personal admiration for the Queen,[109] and after Thatcher's replacement by John Major, Elizabeth gave two honours in her personal gift to Thatcher: appointment to the Order of Merit and the Order of the Garter.[110]

In 1987, the elected Fijian government was deposed in a military coup. Elizabeth, as head of state, supported the attempts of the Governor-General, *Ratu* Sir Penaia Ganilau, to assert executive power and negotiate a settlement. Coup leader Sitiveni Rabuka deposed Ganilau, abolished the monarchy, and declared Fiji a republic.[111] By the start of 1991, republican feeling in Britain had risen because of press estimates of the Queen's private wealth, which were contradicted by the palace, and reports of affairs and strained marriages among her extended family.[112] The involvement of the younger royals in the charity game show *It's a Royal Knockout* was ridiculed,[113] and the Queen was the target of satire.[114]

1990s

In 1991, in the wake of victory in the Gulf War, Elizabeth became the first British monarch to address a joint session of the United States Congress.[115] The following year, she attempted to save the failing marriage of her eldest son, Charles, by counselling him and his wife, Diana, Princess of Wales, to reconcile.[116]

In a speech on 24 November 1992, to mark the 40th anniversary of her accession, the Queen called 1992 her *annus horribilis*, meaning *horrible year*.[117] In March, her second son Prince Andrew, Duke of York, and his wife Sarah, Duchess of York, separated. In April, her daughter Anne, Princess Royal, divorced her husband Captain Mark Phillips.[118] During a state visit to Germany in October, angry demonstrators in Dresden threw eggs at her,[119] and in November Windsor Castle suffered severe fire damage. The monarchy received increased criticism and public scrutiny.[120] In an unusually personal speech, Elizabeth said that any institution must expect

Prince Philip and Elizabeth II, October 1992

criticism, but suggested it be done with "a touch of humour, gentleness and understanding".[121] Two days later, Prime Minister John Major announced reforms of the royal finances that had been planned since the previous year, including the Queen paying income tax for the first time, starting in 1993, and a reduction in the civil list.[122] In December, Charles and Diana formally separated.[123] The year ended with a lawsuit as the Queen sued *The Sun* newspaper for breach of copyright when it published the text of her annual Christmas message two days before its broadcast. The newspaper was forced to pay her legal fees, and donated £200,000 to charity.[124]

In the ensuing years, public revelations on the state of Charles and Diana's marriage continued.[125] Even though support for a British republic seemed higher than at any time in living memory, republicanism remained a minority viewpoint and Elizabeth herself had high approval ratings.[126] Criticism was focused on the institution of monarchy itself and the Queen's wider family rather than the Queen's own behaviour and actions.[127] In consultation with Prime Minister Major, Archbishop of Canterbury George Carey, her private secretary Robert Fellowes, and her husband, she wrote to Charles and Diana at the end of December 1995, saying that a divorce was desirable.[128] A year after the divorce, which took place in 1996, Diana was killed in a car crash in Paris on 31 August 1997. The Queen was on holiday with her son and grandchildren at Balmoral. Diana's two sons wanted to attend church, and so the Queen and Prince Philip took them that morning.[129] After that single public appearance, for five days the Queen and the Duke shielded their grandsons from the intense press interest by keeping them at Balmoral where they could grieve in private.[130] The royal family's seclusion caused public dismay.[131] Pressured by the hostile reaction, the Queen agreed to a live broadcast to the world, the day before Diana's funeral and returned to London to deliver it on 5 September.[132] In the broadcast, she expressed admiration for Diana, and her feelings "as a grandmother" for Princes William and Harry.[133] As a result, much of the public hostility evaporated.[133]

Golden Jubilee and beyond

In 2002, Elizabeth marked her Golden Jubilee as queen. Her sister and mother died in February and March, respectively, and the media speculated as to whether the Jubilee would be a success or a failure.[134] She again undertook an extensive tour of her realms, which began in Jamaica in February, where she called the farewell banquet "memorable" after a power cut plunged the King's House, the official residence of the Governor-General, into darkness.[135] As in 1977, there were street parties and commemorative events, and monuments were named to honour the occasion. A million people attended each day of the three-day main Jubilee celebration in London,[136] and the enthusiasm shown by the public for Elizabeth was greater than many journalists had predicted.[137]

Elizabeth II and George W. Bush share a toast during a state dinner at the

Though generally healthy throughout her life, in 2003 she had keyhole surgery on both knees, and in June 2005 she cancelled several engagements after contracting a bad cold. In October 2006, she missed

the opening of the new Emirates Stadium because of a strained back muscle that had been troubling her since the summer.[138] Two months later, she was seen in public with a bandage on her right hand, which led to press speculation of ill health.[139] She had been bitten by one of her corgis while she was separating two that were fighting.[140]

White House, 7 May 2007

Elizabeth II (centre, in pink) during a walkabout in Queen's Park, Toronto, 6 July 2010

In May 2007, *The Daily Telegraph* newspaper reported claims from unnamed sources that the Queen was "exasperated and frustrated" by the policies of British Prime Minister Tony Blair, that she had shown concern that the British Armed Forces were overstretched in Iraq and Afghanistan, and that she had raised concerns over rural and countryside issues with Blair repeatedly.[141] She was, however, said to admire Blair's efforts to achieve peace in Northern Ireland.[142] On 20 March 2008, at the Church of Ireland St Patrick's Cathedral, Armagh, the Queen attended the first Maundy service held outside of England and Wales.[143] At the invitation of Irish President Mary McAleese, in May 2011 the Queen made the first state visit to the Republic of Ireland by a British monarch.[144]

Elizabeth addressed the United Nations for a second time in 2010, again in her capacity as queen of all her realms and Head of the Commonwealth.[145] UN Secretary General Ban Ki-moon introduced her as "an anchor for our age".[146] During her visit to New York, which followed a tour of Canada, she officially opened a memorial garden for the British victims of the 11 September attacks.[146]

The Queen's visit to Australia in October 2011, her 16th visit since 1954, was called her "farewell tour" in the press because of her age.[147] Elizabeth plans to celebrate her Diamond Jubilee in 2012, marking 60 years as Queen. She is the longest-lived and second-longest-reigning monarch of the United Kingdom, and the second-longest-serving current head of state (after King Bhumibol Adulyadej of Thailand). She does not intend to abdicate,[148] though the proportion of public duties performed by Prince Charles may increase as Elizabeth reduces her commitments.[149]

She is scheduled to open the 2012 Summer Olympics on 27 July and the Paralympics on 29 August in London. Her father, George VI, opened the 1948 London Olympics, and her great-grandfather, Edward VII, opened the 1908 London Olympics. Elizabeth also opened the 1976 Games in Canada, and Prince Philip opened the Melbourne Olympics in 1956.[150]

Public perception and character

Main article: Personality and image of Queen Elizabeth II

Since Elizabeth rarely gives interviews, little is known of her personal feelings. As a constitutional monarch, she has not expressed her own political opinions in a public forum. She does have a deep sense of religious and civic duty, and takes her coronation oath seriously.[151] Aside from her official religious role as Supreme Governor of the established Church of England, she personally worships with that church and with the national Church of Scotland.[152] She has demonstrated support for inter-faith relations, and has met with leaders of other religions, and granted her personal patronage to the Council of Christians and Jews.[153] A personal note about her faith often features in her annual Royal Christmas Message broadcast to the Commonwealth, such as in 2000, when she spoke about the theological significance of the millennium marking the 2000th anniversary of the birth of

Jesus Christ:

> To many of us, our beliefs are of fundamental importance. For me the teachings of Christ and my own personal accountability before God provide a framework in which I try to lead my life. I, like so many of you, have drawn great comfort in difficult times from Christ's words and example.[154]

Elizabeth II and Ronald Reagan riding at Windsor, 1982

Elizabeth is the patron of over 600 charities and other organisations.[155] Her main leisure interests include equestrianism and dogs, especially her Pembroke Welsh Corgis.[156] Her clothes consist mostly of solid-colour overcoats and decorative hats, which allow her to be seen easily in a crowd.[157]

In the 1950s, as a young woman at the start of her reign, Elizabeth was depicted as a glamorous "fairytale Queen".[158] After the trauma of the war, it was a time of hope, a period of progress and achievement heralding a "new Elizabethan age".[159] Lord Altrincham's accusation in 1957 that her speeches sounded like those of a "priggish schoolgirl" was an extremely rare criticism.[160] In the late 1960s, attempts to portray a more modern image of monarchy were made in the television documentary *Royal Family*, and by televising Prince Charles's investiture as Prince of Wales.[161]

At her Silver Jubilee in 1977, the crowds and celebrations were genuinely enthusiastic,[162] but in the 1980s public criticism of the royal family increased, as the personal and working lives of Elizabeth's children came under media scrutiny.[163] Elizabeth's popularity sank to a low point in the 1990s. Under pressure from public opinion, she began to pay income tax for the first time, and Buckingham Palace was opened to the public.[164] Discontent with the monarchy reached its peak on the death of Diana, Princess of Wales, though the Queen's popularity rebounded after her live broadcast to the world five days after Diana's death.[165]

In November 1999, a referendum in Australia on the future of the Australian monarchy favoured its retention in preference to an indirectly elected head of state.[166] Polls in Britain in 2006 and 2007 revealed strong support for Elizabeth,[167] and referendums in Tuvalu in 2008 and Saint Vincent and the Grenadines in 2009 both rejected proposals to become republics.[168]

Finances

Further information: Finances of the British Royal Family

Elizabeth's personal fortune has been the subject of speculation for many years. *Forbes* magazine estimated her net worth at around US$450 million in 2010,[169] but official Buckingham Palace statements in 1993 called estimates of £100 million "grossly overstated".[170] Jock Colville, who was her former private secretary and a director of her bank, Coutts, estimated her wealth in 1971 at £2 million (the equivalent of about £21 million today[171]).[172][173] The Royal Collection, which includes artworks and the Crown Jewels, is not owned by the Queen personally and is held in trust,[174] as are the occupied palaces in the United Kingdom such as Buckingham Palace and Windsor Castle,[175]

Sandringham House, Elizabeth's private residence in Sandringham, Norfolk

and the Duchy of Lancaster, a property portfolio valued at £383 million in 2011.[176] Sandringham House and Balmoral Castle are privately owned by the Queen.[175] The British Crown Estate—with holdings of £7.3 billion in 2011[177]—is held in trust for the nation, and cannot be sold or owned by Elizabeth in a private capacity.[178]

Titles, styles, honours, and arms

Titles and styles

Main article: List of titles and honours of Queen Elizabeth II

Personal Flag of Queen Elizabeth II

Elizabeth has held titles throughout her life, as a granddaughter of the monarch, as a daughter of the monarch, through her husband's titles, and eventually as Sovereign. In common parlance, she is *The Queen* or *Her Majesty*. Officially, she has a distinct title in each of her realms: Queen of Canada in Canada, Queen of Australia in Australia, etc. In the Channel Islands and Isle of Man, which are Crown dependencies rather than separate realms, she is known as Duke of Normandy and Lord of Mann respectively. Additional styles include Defender of the Faith and Duke of Lancaster. When in conversation with the Queen, the practice is to initially address her as *Your Majesty* and thereafter as *Ma'am*.[179]

She has received honours and awards from around the world, and has held honorary military positions throughout the Commonwealth, both before and after her accession.

Arms

See also: Flags of Elizabeth II

From 21 April 1944, Elizabeth's arms consisted of a lozenge bearing the royal coat of arms of the United Kingdom, differenced with a label of three points argent, the centre point bearing a Tudor rose and the first and third a cross of St. George.[180] After her accession as Sovereign, she adopted the royal coat of arms undifferenced. The design of the shield is also used on the Royal Standard of the United Kingdom. Elizabeth has personal flags for use in Canada, Australia, New Zealand, Jamaica, Barbados, and elsewhere.[181]

The **House of Windsor** is the royal house of the Commonwealth realms. It was founded by King George V by royal proclamation on the 17 July 1917, when he changed the name of his family from the German **Saxe-Coburg and Gotha** (a branch of the House of Wettin) to the English *Windsor*, due to the anti-German sentiment in the United Kingdom during World War I. Currently, the most prominent member of the House of Windsor is Queen Elizabeth II, the reigning monarch of the Commonwealth realms.

Foundation [edit]

"A God from P… comme… relinqu… membe…

Edward VII, and, in turn, his son, George V were members of the House of Saxe-Coburg and Gotha, a German ducal family, by virtue of their descent from Albert, Prince Consort, husband of Queen Victoria. High anti-German sentiment amongst the people of the British Empire during World War I reached a peak in March 1917, when the Gotha G.IV, a heavy aircraft capable of crossing the English Channel began bombing London directly. The aircraft became a household name, and the name *Gotha* was part of the name of the royal family, *Saxe-Coburg-Gotha*. These bombings were coupled with the abdication of King George's first cousin, Nicholas II, the Tsar of Russia on 15 March 1917, which raised the spectre of the eventual abolition of all the monarchies in Europe. The King and his family were finally convinced to abandon all titles held under the German Crown, and to change German titles and house names to anglicised versions. Hence, on 17 July 1917, a royal proclamation issued by George V declared:

> Now, therefore, We, out of Our Royal Will and Authority, do hereby declare and announce that as from the date of this Our Royal Proclamation Our House and Family shall be styled and known as the House and Family of Windsor, and that all the descendants in the male line of Our said Grandmother Queen Victoria who are subjects of these Realms, other than female descendants who may marry or may have married, shall bear the said Name of Windsor....[1]

Upon hearing that his cousin had changed the name of the British royal house to Windsor, German Emperor Wilhelm II remarked jokingly that he planned to see Shakespeare's play *The Merry Wives of Saxe-Coburg-Gotha*.

The name had a long association with British royalty, through the town of Windsor, Berkshire and Windsor Castle, a link reflected in the Round Tower of Windsor Castle being the basis of the badge of the House of Windsor.

Also in 1917 Prince Louis of Battenberg adopted the surname Mountbatten, a partial translation into English. Prince Louis is the maternal grandfather of Prince Philip, Duke of Edinburgh. From 1917 to 1919, George V also stripped 15 of his German relations - most of whom belonged to the House of Hanover - of their British titles and styles of prince and princess.

Descendants of Elizabeth II [edit]

When Princess Elizabeth (as she then was) married Prince Philip of Greece and Denmark, the standard practice would be to adopt the name of his royal house. Because he was a prince, Prince Philip did not have a surname but he was of the House of Schleswig-Holstein-Sonderburg-Glücksburg, a branch of the House of Oldenburg, and that ruled or rules as Kings of Greece, Denmark and Norway. Not wishing to repeat the difficulties of three decades previous, before his marriage Prince Philip renounced his titles and adopted the surname Mountbatten, the literal translation of the German Battenberg that his maternal grandfather had adopted in 1917. The Mountbatten/Battenberg name refers to Battenberg, a small town in Hesse.

On 9 April 1952, Queen Elizabeth II officially declared her "Will and Pleasure that I and My children shall be styled and known as the House and Family of Windsor, and that my descendants who marry and their descendants, shall bear the name of Windsor."[2] On 8 February 1960, the Queen confirmed that she and her children would continue to be known as the House and Family of Windsor, as would any agnatic descendants who enjoy the style of Royal Highness, and the title of Prince or Princess.[2] Still, Elizabeth also decreed that her agnatic descendants who do not have that style and title would bear the surname Mountbatten-Windsor.[2]

Any future monarch can change the dynastic name through a similar royal proclamation, as royal proclamations do not have statutory authority.[3]

Members [edit]

The 1917 proclamation stated that the name of the Royal House and all British descendants of Victoria and Albert in the male line were to bear the name of Windsor, except for women who married into other families.

By early 1919 the living male-line British descendants of Victoria subject to British rule were King George V, his five sons, his daughter Princess Mary, his unmarried sister Princess Victoria, his uncle Prince Arthur, Duke of Connaught and Strathearn, his cousin Prince Arthur of Connaught, his cousin once removed Prince Alastair of Connaught, and his unmarried cousin Princess Patricia of Connaught. Prince Alastair and Princess Patricia were created by [illegible] and subsequent members of the Lascelles family, and Princess Patricia married Alexander Ramsay of Mar. Neither of the Prince Arthurs had any [illegible]

House of Windsor descend from the sons of George V.

Two of George V's sons, Edward VIII (later Duke of Windsor) and Prince John, had no children, so the entire present day members of the House of Windsor are descendants of the other three sons, Prince Albert, Duke of York (later George VI), Prince Henry, Duke of Gloucester, and Prince George, Duke of Kent. All descendants living and dead are shown in the table.

As of January 2011, two of these descendants are dead: Princess Margaret, Countess of Snowdon, and Prince William of Gloucester. Seven are Roman Catholic or are married to a Roman Catholic (labelled "CA" in the table), and are thus excluded from the succession. The remaining 43 are in the line of succession:

- Descendants of George V in male line
- Descendants of Queen Elizabeth II and Philip, Duke of Edinburgh, in male line
- Other descendants of the House of Windsor

Generations from George V	Place in the line of succession	Name	Birth (& Age)	Image

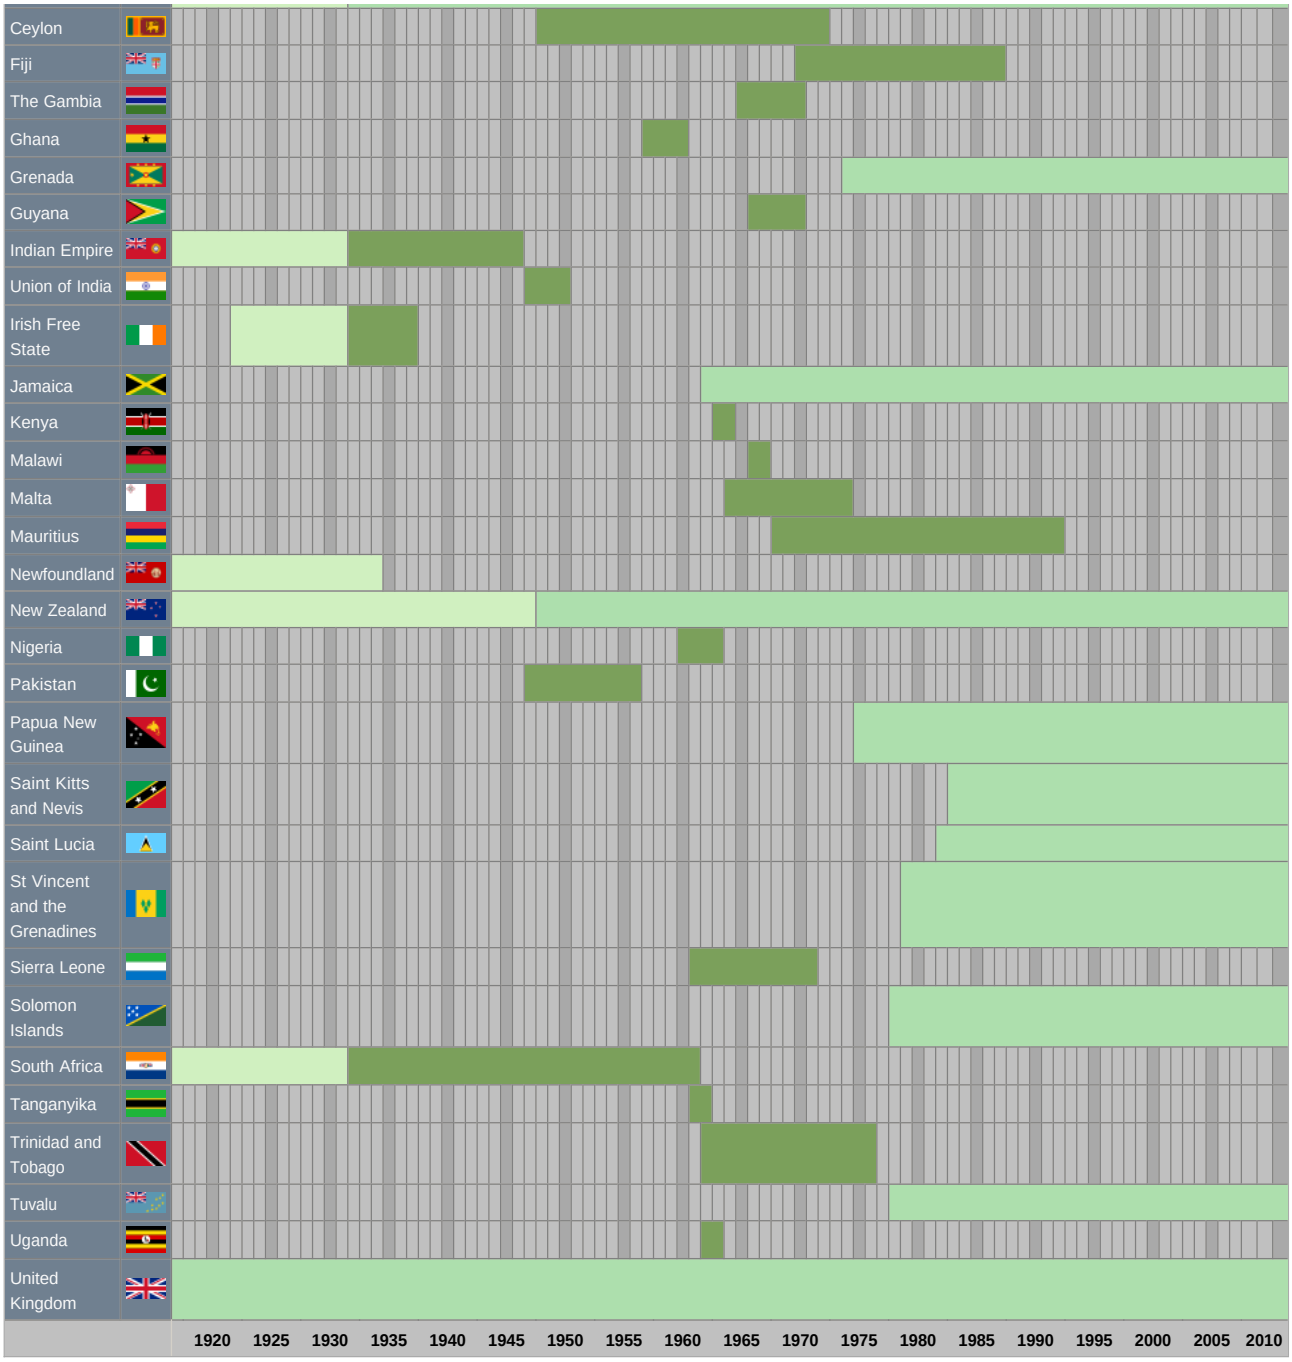
Titles [edit]



Designation and details [edit]

At the creation of the House of Windsor, its head reigned over a unitary British Empire. Following the end of the First World War, however, geo-political shifts took place that saw the emergence of the Dominions as sovereign states, the first step being the issuance of the Balfour Declaration in 1926, followed by the Royal and Parliamentary Titles Act the next year, and the Statute of Westminster in 1931. From then on, the House of Windsor became the royal house of multiple countries, a number that shifted over the decades, as some Dominions became republics and Crown colonies became realms, republics or monarchies under a different sovereign. Since 1949, two monarchs of the House of Windsor, George VI and Elizabeth II, have also been Head of the Commonwealth of Nations, comprising most (but not all) parts of the former British Empire and some states that were never part of it.

In the chart below, the countries are differentiated between light green (realms of the House of Windsor as dominions), medium green (present realms of the House of Windsor), and dark green (former realms of the House of Windsor).

Notes [edit]

1. ^ Princess Anne is not 4th in line, as would be expected by her birth order, but 10th. This is a result of the rule of male-preference primogeniture currently practiced by the British monarchy.

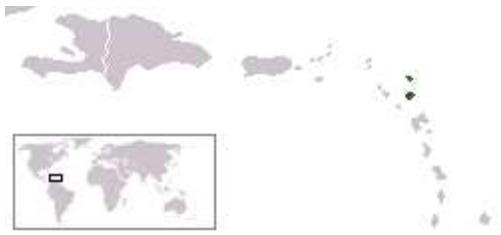
Antigua and Barbuda

From Wikipedia, the free encyclopedia

Antigua and Barbuda (/ænˈtiːgə ænd bɑrˈbjuːdə/; Spanish for "ancient" and "bearded") is a twin-island nation lying between the Caribbean Sea and the Atlantic Ocean. It consists of two major inhabited islands, Antigua and Barbuda, and a number of smaller islands (including Great Bird, Green, Guinea, Long, Maiden and York Islands and further south, the island of Redonda). The permanent population number approximately 81,800 (at the 2011 Census) and the capital and largest port and city is St. John's, on Antigua.



Separated by a few nautical miles, Antigua and Barbuda are in the middle of the Leeward Islands, part of the Lesser Antilles, roughly at 17 degrees north of the Equator. The country is nicknamed "Land of 365 Beaches" due to the many beaches surrounding the islands. Its governance, language, and culture have all been strongly influenced by the British Empire, of which the country was formerly a part.

1 *God Save The Queen* is the official national anthem but it is generally used only on regal and vice-regal occasions.

Antigua was first settled by Archaic Age hunter-gatherer Amerindians, erroneously referred to as Siboney or Ciboney. Carbon-dating has established that the earliest settlements started around 3100 BC. They were succeeded by the Ceramic Age pre-Columbian Arawak-speaking Saladoid people who migrated from the lower Orinoco River.

The Arawaks introduced agriculture, raising, among other crops, the famous Antigua Black Pineapple (Moris cultivar of *Ananas comosus*), corn, sweet potatoes (white with firmer flesh than the bright orange "sweet potato" used in the United States), chiles, guava, tobacco and cotton.

The indigenous West Indians made excellent sea-going vessels which they used to sail the Atlantic and the Caribbean. As a result, Caribs and Arawaks were able to colonize much of South America and the Caribbean Islands. Their descendants still live there, notably in Brazil, Venezuela and Colombia.

Most Arawaks left Antigua around 1100 AD; those who remained were later raided by the Caribs. According to the *Catholic Encyclopedia*, the Caribs' superior weapons and seafaring prowess allowed them to defeat most of the West Indian Arawak nations, enslaving some and possibly cannibalizing others.

The *Catholic Encyclopedia* does make it clear that the European invaders had some difficulty differentiating between the native peoples they encountered. As a result, the number and types of ethnic/tribal groups in existence at that time may have been much more varied and numerous than just the two mentioned in this article.

European and African diseases, malnutrition and slavery eventually killed most of the Caribbean's native population, although no researcher has conclusively proven any of these causes as the real reason for these deaths.[2] Smallpox was probably the greatest killer.[3] In fact, some historians believe that the psychological stress of slavery may also have played a part in the massive number of deaths amongst enslaved natives. Others believe that the reportedly abundant, but starchy, low-protein diet may have contributed to severe malnutrition of the Amerindians, who were used to a diet fortified with protein from the sea.[2]

The island of Antigua, originally called "Wa'ladli" by Arawaks, is today called "Wadadli" by locals. It is possible that Caribs called it "Wa'omoni". Christopher Columbus, while sailing by in 1493, may have named it Santa Maria la Antigua after an icon in the Spanish Seville Cathedral. The Spaniards did not colonize Antigua because it lacked fresh water but not aggressive Caribs.

The English settled on Antigua in 1632; Sir Christopher Codrington settled on Barbuda in 1684. Slavery, established to run sugar plantations around 1684, was abolished in 1834. The British ruled from 1632 to 1981, with a brief French interlude in 1666.

The islands became an independent state within the Commonwealth Realm system on November 1, 1981, with Elizabeth II as the first Queen of Antigua and Barbuda. The Right Honourable Vere Cornwall Bird became the first Prime Minister.

Politics

Main article: Politics of Antigua and Barbuda

Map of Antigua and Barbuda.

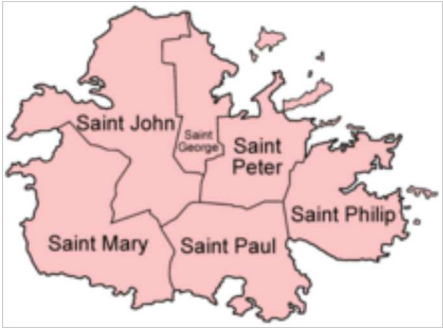
The politics of Antigua and Barbuda take place within a framework of a federal, parliamentary, representative democratic monarchy, in which the Head of State is the Monarch who appoints the Governor General as vice-regal representative. Elizabeth II is the present Queen of Antigua and Barbuda, having served in that position since the islands' independence from the United Kingdom in 1981. The Queen is currently represented by Governor General Dame Louise Lake-Tack (1944–) who became the first woman to hold this position. A Council of Ministers is appointed by the Governor General on the advice of the Prime Minister, currently Winston Baldwin Spencer (1948–). The Prime Minister is the Head of Government.

Executive power is exercised by the government while legislative power is vested in both the government and the two Chambers of Parliament. The bicameral Parliament consists of the Senate (17 members appointed by members of the government and the opposition party, and approved by the Governor-General), and the House of Representatives (17 members elected by first past the post (check this entry) to serve five-year terms). The Speaker of the House is author and former St. John's University professor (New York) D. Gisele Isaac (check), while the President of the Senate is educator Hazlyn Francis-Mason.

The last elections held were on March 12, 2009, during which the Antigua Labour Party won seven seats, the United Progressive Party nine and the Barbuda People's Movement one.

Since 1949, the party system had been dominated by the populist Antigua Labour Party. However, the Antigua and Barbuda legislative election of 2004 saw the defeat of the longest-serving elected government in the Caribbean. Prime Minister Lester Bryant Bird, who had succeeded his father Vere Cornwall Bird, and Deputy Robin Yearwood had been in office since 1994.

The elder Bird was Prime Minister from 1981 to 1994 and Chief Minister of Antigua from 1960 to 1981, except for the 1971–1976 period when the Progressive Labour Movement (PLM) defeated his party. Vere Cornwall Bird, the nation's first Prime Minister, is credited with having brought Antigua and Barbuda and the Caribbean into a new era of independence.



The Judicial Branch is the Eastern Caribbean Supreme Court (based in Saint Lucia; one judge of the Supreme Court is a resident of the islands and presides over the High Court of Justice). In addition, Antigua is a member of the Caribbean Court of Justice. The Supreme Court of Appeal was the British Judicial Committee of the Privy Council up until 2001, when the nations of the Caribbean Community voted to abolish the right of appeal to the Privy Council in favor of a Caribbean Court of Justice. Some debate between member countries repeatedly delayed the court's date of inauguration. As of March 2005 (check the status of this action), only Barbados was set to replace appeals to the Privy Council with appeals the Caribbean Court of Justice, which by then had come into operation.

Administration

Main article: Parishes and dependencies of Antigua and Barbuda

Antigua and Barbuda is divided into six parishes and two dependencies:

- Parishes
  1. Saint George
  2. Saint John
  3. Saint Mary
  4. Saint Paul
  5. Saint Peter
  6. Saint Philip
- Dependencies
  1. Barbuda
  2. Redonda

Parishes of Antigua

Note: Though Barbuda and Redonda are called dependencies, they are integral parts of the state, making them essentially administrative divisions. Dependency is simply a title.

Military

The Royal Antigua and Barbuda Defence Force has 285 members; within it, 200 12-to-18-year-old youngsters make up the Antigua and Barbuda Cadet Corps.

Economy

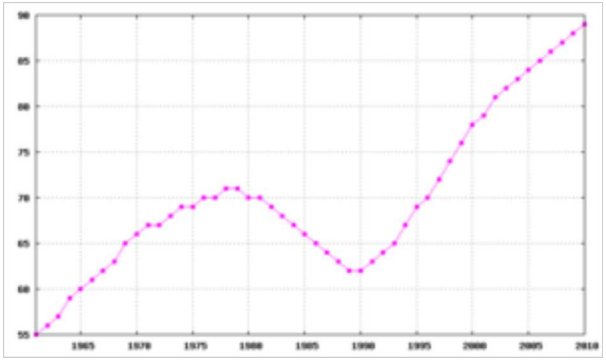
Main article: Economy of Antigua and Barbuda

Tourism dominates the economy, accounting for more than half of the Gross Domestic Product (GDP). Antigua is famous for its many luxury resorts. Weak tourist activity since early 2000 has slowed the economy, however, and squeezed the government into a tight fiscal corner.

Investment banking and financial services also make up an important part of the economy. Major world banks with offices in Antigua include the Bank of America (Bank of Antigua), Barclays, the Royal Bank of Canada (RBC) and Scotia Bank. Financial-services corporations with offices in Antigua include PriceWaterhouseCoopers. The US Securities and Exchange Commission has accused the Antigua-based Stanford International Bank, owned by Texas billionaire Allen Stanford, of orchestrating a huge fraud which may have bilked investors of some $8 billion.[4] (check status 20100312)

Downtown St. John's

The twin-island nation's agricultural production is focused on its domestic market and constrained by a limited water supply and a labor shortage stemming from the lure of higher wages in tourism and construction work.



Manufacturing is made up of enclave-type assembly for export, the major products being bedding, handicrafts and electronic components. Prospects for economic growth in the medium term will continue to depend on income growth in the industrialized world, especially in the United States, from which about one-third of all tourists come.

Following the opening of the American University of Antigua College of Medicine by investor and attorney Neil Simon in 2003, a new source of revenue was established. The university employs many local Antiguans and the approximate 1000 students consume a large amount of the goods and services.

Demographics

Main article: Demographics of Antigua and Barbuda

Ethnicity

Population of Antigua and Barbuda, Data of FAO, year 2005. Number of inhabitants in thousands.

Antigua has a population of 85,632, mostly made up of people of West African, British, and Portuguese descent. The ethnic distribution consists of 91% Black or Mulatto, 4.4% mixed race, 1.7% White, and 2.9% other (primarily East Indian and Asian). Most Whites are of Irish or British descent. Christian Levantine Arabs, and a small number of Asians and Sephardic Jews make up the remainder of the population.

Behind the late 20th-century revival and redefinition of the role of Afro-Antiguans and Barbudans in the society's cultural life is a history of racial/ethnic tensions which systematically excluded non-Whites. Within the colonial framework established by the British soon after their initial settlement of Antigua in 1623, five distinct and carefully ranked racial/ethnic groups emerged.

At the top of this social structure were the British rulers. Amongst them were divisions between British Antiguans and non-creolized Britons, with the latter coming out on top. In short, this was a racial/ethnic hierarchy which gave maximum recognition to people and cultural practices of Anglican origin.

Immediately below the British were the mulattos, a mixed-race group of Afro-European origin. Mulattos, lighter in shade than most Africans, developed a complex system based on skin shade to distinguish themselves from the

latter and to legitimate their claims to higher status. In many ways, they paralleled the British White Supremacy ideology.

In the middle of this social stratification were the Portuguese, 2,500 of whom migrated as workers from Madeira (a Portuguese archipelago in the North Atlantic, to the southwest of the Iberian Peninsula) between 1847 and 1852 because of a severe famine there. Many established small businesses and joined the ranks of the mulatto class. The British never really considered the Portuguese as Whites and did not allow them into their ranks. Amongst Antiguans and Barbudans of Portuguese descent, status differences were based on the varying degrees of assimilation into the dominant group's Anglicized practices.

Next to the bottom were Middle Easterners who began migrating to Antigua and Barbuda around the turn of the 20th century. Starting as itinerant traders, they soon worked their way into the social mix. Although Middle Easterners came from a variety of areas, as a group they are usually referred to as Syrians.

Afro-Antiguans and Afro-Barbudans were at the bottom. Forced into slavery, Africans started arriving in Antigua and Barbuda in large numbers during the 1670s. Very quickly, they grew into the largest racial/ethnic group. Their entry into the local social structure was marked by a profound racialization: They ceased being Yoruba, Igbo, or Akan and became Negroes or Blacks.[*citation needed*]

In the 20th century, the colonial social structure gradually started to be phased out with the introduction of universal education and better economic opportunities. This process allowed Blacks to rise to the highest echelons of society and government.

In the last decade, Spanish-speaking immigrants from the Dominican Republic and Afro-Caribbean immigrants from Guyana and Dominica were added to this ethnic mosaic. They have entered at the social structure's bottom; it is still too early to predict their patterns of assimilation and social mobility.

Today, an increasingly large percentage of the population lives abroad, most notably in the United Kingdom (Antiguan Britons), United States and Canada. A minority of Antiguan residents are immigrants from other countries, particularly from Dominica, Guyana and Jamaica, and, increasing, from the Dominican Republic, St. Vincent and the Grenadines and Nigeria. An estimated 4,500 American citizens also make their home in Antigua and Barbuda, making their numbers one of the largest American populations in the English-speaking Eastern Caribbean.[5]

Religion

St. John's Cathedral

Seventy-four percent [6] of Antiguans are Christians, with the Anglican denomination (about 44%) being the largest. Other Christian denominations present are Baptists,[7] Presbyterians[8][9] and Catholics.

Non-Christian religions practiced in the islands include the Rastafari Movement, Islam, Judaism and the Bahá'í Faith.

Languages

English is the official language, but many of the locals speak Antiguan Creole. The Barbudan accent is slightly different from the Antiguan.

In the years before Antigua and Barbuda's independence, Standard English was widely spoken in preference to Antiguan Creole, but afterwards Antiguans began treating Antiguan Creole as a respectable aspect of their

culture. Generally, the upper and middle classes shun Antiguan Creole. The educational system dissuades the use of Antiguan Creole and instruction is done in Standard (British) English.

Many of the words used in the Antiguan dialect are derived from British as well as African languages. This can be easily seen in phrases such as: "Me nah go" meaning "I am not going". Another example is: "Ent it?" meaning "Ain't it?" which is itself dialectical and means "Isn't it?". Common island proverbs can often be traced to Africa.

Culture

See also: Antigua and Barbuda cuisine and Music of Antigua and Barbuda

The culture is predominantly British: For example, cricket is the national sport and Antigua has produced several famous cricket players including Sir Vivian Richards, Anderson "Andy" Roberts, and Richard "Richie" Richardson. Other popular sports include football, boat racing and surfing (the Antigua Sailing Week attracts locals and visitors from all over the world).

American popular culture and fashion also have a heavy influence. Most of the country's media is made up of major United States networks. Many Antiguans prefer to make a special shopping trip to San Juan, Puerto Rico.

Family and religion play an important roles in the lives of Antiguans. Most attend religious services on Sunday, although there is a growing number of Seventh-day Adventists who observe the Sabbath on Saturday. [*citation needed*]

The national Carnival held each August commemorates the abolition of slavery in the British West Indies, although on some islands, Carnival may celebrate the coming of Lent. Its festive pageants, shows, contests and other activities are a major tourist attraction.

Calypso and soca music are important in Antigua and Barbuda.[*citation needed*]

Corn and sweet potatoes play an important role in Antiguan cuisine. For example, a popular Antiguan dish, Dukuna (DOO-koo-NAH) is a sweet, steamed dumpling made from grated sweet potatoes, flour and spices. One of the Antiguan staple foods, fungi (FOON-ji), is a cooked paste made of cornmeal and water.

Media

Up until April 2010 there were two daily newspapers: Daily Observer and which also published newspapers on other Caribbean islands. Antigua Sun has ceased operation in April. It has been in circulation for 13 years. Besides most American television networks, the local channel ABS TV 10 is available (it is the only station which shows exclusively local programs). There are also several local and regional radio stations, such as V2C-AM 620, ZDK-AM 1100, VYBZ-FM 92.9, and ZDK-FM 97.1.

Sports

See also: Cricket in the West Indies

Like many Commonwealth countries, cricket is the most popular sport. The Antigua and Barbuda national cricket team represented the country at the 1998 Commonwealth Games, but Antiguan cricketers otherwise play for the Leeward Islands cricket team in domestic matches and the West Indies cricket team internationally. The 2007 Cricket World Cup was hosted in the West Indies from March 11 to April 28, 2007. Antigua hosted eight matches at the Sir Vivian Richards Stadium, which was completed on February 11, 2007 and can hold up to

20,000 people. Antigua is a Host of Stanford Twenty20 – Twenty20 Cricket, a version started by Allen Stanford in 2006 as a regional cricket game with almost all Caribbean islands taking part. Antiguan Viv Richards scored the fastest Test Century and Brian Lara twice scored the World Test Record at the Antigua Recreation Ground.

Antigua Recreation Ground

Association football is also a very popular sport. Antigua has a national football team which has entered World Cup qualification for the 1974 tournament and for the 1986 one and onwards. A professional team has also been formed, Antigua Barracuda FC, which is slated to join the USL First Division in 2011.

Athletics are popular. Talented athletes are trained from a young age, and Antigua and Barbuda has produced a few fairly adept athletes. Janill Williams, a young athlete with much promise comes from Gray's Farm, Antigua. Sonia Williams and Heather Samuel represented Antigua and Barbuda at the Olympic Games. Other prominent rising stars include Brendan Christian (100 m, 200 m), Daniel Bailey (100 m, 200 m) and James Grayman (high jump).

Antigua can boast of some excellent *tennis* players, most notably Brian Philip #1 and Roberto Esposito #2 on the island for under-18 tournaments, who both are also involved in under-18 ITF tournaments. Their coach's (Eli Armstrong) daughter Keishora Armstrong, who will be turning 13 later this year, is the under-18's champion on the girls' circuit.

Education

The people of Antigua & Barbuda enjoy a more-than-90% literacy rate. In 1998, Antigua and Barbuda adopted a national mandate to become the pre-eminent provider of medical services in the Caribbean. As part of this mission, Antigua and Barbuda is building the most technologically advanced hospital in the Caribbean, the Mt. St. John Medical Centre. The island of Antigua currently has two medical schools, the American University of Antigua (AUA),[10] founded in 2004, and The University of Health Sciences Antigua (UHSA),[11] founded in 1982.

There is also a government owned state college in Antigua as well as the Antigua and Barbuda Institute of Information Technology (ABIIT)and the Antigua and Barbuda Hospitality Training Institute (ABHTI). The University of the West Indies has a branch in Antigua for locals to continue University studies.

Antigua has two international primary/secondary schools Including (Alphabetically) CCSET International which offers the Ontario Secondary School Diploma and Island Academy which offers the International Baccalaureate. There are also may other private schools but these institutions tend to follow the same local curriculum (CXCs) as government schools. Both international schools are relatively inexperienced with offering international degrees. CCSET international has existed for several years but only began offering an International Degree in 2007. While CCSET's graduating classes have consistently been awarded the OSSD this is somewhat controversial because CCSET students do not receive their diploma from CCSET directly as it is not able to grant OSSD credits instead they receive this diploma from one of CCSET's (constantly changing) partner schools based in Ontario. In contrast Island Academy has offered international degrees for much longer than CCSET but has been inconsistent with their program they have switched from offering the OSSD to the IB, back to the OSSD and finally back to the IB again in February 2009. Sense 2009 island Academy has not granted any IB diplomas to students.

Foreign relations

Main article: Foreign relations of Antigua and Barbuda

Antigua and Barbuda is a member of the United Nations, the Bolivarian Alliance for the Americas, the Commonwealth of Nations, the Caribbean Community, the Organization of Eastern Caribbean States, the Organization of American States, the World Trade Organization and the Eastern Caribbean's Regional Security System.

Antigua and Barbuda is also a member of the International Criminal Court (with a Bilateral Immunity Agreement of Protection for the US military as covered under Article 98).

History of Antigua and Barbuda

From Wikipedia, the free encyclopedia

The **history of Antigua and Barbuda** can be separated into three distinct eras. In the first, the islands were inhabited by three successive Amerindian societies. The islands were neglected by the first wave of European colonisation, but were settled by England in 1632. Under British control, the islands witnessed an influx of both Britons and African slaves. In 1981, the islands were granted independence as the modern state of Antigua and Barbuda.

- 6 References

Pre-Columbian settlements

Antigua was first settled by pre-agricultural Amerindians known as "Archaic People", (although they are commonly, but erroneously known in Antigua as Siboney, a preceramic Cuban people). The earliest settlements on the island date to 2900 BC. They were succeeded by ceramic-using agriculturalist Saladoid people who migrated up the island chain from Venezuela. They were later replaced by Arawakan speakers around 1200 AD, and around 1500 by Island Caribs.[1]

The Arawaks were the first well-documented group of Antiguans. They paddled to the island by canoe (piragua) from Venezuela, ejected by the Caribs—another people indigenous to the area. Arawaks introduced agriculture to Antigua and Barbuda, raising, among other crops, the famous Antiguan "Black" pineapple. They also cultivated various other foods including:

- corn
- sweet potatoes (White with firmer flesh than the bright orange "sweet potato" used in the United States.)
- chiles
- guava
- tobacco
- cotton

Some of the vegetables listed, such as corn and sweet potatoes, still play an important role in Antiguan cuisine.

For example, a popular Antiguan dish, Ducuna (DOO-koo-NAH) is a sweet, steamed dumpling made from grated sweet potatoes, flour and spices. In addition, one of the Antiguan staple foods, fungee (FOON-ji), is a cooked paste made of cornmeal and water.

The bulk of the Arawaks left Antigua about 1100 A.D. Those who remained were subsequently raided by the Caribs. According to the Catholic Encyclopedia, the Carib's superior weapons and seafaring prowess allowed

them to defeat most Arawak nations in the West Indies—enslaving some, and cannibalizing others.

The Catholic Encyclopedia does make it clear that the European invaders had some difficulty identifying and differentiating between the various native peoples they encountered. As a result, the number and types of ethnic/tribal/national groups in existence at the time may be much more varied and numerous than the two mentioned in this Article.

According to A Brief History of the Caribbean (Jan Rogozinski, Penguin Putnam, Inc September 2000), European and African diseases, malnutrition and slavery eventually destroyed the vast majority of the Caribbean's native population. No researcher has conclusively proven any of these causes as the real reason for the destruction of West Indian natives. In fact, some historians believe that the psychological stress of slavery may also have played a part in the massive number of native deaths while in servitude. Others believe that the reportedly abundant, but starchy, low-protein diet may have contributed to severe malnutrition of the "Indians" who were used to a diet fortified with protein from sea-life.

The Indigenous West Indians made excellent sea vessels that they used to sail the Atlantic and Caribbean. As a result, Caribs and Arawaks populated much of South American and the Caribbean Islands. Relatives of the Antiguan Arawaks and Caribs still live in various countries in South America, notably Brazil, Venezuela and Colombia. The smaller remaining native populations in the West Indies maintain a pride in their heritage.

European colonization

Christopher Columbus landed on the islands in 1493, naming the larger one *Santa Maria de la Antigua*. However, early attempts by Europeans to settle the islands failed due to the Caribs' excellent defenses. [*citation needed*] England succeeded in colonising the islands in 1632, with Thomas Warner as the first governor. Settlers raised tobacco, indigo, ginger, and sugarcane as cash crops. Sir Christopher Codrington established the first large sugar estate in Antigua in 1674, and leased Barbuda to raise provisions for his plantations. Barbuda's only town is named after him. In the fifty years after Codrington established his initial plantation, the sugar industry became so profitable that many farmers replaced other crops with sugar, making it the economic backbone of the islands. Codrington and others brought slaves from Africa's west coast to work the plantations under brutal conditions.

During the 18th century, Antigua was used as the headquarters of the British Royal Navy Caribbean fleet. English Dockyard, as it came to be called, a sheltered and well-protected deepwater port, was the main base and facilities there were greatly expanded during the later 18th century. Admiral Lord Horatio Nelson commanded the British fleet for much of this time, and made himself unpopular with local merchants by enforcing the Navigation Act, a British ruling that only British-registered ships could trade with British colonies. As the United States were no longer British colonies, the act posed a problem for merchants, who depended on trade with the fledgling country.

Political development

With all others in the British Empire, Antiguan slaves were emancipated in 1834, but remained economically dependent upon the plantation owners. Economic opportunities for the new freedmen were limited by a lack of surplus farming land, no access to credit, and an economy built on agriculture rather than manufacturing. Poor labour conditions persisted until 1939 when a member of a royal commission urged the formation of a trade union movement.

The Antigua Trades and Labour Union, formed shortly afterward, became the political vehicle for Vere Cornwall

Bird who became the union's president in 1943. The Antigua Labour Party (ALP), formed by Bird and other trade unionists, first ran candidates in the 1946 elections and became the majority party in 1951 beginning a long history of electoral victories.

Voted out of office in the 1971 general elections that swept the progressive labour movement into power, Bird and the ALP returned to office in 1976.

Independent Antigua and Barbuda

The islands achieved independence from the United Kingdom in 1981, becoming the nation of Antigua and Barbuda. It remains part of the Commonwealth of Nations, and remains a constitutional monarchy, with Queen Elizabeth II as Queen of Antigua and Barbuda.

In 1997, Prime Minister Lester Bird announced that a group of ecologically sensitive islands just off Antigua's northeastern coast, previously proposed for national park status, were being turned over to Malaysian developers. The Guiana Island Development Project deal, calling for a 1000-room hotel, an 18-hole golf course and a world-class casino, sparked widespread criticism by environmentalists, minority members in parliament, and the press. The issue came to a head when a local resident shot the PM's brother. Today, the proposed development is mired in lawsuits and politics.

The ALP won renewed mandates in the general elections in 1984 and 1989. In the 1989 elections, the ruling ALP won all but two of the 17 seats. During elections in March 1994, power passed from Vere Bird to his son, Lester Bird, but remained within the ALP which won 11 of the 17 parliamentary seats. The United Progressive Party won the 2004 elections and Baldwin Spencer became Prime Minister, removing from power the longest-serving elected government in the Caribbean.

Monarchy of Antigua and Barbuda

From Wikipedia, the free encyclopedia

Antigua and Barbuda is a constitutional monarchy and a Commonwealth realm, with Queen Elizabeth II as its reigning monarch since November 1, 1981. As such she is Antigua and Barbuda's Sovereign and head of state and officially called Queen of Antigua and Barbuda.

Most of the Queen's powers in Antigua and Barbuda are exercised by the Governor General, presently Louise Lake-Tack, though the Monarch does hold several powers that are hers alone.

The Queen is the only member of the Antiguan and Barbudian Royal Family with any constitutional role; she, her husband, Prince Philip, Duke of Edinburgh, their son The Prince of Wales, and other members of the Royal Family, including the Queen's other children and cousins, undertake various public ceremonial functions within Antigua and Barbuda and abroad.

Queen of Antigua and Barbuda

Origins

The current Antiguan and Barbudian monarchy can trace its ancestral lineage back to the Anglo-Saxon and Merovingian periods, and ultimately back to the kings of the Angles, the early Scottish kings, and the Frankish kingdom of Clovis I. Parts of the territories that today comprise Antigua and Barbuda were claimed under King Charles I in 1632. The country was proclaimed fully independent, via constitutional patriation, by Queen

Elizabeth II in 1981.

International and domestic aspects

Sixteen states within the 54-member Commonwealth of Nations are known as Commonwealth realms and Antigua and Barbuda is one of these. Despite sharing the same person as their respective national monarch, each of the Commonwealth realms is sovereign and independent of the others.[1]

See also: Commonwealth realm: Constitutional implications

Development of shared monarchy

The Balfour Declaration of 1926 provided the Dominions the right to be considered equal to Britain, rather than subordinate; an agreement that had the result of, in theory, a shared Crown that operates independently in each realm rather than a unitary British Crown under which all the Dominions were secondary. The Monarchy thus ceased to be an exclusively British institution, although it has often been called "British" since this time (in both legal and common language) for reasons historical, legal, and of convenience. The Royal and Parliamentary Titles Act, 1927 was the first indication of this shift in law, further elaborated in the Statute of Westminster, 1931.

Under the Statute of Westminster, Antigua and Barbuda has a common monarchy with Britain and the other Commonwealth realms, and though laws governing the line of succession to the Antiguan and Barbudian throne lie within the control of the Antiguan and Barbudian Parliament, Antigua and Barbuda cannot change the rules of succession without the unanimous consent of the other realms, unless explicitly leaving the shared monarchy relationship by means of a constitutional amendment. This situation applies symmetrically in all the other realms, including the UK.

On all matters of the Antiguan and Barbudian State, the Monarch is advised solely by Antiguan and Barbudian ministers. Effective with the patriation of Antigua and Barbuda's Constitution, no British or other realm government can advise the Monarch on any matters pertinent to Antigua and Barbuda.

Title

Main article: List of titles and honours of Queen Elizabeth II

In Antigua and Barbuda, the Queen's official title is:

- *Elizabeth the Second, by the Grace of God, Queen of Antigua and Barbuda and of Her other Realms and Territories, Head of the Commonwealth.*

This style communicates Antigua and Barbuda's status as an independent monarchy, highlighting the Monarch's role specifically as Queen of Antigua and Barbuda, as well as the shared aspect of the Crown throughout the realms, by mentioning Antigua and Barbuda separately the other Commonwealth realms. Typically, the Sovereign is styled "Queen of Antigua and Barbuda," and is addressed as such when in Antigua and Barbuda, or performing duties on behalf of Antigua and Barbuda abroad.

Finance

Antiguans and Barbudians do not pay any money to the Queen, either for personal income or to support the royal residences outside of Antigua and Barbuda. Only when the Queen is in Antigua and Barbuda, or acting

abroad as Queen of Antigua and Barbuda, does the Antiguan and Barbudian government support her in the performance of her duties. This rule applies equally to other members of the Royal Family.

Usually the Queen's Antiguan and Barbudian government pays only for the costs associated with the Governor General in his or her exercising of the powers of the Crown on behalf of the Queen, including travel, security, residences, offices, ceremonial occasions, etc.

Succession

Charles, Prince of Wales, is the heir apparent to the Antiguan and Barbudian Throne

The heir apparent is Elizabeth II's eldest son, Charles. The Governor General is expected to proclaim him King of Antigua and Barbuda upon his accession to the Throne upon the demise of the Crown.

Succession to the throne is by male-preference primogeniture, and governed by the provisions of the *Act of Settlement*, as well as the English *Bill of Rights*. These documents, though originally passed by the Parliament of England, are now part of Antiguan and Barbudian constitutional law, under control of the Antiguan and Barbudian parliament only. As such, the rules for succession are not fixed, but may be changed by a constitutional amendment.

This legislation restricts the succession to the natural (i.e. non-adopted), legitimate descendants of Sophia, Electress of Hanover (1630–1714), a granddaughter of James I, and lays out the rules that the Monarch cannot be a Roman Catholic, nor married to one, and must be in communion with the Church of England upon ascending the throne. As Antigua and Barbuda's laws governing succession are currently identical to those of the United Kingdom (by the *Statute of Westminster*) see Succession to the British Throne for more information.

Upon a "demise in the Crown" (the death of a Sovereign) his or her heir immediately and automatically succeeds, without any need for confirmation or further ceremony. (Hence arises the phrase "The King is dead. Long live the King!") Nevertheless, it is customary for the accession of the Sovereign to be publicly proclaimed. After an appropriate period of mourning has passed, the Sovereign is also crowned in Westminster Abbey, normally by the Archbishop of Canterbury. A coronation is not necessary for a Sovereign to rule; for example, Edward VIII was never crowned, yet was undoubtedly king during his short reign.

After an individual ascends the Throne, he or she continues to reign until death. Monarchs are not allowed to unilaterally abdicate; no Antiguan and Barbudian monarch has abdicated.

Constitutional role

Antigua and Barbuda's constitution is made up of a variety of statutes and conventions that are either British or Antiguan and Barbudian in origin, which gives Antigua and Barbuda a similar parliamentary system of government as the other Commonwealth realms. All powers of state are constitutionally reposed in the Monarch, who is represented in the country by the Governor-General of Antigua and Barbuda — appointed by the Monarch upon the advice of the Prime Minister of Antigua and Barbuda; most of the Queen's domestic duties are performed by these vice-regal representative.

Constitutional duties

The role of the Queen and the Governor General is both legal and practical; the Crown is regarded as a corporation, in which several parts share the authority of the whole, with the Queen as the person at the centre of the constitutional construct.

The vast powers that belong to the Crown are collectively known as the Royal Prerogative, which includes many powers such as the ability to make treaties or send ambassadors, as well as certain duties such as to defend the realm and to maintain the Queen's peace. Parliamentary approval is not required for the exercise of the Royal Prerogative; moreover, the Consent of the Crown must be obtained before either House may even debate a bill affecting the Sovereign's prerogatives or interests. It is important to note that the Royal Prerogative belongs to the Crown, and not to any of the ministers, though it may sometimes appear that way.[*citation needed*] Although the Royal Prerogative is extensive, it is not unlimited. For example, the Monarch does not have the prerogative to impose and collect new taxes; such an action requires the authorization of an Act of Parliament.

The Crown is responsible for appointing a Prime Minister. In accordance with unwritten constitutional conventions, the Monarch or Governor General must appoint the individual most likely to maintain the support of the House of Commons: usually, the leader of the party which has a majority in that House. If no party has a majority, two or more groups may form a coalition, whose agreed leader is then appointed Prime Minister. In a Parliament in which no party or coalition holds a majority, the Crown is required by convention to appoint the individual most likely to command the support of the House of Commons, usually, but not necessarily, the leader of the largest party. Situations can arise in which the Governor General's judgement about the most suitable leader to be Prime Minister has to be brought into play. The Queen is informed by the Governor General of the acceptance of the resignation of a prime minister and the swearing-in of a new prime minister and members of the Ministry.

It is a duty of the Crown to also appointment and dismiss ministers, members of various executive agencies, other officials. The appointment of Senators and the Speaker of the Senate also falls under the Royal Prerogative. Effectively, however, the appointees are chosen by the Prime Minister, or, for less important offices, by other ministers.

In addition, it is the Crown's prerogative to declare war, make peace, and direct the actions of the military, although the Prime Minister holds *de facto* decision-making power over the armed forces. The Royal Prerogative also extends to foreign affairs: the Sovereign or Governor General may negotiate and ratify treaties, alliances, and international agreements; no parliamentary approval is required. However, a treaty cannot alter the domestic laws of the Antigua and Barbuda; an Act of Parliament is necessary in such cases. The Governor General, on behalf of the Queen, also accredits Antiguan and Barbudian High Commissioners and ambassadors, and receives diplomats from foreign states. In addition, all Antiguan and Barbudian passports are issued in the Monarch's name. In Antigua and Barbuda major public inquiries are called Royal Commissions, and are created by the Cabinet on behalf of the Monarch through a Royal Warrant.

The Sovereign is one of the three components of Parliament; the others are the Senate and the House of Representatives. The Governor General is also responsible for summoning the House of Commons, though it remains the Monarch's prerogative to prorogue, and dissolve Parliament. The new parliamentary session is marked by the State Opening of Parliament, during which either the Sovereign of the Governor General reads the Speech from the Throne in the Senate Chamber, outlining the Government's legislative agenda. Prorogation usually occurs about one year after a session begins, and formally concludes the session. Dissolution, the timing of which is affected by a variety of factors, ends a parliamentary term (which lasts a maximum of five years), and is followed by general elections for all seats in the House of Commons. The Monarch or Governor General may theoretically refuse a dissolution.

Because the Antiguan and Barbudian Monarchy is a constitutional one, the powers that are constitutionally the Monarch's are exercised almost wholly upon the advice of his or her Prime Minister and the Ministers of the

Crown in Cabinet, who are, in turn, accountable to the democratically elected House of Commons, and through it, to the people. It has been said since the death of Queen Anne in 1714, the last monarch to head the British cabinet, that the monarch "reigns" but does not "rule". This means that the Monarch's role, and thereby the Vice-regent's role, is almost entirely symbolic and cultural, acting as a symbol of the legal authority under which all governments and agencies operate.

Legal role

All laws in Antigua and Barbuda are enacted with the sovereign's, or the vice-regal's signature. The granting of a signature to a bill is known as Royal Assent; it and proclamation are required for all acts of Parliament, usually granted or withheld by the Governor General, with the Public Seal of Antigua and Barbuda. The Vice-regal may reserve a bill for the Monarch's pleasure, that is to say, allow the Monarch to make a personal decision on the bill. The Monarch has the power to disallow a bill (within a time limit specified by the Constitution).

The Sovereign is deemed the "fount of justice," and is responsible for rendering justice for all subjects. The Sovereign does not personally rule in judicial cases; instead, judicial functions are performed in his or her name. The common law holds that the Sovereign "can do no wrong"; the monarch cannot be prosecuted in his or her own courts for criminal offences. Civil lawsuits against the Crown in its public capacity (that is, lawsuits against the government) are permitted; however, lawsuits against the Monarch personally are not cognizable. In international cases, as a sovereign and under established principles of international law, the Queen of Antigua and Barbuda is not subject to suit in foreign courts without her express consent.[*citation needed*] The Sovereign, and by extension the Governor General, also exercises the "prerogative of mercy," and may pardon offences against the Crown. Pardons may be awarded before, during, or after a trial.

In Antigua and Barbuda the legal personality of the State is referred to as "Her Majesty the Queen in Right of Antigua and Barbuda." For example, if a lawsuit is filed against the government, the respondent is formally described as Her Majesty the Queen in Right of Antigua and Barbuda. The monarch as an individual takes no more role in such an affair than in any other business of government.

The Oath of Allegiance is required by law to be sworn by new members of the Royal Antigua and Barbuda Defence Force, police officers, and parliamentarians; it is an oath to the Monarch as Sovereign of Antigua and Barbuda, and to his/her heirs and successors according to law. The Oath of Allegiance is as follows:

> *I, _____, do swear (or solemnly affirm) that I will faithfully bear true allegiance to Her Majesty Queen Elizabeth the Second, Her Heirs and Successors, according to law. So help me God. (To be omitted in affirmation).*

Further information: The Crown

History

Elizabeth II, Queen of Antigua and Barbuda, and her husband, the royal consort the Duke of Edinburgh, included the Antigua and Barbuda in their Caribbean tour of 1966, and in the Silver Jubilee tour of October, 1977. The Queen visited again in 1985.[2]

The Earl of Wessex opened Antigua and Barbuda's new parliament building on the country's twenty fifth anniversary of independence, October 30, 2006, reading a message from his mother, the Queen. HRH The Duke of York visited Antigua and Barbuda in January 2001.[3]

Australia

From Wikipedia, the free encyclopedia

Australia (/əˈstreɪljə/), officially the **Commonwealth of Australia**,[10] is a country in the Southern Hemisphere comprising the mainland of the Australian continent as well as the island of Tasmania and numerous smaller islands in the Indian and Pacific Oceans.[N 4] It is the world's sixth-largest country by total area. Neighbouring countries include Indonesia, East Timor and Papua New Guinea to the north; the Solomon Islands, Vanuatu and New Caledonia to the north-east; and New Zealand to the south-east.

For at least 40,000 years[12] before European settlement in the late 18th century, Australia was inhabited by indigenous Australians,[13] who belonged to one or more of roughly 250 language groups.[14][15] After discovery by Dutch explorers in 1606, Australia's eastern half was claimed by Great Britain in 1770 and settled through penal transportation to the colony of New South Wales from 26 January 1788. The population grew steadily in subsequent decades; the continent was explored and an additional five self-governing Crown Colonies were established.

On 1 January 1901, the six colonies federated, forming the Commonwealth of Australia. Since Federation, Australia has maintained a stable liberal democratic political system which functions as a federal parliamentary democracy and constitutional monarchy. The federation comprises six states and several territories. The population of 22.7 million is heavily concentrated in the Eastern states and is highly urbanised.

A highly developed country, Australia is the world's 13th-largest economy and has the world's fifth-highest per capita income. Australia's military expenditure is the world's 13th-largest. With the second-highest human development index globally, Australia ranks highly in many international comparisons of national performance, such as quality of life, health, education, economic freedom, and the protection of civil liberties and political rights.[16] Australia is a member of the G20, OECD, WTO, APEC, UN, Commonwealth of Nations, ANZUS, and the Pacific Islands Forum.

Etymology

Pronounced [əˈstɹæɪljə, −liə] in Australian English,[17] the name *Australia* is derived from the Latin *australis*, meaning "southern". The country has been referred to colloquially as *Oz* since the early 20th century.[N 5] *Aussie* is a common colloquial term for "Australian". In neighbouring New Zealand the term "Aussie" is sometimes applied as a noun to the nation as well as its residents.[22]

Legends of *Terra Australis Incognita*—an "unknown land of the South"—date back to Roman times and were commonplace in medieval geography, although not based on any documented knowledge of the continent. Following European discovery, names for the Australian landmass were often references to the famed *Terra Australis*.

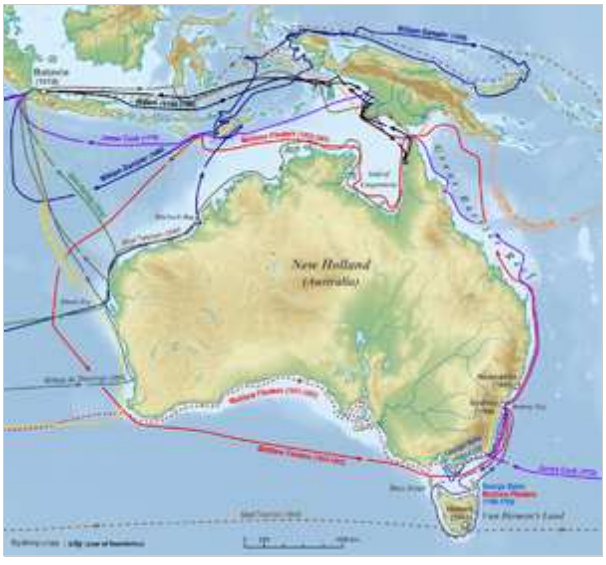
The earliest recorded use of the word *Australia* in English was in 1625 in "A note of Australia del Espíritu Santo, written by Sir Richard Hakluyt", published by Samuel Purchas in *Hakluytus Posthumus*, a corruption of the original Spanish name "Tierra Austral del Espíritu Santo" (Southern Land of the Holy Spirit)[23] for an island in Vanuatu.[24] The Dutch adjectival form *Australische* was used in a Dutch book in Batavia (Jakarta) in 1638, to refer to the newly discovered lands to the south.[25] *Australia* was later used in a 1693 translation of *Les Aventures de Jacques Sadeur dans la Découverte et le Voyage de la Terre Australe*, a 1676 French novel by Gabriel de Foigny, under the pen-name Jacques Sadeur.[26] Referring to the entire South Pacific region,

Alexander Dalrymple used it in *An Historical Collection of Voyages and Discoveries in the South Pacific Ocean* in 1771. By the end of the 18th century, the name was being used to refer specifically to Australia, with the botanists George Shaw and Sir James Smith writing of "the vast island, or rather continent, of Australia, Australasia or New Holland" in their 1793 *Zoology and Botany of New Holland*,[27] and James Wilson including it on a 1799 chart.[28]

The name *Australia* was popularised by the explorer Matthew Flinders, who pushed for it to be formally adopted as early as 1804. When preparing his manuscript and charts for his 1814 *A Voyage to Terra Australis*, he was persuaded by his patron, Sir Joseph Banks, to use the term *Terra Australis* as this was the name most familiar to the public. Flinders did so, but allowed himself the footnote:

> "Had I permitted myself any innovation on the original term, it would have been to convert it to Australia; as being more agreeable to the ear, and an assimilation to the names of the other great portions of the earth."[29]

This is the only occurrence of the word *Australia* in that text; but in Appendix III, Robert Brown's *General remarks, geographical and systematical, on the botany of Terra Australis*, Brown makes use of the adjectival form *Australian* throughout,[30]—the first known use of that form.[31] Despite popular conception, the book was not instrumental in the adoption of the name: the name came gradually to be accepted over the following ten years.[32]



The first time that the name Australia appears to have been officially used was in a despatch to Lord Bathurst of 4 April 1817 in which Governor Lachlan Macquarie acknowledges the receipt of Capt. Flinders' charts of Australia.[33] On 12 December 1817 Macquarie recommended to the Colonial Office that it be formally adopted.[34] In 1824, the Admiralty agreed that the continent should be known officially as *Australia*.[35]

The first map on which the word Australia occurs was published in St Petersburg in 1824. It is in Krusenstern's "Atlas de l'Océan Pacifique".[36]

History

Main article: History of Australia

Human habitation of the Australian continent is estimated to have begun between 42,000 and 48,000 years ago,[37] possibly with the migration of people by land bridges and short sea-crossings from what is now South-East Asia. These first inhabitants may have been ancestors of modern Indigenous Australians. At the time of European settlement in the late 18th century, most Indigenous Australians were hunter-gatherers, with a complex oral culture and spiritual values based on reverence for the land and a belief in the Dreamtime. The Torres Strait Islanders, ethnically Melanesian, were originally horticulturalists and hunter-gatherers.[38]

Exploration by Europeans till 1812

Following sporadic visits by fishermen from the Malay Archipelago,[39] the first recorded European sighting of the Australian mainland and the first recorded European landfall

- 1606 Willem Janszoon
- 1606 Luis Váez de Torres
- 1616 Dirk Hartog
- 1619 Frederick de Houtman
- 1644 Abel Tasman
- 1696 Willem de Vlamingh
- 1699 William Dampier
- 1770 James Cook
- 1797–1799 George Bass
- 1801–1803 Matthew Flinders

on the Australian continent were attributed to the Dutch navigator Willem Janszoon. He sighted the coast of Cape York Peninsula on an unknown date in early 1606, and made landfall on 26 February at the Pennefather River on the western shore of Cape York, near the modern town of Weipa.[40] The Dutch charted the whole of the western and northern coastlines of "New Holland" during the 17th century, but made no attempt at settlement.[40] William Dampier, an English explorer and privateer landed on the north-west coast of Australia in 1688 and again in 1699 on a return trip. In 1770, James Cook sailed along and mapped the east coast of Australia, which he named New South Wales and claimed for Great Britain.[41] Cook's discoveries prepared the way for establishment of a new penal colony. Captain Arthur Phillip led the First Fleet into Port Jackson on 26 January 1788.[42] This date became Australia's national day, Australia Day. (The British Crown Colony of New South Wales was not formally promulgated until 7 February 1788, but 26 January has entered the popular consciousness as the effective date of its foundation.) Van Diemen's Land, now known as Tasmania, was settled in 1803 and became a separate colony in 1825.[43] The United Kingdom formally claimed the western part of Australia in 1828.[44]

Separate colonies were carved from parts of New South Wales: South Australia in 1836, Victoria in 1851, and Queensland in 1859.[45] The Northern Territory was founded in 1911 when it was excised from South Australia.[46] South Australia was founded as a "free province"—it was never a penal colony.[47] Victoria and Western Australia were also founded "free", but later accepted transported convicts.[48][49] A campaign by the settlers of New South Wales led to the end of convict transportation to that colony; the last convict ship arrived in 1848.[50]

Port Arthur, Tasmania was Australia's largest gaol for transported convicts.

The indigenous population, estimated at 750,000 to 1,000,000 at the time of European settlement,[51] declined steeply for 150 years following settlement, mainly due to infectious disease.[52] The "Stolen Generations" (removal of Aboriginal children from their families), which historians such as Henry Reynolds have argued could be considered genocide,[53] may have contributed to the decline in the Indigenous population.[54] Such interpretations of Aboriginal history are disputed by conservative commentators such as former Prime Minister John Howard as exaggerated or fabricated for political or ideological reasons.[55] This debate is known within Australia as the History wars.[56] The Federal government gained the power to make laws with respect to Aborigines following the 1967 referendum.[57] Traditional ownership of land—aboriginal title—was not recognised until 1992, when the High Court case *Mabo v Queensland (No 2)* overturned the notion of Australia as *terra nullius* ("land belonging to no one") before European occupation.[58]

A gold rush began in Australia in the early 1850s,[59] and the Eureka Rebellion against mining licence fees in 1854 was an early expression of civil disobedience.[60] Between 1855 and 1890, the six colonies individually gained responsible government, managing most of their own affairs while remaining part of the British Empire.[61] The Colonial Office in London retained control of some matters, notably foreign affairs,[62] defence,[63] and international shipping.

The Last Post is played at an ANZAC Day ceremony in Port Melbourne, Victoria. Similar ceremonies are held in most suburbs and towns.

On 1 January 1901 federation of the colonies was achieved after a decade of planning, consultation, and voting.[64] The Commonwealth of Australia was established and it became a dominion of the British Empire in 1907. The Federal Capital Territory (later renamed the Australian Capital Territory) was formed in 1911 as the location for the future federal capital of Canberra. Melbourne was the temporary seat of government from 1901 to 1927 while Canberra was constructed.[65] The Northern Territory was transferred from the control of the South Australian government to the federal parliament in 1911.[66] In 1914, Australia joined Britain in fighting World War I, with support from both the outgoing Liberal Party and the incoming Labor Party.[67] Australians took part in many of the major battles fought on the Western Front.[68] Of about 416,000 who served, about 60,000 were killed and another 152,000 were wounded.[69] Many Australians regard the defeat of the Australian and New Zealand Army Corps (ANZACs) at Gallipoli as the birth of the nation—its first major military action.[70][71] The Kokoda Track campaign is regarded by many as an analogous nation-defining event during World War II.[72]

Australia's national flag comprises the Union Jack, the Commonwealth Star, and the Southern Cross.

Britain's Statute of Westminster 1931 formally ended most of the constitutional links between Australia and the UK. Australia adopted it in 1942,[73] but it was backdated to 1939 to confirm the validity of legislation passed by the Australian Parliament during World War II.[74][75] The shock of the UK's defeat in Asia in 1942 and the threat of Japanese invasion caused Australia to turn to the United States as a new ally and protector.[76] Since 1951, Australia has been a formal military ally of the US, under the ANZUS treaty.[77] After World War II Australia encouraged immigration from Europe. Since the 1970s and following the abolition of the White Australia policy, immigration from Asia and elsewhere was also promoted.[78] As a result, Australia's demography, culture, and self-image were transformed.[79] The final constitutional ties between Australia and the UK were severed with the passing of the Australia Act 1986, ending any British role in the government of the Australian States, and closing the option of judicial appeals to the Privy Council in London.[80] In a 1999 referendum, 55 per cent of Australian voters and a majority in every Australian state rejected a proposal to become a republic with a president appointed by a two-thirds vote in both Houses of the Australian Parliament. Since the election of the Whitlam Government in 1972,[81] there has been an increasing focus in foreign policy on ties with other Pacific Rim nations, while maintaining close ties with Australia's traditional allies and trading partners.[82]

Government

Main articles: Government of Australia, Politics of Australia, and Monarchy of Australia

Australia is a constitutional monarchy with a federal division of powers. It uses a parliamentary system of government with Queen Elizabeth II at its apex as the Queen of Australia, a role that is distinct from her position as monarch of the other Commonwealth realms. The Queen resides in the United Kingdom, and she is represented by her viceroys in Australia (the Governor-General at the federal level and by the Governors at the state level), who by convention act on the advice of her ministers. Supreme executive authority is vested by the

Constitution of Australia in the sovereign, but the power to exercise it is conferred by the Constitution specifically to the Governor-General.[83][84] The most notable exercise of the Governor-General's reserve powers outside a Prime Minister's request was the dismissal of the Whitlam Government in the constitutional crisis of 1975.[85]

Parliament House, Canberra was opened in 1988, replacing the provisional Parliament House building opened in 1927.

The federal government is separated into three branches:

- The legislature: the bicameral Parliament, defined in section 1 of the constitution as comprising the Queen (represented by the Governor-General), the Senate, and the House of Representatives;
- The executive: the Federal Executive Council, in practice the Governor-General as advised by the Prime Minister and Ministers of State;[86]
- The judiciary: the High Court of Australia and other federal courts, whose judges are appointed by the Governor-General on advice of the Council.

Government House, Canberra, also known as "Yarralumla", is the official residence of the Governor-General.

In the Senate (the upper house), there are 76 senators: twelve each from the states and two each from the mainland territories (the Australian Capital Territory and the Northern Territory).[87] The House of Representatives (the lower house) has 150 members elected from single-member electoral divisions, commonly known as "electorates" or "seats", allocated to states on the basis of population,[88] with each original state guaranteed a minimum of five seats.[89] Elections for both chambers are normally held every three years, simultaneously; senators have overlapping six-year terms except for those from the territories, whose terms are not fixed but are tied to the electoral cycle for the lower house; thus only 40 of the 76 places in the Senate are put to each election unless the cycle is interrupted by a double dissolution.[87]

Julia Gillard, Prime Minister of Australia since 2010

Australia's electoral system uses preferential voting for all lower house elections with the exception of Tasmania and the ACT, which, along with the Senate and most state upper houses, combine it with proportional representation in a system known as the single transferable vote. Voting is compulsory for all enrolled citizens 18 years and over in every jurisdiction,[90] as is enrolment (with the exception of South Australia).[91] The party with majority support in the House of Representatives forms the government and its leader becomes Prime Minister. In cases where no party has majority support, the Governor-General has the power to appoint the Prime Minister, and if necessary dismiss one that has lost the confidence of Parliament.[92]

There are two major political groups that usually form government, federally and in the states: the Australian Labor Party, and the Coalition which is a formal grouping of the Liberal Party and its minor partner, the National Party.[93][94] Independent members and several minor parties—including the Greens and the Australian Democrats—have achieved representation in Australian parliaments, mostly in upper houses.

Following a partyroom leadership challenge, Julia Gillard became the first female Prime Minister in June 2010.[95] The most recent federal election was held on 21 August 2010 and resulted in the first hung parliament

in over 50 years. Gillard was able to form a minority Labor government with the support of independents.

States and territories

Main article: States and territories of Australia

Australia has six states—New South Wales, Queensland, South Australia, Tasmania, Victoria, and Western Australia—and two major mainland territories—the Northern Territory and the Australian Capital Territory (ACT). In most respects these two territories function as states, but the Commonwealth Parliament can override any legislation of their parliaments. By contrast, federal legislation overrides state legislation only in areas that are set out in Section 51 of the Australian Constitution; state parliaments retain all residual legislative powers, including those over schools, state police, the state judiciary, roads, public transport, and local government, since these do not fall under the provisions listed in Section 51.[96]

A clickable map of Australia's states and mainland territories

Each state and major mainland territory has its own parliament—unicameral in the Northern Territory, the ACT, and Queensland, and bicameral in the other states. The states are sovereign entities, although subject to certain powers of the Commonwealth as defined by the Constitution. The lower houses are known as the Legislative Assembly (the House of Assembly in South Australia and Tasmania); the upper houses are known as the Legislative Council. The head of the government in each state is the Premier, and in each territory the Chief Minister. The Queen is represented in each state by a Governor; and in the Northern Territory, the Administrator.[97] In the Commonwealth, the Queen's representative is the Governor-General.[98]

The federal parliament directly administers the following territories:[86]

- Ashmore and Cartier Islands
- Australian Antarctic Territory
- Christmas Island and Cocos (Keeling) Islands
- Coral Sea Islands
- Heard Island and McDonald Islands
- Jervis Bay Territory, a naval base and sea port for the national capital in land that was formerly part of New South Wales

Norfolk Island is also technically an external territory; however, under the Norfolk Island Act 1979 it has been granted more autonomy and is governed locally by its own legislative assembly. The Queen is represented by an Administrator, currently Owen Walsh.[99]

Foreign relations and military

Main articles: Foreign relations of Australia and Australian Defence Force

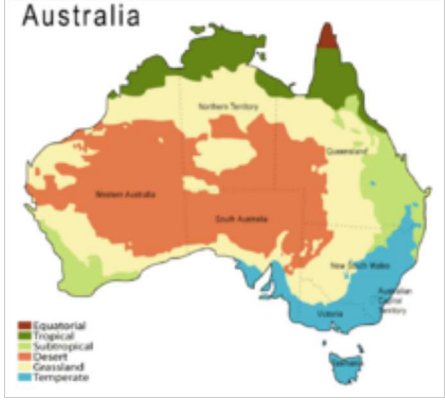
Over recent decades, Australia's foreign relations have been driven by a close association with the United States through the ANZUS pact, and by a desire to develop relationships with Asia and the Pacific, particularly through ASEAN and the Pacific Islands Forum. In 2005 Australia secured an inaugural seat at the East Asia Summit following its accession to the Treaty of Amity and Cooperation in Southeast Asia, and in 2011 attended the Sixth East Asia Summit in Indonesia. Australia is a member of the Commonwealth of Nations, in which the Commonwealth Heads of Government meetings provide the main forum for co-operation.[100]

Australian Army soldiers conducting a foot patrol during a joint training exercise with US forces in Shoalwater Bay (2007).

Australia has pursued the cause of international trade liberalisation.[101][102][103] It led the formation of the Cairns Group and Asia-Pacific Economic Cooperation.[104][105] Australia is a member of the Organisation for Economic Co-operation and Development and the World Trade Organization,[106][107] and has pursued several major bilateral free trade agreements, most recently the Australia – United States Free Trade Agreement[108] and Closer Economic Relations with New Zealand,[109] with another free trade agreement being negotiated with China—the Australia – China Free Trade Agreement—and Japan,[110] South Korea in 2011,[111][112] Australia–Chile Free Trade Agreement, ASEAN – Australia – New Zealand Free Trade Area, and the Trans-Pacific Strategic Economic Partnership.

Along with New Zealand, the United Kingdom, Malaysia and Singapore, Australia is party to the Five Power Defence Arrangements, a regional defence agreement. A founding member country of the United Nations, Australia is strongly committed to multilateralism[113] and maintains an international aid program under which some 60 countries receive assistance. The 2005–06 budget provides A$2.5 billion for development assistance;[114] as a percentage of GDP, this contribution is less than that recommended in the UN Millennium Development Goals. Australia ranks seventh overall in the Center for Global Development's 2008 Commitment to Development Index.[115]

Australia's armed forces—the Australian Defence Force (ADF)—comprise the Royal Australian Navy (RAN), the Australian Army and the Royal Australian Air Force (RAAF), in total numbering 80,561 personnel (including 55,068 regulars and 25,493 reservists).[116] The titular role of Commander-in-Chief is vested in the Governor-General, who appoints a Chief of the Defence Force from one of the armed services on the advice of the government.[117] Day-to-day force operations are under the command of the Chief, while broader administration and the formulation of defence policy is undertaken by the Minister and Department of Defence.



In the 2010–11 budget, defence spending was A$25.7 billion,[118] representing the 13th largest defence budget.[119] Australia has been involved in UN and regional peacekeeping, disaster relief and armed conflict; it currently has deployed approximately 3,330 defence force personnel in varying capacities to 12 overseas operations in areas including East Timor, Solomon Islands and Afghanistan.[120]

Geography and climate

Main articles: Geography of Australia, Climate of Australia, and Geology of Australia

Australia's landmass of 7,617,930 square kilometres (2,941,300 sq mi)[121] is on the Indo-Australian Plate.

Surrounded by the Indian and Pacific oceans,[N 4] it is separated from Asia by the Arafura and Timor seas, with the Coral Sea lying off the Queensland coast, and the Tasman Sea lying between Australia and New Zealand. The world's smallest continent[122] and sixth largest country by total area,[123] Australia—owing to its size and isolation—is often dubbed the "island continent",[124] and is sometimes considered the world's largest island.[125] Australia has 34,218 kilometres (21,262 mi) of coastline (excluding all offshore islands),[126] and claims an extensive Exclusive Economic Zone of 8,148,250 square kilometres (3,146,060 sq mi). This exclusive economic zone does not include the Australian Antarctic Territory.[127] Excluding Macquarie Island, Australia lies between latitudes 9° and 44°S, and longitudes 112° and 154°E.

Climatic zones in Australia, based on the Köppen climate classification.

The Great Barrier Reef, the world's largest coral reef,[128] lies a short distance off the north-east coast and extends for over 2,000 kilometres (1,240 mi). Mount Augustus, claimed to be the world's largest monolith,[129] is located in Western Australia. At 2,228 metres (7,310 ft), Mount Kosciuszko on the Great Dividing Range is the highest mountain on the Australian mainland. Even taller are Mawson Peak (at 2,745 metres or 9,006 feet), on the remote Australian territory of Heard Island, and, in the Australian Antarctic Territory, Mount McClintock and Mount Menzies, at 3,492 metres (11,457 ft) and 3,355 metres (11,007 ft) respectively.[130]

Everlastings on Mount Hotham, located in Victoria

Australia's size gives it a wide variety of landscapes, with subtropical rain forests in the north-east, mountain ranges in the south-east, south-west and east areas, and a dry desert in its centre.[131] It is the flattest continent,[132] with the oldest and least fertile soils;[133][134] desert or semi-arid land commonly known as the outback makes up by far the largest portion of land.[135] The driest inhabited continent, only its south-east and south-west corners have a temperate climate.[136] The population density, 2.8 inhabitants per square kilometre, is among the lowest in the world,[137] although a large proportion of the population lives along the temperate south-eastern coastline.[138]

Eastern Australia is marked by the Great Dividing Range that runs parallel to the coast of Queensland, New South Wales, and much of Victoria—although the name is not strictly accurate, as in parts the range consists of low hills and the highlands are typically no more than 1,600 metres (5,249 ft) in height.[139] The coastal uplands and a belt of Brigalow grasslands lie between the coast and the mountains, while inland of the dividing range are large areas of grassland.[139][140] These include the western plains of New South Wales, and the Einasleigh Uplands, Barkly Tableland, and Mulga Lands of inland Queensland. The northern point of the east coast is the tropical rainforested Cape York Peninsula.[141][142][143][144]

The landscapes of the northern part of the country—the Top End and the Gulf Country behind the Gulf of Carpentaria, with their tropical climate—consist of woodland, grassland, and desert.[145][146][147] At the north-west corner of the continent are the sandstone cliffs and gorges of The Kimberley, and below that the Pilbara. South and inland of these lie more areas of grassland: the Ord Victoria Plain and the Western Australian Mulga shrublands.[148][149][150] At the heart of the country are the uplands of central Australia; prominent features of the centre and south include the inland Simpson, Tirari and Sturt Stony, Gibson, Great Sandy, Tanami,

and Great Victoria deserts, with the famous Nullarbor Plain on the southern coast.[151][152][153][154]

Topographic map of Australia

The climate of Australia is significantly influenced by ocean currents, including the Indian Ocean Dipole and the El Niño-Southern Oscillation, which is correlated with periodic drought, and the seasonal tropical low pressure system that produces cyclones in northern Australia.[155][156] These factors induce rainfall to vary markedly from year to year. Much of the northern part of the country has a tropical predominantly summer rainfall (monsoon) climate.[157] The southwest corner of the country has a Mediterranean climate.[158] Much of the southeast (including Tasmania) is temperate.[157]

Environment

Main article: Environment of Australia

Although most of Australia is semi-arid or desert, it includes a diverse range of habitats from alpine heaths to tropical rainforests, and is recognised as a megadiverse country. Because of the continent's great age, extremely variable weather patterns, and long-term geographic isolation, much of Australia's biota is unique and diverse. About 85 per cent of flowering plants, 84 per cent of mammals, more than 45 per cent of birds, and 89 per cent of in-shore, temperate-zone fish are endemic.[159] Australia has the greatest number of reptiles of any country, with 755 species.[160]

The koala and the *eucalyptus* form an iconic Australian pair

Australian forests are mostly made up of evergreen species, particularly eucalyptus trees in the less arid regions, wattles replace them in drier regions and deserts as the most dominant species.[161] Among well-known Australian fauna are the monotremes (the platypus and echidna); a host of marsupials, including the kangaroo, koala, and wombat, and birds such as the emu and the kookaburra.[161] Australia is home to many dangerous animals including some of the most venomous snakes in the world.[162] The dingo was introduced by Austronesian people who traded with Indigenous Australians around 3000 BCE.[163] Many plant and animal species became extinct soon after first human settlement,[164] including the Australian megafauna; others have disappeared since European settlement, among them the thylacine.[165][166]

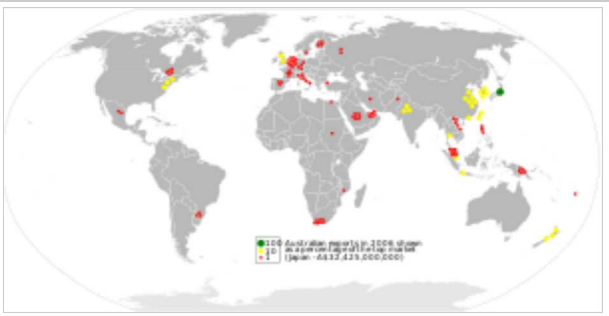
Many of Australia's ecoregions, and the species within those regions, are threatened by human activities and introduced plant and animal species.[167] The federal *Environment Protection and Biodiversity Conservation Act 1999* is the legal framework for the protection of threatened species.[168] Numerous protected areas have been created under the National Strategy for the Conservation of Australia's Biological Diversity to protect and preserve unique ecosystems;[169][170] 65 wetlands are listed under the Ramsar Convention,[171] and 16 natural World Heritage Sites have been established.[172] Australia was ranked 51st of 163 countries in the world on the 2010 Environmental Performance Index.[173]

Climate change has become an increasing concern in Australia in recent years, and protection of the

environment is a major political issue.[174][175] In 2007, the Rudd Government signed the instrument of ratification of the Kyoto Protocol. Nevertheless, Australia's carbon dioxide emissions per capita are among the highest in the world, lower than those of only a few other industrialised nations.[176] Rainfall in Australia has slightly increased over the past century, both nationwide and for two quadrants of the nation,[177] According to the Bureau of Meteorology's 2011 Australian Climate Statement, Australia had lower than average temperatures in 2011 as a consequence of a La Nina weather pattern, however, "the country's 10-year average continues to demonstrate the rising trend in temperatures, with 2002-2011 likely to rank in the top two warmest 10-year periods on record for Australia, at 0.52 °C above the long-term average".[178] Water restrictions are frequently in place in many regions and cities of Australia in response to chronic shortages due to urban population increases and localised drought.[179][180] Throughout much of the continent, major flooding regularly follows extended periods of drought, flushing out inland river systems, overflowing dams and inundating large inland flood plains, as occurred throughout Eastern Australia in 2010, 2011 and 2012 after the 2000s Australian drought.

Economy

Main article: Economy of Australia



See also: Economic history of Australia and Median household income in Australia and New Zealand

Australia has a market economy with high GDP per capita and a low rate of poverty. The Australian dollar is the currency for the nation, including Christmas Island, Cocos (Keeling) Islands, and Norfolk Island, as well as the independent Pacific Island states of Kiribati, Nauru, and Tuvalu. After the 2006 merger of the Australian Stock Exchange and the Sydney Futures Exchange, the Australian Securities Exchange is now the ninth largest in the world.[182]

The Super Pit gold mine in Kalgoorlie, Australia's largest open cut mine.[181]

Ranked third in the Index of Economic Freedom (2010),[183] Australia is the world's thirteenth largest economy and has the fifth highest per capita GDP at $66,984; significantly higher than that of the United States, United Kingdom, Germany, France, Canada, Japan, and New Zealand. The country was ranked second in the United Nations 2011 Human Development Index and first in Legatum's 2008 Prosperity Index.[184] All of Australia's major cities fare well in global comparative livability surveys;[185] Melbourne reached first place on *The Economist*'s 2011 World's Most Livable Cities list, followed by Sydney, Perth, and Adelaide in sixth, eighth, and ninth place respectively.[186] Total government debt in Australia is about $190 billion.[187] Australia has among the highest house prices and some of the highest household debt levels in the world.[188]

Destination and value of Australian exports in

An emphasis on exporting commodities rather than manufactured goods has underpinned a significant increase in Australia's terms of trade since the start of the 21st century, due to rising commodity prices. Australia has a balance of payments that is more than 7 per cent of GDP negative, and has had persistently large current account deficits for more than 50 years.[190] Australia has grown at an average annual rate of 3.6 per cent for over 15 years, in comparison to the OECD annual average of 2.5 per cent.[190] There are differing opinions based on evidence as

2006[189]

to whether or not Australia had been one of the few OECD nations to avoid experiencing a recession during the late 2000s global financial downturn.[191][191][192] Six of Australia's major trading partners had been in recession which in turn affected Australia, and economic growth was hampered significantly over recent years.[193][194]

The Hawke Government floated the Australian dollar in 1983 and partially deregulated the financial system.[195] The Howard Government followed with a partial deregulation of the labour market and the further privatisation of state-owned businesses, most notably in the telecommunications industry.[196] The indirect tax system was substantially changed in July 2000 with the introduction of a 10 per cent Goods and Services Tax (GST).[197] In Australia's tax system, personal and company income tax are the main sources of government revenue.[198]

In July 2011, there were 11,450,500 people employed, with an unemployment rate of 5.1 per cent.[199] Youth unemployment (15–24) rose from 8.7 per cent to 9.7 per cent over 2008–2009.[200] Over the past decade, inflation has typically been 2–3 per cent and the base interest rate 5–6 per cent. The service sector of the economy, including tourism, education, and financial services, accounts for about 70 per cent of GDP.[201] Rich in natural resources, Australia is a major exporter of agricultural products, particularly wheat and wool, minerals such as iron-ore and gold, and energy in the forms of liquified natural gas and coal. Although agriculture and natural resources account for only 3 per cent and 5 per cent of GDP respectively, they contribute substantially to export performance. Australia's largest export markets are Japan, China, the US, South Korea, and New Zealand.[202] Australia is the world's fourth largest exporter of wine, in an industry contributing $5.5 billion per annum to the nation's economy.[203]

Demography

Main articles: Demographics of Australia and Immigration to Australia

For almost two centuries the majority of settlers, and later immigrants, came from the British Isles. As a result the people of Australia are mainly a mixture of British and Irish ethnic origin. In the 2006 Australian census, the most commonly nominated ancestry was Australian (37.13 per cent),[205] followed by English (32 per cent), Irish (9 per cent), Scottish (8 per cent), Italian (4 per cent), German (4 per cent), Chinese (3 per cent), and Greek (2 per cent).[206]

Nearly three quarters of Australians live in metropolitan cities and coastal areas. The beach is an integral part of the Australian identity.[204]

Australia's population has quadrupled since the end of World War I,[207] much of the increase from immigration. Following World War II and through to 2000, almost 5.9 million of the total population settled in the country as new immigrants, meaning that nearly two out of every seven Australians were born overseas.[208] Most immigrants are skilled,[209] but the immigration quota includes categories for family members and refugees.[209] By 2050, Australia's population is currently projected to reach around 42 million.[210]

In 2001, 23.1 per cent of Australians were born overseas; the five largest immigrant groups were those from the United Kingdom, New Zealand, Italy, Vietnam, and China.[202][211] Following the abolition of the White Australia policy in 1973, numerous government initiatives have been established to encourage and promote racial harmony based on a policy of multiculturalism.[212] In 2005–06, more than 131,000 people emigrated to

Australia, mainly from Asia and Oceania.[213] The migration target for 2010–11 is 168,700, compared to 67,900 in 1998–99.[214]

The Barossa Valley is a wine-producing region in South Australia. Fewer than 15 per cent of Australians live in rural areas.

The Indigenous population—mainland Aborigines and Torres Strait Islanders—was counted at 410,003 (2.2 per cent of the total population) in 2001, a significant increase from 115,953 in the 1976 census.[215] A large number of Indigenous people are not identified in the Census due to undercount and cases where their Indigenous status is not recorded on the form; after adjusting for these factors, the ABS estimated the true figure for 2001 to be around 460,140 (2.4 per cent of the total population).[216]

Indigenous Australians experience higher than average rates of imprisonment and unemployment,[217] lower levels of education, and life expectancies for males and females that are 11–17 years lower than those of non-indigenous Australians.[202][218][219] Some remote Indigenous communities have been described as having "failed state"-like conditions.[220][221][222][223][224]

In common with many other developed countries, Australia is experiencing a demographic shift towards an older population, with more retirees and fewer people of working age. In 2004, the average age of the civilian population was 38.8 years.[225] A large number of Australians (759,849 for the period 2002–03)[226] live outside their home country.

Language

Main article: Australian English

Although Australia has no official language, English is so entrenched that it has become the de facto national language.[2] Australian English is a major variety of the language with a distinctive accent and lexicon. General Australian serves as the standard dialect. Spelling is similar to that of British English with a number of exceptions.[228] According to the 2006 census, English is the only language spoken in the home for close to 79 per cent of the population. The next most common languages spoken at home are Italian (1.6 per cent), Greek (1.3 per cent) and Cantonese (1.2 per cent);[229] a considerable proportion of first- and second-generation migrants are bilingual. A 2010–2011 study by the Australia Early Development Index found that the most common language spoken by children after English was Arabic, followed by Vietnamese, Greek, Chinese, and Hindi.[230]

Between 200 and 300 Indigenous Australian languages are thought to have existed at the time of first European contact, of which only about 70 have survived. Many of these are exclusively spoken by older people; only 18 Indigenous languages are still spoken by all age groups.[231] At the time of the 2006 Census, 52,000 Indigenous Australians, representing 12 per cent of the Indigenous population, reported that they spoke an Indigenous language at home.[232] Australia has a sign language known as Auslan, which is the main language of about 5,500 deaf people.[233]

Religion

Main article: Religion in Australia

Australia has no state religion, and section 116 of the Australian Constitution prohibits the federal government from making any law to establish any religion, impose any religious observance, or prohibit the free exercise of any religion.[234] In the 2006 census, 64 per cent of Australians were counted as Christian, including 26 per cent as Roman Catholic and 19 per cent as Anglican. About 19 per cent of the population stated "no religion" (which includes humanism, atheism, agnosticism and rationalism), which was the fastest-growing group from 2001 to 2006, and a further 12 per cent did not answer (the question is optional) or did not give a response adequate for interpretation. The largest non-Christian religion in Australia is Buddhism (2.1 per cent), followed by Islam (1.7 per cent), Hinduism (0.8 per cent) and Judaism (0.5 per cent). Overall, fewer than 6 per cent of Australians identify with non-Christian religions.[235]

WR Thomas, *A South Australian Corroboree*, 1864, Art Gallery of South Australia. Aboriginal Australians developed the animist religion of the Dreamtime.

Prior to European settlement in Australia, the animist beliefs of Australia's indigenous people had been practised for millennia. In the case of mainland Aboriginal Australians, their spirituality is known as The Dreamtime and it places a heavy emphasis on belonging to the land. The collection of stories that it contains shaped Aboriginal law and customs. Aboriginal art, story and dance continue to draw on these spiritual traditions. In the case of the Torres Strait Islanders who inhabit the islands between Australia and New Guinea, spirituality and customs reflected their Melanesian origins and dependence on the sea. The 1996 Australian census counted more than 7000 respondents as followers of a traditional Aboriginal religion.[236]

St Mary's Catholic Cathedral, Sydney, built to a design by William Wardell. About a quarter of Australians are Roman Catholic.

Since the arrival of the First Fleet of British ships in 1788, Christianity has grown to be the major religion. Consequently, the Christian festivals of Christmas and Easter are public holidays, the skylines of Australian cities and towns are marked by church and cathedral spires, and the Christian churches have played an integral role in the development of education, health and welfare services in Australia. The Catholic education system operates as the largest non-government educator, accounting for about 21% of all secondary enrolments at the close of the 2000s (decade), with Catholic Health Australia similarly being the largest non-government provider. Christian welfare organisations also play a prominent role within national life, with organisations like the Salvation Army, St Vincent de Paul Society and Anglicare enjoying widespread support. Such contributions are recognised on Australia's currency, with the presence of Christian pastors like Aboriginal writer David Unaipon ($50); founder of the Royal Flying Doctor Service, John Flynn ($20); and Catherine Helen Spence ($5) who was Australia's first female candidate for political office. Other significant Australian religious figures have included St. Mary McKillop, who became the first Australian to be recognised as a saint by the Roman Catholic Church in 2010 and Church of Christ pastor Sir Douglas Nicholls, who, like Martin Luther King in the United States, led a movement against racial inequality in Australia and was also the first indigenous Australian to be appointed as a State Governor.

For much of Australian history the Church of England (now known as the Anglican Church of Australia) was the largest religious affiliation, however multicultural immigration has contributed to a decline in its relative position, with the Roman Catholic Church benefiting from the opening of post-war Australia to multicultural immigration

and becoming the largest group. Similarly, Islam, Buddhism, Hinduism and Judaism have all been expanding in the post war decades. Weekly attendance at church services in 2001 was about 1.5 million[237] (about 7.8 per cent of the population).[238]

An international survey, made by the private, not-for profit German think-tank, the Bertelsmann Foundation, found that "Australia is one of the least religious nations in the western world, coming in 17th out of 21 [countries] surveyed" and that "Nearly three out of four Australians say they are either not at all religious or that religion does not play a central role in their lives."[239] A survey of 1,718 Australians by the Christian Research Association at the end of 2009 suggested that the number of people attending religious services per month in Australia has dropped from 23 per cent in 1993 to 16 per cent in 2009, and while 60 per cent of 15 to 29-year-old respondents in 1993 identified with Christian denominations, 33 per cent did in 2009.[240]

Education

Main article: Education in Australia

School attendance is compulsory throughout Australia. Education is the responsibility of the individual states and territories[241] so the rules vary between states, but in general children are required to attend school from the age of about 5 up until about 16.[242][243] In at least some states (eg, WA)[244] children aged 16–17 are required to either attend school or participate in vocational training, such as an apprenticeship.

Australia has an adult literacy rate that is assumed to be 99 per cent. In the Programme for International Student Assessment, Australia regularly scores among the top five of thirty major developed countries (member countries of the Organisation for Economic Co-operation and Development). Catholic education accounts for the largest non-government sector.

Australia has 37 government-funded universities and two private universities, as well as a number of other specialist institutions that provide approved courses at the higher education level.[245] The University of Sydney is Australia's oldest university, having been founded in 1850, followed by the University of Melbourne three years later. Other notable universities include those of the Group of Eight leading tertiary institutions, including the University of Adelaide (which boasts an association with five Nobel Laureates), the Australian National University located in the national capital of Canberra, Monash University and the University of New South Wales.

The OECD places Australia among the most expensive nations to attend university.[246] There is a state-based system of vocational training, known as TAFE, and many trades conduct apprenticeships for training new tradespeople.[247] Approximately 58 per cent of Australians aged from 25 to 64 have vocational or tertiary qualifications,[202] and the tertiary graduation rate of 49 per cent is the highest among OECD countries. The ratio of international to local students in tertiary education in Australia is the highest in the OECD countries.[248]

Health

See also: Health care in Australia

Life expectancy in Australia in 2006 was 78.7 years for males and 83.5 years for females.[249] Australia has the highest rates of skin cancer in the world,[250] while cigarette smoking is the largest preventable cause of death and disease.[251] Australia has one of the highest proportions of overweight citizens among developed nations.[252]

Total expenditure on health (including private sector spending) is around 9.8 per cent of GDP.[253] Australia introduced universal health care in 1975.[254] Known as Medicare it is now nominally funded by an income tax surcharge known as the *Medicare levy*, currently set at 1.5 per cent.[255] The states manage hospitals and attached outpatient services, while the Commonwealth funds the Pharmaceutical Benefits Scheme (reducing the costs of medicines) and general practice.[254]

Culture

Main article: Culture of Australia

The Royal Exhibition Building in Melbourne was the first building in Australia to be listed as a UNESCO World Heritage Site in 2004[256]

Since 1788, the basis of Australian culture has been strongly influenced by Anglo-Celtic Western culture.[257][258] Distinctive cultural features have also arisen from Australia's natural environment and Indigenous cultures.[259][260] Since the mid-20th century, American popular culture has strongly influenced Australia, particularly through television and cinema.[261] Other cultural influences come from neighbouring Asian countries, and through large-scale immigration from non-English-speaking nations.[261][262]

Arts

Main articles: Visual arts of Australia, Theatre of Australia, and Dance in Australia

Australian visual arts are thought to have begun with the cave and bark paintings of its Indigenous peoples. The traditions of Indigenous Australians are largely transmitted orally, through ceremony and the telling of Dreamtime stories.[263] From the time of European settlement, a theme in Australian art has been the natural landscape,[259] seen for example in the works of Albert Namatjira,[264] Arthur Streeton and others associated with the Heidelberg School,[259] and Arthur Boyd.[265]

Sunlight Sweet by Australian landscape artist Arthur Streeton.

The country's landscape remains a source of inspiration for Australian modernist artists; it has been depicted in acclaimed works by the likes of Sidney Nolan,[266] Fred Williams,[267] Sydney Long,[268] and Clifton Pugh.[269] Australian artists influenced by modern American and European art include cubist Grace Crowley,[270] surrealist James Gleeson,[271] and pop artist Martin Sharp.[272] Contemporary Indigenous Australian art is the only art movement of international significance to emerge from Australia[273][274] and "the last great art movement of the 20th century";[275] its exponents have included Emily Kngwarreye.[276][277] Art critic Robert Hughes has written several influential books about Australian history and art, and was described as the "world's most famous art critic" by *The New York Times*.[278] The National Gallery of Australia and state galleries maintain Australian and overseas collections.[279] Australia has one of the world's highest attendances of art galleries and museums per head of population—far more than Britain or America.[280]

Many of Australia's performing arts companies receive funding through the federal government's Australia Council.[281] There is a symphony orchestra in each state,[282] and a national opera company, Opera Australia,[283] well-known for its famous soprano Joan Sutherland.[284] At the turn of the 19th to 20th century, Nellie Melba was one of the world's leading opera singers.[285] Ballet and dance are represented by The Australian Ballet and various state companies. Each state has a publicly funded theatre company.[286][287][288]

Australian literature has also been influenced by the landscape; the works of writers such as Banjo Paterson, Henry Lawson, and Dorothea Mackellar captured the experience of the Australian bush.[289] The character of the nation's colonial past, as represented in early literature, is popular with modern Australians.[259] In 1973, Patrick White was awarded the Nobel Prize in Literature,[290] the first Australian to have achieved this.[291] Australian winners of the Man Booker Prize have included Peter Carey and Thomas Keneally;[292] David Williamson, David Malouf, and J. M. Coetzee, who recently became an Australian citizen, are also renowned writers,[293] and Les Murray is regarded as "one of the leading poets of his generation".[294]

Media

Main articles: Television in Australia, Cinema of Australia, Media of Australia, Australian literature, and Music of Australia

The Australian cinema industry began with the 1906 release of *The Story of the Kelly Gang*, which is regarded as being the world's first feature-length film;[295] but both Australian feature film production and the distribution of British-made features declined dramatically after World War I as American studios and distributors monopolised the industry,[296] and by the 1930s around 95 per cent of the feature films screened in Australia were produced in Hollywood. By the late 1950s feature film production in Australia had effectively ceased and there were no all-Australian feature films made in the decade between 1959 and 1969.[297]

Thanks to initiatives by the Gorton and Whitlam federal governments, the New Wave of Australian cinema of the 1970s brought provocative and successful films, some exploring the nation's colonial past, such as *Picnic at Hanging Rock* and *Breaker Morant*,[298] while the so-called "Ocker" genre produced several highly successful urban-based comedy features including *The Adventures of Barry McKenzie* and *Alvin Purple*.[299][300][301] Later hits included *Mad Max* and *Gallipoli*.[302][303] More recent successes included *Shine* and *Rabbit-Proof Fence*.[304][305] Notable Australian actors include Judith Anderson,[306] Errol Flynn,[307] Nicole Kidman, Hugh Jackman, Heath Ledger, Geoffrey Rush, and Cate Blanchett—current joint director of the Sydney Theatre Company.[308][309]

Australia has two public broadcasters (the Australian Broadcasting Corporation and the multicultural Special Broadcasting Service), three commercial television networks, several pay-TV services,[310] and numerous public, non-profit television and radio stations. Each major city has at least one daily newspaper,[310] and there are two national daily newspapers, *The Australian* and *The Australian Financial Review*.[310] In 2010, Reporters Without Borders placed Australia 18th on a list of 178 countries ranked by press freedom, behind New Zealand (8th) but ahead of the United Kingdom (19th) and United States (20th).[311] This relatively low ranking is primarily because of the limited diversity of commercial media ownership in Australia;[312] most print media

are under the control of News Corporation and Fairfax Media.[313]

Cuisine

Main article: Australian cuisine

The food of Indigenous Australians was largely influenced by the area in which they lived. Most tribal groups subsisted on a simple hunter-gatherer diet, hunting native game and fish and collecting native plants and fruit. The general term for native Australian flora and fauna used as a source of food is bush tucker.[314][315] The first settlers introduced British food to the continent[316] which much of what is now considered typical Australian food is based on the Sunday roast has become an enduring tradition for many Australians.[317] Since the beginning of the 20th century, food in Australia has increasingly been influenced by immigrants to the nation, particularly from Southern European and Asian cultures.[316][317] Australian wine is produced in 60 distinct production areas totaling approximately 160,000 hectares, mainly in the southern, cooler parts of the country. The wine regions in each of these states produce different wine varieties and styles that take advantage of local climates and soil types. The predominant varieties are Shiraz, Cabernet Sauvignon, Chardonnay, Merlot, Sémillon, Pinot noir, Riesling, and Sauvignon blanc.[318][319][320][203][321][322] In 1995, an Australian red wine, Penfolds Grange, won the Wine Spectator award for Wine of the Year, the first time a wine from outside France or California achieved this distinction.[323]

Sport

Main article: Sport in Australia

Around 24 per cent Australians over the age of 15 regularly participate in organised sporting activities in Australia.[202] Australia has strong international teams in cricket, field hockey, netball, rugby league, and rugby union, having been Olympic or world champions at least twice in each sport in the last 25 years for both men and women where applicable.[325][326][327][328][329][330][331][332] Australia is also powerful in track cycling, rowing, and swimming, having consistently been in the top-five medal-winners at Olympic or World Championship level since 2000.[333][334][335] Swimming is the strongest of these sports; Australia is the second-most prolific medal winner in the sport in Olympic history.[336][337][338]

Cricket has been an important part of Australia's sporting culture since the 19th century.[324]

Some of Australia's most internationally well-known and successful sportspeople are swimmers Dawn Fraser, Murray Rose, Shane Gould, and Ian Thorpe; sprinters Shirley Strickland, Betty Cuthbert, and Cathy Freeman;[339] tennis players Rod Laver, Roy Emerson, Ken Rosewall, Evonne Goolagong, and Margaret Court; cricketers Donald Bradman and Shane Warne; three-time Formula One world champion Jack Brabham; five-time motorcycle grand prix world champion Mick Doohan; golfers Greg Norman and Karrie Webb;[340] cyclist Hubert Opperman; and prodigious billiards player Walter Lindrum.[341] Nationally, other popular sports include Australian rules football, horse racing, squash, surfing, soccer, and motor racing. The annual Melbourne Cup horse race and the Sydney to Hobart yacht race attract intense interest.

Australia has participated in every summer Olympics of the modern era,[342] and every Commonwealth Games.[343] Australia hosted the 1956 Summer Olympics in Melbourne and the 2000 Summer Olympics in Sydney,[344] and has ranked among the top six medal-takers since 2000.[345] Australia has also hosted the 1938,

1962, 1982, 2006 Commonwealth Games and will host the 2018 Commonwealth Games.[346] Other major international events held in Australia include the Australian Open tennis grand slam tournament, international cricket matches, and the Australian Formula One Grand Prix. Sydney hosted the 2003 Rugby World Cup and the annual Australia–New Zealand Bledisloe Cup is keenly watched. The highest-rating television programs include sports telecasts such as the summer Olympics, FIFA World Cup, Rugby League State of Origin, and the grand finals of the National Rugby League and Australian Football League.[347] Skiing in Australia began in the 1860s and snow sports take place in the Australian Alps and parts of Tasmania.

Notes

1. ^ Australia also has a royal anthem, "God Save the Queen (or King)", which is played in the presence of a member of the Royal family when they are in Australia. In all other appropriate contexts, the national anthem of Australia, "Advance Australia Fair", is played.[1]
2. ^ ***a*** ***b*** English does not have *de jure* status.[2]
3. ^ ***a*** ***b*** There are minor variations from these three time zones, see Time in Australia.
4. ^ ***a*** ***b*** Australia describes the body of water south of its mainland as the Southern Ocean, rather than the Indian Ocean as defined by the International Hydrographic Organization (IHO). In 2000, a vote of IHO member nations defined the term "Southern Ocean" as applying only to the waters between Antarctica and 60 degrees south latitude.[11]
5. ^ The Oxford English Dictionary records a first occurrence in 1908, in the form *Oss*. *Oz* is often taken as an oblique reference to the fictional Land of Oz in the film *The Wizard of Oz* (1939), based on L. Frank Baum's novel *The Wonderful Wizard of Oz* (1900).[18] Australians' "image of Australia as a 'Land of Oz' is not new, and dedication to it runs deep".[19] The spelling *Oz* is likely to have been influenced by the 1939 film, though the pronunciation was probably always with a /z/, as it is also for *Aussie*, sometimes spelt *Ozzie*.[20] The Baz Luhrmann film *Australia* (2008) makes repeated reference to *The Wizard of Oz*, which appeared just before the wartime action of *Australia*. Some critics have even speculated that Baum was inspired by Australia, in naming the *Land of Oz*: "In *Ozma of Oz* (1907) Dorothy gets back to Oz as the result of a storm at sea while she and Uncle Henry are traveling by ship to Australia. So, like Australia, Oz is somewhere to the west of California. Like Australia, Oz is an island continent. Like Australia, Oz has inhabited regions bordering on a great desert. One might almost imagine that Baum intended Oz to be Australia, or perhaps a magical land in the center of the great Australian desert."[21]

Brunei

From Wikipedia, the free encyclopedia

Brunei /bruːˈnaɪ/, officially the **Nation of Brunei, the Abode of Peace**[8] (Malay: *Negara Brunei Darussalam*, Jawi: نڬارا بروني دارالسلام), is a sovereign state located on the north coast of the island of Borneo, in Southeast Asia. Apart from its coastline with the South China Sea, it is completely surrounded by the state of Sarawak, Malaysia, and it is separated into two parts by Limbang, which is part of Sarawak. It is the only sovereign state completely on the island of Borneo, with the remainder of the island belonging to Malaysia and Indonesia. Brunei's population was 401,890 in July 2011.[9]

The official national history claims that Brunei can trace its beginnings to the 7th century, when it was a subject state of the Srivijayan empire under the name P'o-li. It later became a vassal state of Majapahit empire before converting to Islam in the 15th century. At the peak of its empire, the sultanate had control that extended over the coastal regions of modern-day Sarawak and Sabah, the Sulu archipelago, and the islands off the northwest tip of Borneo. The thalassocracy was visited by Ferdinand Magellan in 1521 and fought the Castille War in 1578 against Spain. Its empire began to decline with the forced ceding of Sarawak to James Brooke and the ceding of Sabah to the British North Borneo Chartered Company. After the loss of Limbang, Brunei finally became a British protectorate in 1888, receiving a resident in 1906. In the years after the Japanese wartime occupation during World War II, it formalised a constitution and fought an armed rebellion.[10] Brunei regained its independence from the United Kingdom on 1 January 1984. Economic growth during the 1970s and 1990s, averaging 56% from 1999 to 2008, has transformed Brunei Darussalam into a newly industrialised country.

Brunei has the second highest Human Development Index among the South East Asia nations after Singapore, and is classified as a developed country.[11] According to the International Monetary Fund (IMF), Brunei is ranked 5th in the world by gross domestic product per capita at purchasing power parity. Forbes also ranks Brunei as the fifth richest nation out of 182 nations due to its extensive petroleum and natural gas fields.[12]

Etymology

According to legend, Brunei was founded by Awang Alak Betatar. His move from Garang, a place in the Temburong District[13] to the Brunei river estuary led to the discovery of Brunei. According to legend, upon landing he exclaimed "*Baru nah!*" (loosely translating as "that's it!" or "there"), from which the name *Brunei* was derived.[14]

It was renamed *Barunai* in the 14th century, possibly influenced by the Sanskrit word *varuṇ* (वरुण), meaning either "ocean" or mythological "regent of ocean." The word *Borneo* is of the same origin. In the country's full name *Negara Brunei Darussalam*, *Darussalam* (Arabic: دار السلام) means "Abode of Peace", while *Negara* means "country" in Malay.

History

Main article: History of Brunei

Early History

In the absence of any other evidence scholars have created an early history of Brunei that is mainly based on flexible interpretations of Chinese texts. This early part reads: Chinese records from the sixth century mention a state called P'o-li on the northwest coast of Borneo.[15] In the seventh century, Chinese and Arab accounts state a place called Vijayapura, which was thought to be founded by members of the royal family of Funan.[16] They were believed to have landed on the northwest coast of Borneo with some of their followers. They then captured P'o-li and renamed the territory 'Vijayapura' (meaning 'victory'). In 977, Chinese records started to use Po-ni instead of Vijayapura to refer to Brunei.[17] In 1225 a Chinese official named Chua Ju-Kua reported that Brunei has 100 warships to protect its trade and that there was a lot of gold in the kingdom.[18] Another report in 1280 described Po-ni as controlling large parts of Borneo Island (modern day Sabah and Sarawak, Sulu and some parts of the Philippines. In the fourteenth century, Po-ni became a vassal state of Majapahit, and had to pay an annual payment of 40 katis of camphor. Po-ni was attacked and looted of its treasure and gold by the Sulus in 1369. A fleet from Majapahit succeeded in driving away the Sulus but Po-ni became much weaker after the attack.[19] A Chinese report of 1371 described Po-ni as poor and totally controlled by Majapahit.[20]

The power of the Sultanate of Brunei was at its peak between the 15th and 17th centuries, with its power extending from northern Borneo to the southern Philippines.[4]

By the 16th century, Islam was firmly rooted in Brunei, and the country had built one of its biggest mosques. In 1578, Alonso Beltrán, a Spanish traveler described it as being five stories tall and built on the water.[21]

War with Spain and decline

European influence gradually brought an end to this regional power, as Brunei entered a period of decline compounded by internal strife over royal succession. Piracy was also detrimental to the kingdom.[4] Spain declared it war in 1578, attacking and capturing Brunei's capital at the time, Kota Batu. This was achieved as a result in part of the assistance rendered to them by two Bruneian noblemen, Pengiran Seri Lela and Pengiran Seri Ratna. The former had travelled to Manila to offer Brunei as a tributary of Spain for help to recover the throne usurped by his brother, Saiful Rijal.[22] The Spanish agreed that if they succeeded in conquering Brunei, Pengiran Seri Lela would indeed become the Sultan, while Pengiran Seri Ratna would be the new Bendahara. In March 1578, the Spanish fleet, led by De Sande himself, acting as Capitán-General, started their journey towards Brunei. The expedition consisted of 400 Spaniards, 1,500 Filipino natives and 300 Borneans.[23] The campaign was one of many, which also included action in Mindanao and Sulu.[24][25]

The Spanish succeeded in invading the capital on 16 April 1578, with the help of Pengiran Seri Lela and Pengiran Seri Ratna. The Sultan Saiful Rijal and Paduka Seri Begawan Sultan Abdul Kahar were forced to flee to Meragang then to Jerudong. In Jerudong, they made plans to chase the conquering army away from Brunei. The Spanish suffered heavy losses due to a cholera or dysentery outbreak.[26][27] They were so weakened by the illness that they decided to abandon Brunei to return to Manila on 26 June 1578, after just 72 days. Before doing so, they burned the mosque, a high structure with a five-tier roof.[28]

Pengiran Seri Lela died in August–September 1578, probably from the same illness that had afflicted his Spanish allies, although there was suspicion he could have been poisoned by the ruling Sultan. Seri Lela's daughter left with the Spanish and went on to marry a Christian Tagalog, named Agustín de Legazpi de Tondo.[29]

The local Brunei accounts[15] differ greatly from the generally accepted view of events. The *Castilian War* entering the national conscience as a heroic episode, with the Spaniards being driven out by Bendahara Sakam, supposedly a brother of the ruling Sultan, and a thousand native warriors. This version, nevertheless, is disputed by most historians and considered a folk-hero recollection, probably created decades or centuries after.[30]

Notwithstanding the retreat, Brunei lost a number of territories to Spain, including the island of Luzon.[31]

A civil war was fought from 1660 to 1673.

British Intervention

The decline of the Bruneian Empire culminated in the 19th century, when Brunei lost much of its territory to the White Rajahs of Sarawak, resulting in its current small landmass and separation into two parts.[32] The Treaty of Protection which was negotiated by Sir Hugh Low was signed into effect on 17 September 1888. This enables Britain control over Brunei's external affairs. This treaty was signed after Sultan Hashim, the Sultan at that time, appealed to the British to stop partitioning and annexing Brunei, as what James Brooke was doing since 1846.[33] One of the terms in the agreement included that the Sultan "could not cede or lease any territory to foreign powers without British consent." When James Brooke later annexed the Pandaruan district, however the British did not take any action against him as they regarded James Brooke as not being a foreigner.

The British also attacked Brunei on July 1846 due to disagreement of on who was the rightful Sultan.[34] Brunei was a British protectorate from 1888 to 1984.[4] British Residents were introduced in Brunei under the Supplementary Protectorate Agreement in 1906.[35] The Residents were to advise the Sultan on all matters of administration. However, the Resident assumed more executive control than the Sultan. The Residential system ended in 1959.[36]

Discovery of Oil

Oil was discovered in 1929 after several fruitless attempts.[37] Two men, F.F. Marriot and T.G. Cochrane smelled oil near the Seria river in late 1926.[38] They informed a geophysicist which then conducted a survey there. In 1927, gas seepages were reported in the area. Seria Well Number One (S-1) was drilled on 12 July 1928. Oil was struck at 297 meters on 5 April 1929. Seria Well Number 2 was drilled on 19 August 1929 and is still producing oil to this date.[39] Oil production increased considerably in the 1930s. In 1940, oil production was at more than six million barrels.[39] The British Malayan Petroleum Company (now Brunei Shell Petroleum Company) was formed on 22 July 1922.[40]

The first offshore well was drilled in 1957.[41]

Japanese Occupation

Brunei was occupied by Japan from 1941 to 1945 during World War II. The Japanese landed 10,000 men at Kuala Belait on 16 December 1941. The British in Brunei were easily defeated due to their unpreparedness and the fact that they were outnumbered. After capturing Kuala Belait, the Japanese army moved on to Brunei Town (now Bandar Seri Begawan) and captured it on 22 December 1941, capturing the police headquarters there. Brunei was liberated on 10 June 1945 under Operation Oboe Six.[42][43]

Post World War II

After World War II, a new government was formed in Brunei under the British Military Administration (BMA). It consisted mainly of Australian officers and servicemen.[44] The administration of Brunei was handed over to the Civil Administration on 6 July 1945. The Brunei State Council was also revived that year.[42] The BMA was also tasked to revive the Bruneian economy, which was extensively damaged by the Japanese during their occupation. They were also tasked with putting out the fires started on the wells of Seria, which was started by the Japanese

prior to their defeat.[42] Before 1941, the Governor of the Straits Settlements based in Singapore was responsible for the duties of British High Commissioner for Brunei, Sarawak, and North Borneo (now Sabah).[45] The first British High Commissioner for Brunei was the Governor of Sarawak, Sir Charles Ardon Clarke. The Barisan Pemuda ("Youth Movement") (abbreviated as BARIP) was the first political party to be formed in Brunei. It was formed on 12 April 1946. The aims of the party were to "preserve the sovereignty of the Sultan and the country, and to defend the rights of the Malays."[46] BARIP also contributed to the formation of the country's National Anthem. The party was dissolved in 1948 due to inactivity.

In 1959, a new constitution was written declaring Brunei a self-governing state, while its foreign affairs, security, and defense remained the responsibility of the United Kingdom.[9] There was a small rebellion against the monarchy in 1962, which was suppressed with help from the United Kingdom. This event became known as the Brunei Revolt and was partly responsible for the failure to create the North Borneo Federation. The rebellion partially affected Brunei's decision to opt out of the Malaysian Federation.[9]

Brunei gained its independence from the United Kingdom on 1 January 1984.[9] The official National Day, which celebrates the country's independence, however, is held on 23 February due to tradition.

Writing of the Constitution

In July 1953, Sultan Omar Ali Saifuddien III formed a seven-member committee named Tujuh Serangkai to find out the citizens' views regarding a written constitution for Brunei. In May 1954, a meeting attended by the Sultan, the Resident and the High Commissioner was held to discuss the findings of the committee. In March 1959 Sultan Omar Ali Saifuddien III led a delegation to London to discuss the proposed Constitution.[47] The British delegation was led by Sir Alan Lennox-Boyd who was the Secretary of State for the Colonies. The British Government later accepted the draft constitution. On 29 September 1959, the Constitution Agreement was signed in Bandar Seri Begawan. The agreement was signed by Sultan Omar Ali Saifuddien III and Sir Robert Scott, the Commissioner-General for Southeast Asia. Some of the points of the constitution were:[35]

- The Sultan was made the Supreme Head of State.
- Brunei was responsible for its internal administration.
- The British Government was now responsible for foreign and defence affairs only.
- The post of Resident was abolished and replaced by a British High Commissioner.

Five councils were also set up:[48]

- The Executive Council
- The Legislative Council of Brunei
- The Privy Council
- The Council Of Succession
- The State Religious Council

The National Development Plans

A series of National Development Plans were initiated by the 28th Sultan of Brunei, Omar Ali Saifuddien III.

The First National Development Plan

The First National Development plan was introduced in 1953.[49] A total sum of B$100 million was approved by the Brunei State Council for the plan. E.R. Bevington from the Colonial Office in Fiji.[50] A $14 million Gas Plant was built under the plan. In 1954, survey and exploration work were undertaken by the Brunei Shell Petroluem on

both offshore and onshore fields. By 1956, production reached 114,700 bpd. Developments on education were also made. In 1952, a written policy on education was made.[50] By 1958, expenditure on education totaled at $4 million.[50] Communications were also improved with new roads built and and reconstruction works at Berakas Airport being completed at 1954.[51]

The Second National Development Plan

The second National Development Plan was launched in 1962.[51] A major oil and gas field was discovered in 1963, with this discovery, Liquefied Natural Gas became important. Developments in the oil and gas sector has continued actively and oil production has steadily increased since then.[52] The plan also saw an increase of production of meat and eggs. The fishing industry increased its output by 25% throughout the course of the plan. The Muara Deepwater Port was also constructed under the plan. Power requirements were met and studies were made to provide electricity to rural areas.[52] Efforts were made to eradicate malaria, with the help of the World Health Organisation, under the plan. Efforts were successful, bringing the down the cases of malaria from 300 cases in 1953 to only 66 cases in 1959.[53] The death rate was also brought down from 20 per thousand in 1947 to 11.3 per thousand in 1953.[53] This has been attributed to public sanitation and improvement of drainage and the provision of piped pure water to the population.[53]

Politics and government

Main article: Politics of Brunei

Brunei has a constitutional sultanate. It has a legal system based on English common law, although Islamic shariah law supersedes this in some cases.[4]

The political system in the country is governed by the constitution and the tradition of the Malay Islamic Monarchy, the concept of “Melayu Islam Beraja” (MIB). The three components of MIB cover Malay culture, Islamic religion and the political framework under the monarchy.[54]

Under Brunei's 1959 constitution, His Majesty Paduka Seri Baginda Sultan Haji Hassanal Bolkiah Mu'izzaddin Waddaulah is the head of state with full executive authority, including emergency powers which are renewed every two years, since 1962. The Sultan's role is enshrined in the national ideology known as Melayu Islam Beraja (MIB), or Malay Muslim Monarchy. The country has been under hypothetical martial law since the Brunei Revolt of 1962.[9] Hassanal Bolkiah is also the state's Prime Minister, Finance Minister and Defence Minister.[55] The Royal family retains a venerated status within the country.[9] The country also has its own parliament.

Hassanal Bolkiah, Sultan of Brunei.

Foreign relations

Main article: Foreign relations of Brunei

With its traditional ties with the United Kingdom, it became the 49th member of the Commonwealth immediately on the day of its independence on 1 January 1984.[56] As its first initiatives toward improved regional relations, Brunei joined ASEAN on 7 January 1984, becoming the sixth member.[57] It later joined the United Nations at the 39th Session of the United Nations General Assembly and became a full member on 21 September 1984 as a means

to achieve recognition of its sovereignty and full independence from the world community.[58] As it is an Islamic country, Brunei Darussalam became a full member of the Organisation of the Islamic Conference (now the Organisation of Islamic Cooperation) in January 1984 at the Fourth Islamic Summit held in Morocco.[59]

After its accession to the Asia Pacific Economic Cooperation forum (APEC) in 1989, Brunei hosted the APEC Economic Leaders' Meeting in November 2000 and the ASEAN Regional Forum (ARF) in July 2002.[60] As for other economic ties, Brunei Darussalam became an original member of the World Trade Organization (WTO) since it came into force in 1 January 1995,[61] and is a major player in BIMP-EAGA which was formed during the Inaugural Ministers' Meeting in Davao, Philippines on 24 March 1994.[62]

Brunei is recognized by every nation in the world. It shares a close relationship particularly with the Philippines and other nations such as Singapore. In April 2009, Brunei and the Philippines signed a Memorandum of Understanding (MOU) that seeks to strengthen the bilateral cooperation of the two countries in the fields of agriculture and farm-related trade and investments.[63]

Brunei is one of many nations to lay claim to some of the disputed Spratly Islands.[64] The status of Limbang as part of Sarawak was disputed by Brunei since the area was first annexed in 1890.[65] The issue was reportedly settled in 2009, with Brunei agreeing to accept the border in exchange for Malaysia giving up claims to oil fields in Bruneian waters.[66] The government, however, denies this and says that their claim on Limbang was never dropped.[67][68]

Subdivisions

Main articles: Districts of Brunei and Mukims of Brunei

Brunei is divided into four districts (*daerah*):[69]

- Belait
- Brunei and Muara
- Temburong
- Tutong

The district of Temburong is physically separated from the rest of Brunei by part of Sarawak State (Malaysia). The districts are subdivided into 38 *mukims*.[9]

Rank	Mukim	Population	Town/Suburb/Town	District
1	Sengkurong	62,400	Jerudong and Bandar Seri Begawan	Brunei-Muara
2	Gadong A & Gadong B	59,610	Bandar Seri Begawan	Brunei-Muara
3	Berakas A	57,500	Bandar Seri Begawan	Brunei-Muara
4	Kuala Belait	35,500	Kuala Belait	Belait

Rank	Mukim	Population	Town/Suburb/Town	District
5	Seria	32,900	Seria Town (Pekan Seria)	Belait

Geography

Main article: Geography of Brunei

The topographic map of Brunei

Brunei is a southeast Asian country consisting of two unconnected parts with the total area of 5,765 square kilometres (2,226 sq mi). It has 161 kilometres (100 mi) of coastline next to the South China sea, and it shares a 381 km (237 mi) border with Malaysia. It has 500 square kilometres (193 sq mi) of territorial waters, and an 200 nm exclusive economic zone.[4]

77% of the population lives in the eastern part of Brunei, while only about 10,000 live in the mountainous south eastern part (the district of Temburong). The total population of Brunei Darussalam is approximately 408,000 (July 2010) of which around 150,000 live in the capital Bandar Seri Begawan.[70] Other major towns are the port town of Muara, the oil producing town of Seria and its neighboring town, Kuala Belait. In the Belait district, the Panaga area is home to large numbers of expatriates due to Royal Dutch Shell and British Army housing and recreational facilities located there.[71]

Most of Brunei is within the Borneo lowland rain forests ecoregion that covers most of the island but there are areas of mountain rain forests inland.[72]

The climate of Brunei is tropical equatorial.[4] The average annual temperature is 26.1 °C (79.0 °F), with the April–May average of 24.7 °C (76.5 °F) and the October–December average of 23.8 °C (74.8 °F).[73]

Month	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Year

Economy

Main article: Economy of Brunei

This small, wealthy economy is a mixture of foreign and domestic entrepreneurship, government regulation, welfare measures, and village tradition. Crude oil and natural gas production account for about 90% of its GDP.[9] About 167,000 barrels of oil are produced everyday, making Brunei the fourth largest producer of oil in South-east Asia.[9] It also produces approximately 895 million cubic feet of liquified natural gas per day, making Brunei the ninth-largest exporter of the substance in the world.[9] Substantial income from overseas investment supplements income from domestic production. Most of these investments are made by the Brunei Investment Agency, an arm of the Ministry of Finance.[9] The government provides for all medical services[74] and subsidizes rice[75] and housing.[9] The national airline, Royal Brunei, is trying to make Brunei a modest hub for international travel between Europe and Australia/New Zealand. Central to this strategy is the position that the airline maintains at London Heathrow Airport. It holds a daily slot at the highly capacity-controlled airport, which it serves from Bandar Seri Begawan via Dubai. The airline also has services to major Asian destinations including Shanghai, Bangkok, Singapore and Manilla.[*citation needed*] Brunei is increasingly importing from other countries.[76]

Brunei's leaders are very concerned that steadily increased integration in the world economy will undermine internal social cohesion although it became a more prominent player by serving as chairman for the 2000 Asia-Pacific Economic Cooperation (APEC) forum. Stated plans for the future include upgrading the labour force, reducing unemployment, which currently stands at 6%,[77] strengthening the banking and tourism sectors, and, in general, further widening the economic base.[78]

To achieve its target for food self-sufficiency, Brunei renamed its Brunei Darussalam Rice 1 to Laila Rice during the launch of the "Padi Planting Towards Achieving Self-Sufficiency of Rice Production in Brunei Darussalam" ceremony at the Wasan padi fields in April 2009.[79] In August 2009, the Royal Family reaped the first few Laila padi stalks, after years of multiple attempts to boost local rice production, a goal which was envisioned about half a century ago.[80] In July 2009 Brunei launched its national halal branding scheme, Brunei Halal, with an aim to export to foreign markets.[81]

Demographics

Main article: Demographics of Brunei

The population of Brunei in July 2011 was 401,890 of which 76% live in urban areas. The average life expectancy is 76.17 years. In 2004, 66.3% of the population were Malay, 11.2% are Chinese, 3.4% are Indigenous, with

smaller groups making up the rest.[4]

The official language of Brunei is Malay. There are calls to expand the use of the language in Brunei.[82] The principal spoken language is Melayu Brunei (Brunei Malay, AKA Kedayan). Brunei is rather divergent from standard Malay and the rest of the Malay dialects, being about 80% cognate with standard Malay, and is mostly mutually unintelligible with it.[1] English and Chinese are also widely spoken[83][84] and there is a relatively large expatriate community.[85] Bahasa Rojak, often spoken by the media and the public, is known as a "mixed language" and considered detrimental to normal Malay.[86] Other languages spoken include Kedayan, Tutong, Murut, Dusun and Iban.[83]

Sultan Omar Ali Saifuddin Mosque at night.

Islam is the official religion of Brunei,[4] and two-thirds of the population adheres to Islam. Other faiths practiced are Buddhism (13%, mainly by the Chinese) and Christianity (10%).[4] Freethinkers, mostly Chinese, form about 7% of the population. Although most of them practice some form of religion with elements of Buddhism, Confucianism and Taoism, they prefer to present themselves as having professed no religion officially, hence regarded as atheists in official censuses. Followers of indigenous religions are about 2% of the population.[87]

Culture

Main article: Culture of Brunei

The culture of Brunei is predominantly Malay (reflecting its ethnicity), with heavy influences from Islam, but is seen as more conservative than Malaysia.[88]

Brunei's culture is mainly derived from the Old Malay World, which encompassed the Malay Archipelago and from this stemmed what is known as the Malay Civilisation. Based on historical facts, various cultural elements and foreign civilisations had a hand in influencing the culture of this country. Thus, the influence of culture can be traced to four dominating periods of animism, Hinduism, Islam and the West. However, it was Islam that managed to wind its roots deeply into the culture of Brunei hence it became a way of life and adopted as the state's ideology and philosophy.[89]

As a Sharia country, the sale and public consumption of alcohol is banned.[90] Non-Muslims are allowed to bring in a limited amount of alcohol from their point of embarkation overseas for their own private consumption.[54]

Titles[91]

Royalty: [92]

- '**Kebawah Duli Yang Maha Mulia Paduka Seri Baginda Sultan**' is the official title of the Sultan of Brunei. The present Sultan's official name (with full title) is "Kebawah Duli Yang Maha Mulia Paduka Seri Baginda Sultan Haji Hassanal Bolkiah Muizzaddin Waddaulah, Sultan dan Yang Di-Pertuan Negara Brunei Darussalam"
- With the style of: - **His Majesty.**

- **Kebawah Duli Yang Maha Mulia Paduka Seri Baginda Raja Isteri**, i.e. Raja Isteri, with the style of: - **Her Majesty**.
- **Duli Yang Teramat Mulia Pengiran Isteri**, i.e. Princess with the style of:- **Her Royal Highness**.
- **Duli Yang Teramat Mulia Paduka Seri Duli Pengiran Muda Mahkota**, i.e. Crown Prince with the style of:- **His Royal Highness**.
- **Yang Teramat Mulia Paduka Seri Duli Pengiran Muda**, i.e. Prince (younger sons and grandsons of the Sultan, in the male line) with the style of:- **His Royal Highness.**
- **Pengiran Anak Istri**: a title used for the senior and royal wives of a Pengiran Muda.
- **Yang Teramat Mulia Paduka Seri Duli Pengiran Anak Puteri**, i.e. Princess (Daughters and granddaughters of the Sultan, in the male line) with the style of:- **Her Royal Highness.**
- **Paduka Seri Pengiran Anak Puteri**: style used for the daughters of a Sultan born of Royal wives.
- **Yang Amat Mulia Duli Pengiran Anak,** (Grandsons & Granddaughters of the Sultan, being the sons of daughters/being the daughters of daughters)
- **Yang Amat Mulia (Y.A.M.)**: the style used for the daughter of a Sultan by a senior wife, the children of a Sultan by his junior wives, the children of the Pangiran Shahbandar, Maharaja Laila, Paduka Tuan, Maharaja Adinda, Cheteria Besar, Cheteria Pengalasan and Cheteria Damit.
- **Yang Teramat Mulia (Y.T.M.)**: the style used for the children of a Sultan by a Royal wife, the children of the Sri Paduka Duli Pangiran Bendahara, the di-Gadong, the Pemancha and the Temenggong.

WAZIRs: [93]

- **Vizier(or Wazir)**: the highest noble officials, ranking immediately after the Sultan.

- **Duli Pengiran Perdana Wazir Sahibul Himmah Wal-Waqar**: Chief Vizier - the highest Vizier title, usually held by a senior member of the Royal family.
- **Duli Pengiran Bendahara Paduka Seri Maharaja Permaisuara**: the full style for one of the high Vizier title, usually held by a senior member of the Royal family.
- **Pengiran DiGadong Sahibul Mal**: the full style for one of the senior Vizier titles, frequently held by members of the Royal family.
- **Duli Pengiran di-Gadong Sahib ul-Mal ul-Mulk ul-Adli**: the full style for one of the senior Vizier titles, frequently held by members of the Royal family.
- **Duli Pengiran Pemancha Sahib ul-Rai' wa ul-Mushuarat**: the full style for one of the senior Vizier titles, frequently held by members of the Royal family.
- **Duli Pengiran Shahbandar Sahib ul-Bandar Bait ul-Karib**: the full style for one of the Vizier titles of the second rank, frequently held by members of the Royal family.

OTHERS (Title by inheritance)

- **Pengiran**: title of married male descendants in the male line of a Sultan or great nobleman, or for any female descendant in the male line who has married a man of that rank.[94]
- **Awangku** - hereditary title for the unmarried male children of a **Pengiran**. They may later claim the title Pengiran since they are also related to the Brunei Sultanate. This, however can only be done after he gets the approval of the elders and is considered as matured enough to carry the title, or after which he has married.
- **Dayangku** - hereditary title for the unmarried female children of a **Pengiran** (retained after marriage if the husband is a commoner).

SALUTATIONS [95]

- **Awang**: style of address originally used for lesser nobles but now used for addressing men in Brunei and it is equivalent to **Mr.**.
- **Dayang**: style of address originally used for lesser nobles but now used for addressing women in Brunei and it is equivalent to **Miss**.
- **Haji** (or **Hajah** for female) can be used by people who have completed the pilgrimage of Hajj to Mecca.

This title is abbreviated as "Hj." or "Hjh." (before the name for males/females).

- **Dato** : part of the title for non-nobles, now also used for certain higher classes of the Orders of Chivalry, equivalent to Knight Commander.
- **Dato Paduka**: the most common title awarded in Brunei, of which it is a class of the Darjah Seri Paduka Mahkota Brunei Yang Amat Mulia (The Most Honourable Order of Seri Paduka Mahkota Brunei). Other versions of Dato Paduka includes Dato Seri Paduka, Dato Paduka Seri, Dato Laila Utama, Dato Paduka Seri Laila Jasa and others. These title awards are granted by His Majesty the Sultan of Brunei, and the titles are non-hereditary.[96]
- **Datin**: The wife of a Dato Paduka, except when the recipient is a female, whereby she would be addressed as **Datin Paduka.**
- **Menteri** (or Mantri): **Minister**, ranking below vizier (Wazir).
- **Pehin**: a non-noble official of high rank.
- **Orang Kaya**: literally "rich man", part of a title for non-nobles.
- **Tuan/Puan Yang Terutama** (T.Y.T.): **His/Her Excellency** (is the style of a state Governor - a title for serving Ambassadors).

Media

Media in Brunei are extremely pro-government. The country has been given "Not Free" status by Freedom House; press criticism of the government and monarchy is rare.[97] Nonetheless, the press is not overtly hostile toward alternative viewpoints and is not restricted to publishing only articles regarding the government. The government allowed a printing and publishing company, Brunei Press PLC, to form in 1953. It continues to print the leading English daily *Borneo Bulletin*. This paper began as a weekly community paper, became the country's daily paper in 1990, and "remains the foremost source of information on local and foreign affairs."[54] Apart from The *Borneo Bulletin*, there is also the *Media Permata*, the local Malay newspaper which is circulated daily. *The Brunei Times* is another English independent newspaper published in Brunei Darussalam.[98]

The Brunei government owns and operates six television channels with the introduction of digital TV using DVB-T (RTB 1, RTB 2, RTB 3 (HD), RTB 4, RTB 5 and RTB New Media (Game portal) and five radio stations (National FM, Pilihan FM, Nur Islam FM, Harmony FM and Pelangi FM). A private company has made cable television available (Astro-Kristal) as well as one private radio station, Kristal FM.[54] It also has an online campus radio station, *UBD FM* that streams from the its first university, *Universiti Brunei Darussalam*.[99]

Defence

Main article: Royal Brunei Armed Forces

Brunei maintains three infantry battalions stationed around the country.[9] The Brunei navy has several "Ijtihad"-class patrol boats purchased from a German manufacturer . The United Kingdom also maintains a base in Seria, the center of the oil industry in Brunei. A Gurkha battalion consisting of 1500 personnel is stationed there.[9] United Kingdom military personnel are stationed there under a defence agreement signed between the two countries.[9]

Infrastructure

Further information: Transport in Brunei

The major population centres in the country are linked by a network of 2,800 kilometres of road. The 135 km

highway from Muara Town to Kuala Belait is being upgraded to a dual carriageway.[54]

Brunei is accessible by air, sea and land transport. Brunei International Airport is the main entry point to the country. Royal Brunei Airlines[100] is the national carrier. There is another airfield, the Anduki Airfield, located in Seria. The ferry terminal at Muara services regular connections to Labuan (Malaysia). Speedboats provide passenger and goods transportation to the Temburong district.[101] The main highway running across Brunei is the Tutong-Muara Highway. The country's road network is well developed. Brunei has one main sea port located at Muara.[9]

With one private car for every 2.09 persons, Brunei Darussalam has one of the highest car ownership rates in the world. This has been attributed to the absence of a comprehensive transport system, low import tax and low unleaded petrol price of B$0.53 per litre.[54]

Healthcare in Brunei is charged at B$1 per consultation for citizens.[102] A health center run by Brunei Shell Petroleum is located in Panaga. For medical assistance not available in the country, citizens are sent overseas at the government's expense.[102]

The largest hospital in Brunei is Raja Isteri Pengiran Anak Saleha Hospital (RIPAS) hospital, which has 538 beds,[102] is situated in the country's capital Bandar Seri Begawan. There are two private medical centres, Gleneagles JPMC Sdn Bhd .[103] and Jerudong Park Medical Centre. The Health Promotion Centre opened in November 2008 and serves to educate the public on the importance of having a healthy lifestyle.[104]

There is currently no medical school in Brunei, and Bruneians wishing to study to become doctors must attend university overseas. However, the Institute of Medicines had been introduced at the Universiti Brunei Darussalam and a new building has been built for the faculty. The building, including research lab facilities, was completed in 2009. There has been a School of Nursing since 1951.[105] 58 nurse managers were appointed in RIPAS to improve service and provide better medical care.[106] In December 2008, The nursing college merged with the Institute of Medicines at the Universiti Brunei Darussalam to produce more nurses and midwives.[107] It is now called the PAPRSB (Pengiran Anak Puteri Rashidah Sa'datul Bolkiah) Institute of Health Sciences.[108]

Monarchy of Australia

From Wikipedia, the free encyclopedia

The **Monarchy of Australia** is a form of government in which a hereditary monarch is the sovereign of Australia. The monarchy is a constitutional one modelled on the Westminster style of parliamentary government, incorporating features unique to the Constitution of Australia.

The present monarch is Elizabeth II, styled Queen of Australia, who has reigned since 6 February 1952. She is represented in Australia by the Governor-General, in accordance with the Australian Constitution and Letters Patent from the Queen.[1][2] In each of the states, the monarch is represented by a governor, appointed directly by the Queen on the advice of each of her respective state governments.

The Australian monarch, besides reigning in Australia, separately serves as monarch for each of fifteen other Commonwealth countries known as Commonwealth realms. This developed from the former colonial relationship of these countries to Britain, but they are now independent of each other and are legally distinct.

International and domestic aspects

Further information: Commonwealth realm: The Crown in the Commonwealth realms

The monarch of Australia is the same person as the monarch of the fifteen other Commonwealth realms within the 54-member Commonwealth of Nations; however, each country is sovereign and independent of the others.[3] On all matters of the Australian state, the monarch is advised by Australian federal Ministers of the Crown[4][5] and, effective with the Australia Act 1986, no British government can advise the monarch on any matters pertinent to Australia. The British Government is thus considered a foreign power in regard to Australia's domestic and foreign affairs. Still, the High Court of Australia found that those natural-born subjects of other Commonwealth realms who migrated to Australia could not be classified as aliens (as referred to in the constitution) within Australia, given that they owed allegiance to the same monarch and thus are subjects of the Queen of Australia.[6] However, in Sue v Hill, the High Court of Australia found that the United Kingdom was a foreign power for the purposes of Section 44 of the Australian Constitution, which determines eligibility for parliamentary office.[7]

Title

Further information: List of titles and honours of Queen Elizabeth II and Australian peers

The shared and domestic aspects of the Crown are also highlighted in the sovereign's Australian title, currently *Elizabeth the Second, by the Grace of God Queen of Australia and Her other Realms and Territories, Head of the Commonwealth*. The Australian monarch has maintained the style of "Elizabeth the Second", even though she is the first Queen of Australia with that name. The sovereign's role specifically as Queen of Australia, as well as her status as monarch of other nations, is communicated by mentioning Australia separately from, but along with, the Queen's other lands. Typically, the sovereign is styled *Queen of Australia* and is addressed as such when in Australia or performing duties on behalf of Australia abroad. The sovereign is the only member of the Royal Family to have a title established through Australian law; other members are accorded a courtesy title, which is the title they have been granted via Letters Patent in the United Kingdom.

Prior to 1953, the title had simply been the same as that in the United Kingdom, the current form of the title being the result of occasional discussion and an eventual meeting of Commonwealth representatives in London in December 1952, at which Canada's preferred format for the monarch's title was: *Elizabeth the Second, by the Grace of God, Queen of [Realm] and of Her other realms and territories, Head of the Commonwealth, Defender of the Faith*;[8] however, Australia wished to have the United Kingdom mentioned as well.[9] Thus, the resolution was a title that included the United Kingdom but, for the first time, also mentioned Australia, and the other Commonwealth realms, separately. The passage of a new Royal Style and Titles Act by the parliament of Australia put these recommendations into law. This act was further amended in 1973, removing specific reference to the monarch's role as Queen of the United Kingdom. Still, laws pre-dating the Royal Styles and Titles Acts have not been amended to alter references to the *Queen of the United Kingdom*.[10]

Finance

Australians do not pay any money to the Queen, either for personal income or to support the royal residences outside of Australia. Only when the Queen is in Australia, or acting abroad as Queen of Australia, does the Australian government support her in the performance of her duties. This rule applies equally to other members of the Royal Family. Usually the Queen's Australian governments pay only for the costs associated with the governor-general and governors in their exercising of the powers of the Crown on behalf of the Queen, including travel, security, residences, offices and ceremonial occasions, etc.

Succession

Succession is by primogeniture[11] governed by the provisions of the Act of Settlement 1701 and the Bill of Rights 1689. This legislation limits the succession to the natural (i.e. non-adopted), legitimate descendants of Sophia, Electress of Hanover and stipulates that the monarch must be in communion with the Church of England upon ascending the throne. Prior to 2011, the law gave preference to sons over any older sisters and stipulated that the monarch cannot be married to a Roman Catholic.[11] Though these constitutional laws, as they apply to Australia, lie within the control of the British parliament,[12] via adopting the Statute of Westminster, the UK agreed not to change its rules of succession without the unanimous consent of the other realms, unless explicitly leaving the shared monarchy relationship; a situation which applies symmetrically in all the other realms and which has been likened to a treaty amongst these countries.[13]

Charles, Prince of Wales, is the heir apparent to the Australian

Upon a demise of the Crown (the death or abdication of a sovereign) it is customary for the accession of the new monarch to be publicly proclaimed by the governor-general on behalf of the Federal Executive Council, which meets at Government House, Canberra, after the accession. Parallel proclamations are made by the governors in each state.[14] Regardless of any proclamations, the late sovereign's heir immediately and automatically succeeds, without any need for confirmation or further ceremony; hence arises the phrase "The King is dead. Long live the King!" Following an appropriate period of mourning, the monarch is also crowned in the United Kingdom, though this ritual is not necessary for a sovereign to reign; for example, Edward VIII was never crowned, yet was undoubtedly king during his short time on the throne. After an individual ascends the throne, he or she typically continues to reign until death. There is no provision in the law for a monarch to unilaterally abdicate; the only Australian monarch to abdicate, Edward VIII, did so with the authorisation of the Australian government, granted in His Majesty's Declaration of Abdication Act, 1936.

throne.

Personification of the state

Further information: The Crown

Today the sovereign is regarded as the legal personality of the Australian state, which is therefore referred to as *Her Majesty the Queen in Right of Australia*. For example, if a lawsuit is filed against the Commonwealth government, the respondent is formally described as *Her Majesty the Queen in Right of Australia*, or simply *Regina*. Likewise, in a case in which a party sues both the state of Queensland and the federal government, the respondents would formally be called *Her Majesty the Queen in Right of Queensland* and *Her Majesty the Queen in Right of Australia*.

As such, all state lands are called *Crown land*, state owned buildings and equipment are called *Crown held property*, and the copyright for all government publications is called *Crown copyright*. In this role, the monarch is also the locus of oaths of allegiance; many employees of the Crown are required by law to recite this oath before taking their posts, such as all members of the Commonwealth parliament, all members of the state and territorial parliaments, as well as all magistrates, judges and justices of the peace. This is in reciprocation to the sovereign's Coronation Oath, wherein he or she promises "to govern the Peoples of... Australia... according to their respective laws and customs".[15] Previously, new appointees to Cabinet would also swear an oath that included allegiance to the monarch before taking their post. This oath was never written in law, however, and would only take the form of what the prime minister of the time suggested to the governor-general. In December 2007, Kevin Rudd did not swear allegiance to the sovereign when sworn in by the Governor-General, making him the first prime minister not to do so;[16] however, he (like all other Members of Parliament) did swear allegiance to the Queen, as required by law, when sworn-in by the Governor-General as newly-elected parliamentarians. Similarly, the Oath of Citizenship contained a statement of allegiance to the reigning monarch until 1994, when a pledge of allegiance to Australia and its values was introduced. The High Court found, in 2002, though, that allegiance to the Queen of Australia was the "fundamental criterion of membership" in the Australian body politic, from a constitutional, rather than statutory, point of view.[6]

Constitutional role

Australia's constitution is a written one, based on the Westminster model of government, with federal elements modelled on the United States Constitution and a distinct separation of powers. It gives Australia a parliamentary system of government similar to the other Commonwealth realms, wherein the role of the Queen and the Governor-General is both legal and practical. The Crown is regarded as a corporation, in which several parts share the authority of the whole, with the Queen as the person at the centre of the constitutional construct,[18] meaning all powers of state are constitutionally reposed in the monarch;[19] the 1993 Republic Advisory Committee concluded that "the Queen" in the constitution means "the Australian Government".[5] The sovereign is represented in the federal sphere by the Governor-General – appointed by the monarch on the advice of the Prime Minister of Australia – and in the states by governors – appointed by the monarch upon the advice of the relevant state premier.

There is some debate over whether the sovereign or the governor-general is Australia's head of state.[20]

> *We have a very good system now in terms of political stability... one of the reasons why we have had this wonderful stability is because of the constitutional linkages from Crown to Governor-General to Prime Minister at the Federal level, and Crown to Governor to Premiers at the State level. There are checks and balances in the system, and that is why we never had civil wars, that is why we never had huge political upheavals except in '32 and '75. So the system as it is has worked very well.*[17]
>
> —Governor-General Michael Jeffery, 2003

Executive

Australia Act 1986 (United Kingdom) document, located in Parliament House, Canberra, and bearing the signature of Elizabeth II, Queen of Australia.

In Australia's constitutional system, one of the main duties of the Governor-General is to appoint a prime minister, who thereafter heads the Cabinet and advises the governor-general on how to execute his or her executive powers over all aspects of government operations and foreign affairs. This means that the monarch's and the viceroy's roles are primarily symbolic and cultural, acting as a symbol of the legal authority under which all governments and agencies operate. In practice, ministers direct the use of the Royal Prerogative, which includes the privilege to declare war, maintain peace, and direct the actions of the Australian Defence Force. The governor-general is empowered by the Constitution to summon and prorogue parliament, and call elections; however the powers are almost never exercised without advice from the prime minister. Still, the Royal Prerogative belongs to the Crown, and not to any of the ministers and the governor-general may unilaterally use these powers in exceptional constitutional crisis situations,[21] such as when, during the 1975 Australian constitutional crisis, Sir John Kerr dismissed Prime Minister Gough Whitlam, on the occasion of a stalemate over government funding between the House of Representatives and the Senate. There are also a few duties which must be specifically performed by the Queen. These include signing the appointment papers of governors-general, the confirmation of the creation of awards of Australian honours,[22][23] and the approval of any change in her Australian title.

Elizabeth II is greeted by Margaret Whitlam at Fairbairn RAAF base, with Gough Whitlam, Prime Minister of Australia, and Lady Hasluck, wife of the then Governor-General, looking on.

In accordance with convention, the governor-general, to maintain the stability of government, must appoint as prime minister the individual most likely to maintain the support of the House of Representatives: usually the leader of the political party with a majority in that house, but also when no party or coalition holds a majority (referred to as a minority government situation), or other scenarios in which the governor-general's judgement about the most suitable candidate for prime minister has to be brought into play.[24] The governor-general also appoints to Cabinet the other ministers of the Crown, who are, in turn, accountable to the Parliament, and through it, to the people. The Queen is informed by her viceroy of the acceptance of the resignation of a prime minister and the swearing-in of a new prime minister and other members of the ministry, and she holds audience with her Australian ministers where possible.[25]

Members of various executive agencies and other officials are appointed by the governor-general, including High Court justices. Ministers and parliamentary secretaries are also appointed to the Federal Executive Council. Public inquiries are also commissioned by the Crown through a Royal Warrant, and are called Royal Commissions. A casual vacancy in the Senate is filled by an appointee from the same political party by a state parliament or state governor.

Foreign affairs

The Royal Prerogative also extends to foreign affairs: the Governor-General-in-Council negotiates and ratifies treaties, alliances, and international agreements.[26] As with other uses of the Royal Prerogative, no parliamentary approval is required;[27] however, a treaty cannot alter the domestic laws of Australia; an Act of Parliament is necessary in such cases. The governor-general, on behalf of the Queen, also accredits Australian High Commissioners and ambassadors, and receives diplomats from foreign states. In addition, the issuance of passports

falls under the Royal Prerogative, and, as such, all Australian passports are issued in the name of the governor-general as the monarch's representative.

Parliament

The sovereign, along with the Senate and the House of Representatives, being one of the three components of parliament, is called the *Queen-in-Parliament*. The authority of the Crown therein is embodied in the mace (House of Representatives) and Black Rod (Senate), which both bear a crown at their apex. The monarch and viceroy do not, however, participate in the legislative process save for the granting of Royal Assent by the Governor-General. Further, the constitution outlines that the Governor-General alone is responsible for summoning, proroguing, and dissolving parliament,[28] after which the writs for a general election are usually dropped by the Prime Minister at Government House. The new parliamentary session is marked by the State Opening of Parliament, during which either the monarch or the Governor-General reads the Speech from the Throne. As the monarch and viceroy, by convention, cannot enter the House of Representatives, this, as well as the bestowing of Royal Assent, takes place in the Senate chamber; Members of Parliament are summoned to these ceremonies from the House of Representatives by the Crown's messenger, the Usher of the Black Rod, after he knocks on the doors of the lower house that have been slammed closed on him to symbolise the barring of the monarch from the House of Representatives.

All laws in Australia, except in the Australian Capital Territory (ACT) Legislative Assembly, are enacted only with the viceroy's granting of Royal Assent, done by the Governor-General or relevant Governor, with the Great Seal of Australia or the appropriate state seal, while territorial legislatures, unlike their state counterparts, are subject to the oversight of the Government of Australia. The Governor-General may reserve a bill "for the Queen's pleasure"; that is withhold his consent to the bill and present it to the sovereign for her personal decision. Under the constitution, the sovereign also has the power to disallow a bill within one year of the Governor-General having granted Royal Assent. The reference to *the Queen* in this section was intended as a reference to the monarch acting on the advice of his or her British Cabinet; however, with the passage of the Statute of Westminster and the Australia Acts, the power to disallow laws technically devolved to the Queen in a personal capacity.[29] This power, however, has never been used.

Courts

In the United Kingdom, the sovereign was deemed the *fount of justice*.[30][31] However, he or she does not personally rule in judicial cases,[30] meaning that judicial functions are normally performed only in the monarch's name. Criminal offences are legally deemed to be offences against the sovereign and proceedings for indictable offences are brought in the sovereign's name in the form of *The Queen [or King] against [Name]* (sometimes also referred to as *the Crown against [Name]*).[32][33] Hence, the common law holds that the sovereign "can do no wrong"; the monarch cannot be prosecuted in his or her own courts for criminal offences. Civil lawsuits against the Crown in its public capacity (that is, lawsuits against the government) are permitted; however, lawsuits against the monarch personally are not cognizable. In international cases, as a sovereign and under established principles of international law, the Queen of Australia is not subject to suit in foreign courts without her express consent. The *prerogative of mercy* lies with the monarch, and is exercised in the state jurisdictions by the governors,[34] who may pardon offences against the Crown, either before, during, or after a trial.

In addition, the monarch also serves as a symbol of the legitimacy of courts of justice, and of their judicial authority; sessions of the High Court, for example, are opened with the words "the High Court of Australia is now in session; God Save the Queen." In a practice dating back to colonial times, state courts traditionally display the arms of the sovereign in right of the United Kingdom, except in New South Wales, where some of these have been replaced with the state arms.

States and territories

Further information: Governors of the Australian states

In accordance with the Australia Act 1986, the Queen has the power to appoint, on the advice of the relevant state Premier, a Governor in each of the Australian states, who themselves appoint executive bodies, as well as people to fill casual Senate vacancies, if the relevant state parliament is not in session, under the Great Seal of the State. The state Governors continue to serve as the direct representatives of the Queen, in no way subordinate to the Governor-General of the Commonwealth, and they carry out on her behalf all of the Queen's constitutional and ceremonial duties in respect of their respective state. The Northern Territory and the Australian Capital Territory resemble states in many respects, but are administered directly by the Commonwealth of Australia; an Administrator, appointed by the Governor-general upon the advice of the Commonwealth government, takes the place of a state governor in the Northern Territory. The Australian Capital Territory has no equivalent position.

Cultural role

Royal presence and duties

Further information: Royal visits to Australia and List of Commonwealth visits made by Queen Elizabeth II

Members of the Royal Family have been present in Australia since the late 1800s, on military manoeuvres, for official tours, or as the vice-regal representative of the monarch. Queen Elizabeth II was the first reigning monarch of Australia to set foot on Australian soil on 3 February 1954. The Queen has visited the country sixteen times, usually on important milestones, anniversaries, or celebrations of Australian culture, while other royals have been asked to participate in lesser occasions. In these instances, when acting at the direction of the Australian Cabinet, they are doing so as monarch of Australia and members of the Australian Royal Family, respectively, and will carry out two types of duties:

Elizabeth II tours the Australian War Memorial, February 1954

Official duties involve the sovereign representing the state at home or abroad, or other Royal Family members participating in a government organised ceremony either in Australia or elsewhere.[35] The sovereign and/or his or her family have participated in events such as various centennials and bicentennials; Australia Day; the openings of Olympic and other games; award ceremonies; D-Day commemorations; anniversaries of the monarch's accession; and the like. Other royals have participated in Australian ceremonies or undertaken duties abroad, such as Prince Charles at the Anzac Day ceremonies at Gallipoli, or when the Queen, Prince Charles, and Princess Anne participated in Australian ceremonies for the anniversary of D-Day in France in 2004. On 22 February 2009, Princess Anne represented the Queen of Australia at the National Bushfires Memorial Service in Melbourne.[36][37] The Queen also showed her support for the people of Australia by making a personal statement about the bushfires [38] and by also making private donation to the Australian Red Cross Appeal.[39] The Duke of Edinburgh was the first to sign a book of condolences at the Australian High Commission in London.[39]

Unofficial duties are performed by Royal Family members on behalf of Australian organizations of which they may be patrons, through their attendance at charity events, visiting with members of the Australian Defence Force as Colonel-in-Chief, or marking certain key anniversaries. The invitation and expenses associated with these undertakings are usually borne by the associated organization.

The Princess Royal passes behind the Princess Anne Banner at a parade for the 75th anniversary of the Royal Australian Corps of Signals

Apart from Australia, the Queen and other members of the Royal Family regularly perform public duties in the other fifteen nations of the Commonwealth in which the Queen is sovereign. As the Crown within these countries is a legally separate entity from the Australian Crown, it is funded in these countries individually, through the ordinary legislative budgeting process.

Symbols

Main article: Australian Royal Symbols

The Queen's Personal Australian Flag.

The monarchy is presently symbolised through images of the sovereign on currency and in portraits in public buildings; on Australian decorations and honours, some postage stamps and on coats of arms and other government symbols. The crown is used as a heraldic symbol in the coats of arms of the Commonwealth and the states of New South Wales, Victoria, Queensland and Western Australia. Crowns are also visible on police and military badges. The Queen's Birthday is observed as a public holiday in all states.

"God Save the Queen" is Australia's royal anthem. The Vice-Regal Salute, played only for the governor-general and each state sovernor, is the first four and last four bars of "Advance Australia Fair".

There are also hundreds of places named after Australian and British monarchs and members of the Royal Family. The states of Queensland and Victoria were named after Queen Victoria; Adelaide, the capital of South Australia is named after Queen Adelaide, the consort of William IV; numerous streets, squares, parks and buildings are also named in honour of past or present members of the Royal Family.

A monument to King George V in Parkes, Australian Capital Territory.

Religious role

Neither the Queen, the governor-general, or any state governor have any religious role in Australia. There never has been an established church in Australia, either before or since Federation in 1901. Pursuant to the Australian Constitution the Commonwealth may not enact a law establishing or prohibiting the free exercise of religion.[40] This is one of the key differences from the Queen's role in England where she is the Supreme Governor of the Church of England.

Vice-regal residences

The Governor-General's official residence is Government House, commonly known as "Yarralumla", in the city of Canberra. The Australian monarch stays there when visiting the country as do some other visiting heads of state.[41] Government House is the site of most state banquets, investitures, swearing-in of ministers, and other ceremonies. Another vice-regal residence is Admiralty House, in Sydney, and is used principally as a retreat for the Governor-General. The states of New South Wales, Victoria, Western Australia, Queensland, Tasmania, and South Australia also maintain residences, used by the respective Governors, though the monarch or other members of the

Royal Family will stay there when in the state. These residences are the property of the Australian people administered by their federal and state governments.

Australian Defence Force

The Crown has a symbolic place in the Australian Defence Force, which consists of the Royal Australian Navy, Australian Army, and Royal Australian Air Force.

Section 68 of the Australian Constitution says: "The command in chief of the naval and military forces of the Commonwealth is vested in the Governor-General as the Queen's representative." In practice, however, the Governor-General does not play any part in the ADF's command structure and the ADF is under the control of the Minister for Defence and several subordinate ministers. The Minister advises the Governor-General who acts as advised in the normal form of executive government.[42]

Australian naval vessels bear the prefix *Her Majesty's Australian Ship* (HMAS). The Royal Australian Regiment (RAR) which makes up most of the Infantry Corps and many other regiments carry the 'Royal' prefix.[43] Members of the Royal Family have presided over military ceremonies, including Trooping of the Colours, inspections of the troops, and anniversaries of key battles. Whenever the Queen is in Canberra she lays a wreath at the Australian War Memorial. In 2003, Elizabeth II acted in her capacity as Australian monarch when she dedicated the Australian War Memorial in Hyde Park, London. [1]

Some members of the Royal Family are Colonels-in-Chief of Australian regiments, including: the Royal Regiment of Australian Artillery; Royal Australian Army Medical Corps; the Royal Australian Armoured Corps and the Royal Australian Corps of Signals, amongst many others. The Queen's husband, the Duke of Edinburgh, is an Admiral of the Fleet[44] in right of the Royal Australian Navy, Marshal of the Royal Australian Air Force, and Field Marshal of the Australian Army.

On 22 October 2011 at the Royal Military College, Duntroon in Canberra, the Queen of Australia presented new Sovereign's Colours to the Australian Defence Force.

History

Main article: History of monarchy in Australia

The development of a distinctly Australian monarchy came about through a complex set of incremental events, beginning with the initial settlements of the territory in 1770, when Captain James Cook, in the name of, and under instruction from, King George III, claimed the east coast of Australia.[45] Colonies were soon after founded across the continent,[46][47] all of them ruled by the monarch of the United Kingdom, upon the advice of his or her British ministers, the Secretary of State for the Colonies, in particular. After Queen Victoria's granting of Royal Assent to the Commonwealth of Australia Constitution Act on 9 July 1900, which brought about Federation in 1901, whereupon the six colonies became the states of Australia, the relationship between the state governments and the Crown remained as it was pre-1901: References in the constitution to "the Queen" meant the government of the United Kingdom (in the formation of which Australians had no say)[5] and the Colonial Laws Validity Act 1865 – by which colonial laws deemed repugnant to imperial (British) law in force in the colony were rendered void and inoperative – remained in force at in both the federal and state spheres;[48] and all the governors, both of the Commonwealth and the states, remained appointees of the British monarch on the advice of the British Cabinet,[49] a situation that continued even after Australia was recognised as a Dominion of the British Empire in 1907.[50] As Queen-Empress, Victoria "symbolised the British Empire of which all Australians were subjects".[5]

A statue of King George V looks over King's Hall in Old Parliament House, Canberra.

In response to calls from some Dominions for a re-evaluation in their status under the Crown after their sacrifice and performance in the First World War,[51] a series of Imperial Conferences was held in London, from 1917 on, which resulted in the Balfour Declaration of 1926, which provided that the United Kingdom and the Dominions were to be considered as "autonomous communities within the British Empire, equal in status, in no way subordinate to one another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown." The Royal and Parliamentary Titles Act, 1927, an Act of the Westminster Parliament, was the first indication of a shift in the law, before the Imperial Conference of 1930 established that the Australian Cabinet could advise the sovereign directly on the choice of Governor-General, which ensured the independence of the office.[52] The Crown was further separated amongst its dominions by the Statute of Westminster 1931,[53] and, though it was not adopted by Australia until 1942 (retroactive to 3 September 1939),[54] the law's validity in the United Kingdom required its government to seek Australia's consent in allowing the abdication of Edward VIII as King of Australia and all the other Dominions in 1936.

The Curtin Labor Government appointed Prince Henry, Duke of Gloucester, as Governor-General during the Second World War. Curtin hoped the appointment might influence the British to despatch men and equipment to the Pacific War, and the selection of the brother of King George VI reaffirmed the important role of the Crown to the Australian nation at that time.[55] Queen Elizabeth II became the first reigning monarch to visit Australia in 1954, greeted by huge crowds across the nation. Her son Prince Charles attended school in Australia in 1967.[56]Her grandson Prince Harry undertook a portion of his gap-year living and working in Australia in 2003.[57]

The sovereign did not possess a title unique to Australia until the Australian parliament enacted the Royal Styles and Titles Act in 1953, after the accession of Elizabeth II to the throne, and giving her the title of *Queen of the United Kingdom, Australia and Her other Realms and Territories*. Still, Elizabeth remained a queen who reigned in Australia both as Queen of Australia (in the federal jurisdiction) and Queen of the United Kingdom (in each of the states), as a result of the states not wishing to have the Statute of Westminster apply to them, believing that the *status quo* better protected their sovereign interests against an expansionist federal government, which left the Colonial Laws Validity Act in effect. Thus, the British monarch could still – at least in theory, if not with some difficulty in practice – legislate for the Australian states, and the viceroys in the states were appointed by and represented the sovereign of the United Kingdom, not that of Australia;[58] as late as 1976, the British ministry advised the Queen to reject the nominee of the Queensland Cabinet for Governor.[59] It was with the passage of the Australia Act in 1986, which repealed the Colonial Laws Validity Act, that the final vestiges of the British monarchy in Australia were removed, leaving a distinct Australian monarchy for the nation.

It was around the same time that a discussion on the matter of Australia becoming a republic began to emerge, culminating, a decade later, in the 1999 Australian republic referendum, which was defeated by 54.4% of the populace. The referendum followed the recommendation of a 1998 Constitutional Convention called to discuss the issue of Australia becoming a republic. Still, nearly another ten years later, Kevin Rudd was appointed as Prime Minister, whereafter he affirmed that a republic was still a part of his party's platform, and stated his belief that the debate on constitutional change should continue.[60]

Prince Charles, Prince of Wales, with

The current Prime Minister, Julia Gillard has re-affirmed her party's

students of his Australian alma mater, Geelong Grammar School, in Corio, Victoria.

platform about a possible future republic. She stated that she would like to see Australia become a republic, with an appropriate time being when there is a change in monarch. A change of opinion was recorded on 21 October 2011 at a reception in the presence of the Queen at Parliament House in Canberra when the Prime Minister stated that the monarch is "a vital constitutional part of Australian democracy and would only ever be welcomed as a beloved and respected friend." [61] The Opposition Leader, Tony Abbott, a former head of Australians for Constitutional Monarchy stated on 21 October 2011, "Your Majesty, while 11 prime ministers and no less than 17 opposition leaders have come and gone, for 60 years you have been a presence in our national story and given the vagaries of public life, I'm confident that this will not be the final tally of the politicians that you have outlasted." [62]

A Morgan poll taken in October 2011 found that support for constitutional change is at its lowest for 20 years. Of those surveyed 34% were pro-republic as opposed to 55% pro-monarchist, preferring to maintain the current constitutional arrangements. [63]

List of Australian Monarchs

No.	Portrait	Regnal name	Reign over the Commonwealth of Australia		Full name	Consort
1		**Victoria** (1819–1901) House of Hanover	1 January 1901	22 January 1901	Alexandrina Victoria of Australia	Albert, Prince Consort
			Governors general:John Hope, 7th Earl of Hopetoun Prime ministers: Edmund Barton			
2		**Edward VII** (1841–1910) House of Saxe-Coburg and Gotha	22 January 1901	6 May 1910	Albert Edward of Australia	Alexandra of Denmark
			Governors general:John Hope, 7th Earl of Hopetoun, Hallam Tennyson, 2nd Baron Tennyson, Henry Northcote, 1st Baron Northcote, William Ward, 2nd Earl of Dudley Prime ministers: Sir Edmund Barton, Alfred Deakin, Chris Watson, George Reid, Andrew Fisher			
3		**George V** (1865–1836) House of Saxe-Coburg and Gotha (until 1917) House of Windsor (after 1917)	6 May 1910	20 January 1936	George Frederick Ernest Albert of Australia	Mary of Teck
			Governors general:William Ward, 2nd Earl of Dudley, Thomas Denman, 3rd Baron Denman, Sir Ronald Ferguson, Henry Forster, 1st Baron Forster, John Baird, 1st Baron Stonehaven. Sir Isaac Isaacs Prime ministers: Andrew Fisher, Joseph Cook, Billy Hughes, Stanley Bruce, James Scullin, Joseph Lyons			
4		**Edward VIII** (1894–1972) House of Windsor	20 January 1936	11 December 1936	Edward Albert Christian George Andrew Patrick David of Australia	*none*
			Governors general: Sir Isaac Alfred Isaacs, Alexander Hore-Ruthven, 1st Earl of Gowrie Prime ministers: Joseph Lyons			

5		**George VI** (1895–1952) House of Windsor	11 December 1936	6 February 1952	Albert Frederick Arthur George of Australia	Elizabeth Bowes-Lyon
			Governors general: Alexander Hore-Ruthven, 1st Earl of Gowrie, Prince Henry, Duke of Gloucester, Sir William McKell Prime ministers: Joseph Lyons, Sir Earle Page, Robert Menzies, Arthur Fadden, John Curtin, Frank Forde, Ben Chifley, Robert Menzies			
6		**Elizabeth II** (1926–) House of Windsor	6 February 1952	Present	Elizabeth Alexandra Mary of Australia	Prince Philip, Duke of Edinburgh
			Governors general: Sir William McKell, Sir William Slim, William Morrison, 1st Viscount Dunrossil, William Sidney, 1st Viscount De L'Isle, Richard Casey, Baron Casey, Sir Paul Hasluck, Sir John Kerr, Sir Zelman Cowen, Sir Ninian Stephen, William Hayden, Sir William Deane, Peter Hollingworth, Michael Jeffery, Quentin Bryce Prime ministers: Sir Robert Menzies, Harold Holt, John McEwen, John Gorton, William McMahon, Gough Whitlam, Malcolm Fraser, Bob Hawke, Paul Keating, John Howard, Kevin Rudd, Julia Gillard

The Bahamas

From Wikipedia, the free encyclopedia

The Bahamas /bəˈhɑːməz/, officially the **Commonwealth of the Bahamas**, is a nation consisting of more than 3,000 islands, cays, and islets. It is located in the Atlantic Ocean north of Cuba and Hispaniola (Dominican Republic and Haiti), northwest of the Turks and Caicos Islands, and southeast of the United States (nearest to the state of Florida). Its land area is 13,939 km^2 (5,382 sq mi), with a population of 353,658. Its capital is Nassau. Geographically, The Bahamas lie in the same island chain as Cuba, Hispaniola and the Turks and Caicos Islands; the designation of Bahamas refers normally to the Commonwealth and not the geographic chain.

Originally inhabited by the Lucayans, a branch of the Arawakan-speaking Taino people, the Bahamas were the site of Columbus' first landfall in the New World in 1492. Although the Spanish never colonized the Bahamas, they shipped the native Lucayans to slavery in Hispaniola. The islands were mostly deserted from 1513 to 1648, when English colonists from Bermuda settled on the island of Eleuthera.

The Bahamas became a Crown Colony in 1718 when the British clamped down on piracy. After the American War of Independence, thousands of pro-British loyalists and enslaved Africans moved to the Bahamas and set up a plantation economy. The slave trade was abolished in the British Empire in 1807 and many Africans liberated from slave ships by the Royal Navy were settled in the Bahamas during the 19th century. Slavery itself was abolished in 1834 and the descendants form the majority of the Bahamas's population today.

In terms of GDP per capita, The Bahamas is one of the richest countries in the Americas (following Bermuda, the United States, Cayman Islands, Canada, and the British Virgin Islands)[8]

Etymology

The origin of the name *Bahamas* is unclear. It may derive from the Spanish *baja mar* ("low sea") or the Lucayan word for Grand Bahama island, *ba-ha-ma* ("large upper middle land").[9]

History

Main article: History of The Bahamas

Taino people moved into the uninhabited southern Bahamas from Hispaniola and Cuba around the 11th century AD. These people came to be known as the Lucayans. There were an estimated 30,000+ Lucayans at the time of Columbus's arrival in 1492. Christopher Columbus's first landfall in the New World was on an island named San Salvador (known to the Lucayans as Guanahani), which some researchers believe to be present-day San Salvador Island, (also known as Watling's Island) in the southeastern Bahamas.

An alternative theory holds that Columbus landed to the southeast on Samana Cay, according to calculations made in 1986 by *National Geographic* writer and editor Joseph Judge based on Columbus's log. Evidence in support of this remains inconclusive. On the landfall island, Columbus made first contact

Map of The Bahamas

with the Lucayans and exchanged goods with them.

The Lucayans throughout the Bahamas were wiped out as a result of Spanish forced migration of the population to Hispaniola for use as forced labour there, and exposure to diseases to which they had no immunity.[10] The smallpox that ravaged the Taino Indians after Columbus's arrival wiped out half of the population in what is now The Bahamas.[11]

It is generally assumed that the islands were uninhabited by Europeans until the mid-17th century. However, recent research suggests that there may have been attempts to settle the islands by groups from Spain, France, and Britain, as well as by other Amerindians. In 1648, the Eleutherian Adventurers migrated from Bermuda. These English Puritans established the first permanent European settlement on an island which they named Eleuthera—the name derives from the Greek word for freedom. They later settled New Providence, naming it Sayle's Island after one of their leaders. To survive, the settlers resorted to salvaged goods from wrecks.

In 1670 King Charles II granted the islands to the Lords Proprietors of the Carolinas, who rented the islands from the king with rights of trading, tax, appointing governors, and administering the country.[12] In 1684 Spain's corsair Juan de Alcon raided the capital, Charles Town (later renamed Nassau), and in 1703 a joint Franco-Spanish expedition briefly occupied the Bahamian capital during the War of the Spanish Succession.

18th century

During proprietary rule, the Bahamas became a haven for pirates, including the infamous Blackbeard. To restore orderly government, The Bahamas were made a British crown colony in 1718 under the royal governorship of Woodes Rogers, who, after a difficult struggle, succeeded in suppressing piracy.[13] In 1720, Rogers led local militia to drive off a Spanish attack.

During the American War of Independence, the islands were a target for American naval forces under the command of Commodore Ezekial Hopkins. The capital of Nassau on the island of New Providence was occupied by US Marines for a fortnight.

In 1782, following the British defeat at Yorktown, a Spanish fleet appeared off the coast of Nassau, and the city surrendered without a fight.

After American independence, some 7,300 Loyalists and their slaves moved to the Bahamas from New York, Florida, and the Carolinas. These Loyalists established plantations on several islands and became a political force in the capital. The small population became mostly African from this point on.

The British abolished the slave trade in 1807, which led to the forced settlement on Bahamian islands of thousands of Africans liberated from slave ships by the Royal Navy. Slavery itself was finally abolished in the British Empire on August 1, 1834.

20th century

Modern political development began after the Second World War. The first political parties were formed in the 1950s and the British made the islands internally self-governing in 1964, with Sir Roland Symonette of the United Bahamian Party as the first premier.

The fourth James Bond film *Thunderball* was partly filmed in 1965 in Nassau.

In 1967, Sir Lynden Pindling of the Progressive Liberal Party became the first black premier of the colony, and

in 1968 the title was changed to prime minister. In 1973, The Bahamas became fully independent, but retained membership in the Commonwealth of Nations. Sir Milo Butler was appointed the first Bahamian governor-general (the representative of Queen Elizabeth II) shortly after independence.

Based on the twin pillars of tourism and offshore finance, the Bahamian economy has prospered since the 1950s. However, there remain significant challenges in areas such as education, health care, housing, international narcotics trafficking and illegal immigration from Haiti.

The College of The Bahamas is the national higher education/ tertiary system. Offering baccalaureate, masters and associate degrees, COB has three campuses and teaching and research centers throughout The Bahamas. The College is in the process of becoming The University of The Bahamas as early as 2012.

Geography and climate

Main article: Geography of The Bahamas

The Bahamas from space. NASA Aqua satellite image, 2009

The country lies between latitudes 20° and 28°N, and longitudes 72° and 80°W.

In 1864 the Governor of the Bahamas reported that there were 29 islands, 661 cays, and 2,387 rocks in the colony.[14]

The closest island to the United States is Bimini, which is also known as the gateway to The Bahamas. The island of Abaco is to the east of Grand Bahama. The southeasternmost island is Inagua. The largest island is Andros Island. Other inhabited islands include Eleuthera, Cat Island, Long Island, San Salvador Island, Acklins, Crooked Island, Exuma and Mayaguana. Nassau, capital city of The Bahamas, lies on the island of New Providence.

All the islands are low and flat, with ridges that usually rise no more than 15 to 20 m (49 to 66 ft). The highest point in the country is Mount Alvernia, (formerly Como Hill) on Cat Island. It has an altitude of 63 metres (207 ft).

To the southeast, the Turks and Caicos Islands, and three more extensive submarine features called Mouchoir Bank, Silver Bank, and Navidad Bank, are geographically a continuation of The Bahamas, but not part of the Commonwealth of The Bahamas.[*citation needed*]

Climate

See also: Geography of the Bahamas

The climate of The Bahamas is subtropical to tropical, and is moderated significantly by the waters of the Gulf Stream, particularly in winter.[15] Conversely, this often proves very dangerous in the summer and autumn, when hurricanes pass near or through the islands. Hurricane Andrew hit the northern islands during the 1992 Atlantic hurricane season, and Hurricane Floyd hit most of the islands during the 1999 Atlantic hurricane season.

While there has never been a freeze reported in The Bahamas, the temperature can fall as low as 2–3 °C (35.6–37.4 °F) during Arctic outbreaks that affect nearby Florida. Snow was reported to have mixed with rain in Freeport in January 1977, the same time that it snowed in the Miami area.[16] The temperature was about 4.5 °C

(40.1 °F) at the time.[17]

Government and politics

Main article: Politics of The Bahamas

Bahamian Parliament, located in downtown Nassau

The Bahamas is a sovereign, independent, nation. Political and legal traditions closely follow those of the United Kingdom and the Westminster system. The Bahamas is a parliamentary democracy with two main parties, the Free National Movement and the Progressive Liberal Party.

Tourism generates about half of all jobs, but the number of visitors has dropped significantly since the beginning of the global economic downturn during the last quarter of 2008. Banking and international financial services also have contracted, and The Bahamas is one of 34 secrecy jurisdictions that would be subject to the Stop Tax Haven Abuse Act introduced in the U.S. Congress.

Prime Minister Hubert Ingraham

The Bahamas is a member of the Commonwealth of Nations, and a Commonwealth realm with Queen Elizabeth II as head of state (represented by a Governor-General).

Legislative power is vested in a bicameral parliament, which consists of a 41-member House of Assembly (the lower house), with members elected from single-member districts, and a 16-member Senate, with members appointed by the governor-general, including nine on the advice of the prime minister, four on the advice of the leader of the opposition, and three on the advice of the prime minister after consultation with the leader of the opposition. The House of Assembly carries out all major legislative functions. As under the Westminster system, the prime minister may dissolve parliament and call a general election at any time within a five-year term.

The Prime Minister is the head of government and is the leader of the party with the most seats in the House of Assembly. Executive power is exercised by the cabinet, selected by the prime minister and drawn from his

supporters in the House of Assembly. The current governor-general is Sir Arthur Foulkes and the current Prime Minister is Hubert Ingraham.

The Bahamas has a largely two-party system dominated by the centre-left Progressive Liberal Party and the centre-right Free National Movement. A handful of splinter parties have been unable to win election to parliament. These parties have included the Bahamas Democratic Movement, the Coalition for Democratic Reform and the Bahamian Nationalist Party.

Constitutional safeguards include freedom of speech, press, worship, movement, and association. Although The Bahamas is not geographically located in the Caribbean, it is a member of the Caribbean Community. The judiciary is independent of the executive and the legislature. Jurisprudence is based on English law.

Administrative divisions

Main article: Local government in the Bahamas

Districts of The Bahamas

The districts of The Bahamas provide a system of local government everywhere except New Providence, whose affairs are handled directly by the central government. In 1996, the Bahamian Parliament passed "The Local Government Act" to facilitate the establishment of Family Island Administrators, Local Government Districts, Local District Councillors, and Local Town Committees for the various island communities. The overall goal of this act is to allow the various elected leaders to govern and oversee the affairs of their respective districts without the interference of Central Government. In total, there are 32 districts, with elections being held every three years. There are also one hundred and ten Councillors and two hundred and eighty-one Town Committee members to correspond with the various districts.[20]

Each Councillor or Town Committee member is responsible for the proper use of public funds for the maintenance and development of their constituency.

The districts other than New Providence are:

1. Acklins
2. Berry Islands
3. Bimini
4. Black Point, Exuma
5. Cat Island
6. Central Abaco
7. Central Andros
8. Central Eleuthera
9. City of Freeport, Grand Bahama
10. Crooked Island
11. East Grand Bahama
12. Exuma
13. Grand Cay, Abaco
18. Mangrove Cay, Andros
19. Mayaguana
20. Moore's Island, Abaco
21. North Abaco
22. North Andros
23. North Eleuthera
24. Ragged Island
25. Rum Cay
26. San Salvador
27. South Abaco
28. South Andros
29. South Eleuthera
30. Spanish Wells, Eleuthera

14. Harbour Island, Eleuthera
15. Hope Town, Abaco
16. Inagua
17. Long Island
31. West Grand Bahama
32. Green Turtle Cay (not shown on map)

Military

Main article: Royal Bahamas Defence Force

The Bahamas does not have an army or an air force. Its military is composed of the Royal Bahamas Defence Force (RBDF), the navy of The Bahamas. Under The Defence Act, the Royal Bahamas Defence Force has been mandated to defend The Bahamas, protect its territorial integrity, patrol its waters, provide assistance and relief in times of disaster, maintain order in conjunction with the law enforcement agencies of The Bahamas, and carry out any such duties as determined by the National Security Council. The Defence Force is also a member of Caricom's Regional Security Task Force.

The Royal Bahamas Defence Force officially came into existence on March 31, 1980. Their duties include defending the Bahamas, stopping drug smuggling, illegal immigration, poaching, and providing assistance to mariners whenever and wherever they can. The Defence Force has a fleet of 26 coastal and inshore patrol craft along with 2 aircraft and over 850 personnel including 65 officers and 74 women.

National symbols

National flag

National Flag of The Bahamas

The colors embodied in the design of the Bahamian flag symbolise the image and aspirations of the people of The Bahamas; the design reflects aspects of the natural environment (sun, sand, and sea) and the economic and social development. The flag is a black equilateral triangle against the mast, superimposed on a horizontal background made up of two colours on three equal stripes of aquamarine, gold and aquamarine.

The symbolism of the flag is as follows: Black, a strong colour, represents the vigour and force of a united people, the triangle pointing towards the body of the flag represents the enterprise and determination of the Bahamian people to develop and possess the rich resources of sun and sea symbolized by gold and aquamarine respectively. In reference to the representation of the people with the colour black, some white Bahamians have joked that they are represented in the thread which "holds it all together."[21]

Bahamian Coat of Arms

Coat of arms

Main article: Coat of arms of The Bahamas

The Coat of Arms of The Bahamas contains a shield with the national symbols as its focal point. The shield is supported by a marlin and a flamingo, which are the national animals of The Bahamas. The flamingo is located on the land, and the marlin on the sea, indicating the geography of the islands.

On top of the shield is a conch shell, which represents the varied marine life of the island chain. The conch shell rests on a helmet. Below this is the actual shield, the

main symbol of which is a ship representing the *Santa María* of Christopher Columbus, shown sailing beneath the sun. Along the bottom, below the shield appears a banner upon which is scripted the national motto:[22]

"Forward, Upward, Onward Together."

The yellow elder

National flower

The yellow elder was chosen as the national flower of The Bahamas because it is native to the Bahama Islands, and it blooms throughout the year.

Selection of the yellow elder over many other flowers was made through the combined popular vote of members of all four of New Providence's garden clubs of the 1970s – the Nassau Garden Club, the Carver Garden Club, the International Garden Club, and the YWCA Garden Club.

They reasoned that other flowers grown there – such as the bougainvillea, hibiscus, and poinciana – had already been chosen as the national flowers of other countries. The yellow elder, on the other hand, was unclaimed by other countries (although it is now also the national flower of the United States Virgin Islands).[23]

Economy

Main article: Economy of The Bahamas

Cruise ships in Nassau Harbour

One of the most prosperous countries in the Caribbean region, The Bahamas relies on tourism to generate most of its economic activity. Tourism as an industry not only accounts for over 60 percent of the Bahamian GDP, but provides jobs for more than half the country's workforce.[24] After tourism, the next most important economic sector is financial services, accounting for some 15 percent of GDP.

The government has adopted incentives to encourage foreign financial business, and further banking and finance reforms are in progress. The government plans to merge the regulatory functions of key financial institutions, including the Central Bank of The Bahamas (CBB) and the Securities and Exchange Commission.[*citation needed*] The Central Bank administers restrictions and controls on capital and money market instruments. The Bahamas International Securities Exchange currently consists of 19 listed public companies. Reflecting the relative soundness of the banking system (mostly populated by Canadian banks), the impact of the global financial crisis on the financial sector has been limited.[*citation needed*]

The economy has a very competitive tax regime. The government derives its revenue from import tariffs, license fees, property and stamp taxes, but there is no income tax, corporate tax, capital gains tax, value-added tax (VAT), or wealth tax. Payroll taxes fund social insurance benefits and amount to 3.9% paid by the employee and 5.9% paid by the employer.[25] In 2010, overall tax revenue as a percentage of GDP was 17.2%.[26] Authorities are trying to increase tax compliance and collection in the wake of the global crisis. Inflation has been moderate, averaging 3.7 percent between 2006 and 2008.[*citation needed*]

By the terms of GDP per capita, the Bahamas is one of the richest countries in the Americas.[27]

Ethnic groups

Main article: Demographics of The Bahamas

Afro-Bahamians

Afro-Bahamians or Bahamians of African descent are Bahamians whose ancestry lies within the continent of Africa, most notably West Africa. The first Africans to arrive to The Bahamas came from Bermuda with the Eleutheran Adventurers as freed slaves looking for a new life. Currently, Afro-Bahamians are the largest ethnic group in The Bahamas, accounting for some 85% of the country's population.[1]

Europeans

European Bahamians, or Bahamians of European descent, numbering about 38,000,[28] are mainly the descendants of the British Puritans and American Loyalists who arrived in 1649 and 1783 respectively.[29] They form the largest minority group in The Bahamas, making up some 12% of the population.[1] Many Southern Loyalists went to Abaco, which is about 50% white.[30]

A small portion of the European Bahamian population is descended from Greek labourers who came to help develop the sponging industry in the 1900s. Although making up less than 1% of the nation's population, they have been able to preserve their distinct Greek Bahamian culture.

One of the features of the Bahamian genealogy is that most families have branches, and even immediate family members, spanning the entire spectrum between ‘ light’, 'brown' and ‘unequivocally dark.’ [31]

Demographics

- **Population**: 354,563
- **Age structure**: 0–14 years: 25.9% (male 40,085; female 38,959)

  15–64 years: 67.2% (male 102,154; female 105,482)
  65 years and over: 6.9% (male 8,772; female 12,704) (2009 est.)

- **Population growth rate**: 0.925% (2010 est.)[32]
- **Birth rate**: 17.81 births/1,000 population (2010 est.)
- **Death rate**: 9.35 deaths/1,000 population (July 2010 est.)
- **Net migration rate**: -2.13 migrant(s)/1,000 population (2010 est.)
- **Infant mortality rate**: 23.21 deaths/1,000 live births (2010 est.)
- **Life expectancy at birth**: total population: 69.87 years.

  Female: 73.49 years (2002 est.)
  Male: 66.32 years

- **Total fertility rate**: 2.0 children born/woman (2010 est.)[33]
- **Nationality**: noun: Bahamian(s)
- **Adjective**: Bahamian /bəˈheɪmiən/
- **Ethnic groups**: African 85%, European 12%, Asian and Mestizo 3% (Roughly 1.5% each).[1]
- **Religions**: Baptist 35.4%, Anglican 15.1%, Roman Catholic 13.5%, Pentecostal 8.1%, Church of God

4.8%, Methodist 4.2%, other Christian 15.2%,[1] other Protestant 12%, none or unknown 3%, other 2%[34] The 'other' category includes Jews, Muslims, Baha'is, Hindus, Rastafarians, and practitioners of Obeah.[35]

- **Languages**: English (official), Bahamian dialect [36]
- **Literacy (age 15+)**: total population: 98.2%

  male: 98.5%
  female: 98% (1995 est.)[37]

Culture

Main articles: Culture of The Bahamas and Music of The Bahamas

In the less developed outer islands, handicrafts include basketry made from palm fronds. This material, commonly called "straw", is plaited into hats and bags that are popular tourist items. Another use is for so-called "Voodoo dolls," even though such dolls are the result of the American imagination and not based on historic fact.[38]

Junkanoo celebration in Nassau

Although not practised by native Bahamians, a form of folk magic obeah derived from West African origins, is practiced in some Family Islands (out-islands) of The Bahamas due to Haitian migration. The practice of obeah is however illegal in The Bahamas and punishable by law.[39] Junkanoo is a traditional African street parade of music, dance, and art held in Nassau (and a few other settlements) every Boxing Day, New Year's Day. Junkanoo is also used to celebrate other holidays and events such as Emancipation Day.

Regattas are important social events in many family island settlements. They usually feature one or more days of sailing by old-fashioned work boats, as well as an onshore festival.

Some settlements have festivals associated with the traditional crop or food of that area, such as the "Pineapple Fest" in Gregory Town, Eleuthera or the "Crab Fest" on Andros. Other significant traditions include story telling.

History of the Bahamas

From Wikipedia, the free encyclopedia

The **history of the Bahamas** begins with the earliest arrival of humans in the islands in the first millennium AD. The first inhabitants of the islands now known as The Bahamas were the Lucayans, an Arawakan-speaking Taino people, who arrived between about 500 and 800 from the islands of the Caribbean. Recorded history begins in 1492, when Christopher Columbus landed on the island of Guanahani, an unknown island somewhere in the Bahamas, on his first voyage. The earliest permanent European settlement occurred in 1647 on the island. The 18th century slave trade brought many Africans to the Bahamas. Their descendants constitute 85 percent of the Bahamian population. The Bahamas gained independence from the United Kingdom on July 10, 1973.

Pre-Columbian period

The first inhabitants of the Bahamas were the Lucayans, a branch of the Arawakan-speaking Tainos of the Greater Antilles. Sometime between 500 to 800, Tainos began crossing in dugout canoes from Hispaniola and/or Cuba to the Bahamas. Suggested routes for the earliest migrations have been from Hispaniola to the Caicos Islands, from Hispaniola or eastern Cuba to Great Inagua Island, and from central Cuba to Long Island (in the central Bahamas). William Keegan argues that the most likely route was from Hispaniola or Cuba to Great Inagua. Granberry and Vescelius argue for two migrations, from Hispaniola to the Turks and Caicos Islands and from Cuba to Great Inagua.[1]

From the initial colonization(s) the Lucayans expanded throughout the Bahamas Islands in some 800 years (c. 700 – c. 1500), growing to a population of about 40,000. Population density at the time of first European contact was highest in the south central area of the Bahamas, declining towards the north, reflecting the progressively shorter time of occupation of the northern islands. Known Lucayan settlement sites are confined to the nineteen largest islands in the archipelago, or to smaller cays located less than one km. from those islands. Population density in the southern-most Bahamas remained lower, probably due to the drier climate there (less than 800 mm of rain a year on Great Inagua Island and the Turks and Caicos Islands and only slightly higher on Acklins and

Crooked Islands and Mayaguana).[2]

Spanish-Lucayan encounter

In 1492 Christopher Columbus sailed from Spain with three ships, the Nina, the Pinta and the flag ship The Santa Maria, seeking a direct route to Asia. On October 12, 1492 Columbus reached an island in the Bahamas, an event long regarded as the 'discovery' of America. This first island to be visited by Columbus was called Guanahani by the Lucayans, and San Salvador by the Spanish. The identity of the first American landfall by Columbus remains controversial, but many authors accept Samuel E. Morison's identification of what was then called Watling (or Watling's) Island as Columbus' San Salvador. The former Watling Island is now officially named San Salvador. Columbus visited several other islands in the Bahamas before sailing on to Cuba and afterward to Hispaniola.[3]

The Bahamas held little of interest to the Spanish other than as a source of slave labor. Nearly the entire population of Lucayans (almost 40,000 people total) were deported over the next 30 years. When the Spanish decided to evacuate the remaining Lucayans to Hispaniola in 1520, they could find only eleven in all of the Bahamas. The islands remained abandoned and depopulated for 130 years afterwards. With no gold to be found, and the population removed, the Spanish effectively abandoned the Bahamas, but still retained titular claims to them until the Treaty of Versailles in 1783.[4][5]

When Europeans first landed on the islands, they reported the Bahamas were lushly forested. The forests were cleared during plantation days and have not regrown.

Early English settlement

In 1648 a group from Bermuda called 'The Company of Adventurers for the Plantation of the Islands of Eleutheria' which was led by William Sayle, sailed to the Bahamas to found a colony. These early settlers were Puritans and republicans. Bermuda was also becoming overcrowded, and the Bahamas offered both religious and political freedom and economic opportunity. The larger of the company's two ships, the *William*, wrecked on the reef at the north end of what is now called Eleuthera Island, with the loss of all provisions. Despite the arrival of additional settlers, including whites, slaves and free blacks, from Bermuda and the receipt of relief supplies from Virginia and New England, the Eleuthera colony struggled for many years because of poor soil, fighting between settlers, and conflict with the Spanish. In the mid-1650s many of the settlers returned to Bermuda. The remaining settlers founded communities on Harbour Island and Saint George's Cay (Spanish Wells) at the north end of Eleuthera. In 1670 there were about 20 families living in the Eleuthera communities.[6]

In 1666 other settlers from Bermuda arrived on New Providence, which soon became the center of population and commerce in the Bahamas, with almost 500 people living on the island by 1670. Unlike the Eleutherians, who were primarily farmers, the first settlers on New Providence made their living from the sea, salvaging (mainly Spanish) wrecks, making salt, and taking fish, turtles, conchs and ambergris. Farmers from Bermuda soon followed the seamen to New Providence, where they found good, plentiful land. Neither the Eleutherian colony nor the settlement on New Providence had any legal standing under English law. In 1670 the Proprietors of Carolina were issued a patent for the Bahamas, but the governors sent by the Proprietors had difficulty in imposing their authority on the independent-minded residents of New Providence.[7]

The early settlers continued to live much as they had in Bermuda, fishing, hunting turtles, whales, and seals, finding ambergris, making salt on the drier islands, cutting the abundant hardwoods of the islands for lumber, dyewood and medicinal bark, and wrecking, or salvaging wrecks. The Bahamas were close to the sailing routes

between Europe and the Caribbean, so shipwrecks in the islands were common, and wrecking was the most lucrative occupation available to the Bahamians.[8]

For more details on this topic, see Wrecking (shipwreck)#Wrecking in the Bahamas.

Wreckers, privateers and pirates

The Bahamians soon came into conflict with the Spanish over the salvaging of wrecks. The Bahamian wreckers drove the Spanish away from their wrecked ships, and even attacked the Spanish salvagers and seized goods the Spanish had already recovered from the wrecks. The Spanish raided the Bahamas, the Bahamians in turn commissioned privateers against Spain, even though England and Spain were at peace, and in 1684 the Spanish burned the settlements on New Providence and Eleuthera, after which they were largely abandoned. New Providence was settled a second time in 1686 from Jamaica.

In the 1690s English privateers (England was at war with France) established themselves in the Bahamas. In 1696 Henry Every (or Avery), using the assumed name Henry Bridgeman, brought his ship *Fancy*, loaded with pirate's loot, into Nassau harbor. Every bribed the governor, Nicholas Trott (uncle of the Nicholas Trott who presided at the trial of Stede Bonnet), with gold and silver, and by leaving him the *Fancy*, still loaded with 50 tons of elephant tusks and 100 barrels of gunpowder. Following peace with France in 1697 many of the privateers became the pirates. From this time the pirates increasingly made the Bahamian capitol of Nassau, founded in 1694, their base. The governors appointed by the Proprietors usually made a show of suppressing the pirates, but most were often accused of dealing with the pirates. By 1701 England was at war with France and Spain. In 1703 and in 1706 combined French-Spanish fleets attacked and sacked Nassau, after which some settlers left and the Proprietors gave up on trying to govern the Bahamas.[9]

With no functioning government in the Bahamas, Nassau became a base of operations for English privateers, in what has been called a "privateers' republic," which lasted for eleven years. The raiders attacked French and Spanish ships, while French and Spanish forces burned Nassau several times. The War of the Spanish Succession ended in 1714, but some privateers were slow to get the news, or reluctant to accept it, and slipped into piracy. One estimate puts at least 1,000 pirates in the Bahamas in 1713, outnumbering the 200 families of more permanent settlers. The "privateers' republic" in Nassau became a "pirates' republic". At least 20 pirate captains used Nassau or other places in the Bahamas as a home port during this period, including Henry Jennings, Edward Teach (Blackbeard), Benjamin Hornigold and Stede Bonnet. Many settler families moved from New Providence to Eleuthera or Abaco to escape harassment from the pirates. On the other hand, residents of Harbor Island were happy to serve as middlemen for the pirates, as merchants from New England and Virginia came there to exchange needed supplies for pirate plunder.[10] As mentioned above, the activities of pirates provoked frequent and brutal retaliatory attacks by the French and Spanish.

Woodes Rogers

The "pirates' republic" came to an end in 1718, when Woodes Rogers, the first Royal Governor of the Bahamas, reached Nassau with a small fleet of warships. Starting in 1713, Rogers had conceived the idea of leading an expedition to Madagascar to suppress the pirates there and establish it as a British colony. Rogers' friends Richard Steele and Joseph Addison eventually convinced him to tackle the pirates nest in the Bahamas, instead. Rogers and others formed a company to fund the venture. They persuaded the Proprietors of Carolina to surrender the government of the Bahamas to the king, while retaining title to the land. The 1,000 or so pirates on the islands surrendered peacefully and the Proprietors then leased their land in the Bahamas to Rogers' company for 21 years. In 1717 King George appointed Rogers governor of the Bahamas and issued a proclamation

granting a pardon to any pirate who surrendered to a British governor within one year.[11]

Word of the appointment of a new governor and of the offer of pardons reached Nassau ahead of Rogers. Some of the pirates were willing to accept a pardon and retire from piracy. Others were not ready to give up. Many of those were Jacobites, supporters of the House of Stuart, who regarded themselves as enemies of the Hanoverian King George. Still others simply saw themselves as rebels, or thought they were better off as pirates than trying to earn an honest living. When a Royal Navy ship brought official word to Nassau of the pardon offer, it seemed at first that most of the pirates in Nassau would accept. Soon, however, the recalcitrant party gained the upper hand, eventually forcing the Navy ship to leave.[12]

Some pirates, such as Henry Jennings and Christopher Winter, sailed off to find British authorities to confirm their acceptance of the amnesty. Others, such as Blackbeard, Stede Bonnet, Nicholas Brown and Edmond Condent, left the Bahamas for other territories. Charles Vane, with "Calico Jack" Rackham and Edward England in his crew, came to prominence at this time. Vane worked to organize resistance to the anticipated arrival of Royal authority, even appealing to the James Francis Edward Stuart, the Stuart pretender, for aid in holding the Bahamas and capturing Bermuda for the Stuarts. As aid from the Stuarts failed to materialize and Rogers' arrival approached, Vane and his crew prepared to leave Nassau.[13]

Woodes Rogers arrived in Nassau in late July 1718, with his own 460 ton warship, three other ships belonging to his company, and escorted by three ships of the Royal Navy. Vane's ship was trapped in Nassau harbor. His crew set that ship on fire, sending it towards Rogers' ships, and escaped in the ensuing confusion in a smaller ship they had seized from another pirate. Rogers' arrival in Nassau was welcomed by the remaining population, about 200 settlers and 500 to 700 pirates who want to receive pardons, most prominently Benjamin Hornigold.[14]

Rogers had control of Nassau, but Charles Vane was loose and threatening to drive Rogers out, and Rogers received word that the King of Spain wanted to drive the English completely out of the Bahamas. Rogers worked to improve the defenses of Nassau, but an unidentified disease killed almost 100 of the men who had come to Nassau with Rogers, and then the Navy ships left. Rogers sent four of his ships to Havana to assure the Spanish governor that Rogers was suppressing piracy in the Bahamas and to trade for supplies. The crews of ex-pirates and men who had come with Rogers all turned pirate themselves. Ten of those men were caught at Green Turtle Cay by Rogers' new pirate-hunter, the ex-pirate Benjamin Hornigold. Eight of the pirates were found guilty and hanged in front of the fort.[15]

Charles Vane attacked several small settlements in the Bahamas, but after he refused to attack a stronger French frigate, he was deposed for cowardice and replaced as captain by "Calico Jack" Rackham. Vane never returned to the Bahamas, but was eventually caught, tried and executed in Jamaica. After nearly being captured by Jamaican privateers, and hearing that the king had extended the deadline being pardoned for piracy, Rackham and his crew returned to Nassau and received pardons from Woodes Rogers. In Nassau Rackham became involved with Anne Bonny and tried to arrange an annulment of her marriage to another ex-pirate, James Bonny. Rogers blocked the annulment, and Rackham and Bonny left Nassau to be pirates again, taking a small crew and Bonny's friend Mary Read with them. Within months, Rackham, Bonny and Read were captured and taken to Jamaica, where Rackham was executed and Bonny and Read escaped execution due to pregnancy. Bonny died in prison, while Read's fate is unknown.[16]

Britain and Spain went to war again in 1719, and many of the ex-pirates became privateers. A Spanish invasion fleet set out for the Bahamas, but was diverted to Pensacola, Florida when it was seized by the French. Rogers continued to improve the defenses of Nassau, spending his money and going heavily into debt to do so. A second Spanish invasion fleet in 1720 was deterred by the defenses (and the accidental presence of a Royal Navy ship in Nassau). His efforts has also physically exhausted Rogers. He returned to Britain in 1722 to plead for repayment of the money he had borrowed to build up Nassau, only to find he had been replaced as governor. He then ended

up in debtors' prison, although his creditors later absolved his debts, allowing him to leave prison. After the publication in 1724 of *A General History of the Robberies and Murders of the Most Notorious Pirates*, which gave a favorable account of Rogers' efforts to suppress piracy in the Bahamas, his fortunes began to improve. The king awarded him a pension, retroactive to 1721, and in 1728 appointed Governor of the Bahamas for a second term. Rogers dissolved the colony's assembly when it would not approve taxes to repair Nassau's defenses. Woodes Rogers died in Nassau in 1732.[17]

Mid-century

William Shirley, former governor of Massachusetts, was appointed governor of the Bahamas in 1758 and served until 1770.[18]

Loyalists

During the American War of Independence the Bahamas fell to Spanish forces under General Galvez in 1782. A British-American loyalist expedition later recaptured the islands. After the American Revolution, the British issued land grants to American Loyalists, and the sparse population of the Bahamas tripled within a few years. Cotton growing soon became established, but it eventually dwindled from insect damage and soil exhaustion. Most of the current inhabitants are descended from the slaves brought to work on the Loyalist plantations, or from liberated Africans set free by the British navy after the abolition of the slave trade in the British Empire in 1807. Plantation life ended with the British emancipation of slaves in 1834.

Post-emancipation

Main article: Bahamas in the American Civil War

During the American Civil War, the Bahamas prospered as a base for Confederate blockade-running, bringing in cotton for the mills of England and running out arms and munitions. During Prohibition after World War I, the islands were a base for American rum-runners,smuggling liquor into the US. None of these provided any lasting prosperity to the islands, nor did attempts to grow various crops. After emancipation Caribbean societies inherited a rigid racial stratification that was reinforced by the unequal distribution of wealth and power. The three-tier race structure, which existed well into the 1940s and in some societies beyond, upheld the belief of European racial superiority, although most West Indians are of African descent. Race and racial attitudes remain important in mixed Caribbean societies.

Late-colonial period

During World War II, the Allies centred their flight training and antisubmarine operations for the Caribbean in the Bahamas. The wartime airfield became Nassau's international airport in 1957 and helped spur the growth of mass tourism, which accelerated after Havana was closed to American tourists in 1961. Freeport, on the island of Grand Bahama, was established as a free trade zone in the 1950s and became the country's second city. Bank secrecy combined with the lack of corporate and income taxes led to a rapid growth in the offshore financial sector during the postwar years.

Post-independence era

Bahamians achieved self-government in 1964 and full independence within the Commonwealth of Nations on

July 10, 1973. The country's first prime minister was Lynden O. Pindling, leader of the Progressive Liberal Party. Pindling ruled for nearly 20 years, during which the Bahamas benefited from tourism and foreign investment. By the early 1980s, the islands had also become a major center for the drug trade, with 90% of all the cocaine entering the United States reportedly passing through the Bahamas. Diplomatic relations were established with Cuba in 1974. A decade later, as increased Cuban immigration to the islands strained the Bahamas' resources, Cuba refused to sign a letter of repatriation.

In September 2004, Hurricane Frances swept through the Bahamas, leaving widespread damage in its wake. Just three weeks later, Hurricane Jeanne flattened the islands. Jeanne uprooted trees, blew out windows, and sent seawater flooding through neighborhoods on the islands of Abaco and Grand Bahama. Receding floodwaters left boats tossed on roads and homes battered.

Monarchy of the Bahamas

From Wikipedia, the free encyclopedia

The **monarchy of the Bahamas** is a system of government in which a hereditary monarch is the sovereign and head of state of the Commonwealth of The Bahamas. The current monarch is Queen Elizabeth II[1], who has reigned since the country became independent on 10 July 1973. The Bahamas share the Sovereign with a number of Commonwealth realms.[2] The Queen does not personally reside in the islands, and most of her constitutional roles are therefore delegated to her representative in the country, the Governor-General of the Bahamas. Royal succession is governed by the English Act of Settlement of 1701, which is part of constitutional law.

International and domestic role

The Bahamas are one of sixteen independent nations, known as Commonwealth realms, which separately recognise the Queen as their individual monarch and head of state.[3] Despite sharing the same person as their respective monarch, each of the Commonwealth realms — including the Bahamas — is sovereign and independent of the others.

Development of shared monarchy

The *Balfour Declaration* of 1926 provided the dominions the right to be considered equal to Britain, rather than subordinate; an agreement that had the result of, in theory, a shared Crown that operates independently in each realm rather than a unitary British Crown under which all the dominions were secondary. The Monarchy thus ceased to be an exclusively British institution, although it has often been called "British" since this time (in both

legal and common language) for reasons historical, legal, and of convenience. The *Royal and Parliamentary Titles Act, 1927* was the first indication of this shift in law, further elaborated in the *Statute of Westminster, 1931*.

Under the *Statute of Westminster*, the Bahamas have a common monarchy with Britain and the other Commonwealth realms, and though laws governing the line of succession to the Bahamian throne lie within the control of the Bahamian Parliament, the Bahamas cannot change the rules of succession without the unanimous consent of the other realms, unless explicitly leaving the shared monarchy relationship by means of a constitutional amendment. This situation applies symmetrically in all the other realms, including the UK.

On all matters of the Bahamian State, the Monarch is advised solely by Bahamian ministers.

Title

In the Bahamas, the Queen's official title is: *Elizabeth the Second, by the Grace of God, Queen of the Commonwealth of The Bahamas and of Her other Realms and Territories, Head of the Commonwealth*.

This style communicates the Bahamas's status as an independent monarchy, highlighting the Monarch's role specifically as Queen of the Bahamas, as well as the shared aspect of the Crown throughout the realms. Typically, the Sovereign is styled "Queen of the Bahamas," and is addressed as such when in the Bahamas, or performing duties on behalf of the Bahamas abroad.

Constitutional role

The Bahamian constitution is made up of a variety of statutes and conventions that are either British or Bahamian in origin, which gives the Bahamas a similar parliamentary system of government as the other Commonwealth realms.

All powers of state are constitutionally reposed in the Monarch, who is represented by the Governor General of the Bahamas — appointed by the Monarch upon the advice of the Prime Minister of the Bahamas. The Monarch is informed of the Prime Minister's decision before the Governor General gives Royal Assent.

Duties

Most of the Queen's domestic duties are performed by the Governor-General. The Governor-General represents the Queen on ceremonial occasions such as the opening of Parliament, the presentation of honours and military parades. Under the Constitution, he or she is given authority to act in some matters, for example in appointing and disciplining officers of the civil service, in proroguing Parliament. As in the other Commonwealth realms, however, the Monarch's role, and thereby the vice-regent's role, is almost entirely symbolic and cultural, acting as a symbol of the legal authority under which all governments operate, and the powers that are constitutionally hers are exercised almost wholly upon the advice of the Cabinet, made up of Ministers of the Crown. It has been said since the death of Queen Anne in 1714, the last monarch to head the British cabinet, that the monarch "reigns" but does not "rule". In exceptional circumstances, however, the Monarch or vice-regal can act against such advice based upon his or her reserve powers.

There are also a few duties which must be specifically performed by, or bills that require assent by the Queen. These include: signing the appointment papers of Governors General, the confirmation of awards of honours, and approving any change in her title.

It is also possible that if the Governor General decided to go against the Prime Minister's or the government's advice, the Prime Minister could appeal directly to the Monarch, or even recommend that the Monarch dismiss

the Governor General.

Succession

Charles, Prince of Wales, the current heir to the throne of the Bahamas

Succession to the throne is by male-preference primogeniture, and governed by the provisions of the Act of Settlement, as well as the English Bill of Rights. These documents, though originally passed by the Parliament of England, are now part of the Bahamian constitutional law.

This legislation lays out the rules that the Monarch cannot be a Roman Catholic, nor married to one, and must be in communion with the Church of England upon ascending the throne. As the Bahamas's laws governing succession are currently identical to those of the United Kingdom (by the *Statute of Westminster*) see Succession to the British Throne for more information.

The heir apparent is Elizabeth II's eldest son, Charles, who has no official title outside of the UK, but is accorded his UK title, Prince of Wales, as a courtesy title.

Legal role

All laws in the Bahamas are enacted with the sovereign's, or the vice-regal's signature. The granting of a signature to a bill is known as Royal Assent; it and proclamation are required for all acts of Parliament, usually granted or withheld by the Governor General. The Vice-Regals may reserve a bill for the Monarch's pleasure, that is to say, allow the Monarch to make a personal decision on the bill. The Monarch has the power to disallow a bill (within a time limit specified by the constitution).

The Sovereign is deemed the "fount of justice," and is responsible for rendering justice for all subjects. The Sovereign does not personally rule in judicial cases; instead, judicial functions are performed in his or her name. The common law holds that the Sovereign "can do no wrong"; the monarch cannot be prosecuted in his or her own courts for criminal offences. Civil lawsuits against the Crown in its public capacity (that is, lawsuits against the government) are permitted; however, lawsuits against the Monarch personally are not cognizable. The Sovereign, and by extension the Governor General, also exercises the "prerogative of mercy," and may pardon offences against the Crown. Pardons may be awarded before, during, or after a trial.

In the Bahamas the legal personality of the State is referred to as "Her Majesty the Queen in Right of the Bahamas." For example, if a lawsuit is filed against the government, the respondent is formally described as Her Majesty the Queen in Right of the Bahamas. The monarch as an individual takes no more role in such an affair than in any other business of government.

Royal Presence

The Queen and members of the Royal Family have toured The Bahamas on several occasions. As part of larger Caribbean tours, the islands were visited by The Queen and her husband in February 1966 and February 1975, and again during her Silver Jubilee tour of October 1977.

There was a further visit to Nassau for the Commonwealth Heads of Government Meeting in October 1985. Earlier that year, Independence Day celebrations on the islands were attended by The Prince of Wales. The Queen returned again to The Bahamas in March 1994.

Barbados

Coordinates: 13°10′N 59°33′W

From Wikipedia, the free encyclopedia

Barbados (/bɑr'beɪdɒs/ or /bɑr'beɪdoʊs/) is an island country in the Lesser Antilles. It is 34 kilometres (21 mi) in length and as much as 23 kilometres (14 mi) in width, amounting to 431 square kilometres (166 sq mi). It is situated in the western area of the North Atlantic and 100 kilometres (62 mi) east of the Windward Islands and the Caribbean Sea;[6] therein, it is about 168 kilometres (104 mi) east of the islands of Saint Vincent and the Grenadines, and 400 kilometres (250 mi) north-east of Trinidad and Tobago. Barbados is outside of the principal Atlantic hurricane belt.

Barbados was initially visited by the Spanish around the late 1400s to early 1500s and first appears on a Spanish map from 1511.[7] The Spanish explorers may have plundered the island of whatever native peoples resided therein to become slaves.[7] Thereafter, the Portuguese in 1536 then visited, but they too left it unclaimed, with their only remnants being an introduction of wild hogs for a good supply of meat whenever the island was visited. The first English ship, the *Olive Blossom*, arrived in Barbados in 1624. They took possession of it in the name of 'James I, King of England'. Two years later in 1627 the first permanent settlers arrived from England and it became an English and later British colony.[8]

Barbados has an estimated population of 284,000 people,[9] with around 80,000 living in or around Bridgetown, the largest city and the country's capital.[10] In 1966, Barbados became an independent state and Commonwealth realm, retaining Queen Elizabeth II as Head of State.[11] Barbados is one of the Caribbean's leading tourist destinations and is one of the most developed islands in the region, with an HDI number of 0.788. In 2011 Barbados ranked 2nd in The Americas (16th globally) on Transparency International's Corruption Perception Index[12]

Etymology

According to accounts by descendants of the indigenous Arawakan-speaking tribes in other regional areas, the original name for Barbados was **Ichirouganaim**, with possible translations including "Red Land with White Teeth",[13] "Redstone island with teeth outside (reefs)",[14] or simply "Teeth".[15][16][17]

The reason for the later name Barbados is controversial. According to some sources The Portuguese, en route to Brazil,[18][19] were the first Europeans to come upon the island, while others say it was the Spanish which gave the Spanish name "Los Barbudos". The word *Barbados* means "bearded ones", but it is a matter of conjecture whether "bearded" refers to the long, hanging roots of the bearded fig-tree (*Ficus citrifolia*), indigenous to the island; to allegedly bearded Caribs once inhabiting the island; or, more fancifully, to the foam spraying over the outlying reefs giving the impression of a beard. In 1519, a map produced by the Genoese mapmaker Visconte Maggiolo showed and named Barbados in its correct position. Furthermore, an island in the Leewards which is very close in name to Barbados is Barbuda and was once named Las Barbudas by the Spanish.

Other names or nicknames associated with Barbados include "Bim" and "Bimshire". The origin is uncertain but several theories exist. The National Cultural Foundation of Barbados says that "Bim" was a word commonly used by slaves and that it derives from the phrase "bi mu" or either ("bem", "Ndi bem", "Nwanyi ibem" or "Nwoke ibem")[20] from an Igbo phrase meaning "my people". In colloquial or literary contexts, "Bim" can also take a more deific tone, referring to the "goddess" Barbados.[*citation needed*]

The word *Bim* and *Bimshire* are recorded in the Oxford English Dictionary and *Chambers Twentieth Century Dictionaries*. Another possible source for "Bim" is reported to be in the Agricultural Reporter of 25 April 1868, The Rev. N Greenidge (father of one of the island's most famous scholars, Abel Hendy Jones Greenidge) suggested the listing of Bimshire as a county of England. Expressly named were "Wiltshire, Hampshire, Berkshire and Bimshire".[20] Lastly in the *Daily Argosy* (of Demerara, i.e. Guyana) of 1652 it referred to Bim as a possible corruption of the word "Byam", who was a Royalist leader against the Parliamentarians. That source suggested the followers of Byam became known as Bims and became a word for all Barbadians.[20]

History

Main articles: History of Barbados and Timeline of Barbadian history

Amerindian settlement of Barbados dates to about the 4th to 7th century AD, by a group known as the Saladoid-Barrancoid.[21] In the 13th century, the Caribs arrived from South America.[22]

The Spanish and Portuguese briefly claimed Barbados from the late-16th to the 17th centuries, and may have seized the Arawaks on Barbados and used them as slave labour. Other Arawaks are believed to have fled to neighbouring islands. Apart from possibly displacing the Caribs, the Spanish and Portuguese left little impact and left the island uninhabited. Some Arawaks migrated from Guyana in the 1800s and continue to live in Barbados.[22][23][24]

From the arrival of the first English settlers in 1627–1628 until independence in 1966, Barbados was under uninterrupted British governance (and was the only Caribbean island that did not change hands during the colonial period). In the very early years, the majority of the population was white and male, with African slaves providing little of the workforce. Cultivation of tobacco, cotton, ginger and indigo was handled primarily by European indentured labour until the start of the sugar cane industry in the 1640s. As Barbados' economy grew, Barbados developed a large measure of local autonomy through its founding as a proprietary colony. Its House of Assembly began meeting in 1639. Among the initial important figures was Anglo-Dutchman Sir William Courten.

Government and politics

Main articles: Government of Barbados and Politics of Barbados

Parliament Building.

Barbados has been an independent country since 30 November 1966. It functions as a constitutional monarchy and parliamentary democracy, modelled on the British Westminster system, with Elizabeth II, Queen of Barbados, as head of state represented locally by the Governor-General, Elliot Belgrave and the Prime Minister as the head of the government. The number of representatives within the House of Assembly has gradually increased from twenty four at independence, to its present composition of thirty seats.

During the 1990s, at the suggestion of Trinidad and Tobago's Patrick Manning, Barbados attempted a political union with Trinidad and Tobago and Guyana. The project stalled after the then Prime Minister of Barbados Lloyd Erskine Sandiford became ill and his party (the Democratic Labour Party) lost the next general election.[25][26] Barbados continues to share close ties with Trinidad and Tobago and Guyana, claiming the highest number of Guyanese immigrants after the United States, Canada and the United Kingdom.

Barbados functions as a two-party system, the two dominant parties being the ruling Democratic Labour Party and the opposition, Barbados Labour Party. Until 2003, each party had served two terms in office alternately.[27] The election of 2003 gave the BLP a third term victory, at which time the Barbados Labour Party (BLP) achieved being in government for 14 years, (1994 until the 2008 elections). Under that administration, the former Prime Minister, The Right Honourable Owen S. Arthur acted as the Regional Leader of the CSM (Caribbean Single Market).

The Honourable David Thompson, who was elected Prime Minister of Barbados in 2008, died of pancreatic cancer on 23 October 2010. He was succeeded by Deputy Prime Minister Freundel Stuart, who was sworn in the same day.[28][29]

Barbados has had several third parties over a period of time since independence: The People's Pressure Movement formed in the early 1970s and contested the 1976 elections; The National Democratic Party, which contested the 1994 elections; and the People's Democratic Congress, which contested the 2008 elections. Apart from these there were several independents who contested the elections, but independents are yet to win a seat in Parliament.

Law

The Constitution of Barbados is the supreme law of the nation.[30] The Attorney General heads the independent judiciary. Historically, Barbadian law was based entirely on English common law with a few local adaptations. At the time of independence, the British Parliament ceased having the ability to change local legislation at its own discretion. British law and various legal statutes within British law at this time, and other prior measures adopted by the Barbadian parliament became the basis of the modern-day law system.

More recently, however, local Barbadian legislation may be shaped or influenced by such organisations as the United Nations, the Organization of American States, or other international fora to which Barbados has obligatory commitments by treaty. Additionally, through international cooperation, other institutions may supply the Barbados Parliament with key sample legislation to be adapted to meet local circumstances before crafting it as local law.

Laws are passed by the Barbadian Parliament, whereby upon their passage, are given official vice-regal assent by the Governor-General to become law.

In Barbados, camouflage clothing is reserved for military use and forbidden for civilians to wear, including children.[5]

As of October 2010, it is illegal for persons to smoke in public areas.

Judiciary

Main article: Judiciary of Barbados

The local court system of Barbados is made-up of:

- Magistrates' Courts: Covering Criminal, Civil, Domestic, Domestic Violence, and Juvenile matters. But can also take up matters dealing with Corornor's Inquests, Liquor Licences, and civil marriages. Further, the Magistrates' Courts deal with Contract and Tort law where claims do not exceed $10,000.00.[31]
- The Supreme Court: is made up of High Court and Court of Appeals.[31]
    - High Court: Consisting of Civil, Criminal, and Family law divisions.

    - Court of Appeal: Handles appeals from the High Court and Magistrates' Court. It hears appeals in both the civil, and criminal law jurisdictions. It may consist of a single Justice of Appeal sitting in Chambers; or may sit as a Full Court of three Justices of Appeals.
- The Caribbean Court of Justice (CCJ), (based in Port Of Spain, Trinidad and Tobago), is the court of last resort (final jurisdiction) over Barbadian law. It replaced the London-based Judicial Committee of the Privy Council (JCPC). The CCJ may resolve other disputed matters dealing with the Caribbean (CARICOM) Single Market and Economy (CSME).

Foreign relations

Main article: Foreign relations of Barbados

Barbados is a full and participating member of the Caribbean Community (CARICOM), Caribbean Single Market and Economy (CSME), and the Association of Caribbean States (ACS).[32] Organization of American States (OAS), Commonwealth of Nations, and the Caribbean Court of Justice (CCJ), which currently pertains only to Barbados, Belize and Guyana. In 2001 the Caribbean Community heads of government voted on a measure declaring that the region should work towards replacing the UK's Judicial Committee of the Privy Council with the Caribbean Court of Justice.

Barbados is an original Member (1995) of the World Trade Organisation (WTO), and participates actively in its work. It grants at least MFN treatment to all its trading partners. As of December 2007, Barbados is linked by an Economic Partnership Agreement with the European Commission. The pact involves the Caribbean Forum (CARIFORUM) subgroup of the Group of African, Caribbean, and Pacific states (ACP). CARIFORUM presently the only part of the wider ACP-bloc that has concluded the full regional trade-pact with the European Union.

Trade policy has also sought to protect a small number of domestic activities, mostly food production, from foreign competition, while recognising that most domestic needs are best met by imports.

Military

The Barbados Defence Force has roughly 600 members; within it, 12-to-18-year-old youngsters make up the Barbados Cadet Corps.

Geography and climate

Main article: Geography and climate of Barbados

Barbados is the easternmost island in the Lesser Antilles. It is flat in comparison to its island neighbours to the west, the Windward Islands. The island rises gently to the central highland region, with the highpoint of the nation being Mount Hillaby, in the Scotland District, 340 metres (1,120 ft) above sea level. The island is situated in the Atlantic Ocean, east of the other West Indies Islands.

In the parish of Saint Michael lies Barbados' capital and main city, Bridgetown. Other major towns scattered across the island include Holetown, in the parish of Saint James; Oistins, in the parish of Christ Church; and Speightstown, in the parish of Saint Peter.

Geology

Barbados lies on the boundary of the South American and the Caribbean Plates.[33] The shift of the South

Beach near Bridgetown, Barbados.

Map of Barbados

American plate beneath the Caribbean plate scrapes sediment from the South American plate and deposits it above the subduction zone forming an accretionary prism. The rate of this depositing of material allows Barbados to rise at a rate of about 25 millimetres (0.98 in) per 1,000 years.[34] This subduction means geologically the island is composed of coral roughly (90 m/300 ft thick), where reefs formed above the sediment. The land slopes in a series of "terraces" in the west and goes into an incline in the east. A large proportion of the island is circled by coral reefs. The erosion of limestone rock in the North East of the island, in the Scotland District has resulted in the formation of various caves and gullys, some of which have become popular tourist attractions such as Harrison's Cave and Welchman Hall Gully. On the Atlantic East coast of the island coastal landforms including stacks have been created due to the limestone composition of the area.

Climate

The country is generally split into a period of two seasons one of which includes noticeably higher rainfall. Known as the "wet season", this period runs from March–November, In contrast, the "dry season" runs December–May. The annual precipitation ranges between 40 inches (1,000 mm) and 90 inches (2,300 mm). From December–May the average temperatures range from 21 to 31 °C (70 to 88 °F), while between June–November, they range from 23 to 31 °C (73 to 88 °F).[35]

On the Köppen climate classification scale, much of Barbados is regarded as a Tropical monsoon climate (Am). However, gentle breezes of 12–16 kilometres per hour (8–10 mph) abound throughout the year and give Barbados a warm climate which is moderately tropical.

Infrequent natural hazards include: earthquakes, landslips, and hurricanes. Barbados is often spared the worst effects of the region's tropical storms and hurricanes during the rainy season. The far eastern location in the Atlantic Ocean puts the country just outside the principal hurricane strike zone. On average, a major hurricane strikes about once every 26 years. The last significant hit from a hurricane to cause severe damage to Barbados was Hurricane Janet in 1955, and more recently in 2010 the island was struck by Hurricane Tomas, but this only caused minor damage across the country.[36]

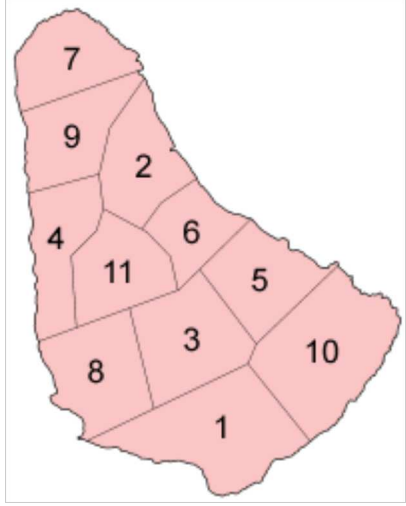
Environmental issues

The island is susceptible to environmental pressures. As one of the world's most densely populated isles, the government worked during the 1990s[37] to aggressively integrate the growing south coast of the island into the Bridgetown Sewage Treatment Plant to reduce contamination of offshore coral reefs.[38][39] As of the 2000s, a second treatment plant has been proposed along the islands' west coast. With such a dense populus, Barbados has placed large efforts on protecting its underground aquifers. As a coral-limestone island, Barbados is highly permeable to seepage of surface water into the earth. As such, a major emphasis by the government has been placed on protecting the catchment areas (in specific surface areas known as buffer zones) that lead directly into

the huge network of underground aquifers and streams.[40] On occasion illegal squatters have breached these areas, and the government has removed squatters in order to preserve the cleanliness of the underground springs for islands drinking water.[41] The government has placed a huge emphasis on keeping Barbados clean with the aim of protecting the environment and preserving offshore coral reefs which surround the island. Many initiatives to mitigate human pressures on the coastal regions of Barbados and seas is the Coastal Zone Management Unit (CZMU) (http://www.coastal.gov.bb/) .[42] Barbados has nearly 90 km of coral reefs just offshore and two protected marine parks have been established off the west coast.[43] Over fishing is another threat which faces Barbados.[44]

Barbados is host to four species of nesting turtles (green turtles, loggerheads, and leatherbacks) and has the second largest hawksbill turtle breeding population in the Caribbean.[45] The driving of vehicles on beaches can crush nests buried in the sand and such activity should be avoided in nesting areas.[46]

Though on the opposite side of the Atlantic, and some 3000 miles west of Africa, Barbados is one of many places in the American continent which experiences heightened levels of mineral dust from the Sahara Desert.[47] Some particularly intense dust episodes have been blamed partly for the impacts on the health of coral reefs[48] surrounding Barbados or asthmatic episodes,[49] but evidence has not wholly supported the former such claim.[50]



Administrative divisions

Main article: Parishes of Barbados

Barbados is divided into 11 parishes:

1. Christ Church
2. Saint Andrew
3. Saint George
4. Saint James
5. Saint John
6. Saint Joseph
7. Saint Lucy
8. Saint Michael
9. Saint Peter
10. Saint Philip
11. Saint Thomas

St. George and St. Thomas located in the middle of the country are the only two parishes without coastlines.

Map of the parishes of Barbados

Economy

Main article: Economy of Barbados

Barbados is the 51st richest country in the world in terms of GDP (Gross domestic product) per capita,[3] has a well-developed mixed economy, and a moderately high standard of living. According to the World Bank, Barbados is classified as being in its 66 top High income economies of the world.[51]

Historically, the economy of Barbados had been dependent on sugarcane cultivation and related activities, but in the late 1970s and early 1980s it has diversified into the manufacturing and tourism sectors. Offshore finance and information services have become important foreign exchange earners, and there is a healthy light manufacturing sector. Since the 1990s the Barbados Government has been seen as business-friendly and economically sound.[*citation needed*] The island has seen a construction boom, with the development and redevelopment of hotels, office complexes, and homes.[*citation needed*]

Recent government administrations have continued efforts to reduce unemployment, encourage foreign direct investment, and privatise remaining state-owned enterprises. Unemployment has been reduced to 10.7 in 2003.[2]

The economy contracted in 2001 and 2002 due to slowdowns in tourism, consumer spending and the impact of the 11 September 2001 attacks, but rebounded in 2003 and has shown growth since 2004.[2] Traditional trading partners include Canada, the Caribbean Community (especially Trinidad and Tobago), the United Kingdom and the United States.

Business links and investment flows have become substantial: as of 2003 the island saw from Canada CA$ 25 billion in investment holdings, placing it as one of Canada's top five destinations for Canadian foreign direct investment (FDI). Businessman Eugene Melnyk of Toronto, Canada, is said to be Barbados' richest permanent resident.[*citation needed*]

It has been reported that the year 2006 would have been one of the busiest years for building construction ever in Barbados, as the building-boom on the island entered the final stages for several multi-million dollar commercial projects.[52]

The European Union is presently assisting Barbados with a €10 million programme of modernisation of the country's International Business and Financial Services Sector.[53]

Barbados maintains the third largest stock exchange in the Caribbean region. At present, officials at the stock exchange are investigating the possibility of augmenting the local exchange with an International Securities Market (ISM) venture.[54]

Tourism

Barbados has numerous internationally known hotels. Time-shares are available, and many of the smaller local hotels and private villas which dot the island have space available if booked in advance. The southern and western coasts of Barbados are popular, with the calm light-blue Caribbean Sea and their white and pinkish sandy beaches. Along the island's east coast, which faces the Atlantic Ocean, there are tumbling waves that are perfect for light surfing. Some areas remain risky to swimmers due to under-tow currents.

Shopping districts are popular in Barbados, with ample duty-free shopping. There is also a festive night-life in mainly tourist areas such as the Saint Lawrence Gap. Other attractions include wildlife reserves (Graeme Hall Nature Sanctuary), jewellery stores, scuba diving, helicopter rides, golf, festivals (the largest being the annual Crop Over festival July/Aug), sightseeing, cave exploration (Harrison's Cave), exotic drinks and fine clothes shopping.

Attractions, landmarks and points of interest

Tourism accounts for almost one half of the economy. Name / Parish Location:

Demographics

Main articles: Demographics of Barbados and Barbadian people

A bus stop in Barbados

Barbados has a population of about 281,968 and a population growth rate of 0.33% (Mid-2005 estimates). It currently ranks as: the 4th most densely populated country in the Americas (18th globally), and the 10th most populated island country in the region, (101st globally). Close to 90% of all Barbadians (also known colloquially as *Bajan*) are of African descent ("Afro-Bajans") and mixed-descent. The remainder of the population includes groups of Europeans ("Anglo-Bajans" / "Euro-Bajans") mainly from the United Kingdom, Ireland, Chinese, Bajan Muslims from India. Other groups in Barbados include people from the United Kingdom, United States and Canada. Barbadians who return after years of residence in the U.S. and children born in America to Bajan parents are called "Bajan Yankees", this term is considered derogatory by some.[55] Generally, Bajans recognise and accept all 'children-of-the-island' as Bajans, and refer to each other as such.

High Street

The biggest communities outside the Afro-Caribbean community are:

1. The Indo-Guyanese, an important part of the economy due to the increase of immigrants from partner country Guyana. There are reports of a growing Indo-Bajan diaspora originating from Guyana and India. They introduced roti and other Indian dishes to Barbados' culture. Mostly from southern India and Hindu states, they are growing in size but smaller than the equivalent communities in Trinidad & Guyana.
2. Euro-Bajans (4% of the population)[2] have settled in Barbados since the 16th century, originating from England, Ireland and Scotland. In 1643, there were 37,200 whites in Barbados (86% of the population).[56] More commonly they are known as "White Bajans". Euro-Bajans introduced folk music, such as Irish music and Highland music, and certain place names, such as "Scotland", a mountainous region. Among White Barbadians there exists an underclass known as Redlegs; the descendants of indentured servants, and prisoners imported to the island.[57] Many additionally moved on to become the earliest settlers of modern-day North and South Carolina in the United States.
3. Chinese are a minute portion of Barbados' Asian demographics, far smaller than the equivalent communities of Jamaica and Trinidad. Most if not all first arrived in the 1940s during the Second World War, originating mainly from the then British territory of Hong Kong. Many Chinese-Bajans have the surnames Chin, Chynn or Lee, although other surnames prevail in certain areas of the island. [*citation needed*]
4. Lebanese and Syrians form the Arab community on the island and the Muslim minority among them make up a small percentage of the Muslim population. The majority of the Lebanese and Syrians arrived in Barbados due to trade opportunities. Although in the numbers are dwindling due to emigration and immigration to other countries.

5. Jewish people arrived in Barbados just after the first settlers in 1627. Bridgetown is the home of the oldest Jewish Synagogue in the Americas, dating from 1654, though the current structure was erected in 1833 replacing one ruined by the hurricane of 1831. Tombstones in the neighbouring cemetery date from the 1630s. Now under the care of the Barbados National Trust the site was deserted in 1929, but was subsequently saved and restored by the Jewish community in 1983.
6. Indians from Gujarat in India make up majority of the Muslim population. Muslim-Indian Barbadians are often perceived to be the most successful group in business, along with the Chinese Bajans.[*citation needed*]

The average life expectancy is 72 years for males and 77 years for females.[2] Barbados and Japan have the highest per capita occurrences of centenarians in the world.[58]

Languages

English is the root official language of Barbados, and is used for communications, administration, and public services all over the island. In its capacity as the official language of the country, the standard of English tends to conform to the vocabulary, pronunciations, spellings, and conventions akin to, but not exactly the same as, those of British English. A regional variant of English, referred to locally as Bajan, is spoken by most Barbadians in everyday life, especially in informal settings. In its full-fledged form, Bajan sounds markedly different from the Standard English heard on the island.

The degree of intelligibility between Bajan and general English changes depending on the speakers' origins and the "rawness" of one's accent. In rare instances, a Bajan speaker may be completely unintelligible to an outside English speaker if sufficient slang terminology is present in a sentence. Bajan is somewhat differentiated from, but highly influenced by other Caribbean English dialects; it is a fusion of British English and elements borrowed from the languages of West Africa. Hindi and Bhojpuri are also spoken on the island by a small Indo-Bajan minority. Spanish is considered the most popular second language on the island, followed by French.
[*citation needed*]

Religion

Main article: Religion in Barbados

Most Barbadians of African and European descent are Christians (95%), chiefly Anglicans (40%). Other Christian denominations with significant followings in Barbados are the Roman Catholic Church,Pentecostals (Evangelicals) Jehovah's Witnesses, Seventh-Day Adventist and Spiritual Baptists. The Church of England was the official state religion until its legal disenfranchisement by the Parliament of Barbados following independence.[59] Religious minorities include Hindus, Muslims, the Baha'i Faith,[60] Jews and Wiccans.

Culture

Main article: Culture of Barbados

See also: Music of Barbados and Rihanna

The influence of the English on Barbados is more noticeable than on other islands in the West Indies. A good example of this is the island's national sport: cricket. Barbados has brought forth several great cricketers, including Sir Garfield Sobers and Frank Worrell.

Citizens are officially called Barbadians. The term "Bajan" (pronounced "beijan) may have come from a localised pronunciation of the word Barbadian which at times can sound more like "Bar-bajan".

The largest carnival-like cultural event which takes place on the island is the *Crop Over* festival. As in many other Caribbean and Latin American countries, *Crop Over* is an important event for many people on the island, as well as the thousands of tourists that flock to the island to participate in the annual events. The festival includes musical competitions and other traditional activities. The male and female Barbadian that harvested the most sugarcane are also crowned as the King and Queen of the crop.[61] It gets under way from the beginning of July, and ends with the costumed parade on Kadooment Day, held on the first Monday of August.

In the music business, Rihanna is currently one of Barbados' most well known Grammy winning artists. As of 2009 she was appointed as an official Honorary Ambassador of youth and culture for Barbados by the late Prime Minister, David Thompson.

Growing up in Barbados, Rihanna became one of the biggest international pop icons.

Health

Similar to other nations within the Commonwealth of Nations all Barbadian citizens are covered by national healthcare. Barbados has over twenty policlinics throughout the country in addition to the Queen Elizabeth Hospital (General Hospital) located in Bridgetown. In 2011 the Government of Barbados signed a Memorandum of Understanding to lease its 22-acre Saint Joseph Hospital to Denver, Colorado based America World Clinics. Under the deal the group will use Barbados as one of its main destinations for medical tourism at that facility. The government also announced it would begin constructing a new $800 million dollar state-of-the-art hospital to replace the QEH.

Education and literacy

Main article: Education in Barbados

Barbados' literacy rate is ranked close to 100%, with both UNESCO and the Minister of Education stating that Barbados was in the top 5 countries worldwide for literacy rate.[62] thus placing the country alongside many of the industrialised nations of the world. The mainstream public education system of Barbados is fashioned after the British model. The government of Barbados spends 6.7% of the GDP on education (2008).[2] All young people in the country must attend school until age 16. Barbados has over 70 primary schools, and over 20 secondary schools throughout the island. There are also a number of private schools catering to various teaching models including Montessori and International Baccalaureate. Degree level education in the country is provided by the Barbados Community College, the Samuel Jackman Prescod Polytechnic, and a local Cave Hill campus of the University of the West Indies

Sports

Main article: Sport in Barbados

As in other Caribbean countries of British colonial heritage, cricket is very popular on the island. Barbadians play on the West Indies cricket team. In addition to several warm-up matches and six "Super Eight" matches, and the country hosted the final of the 2007 Cricket World Cup. They have had many great cricketers such as Sir Garfield Sobers, Sir Frank Worrell, Sir Clyde Walcott, Sir Everton Weekes, Gordon Greenidge, Joel Garner and Malcolm Marshall.

The Kensington Oval, in Bridgetown hosted the 2007 Cricket World Cup final.Cricket is one of the most followed games in the nation and the Kensignton Oval is often referred to as the 'Mecca in Cricket' due to its significance and contributions to the sport.

Obadele Thompson is a world class sprinter from Barbados; he won a bronze medal at Olympic Games over 100m in 2000. Ryan Brathwaite, a hurdler, reached the 2008 Olympic semi-finals in Beijing. Brathwaite also earned Barbados its first ever medal at the world championships in Berlin, Germany on 20 August 2009, when he won the men's 110 meter hurdles title. The 21-year-old timed a national record of 13.14 seconds to win the Gold Medal.

Polo is very popular amongst the rich 'elite' on the island and the 'High-Goal' Apes Hill team is based in the St James's Club.[63] It is also played at the private Holders Festival ground.

In golf, the Barbados Open is an annual stop on the European Seniors Tour. In December 2006 the WGC-World Cup took place at the country's Sandy Lane resort on the Country Club course, an 18-hole course designed by Tom Fazio. The Barbados Golf Club is the other main course on the island. Sanctioned by the PGA European Tour to host a PGA Seniors Tournament in 2003 and it has also hosted the Barbados Open on several occasions.

Basketball is a popular sport played at school or college and is increasing in popularity, as is volleyball, though volleyball is mainly played indoors.

Motorsports also play a role, with Rally Barbados occurring each summer and currently being listed on the FIA NACAM calendar.

The presence of the trade winds along with favourable swells make the southern tip of the Island an ideal location for wave sailing (an extreme form of the sport of windsurfing).

Netball is also popular with women in Barbados.

Barbadian team The Flyin' Fish, are the 2009 Segway Polo World Champions.[64]

Transport

Main article: Transport in Barbados

In addition to being one of the world's most densely populated countries, Barbados also has one of the most dense road networks in the world. Although Barbados is only about 34 kilometres (21 mi) at its widest point, a car journey from Six Cross Roads in St. Philip (south-east) to North Point in St. Lucy (north-central) can take one and a half hours or longer, thanks to the country's narrow, winding and rough roads.

Barbados has half as many registered cars as citizens in the country. The first letter of a vehicle's licence plate designates its usage or owner's registered parish of residence. "Z" and "ZR" are for taxis; "H" for rental cars; "B"

for buses and minibuses; "CD" for diplomatic cars; and "3D" or "7D" for defence force vehicles, while "ML" or "MP" with green plates usually designate military, police or government vehicles. As regards residence, "X" is for Christ Church; "A" for St. Andrew; "G" for St. George; "S" for St. James; "J" for St. John; "O" for St. Joseph; "L" for St. Lucy; "M" for St. Michael; "E" for St. Peter; "P" for St. Philip; and "T" for St. Thomas.

Typical ZR-van with markings indicating that it serves the number 11 route.

Public transport on the island is relatively convenient, with 'route taxis', called "ZRs" (pronounced "Zed-Rs"), travelling to most points on the island. These small buses can at times be crowded, as passengers are generally never turned down, regardless of the number. However, they will usually take the more scenic routes to destinations. They generally depart from the capital Bridgetown or from Speightstown in the northern part of the island.

Old Barbados Transport Board bus in Bridgetown.

Including the ZRs there are three bus systems running seven days a week (though less frequently on Sundays). There's ZRs, the yellow minibuses and the blue Transport Board buses. A ride on any of them costs BBD$2.00. The smaller buses from the two privately owned systems ("ZRs" and "minibuses") can give change; the larger blue buses from the government-operated Barbados Transport Board system cannot, but do give receipts. Children in school uniform ride for free on the government buses and for $1.50 on the minibuses and ZRs. Most routes require a connection in Bridgetown. Some drivers within the competitive privately owned systems are reluctant to advise persons to use competing services, even if those would be more suitable.

Some hotels also provide visitors with shuttles to points of interest on the island from outside the hotel lobby. There are several locally owned and operated vehicle rental agencies in Barbados but there are no multi-national companies.

A Mini Moke at Speightstown beach

The island's lone airport is the Grantley Adams International Airport. It receives daily flights by several major airlines from points around the globe, as well as several smaller regional commercial airlines and charters. The airport serves as the main air-transportation hub for the eastern Caribbean. In the first decade of 21st century it underwent a US$100 million upgrade and expansion.

There is also a helicopter shuttle service, which offers air taxi services to a number of sites around the island, mainly on the West Coast tourist belt. Air and maritime traffic is regulated by the Barbados Port Authority.

History of Barbados

From Wikipedia, the free encyclopedia

Barbados was inhabited by Arawaks and Caribs at the time of European colonization in the 16th century. The island was a British colony from 1625 until 1966. Since 1966, it has been a constitutional monarchy and parliamentary democracy, modelled on the British Westminster system, with Elizabeth II, Queen of Barbados, as head of state.

Early history

Some evidence exists that Barbados may not have been settled in the second millennium BC, but this is limited to fragments of conch lip adzes found in association with shells radiocarbon dated to c.1630 BC.[1] Fully documented Amerindian settlement dates to between about 350 to 650 AD, by a group known as the Saladoid-Barrancoid, who arrived from mainland South America. A second wave of migrants appeared around the year 800 (the Spanish referred to these people as "Arawaks") and a third in the mid-13th century (called "Caribs" by the Spanish). This last group was more politically organised and came to rule over the others. Frequent slave-raiding missions by the Spanish Empire in the early 16th century led to a massive decline in the Amerindian population of Barbados so that by 1541 a Spanish writer could claim they were uninhabited. The Amerindians were either captured for use as slaves by the Spanish or fled to other, more easily defensible mountainous islands nearby.[2]

From about 1600 the English, French and Dutch began to found colonies in the North American mainland and the smaller islands of the West Indies. Although Spanish and Portuguese sailors likely had visited Barbados, the Commonwealth of England was the first Europeans to establish a lasting settlement in Barbados from 1627. England is commonly attributed as making their initial claim of Barbados in 1625, though reportedly an earlier claim may have been made in 1620. Nonetheless, by 1625 Barbados was claimed in the name of King James I of England. Despite earlier settlements by England in The Americas, (1607:Jamestown, 1609:Bermuda, and

1620:Plymouth Colony, and closer to Barbadoes the Leeward Islands were claimed by the English at about the same time as Barbados: 1623: St Kitts, 1628: Nevis, 1632: Montserrat, 1632: Antigua.), Barbados quickly grew to became the third major English settlement in the Americas due to its prime eastern location.

James Hay (Lord Carlisle), made Lord Proprietor of Barbadoes by King Charles I on 2 July 1627.

1627–1639

Early English settlement

The first English ship arrived on 14 May 1625 and was captained by John Powell. The first settlement began some time later on 17 February 1627, near what is now Holetown (formerly Jamestown).[3] The group was led by John Powell's younger brother, Henry, who arrived with 80 settlers and 10 slaves—these first ten slaves were among the sometimes kidnapped and other times runaway English or Irish youth. This settlement established as a proprietary colony and was funded by Sir William Courten, a London merchant who owned the title to Barbados and several other islands. Thus, the first colonists were actually tenants and the profits of their labour returned to Courten and his company.

Courten would later lose this title to James Hay, 1st Earl of Carlisle in what was called the "Great Barbados Robbery." Carlisle then chose as governor Henry Hawley. It was he who established the House of Assembly in 1639, in an effort to appease the planters who might otherwise oppose his controversial appointment.

In the period 1640–60 the West Indies attracted over two thirds of English emigrants to the New World. By 1650 there were 44,000 Anglo settlers in the West Indies, as compared to 12,000 on the Chesapeake and 23,000 in New England. Most Anglo emigrants arrived as indentured servants. After five years of labour, they were given 'freedom dues' of about £10, usually in goods. (Before the mid-1630s, they also received 5 to 10 acres of land but after that time the island filled up and there was no free land.) Around the time of Cromwell a number of rebels and criminals were also transported. The death rate was very high (Parish registers from the 1650s show, for the white population, four times as many deaths as marriages.)

Before this the main stay of the infant colony's economy was the growth export of tobacco, but tobacco prices eventually fell in the 1630s as Chesapeake production expanded.

1640–1680's, 18th century

England's civil war

Around the same time fighting during the War of the Three Kingdoms and the Interregnum spilled over into Barbados and Barbadian territorial waters. The island was not involved in the war until after the execution of Charles I, when the island's government fell under the control of Royalists (ironically the Governor, Philip Bell, remained loyal to Parliament while the Barbadian House of Assembly, under the influence of Humphrey Walrond, supported Charles II). To try to bring the recalcitrant colony to heel, the Commonwealth Parliament passed an act on 3 October 1650 which prohibited trade between England and the island, and because the island also traded with the Netherlands, further navigation acts were passed prohibiting any but English vessels trading with Dutch colonies. These acts were a precursor to the First Anglo-Dutch War. The Commonwealth of England sent an invasion force under the command of Sir George Ayscue which arrived in October 1651. After some skirmishing, the Royalists supporters in the Barbados House of Assembly led by Lord Willoughby surrendered. The conditions of surrender were incorporated into the Charter of Barbados (Treaty of Oistins), which was signed in the Mermaid's Inn, Oistins, on 17 January 1652.[4]

Sugar cultivation

The introduction of sugarcane from Dutch Brazil completely transformed society and the economy. Barbados eventually had one of the world's biggest sugar industries after starting sugar cane cultivation in 1640.[5] One group which was instrumental for ensuring the early success of the sugar cane industry were the Sephardic Jews, who originally been expelled from the Iberian peninsula to end up in Dutch Brazil.[5] As the effects of the new crop increased, so did the shift in the ethnic composition of Barbados and surrounding islands. The workable sugar plantation required a large investment and a great deal of heavy labour. At first, Dutch traders supplied the equipment, financing, and African slaves, in addition to transporting most of the sugar to Europe. In 1644 the population of Barbados was estimated at 30,000, of this amount about 800 were of African decent, with the remainder mainly of white Anglo descent. These white Anglo smallholders were eventually bought out and the island was filled up with large African slave-worked sugar plantations. By 1660 there was near parity with 27,000 blacks and 26,000 whites. By 1666 at least 12,000 white smallholders had been bought out, died, left or the island. Many of the remaining whites were increasingly poor. By 1680 there were seventeen slaves for every indentured servant. By 1700, there were 15,000 free whites and 50,000 enslaved blacks.

Due to the increased implementation of slave codes, which created differential treatment between Africans and the white workers and ruling planter class, the island became increasingly unattractive to poor whites. Black or slave codes were implemented in 1661, 1676, 1682, and 1688. In response to these codes, several slave rebellions were attempted or planned during this time, but none succeeded. Nevertheless, poor whites who had or acquired the means to emigrate often did so. Planters expanded their importation of African slaves to cultivate sugar cane.

By 1660, Barbados generated more trade than all the other English colonies combined. This remained until it was eventually surpassed by geographically larger islands like Jamaica in 1713. Even though, in 1730–31 the estimated value of the colony of Barbados was as much as £5,500,000.[6] Bridgetown, the capital, was one of the three largest cities in British America (the other two were Boston, Massachusetts and Port Royal, Jamaica.) By 1700 the English West Indies produced 25,000 tons of sugar, compared to 20,000 for Brazil, 10,000 for the French islands and 4,000 for the Dutch islands.[7] This quickly replaced tobacco plantations on the islands which were previously the main export.

As the sugar industry developed into its main commercial enterprise, Barbados was divided into large plantation estates that replaced the smallholdings of the early English settlers. In 1680 over half the arable land was held by 175 large planters who held at least 60 slaves. The great planters had connections with the English aristocracy and great influence on Parliament. (In 1668 the West Indian sugar crop sold for £180,000 after customs of £18,000. Chesapeake tobacco earned £50,000 after customs of £75,000). So much land was devoted to sugar that most food had to be imported from New England. The poorer whites that were squeezed off the island went to the British Leeward Islands or, especially, Jamaica. In 1670 the Province of South Carolina was founded with surplus persons leaving Barbados. Other nations benefiting from large numbers of Barbadians include: British Guiana, as well as Panama.

1800s (decade)–1920s

The British abolished the slave trade in 1807 but not the institution itself. In 1816, slaves rose up in the largest major slave rebellion in the island's history. Twenty thousand slaves from over 70 plantations rebelled. They drove whites off the plantations, but widespread killings did not take place. This was later termed "Bussa's Rebellion" after the slave ranger, Bussa, who with his assistants hated slavery, found the treatment of slaves on Barbados to be "intolerable", and believed the political climate in the UK made the time ripe to peacefully negotiate with planters for freedom (Davis, p. 211; Northrup, p. 191). Bussa's Rebellion failed. One hundred and

twenty slaves died in combat or were immediately executed; another 144 were brought to trial and executed; remaining rebels were shipped off the island (Davis, pp. 212–213).

Slavery was finally abolished in the British Empire 18 years later in 1834. In Barbados and the rest of the British West Indian colonies, full emancipation from slavery was preceded by an apprenticeship period that lasted four years.

Statue of Lord Nelson in National Heroes Square which predates the more famous Nelson's Column by some 27 years.

In 1884, the Barbados Agricultural Society sent a letter to Sir Francis Hincks requesting his private and public views on whether the Dominion of Canada would favourably entertain having the then colony of Barbados admitted as a member of the Canadian Confederation. Asked of Canada were the terms of the Canadian side to initiate discussions, and whether or not the island of Barbados could depend on the full influence of Canada in getting the change agreed to by the United Kingdom. Then in 1952 the *Barbados Advocate* newspaper polled several prominent Barbadian politicians, lawyers, businessmen, the Speaker of the Barbados House of Assembly and later as first President of the Senate, Sir Theodore Branker, Q.C. and found them to be in favour of immediate federation of Barbados along with the rest of the British Caribbean with complete Dominion Status within five years from the date of inauguration of the West Indies Federation with Canada.

1930s–present

However, plantation owners and merchants of British descent still dominated local politics, owing to the high-income qualification required for voting. More than 70% of the population, many of them disenfranchised women, were excluded from the democratic process. It was not until the 1930s that the descendants of emancipated slaves began a movement for political rights. One of the leaders of this movement, Sir Grantley Adams, founded the Barbados Labour Party in 1938, then known as the Barbados Progressive League.

Adams and his party demanded more rights for the poor and for the people, and staunchly supported the monarchy. Progress toward a more democratic government in Barbados was made in 1942, when the exclusive income qualification was lowered and women were given the right to vote. By 1949 governmental control was wrested from the planters and, in 1958, Adams became Premier of Barbados.

Modern State

From 1958 to 1962, Barbados was one of the ten members of the West Indies Federation, an organisation doomed by nationalistic attitudes and by the fact that its members, as British colonies, held limited legislative power. Adams served as its first and only "Premier", but his leadership failed in attempts to form similar unions, and his continued defence of the monarchy was used by his opponents as evidence that he was no longer in touch with the needs of his country. Errol Walton Barrow, a fervent reformer, became the new people's advocate. Barrow had left the BLP and formed the Democratic Labour Party as a liberal alternative to Adams' conservative government. Barrow instituted many progressive social programmes, such as free education for all Barbadians and the school meals system. By 1961, Barrow had replaced Adams as Premier and the DLP controlled the government.

With the Federation dissolved, Barbados reverted to its former status, that of a self-governing colony. The island negotiated its own independence at a constitutional conference with Britain in June 1966. After years of peaceful and democratic progress, Barbados finally became an independent state on 30 November 1966, with Errol Barrow its first Prime Minister, although Queen Elizabeth II remained the monarch. Upon independence Barbados maintained historical linkages with Britain by establishing membership to the Commonwealth of Nations grouping. A year later Barbados' international linkages were expanded by obtaining membership to the United Nations and the Organization of American States.

Sugar cane and slavery

Main article: Slavery in the British and French Caribbean

Sugar cane cultivation began in the 1640s, after its introduction in 1637 by Pieter Blower. Initially, rum was produced but by 1642, sugar was the focus of the industry. As it developed into the main commercial enterprise, Barbados was divided into large plantation estates which replaced the small holdings of the early British settlers as the wealthy planters pushed out the poorer. Some of the displaced farmers relocated to British colonies in North America, most notably South Carolina.[8] To work the plantations, black Africans - primarily from West Africa - were imported as slaves in such numbers that there were three for every one planter. The slave trade ceased in 1807 and slaves were emancipated in 1834. Persecuted Catholics from Ireland also worked the plantations. Life expectancy of slaves was short, and replacements were purchased annually.

Sugar cane dominated Barbados' economic growth, and the island's cash crop was at the top of the sugar industry until 1720.

Increasingly after 1750 the plantations were owned by absentee landlords living in Britain and operated by hired managers.[9]

Roberts (2006) shows that slaves did not spend the majority of time in restricted roles cultivating, harvesting, and processing sugarcane, the island's most important cash crop. Rather, slaves involved in various activities and in multiple roles: raising livestock, fertilizing soil, growing provisional crops, maintaining plantation infrastructure, caregiving, and other tasks. One notable soil management technique was intercropping, planting subsistence crops between the rows of cash crops - which demanded of the slaves skilled and experienced observations of growing conditions for efficient land use.[10]

Political history

Carrington (1982) examines politics during the American Revolution, revealing that Barbadian political leaders shared many of the grievances and goals of the American revolutionaries, but that they were unwilling to go to war over them. Nevertheless, the repeated conflicts between the island assembly and the royal governors brought important constitutional reforms which confirmed the legislature's control over most local matters and its power over the executive.[11]

From 1800 until 1885, Barbados then served as the main seat of Government for the former British colonies of the Windward Islands. During the period of around 85 years the resident Governor of Barbados also served as the Colonial head of the Windward Islands. After the Government of Barbados officially exited from the Windward Island union in 1885, the seat was moved from Bridgetown to St. George's on the neighbouring island of Grenada, where it remained until the territory of the Windward Islands was dissolved.

Soon after Barbados' withdrawal from the Windward Islands, Barbados became aware that Tobago was going to

be amalgamated with another territory as part of a single state.[12] In response, Barbados made an official bid to the British Government to have neighbouring Island Tobago joined with Barbados as a political union.[13] The British government however decided that Trinidad would be a better fit and Tobago instead was made a Ward of Trinidad.[14][15]

African slaves worked on plantations owned by merchants of British descent. It was these merchants who continued to dominate politically even after emancipation, due to a high income restriction on voting. Only an exclusive 30%, therefore, had any voice in the democratic process. It was not until the 1930s that a movement for political rights was begun by the descendants of emancipated slaves, who started trade unions. One of the leaders of this movement, Sir Grantley Adams, founded the Barbados Progressive League (now the Barbados Labour Party) in 1938. The Great Depression caused mass unemployment and strikes, and the quality of life on the island lowered drastically. Adams continued to advocate more for the people, especially the poor.

Finally, in 1942, the income qualification was lowered. This was followed by the introduction of universal adult suffrage in 1951, with Adams elected the Premier of Barbados in 1958. For his actions, Adams would later become a National Hero.

From 1958 to 1962, Barbados was one of the ten members of the West Indies Federation, an organisation doomed to failure by a number of factors, including what were often petty nationalistic prejudices and limited legislative power. Indeed, Adams' position as "Prime Minister" is a gross misnomer, as all of the Federation members were still colonies of Britain. Adams, once a political visionary and now a man blind to the needs of his country, not only held fast to his notion of defending the monarchy but also made additional attempts to form similarly flawed Federation-like entities after that union's demise. When the Federation was terminated, Barbados had reverted to its former status as a self-governing colony, but efforts were made by Adams to form another federation composed of Barbados and the Leeward and Windward Islands.

Errol Walton Barrow was to replace Grantley Adams as the people's advocate and it was he who would eventually lead the island into Independence. Barrow, a fervent reformer and once a member of the Barbados Labour Party, had left the party to form his own Democratic Labour Party, as the liberal alternative to the conservative BLP government under Adams. He remains a National Hero for his work in social reformation, including the institution of free education for all Barbadians. In 1961, Barrow supplanted Adams as Premier as the DLP took control of the government.

Due to several years of growing autonomy, Barbados, with Barrow at the helm, was able to successfully negotiate its independence at a constitutional conference with the United Kingdom in June 1966. After years of peaceful and democratic progress, Barbados finally became an independent state and formally joined the Commonwealth of Nations on 30 November 1966, Errol Barrow serving as its first Prime Minister.

Confederations, and political union proposals

A number of proposals have been mooted in the past to have Barbados integrated with either neighboring countries or once even the Canadian Confederation. To date all have failed, and one proposal even led to deadly riots in 1876 when Governor John Pope Hennessy tried to pressure Barbados' politicians to integrate more firmly into the Windward Islands. Governor Hennessy was quickly transferred from Barbados by the British Crown following the situation. In 1884 attempts were then made by the influential Barbados Agricultural Society to have Barbados form a political association with the Canadian Confederation. From 1958-1962 Barbados became one of the 10 states of the West Indies Federation. Lastly in the 1990s, a plan was devised by the leaders of Guyana, Barbados, and Trinidad and Tobago to form a political association between those three governments. Again this deal was never completed, following the loss of Sir Lloyd Erskine Sandiford in the Barbadian general elections.

Monarchy of Barbados

From Wikipedia, the free encyclopedia

The **monarchy of Barbados** is a constitutional system of government in which a hereditary monarch is the sovereign and head of state of Barbados, forming the core of the country's Westminster style parliamentary democracy.[1][2] The terms *Crown in Right of Barbados*, *Her Majesty in Right of Barbados*, or *The Queen in Right of Barbados* may also be used to refer to the entire executive of the government of Barbados. Though the Barbadian Crown has its roots in the British Crown, it has evolved over the centuries to become a distinctly Barbadian institution, represented by unique symbols.

The present monarch is Elizabeth II – officially titled Queen of Barbados – who has reigned since 6 February 1952. She, her consort, and other members of the Royal Family undertake various public and private functions across Barbados and on behalf of the country abroad. However, the Queen is the only member of the Royal Family with any constitutional role, holding ultimate executive authority, though her Royal Prerogative remains bound by laws enacted by her in parliament and by conventions and precedents, leaving the day-to-day exercise of executive power to her Cabinet. While several powers are the sovereign's alone,[3] most of the royal constitutional and ceremonial duties in Barbados are carried out by the Queen's representative, the Governor-General; as such, the Governor-General can sometimes be referred to as the head of state.[4]

Queen of Barbados

MONARCHY

Coat of arms of Barbados

Incumbent:
Elizabeth II

Style:	Her Majesty
Heir apparent:	Charles, Prince of Wales
First monarch:	Elizabeth II
Formation:	30 November 1966

The Barbadian government had planned a referendum on the future of the monarchy in August 2008, however these plans were delayed indefinitely due to electoral concerns and change of government following the 2008 general election.

International and domestic aspects

Further information: Commonwealth realm: The Crown in the Commonwealth realms

Barbados, is one the Commonwealth realms, sharing the same person as their respective monarch. Each realm is sovereign and independent of the others,[5] meaning the Barbadian monarchy acts as a separate Kingdom with both a separate and yet shared character, and the monarchy has also thus ceased to be an exclusively British institution, although it has often been called *British* since this time (in both legal and common language) for reasons historical, political, and of convenience. On all matters of the Barbadian state, the monarch is advised solely by Barbadian Ministers of the Crown,[6] and, effective with the Barbados Independence Order of 1966 and Statute of Westminster (1931),[7] no British or other realm government can advise the monarch on any matters pertinent to Barbados.

Title and style

Further information: List of titles and honours of Queen Elizabeth II

The shared and domestic aspects of the Crown are also highlighted in the sovereign's Barbadian title, currently *Elizabeth the Second, by the Grace of God, Queen of Barbados and of Her other Realms and Territories, Head of the Commonwealth*. The sovereign's role specifically as Queen of Barbados, as well as her status as monarch of other nations, is communicated by mentioning Barbados separately from, but along with, the Queen's other lands. Typically, the sovereign is styled *Queen of Barbados*, and is addressed as such when in Barbados or performing duties on behalf of Barbados abroad.

Finance

The sovereign only draws from Barbadian coffers for support in the performance of her duties when in Barbados or acting as Queen of Barbados abroad; Barbadians do not pay any money to the Queen, either towards personal income or to support royal residences outside of Barbados. This applies equally to other members of the Royal Family. Normally, tax dollars pay only for the costs associated with the Governor-General in the exercise of the powers of the Crown, including travel, security, residences, offices, ceremonies, and the like.

Succession

Succession is by male-preference primogeniture governed by the provisions of the Act of Settlement, 1701, and the Bill of Rights, 1689. This legislation limits the succession to the natural (i.e. non-adopted), legitimate descendants of Sophia, Electress of Hanover, and stipulates that the monarch cannot be a Roman Catholic, nor

have married one, and must be in communion with the Church of England upon ascending the throne. Though these constitutional laws, as they apply to Barbados, still lie within the control of the British parliament, via adopting the Statute of Westminster both the United Kingdom and Barbados agreed not to change the rules of succession without the unanimous consent of the other realms, unless explicitly leaving the shared monarchy relationship;[8] a situation that applies symmetrically in all the other realms, and which has been likened to a treaty amongst these countries.[9] Thus, Barbados' line of succession remains identical to that of the United Kingdom.

Charles, Prince of Wales, is the heir apparent to the Barbadian throne.

Upon a *demise of the Crown* (the death or abdication of a sovereign) it is customary for the accession of the new monarch to be publicly proclaimed by the Governor-General. Regardless of any proclamations, the late sovereign's heir immediately and automatically succeeds, without any need for confirmation or further ceremony; hence arises the phrase "The King is dead. Long live the King!" Following an appropriate period of mourning, the monarch is also crowned in the United Kingdom, though this ritual is not necessary for a sovereign to reign; for example, Edward VIII was never crowned, yet was undoubtedly king during his short time on the throne. All incumbent viceroys, judges, civil servants, legislators, military officers, etc., are not affected by the death of the monarch. After an individual ascends the throne, he or she typically continues to reign until death. Monarchs are not allowed to unilaterally abdicate; the only monarch to abdicate, Edward VIII, did so before Barbados was independent, and, even then, only with the authorization of special Acts of Parliament in the Dominions.

Personification of the state

Further information: The Crown

Since the independence of Barbados, the sovereign's role as monarch of Barbados has been recognised and promoted as separate to his or her position as monarch of the United Kingdom.[6] From the beginning of Queen Elizabeth II's reign onwards, royal symbols in Barbados were altered or new ones created to make them distinctly Barbadian, such as the creation of the Royal Arms of Barbados in 1966 (presented on 14 February that year by the Queen to then President of the Senate Sir Grey Massiah),[10][11] and Queen's Royal Standard for Barbados, created in 1975.[12] Today the sovereign is regarded as the personification, or legal personality, of the Barbadian state. Therefore, the state is referred to as *Her Majesty the Queen in Right of Barbados*; for example, if a lawsuit is filed against the government, the respondent is formally described as *Her Majesty the Queen in Right of Barbados*, or simply *Regina*. As such, the monarch is the owner of all state lands (called *Crown land*), buildings and equipment (called *Crown held property*), state owned companies (called *Crown Corporations*), and the copyright for all government publications (called *Crown copyright*), as well as guardianship of foster children (called *Crown wards*), in his or her position as sovereign, and not as an individual. Government staff are also employed by the monarch, as are the Governor-General, judges, members of the Barbados Defence Force, police officers, and parliamentarians, who all technically work for the monarch. Hence, many employees of the Crown are required by law to recite an oath of allegiance to the monarch before taking their posts, in reciprocation to the sovereign's Coronation Oath, wherein he or she promises "to govern the Peoples of ... [Barbados] ... according to their respective laws and customs".[13] The oath required by the Director of Public Prosecutions, for example, is: *I, [name], do swear that I will well and truly serve Her Majesty Queen Elizabeth II, Her Heirs and Successors, in the office of Director of Public Prosecutions. So help me God*, while that for judges is: *I, [name], do swear that I will well and truly serve Our Sovereign Lady Queen Elizabeth II, Her Heirs and Successors, in the office of Chief Justice/Judge of the Supreme Court and I will do right to all manner of*

people after the laws and usages of Barbados without fear or favour, affection or ill will. so help me God.[14]

Constitutional role

A simplified diagram of the Barbados government

Barbados' constitution is made up of a variety of statutes and conventions that are either British or Barbadian in origin, which gives Barbados a similar parliamentary system of government to the other Commonwealth realms, wherein the role of the Queen and the Governor-General is both legal and practical. The Crown is regarded as a corporation, in which several parts share the authority of the whole, with the Queen as the person at the centre of the constitutional construct,[15] meaning all powers of state are constitutionally reposed in the monarch (Section 63 of the Constitution), who is represented by the Governor-General – appointed by the monarch on the advice of the Prime Minister of Barbados.[16] Most of the Queen's domestic duties are performed by this vice-regal representative.

All institutions of government are said to act under the sovereign's authority; the vast powers that belong to the Crown are collectively known as the Royal Prerogative. Parliamentary approval is not required for the exercise of the Royal Prerogative; moreover, the consent of the Crown must be obtained before either of the houses of parliament may even debate a bill affecting the sovereign's prerogatives or interests. While the Royal Prerogative is extensive, it is not unlimited; for example, the monarch does not have the prerogative to impose and collect new taxes – such an action requires the authorization of an Act of Parliament. The government of Barbados is also thus formally referred to as *Her Majesty's Government*. Further, the constitution instructs that any change to the position of the monarch, or the monarch's representative in Barbados, requires the consent of two-thirds of the all the members of each house of parliament.[2][17]

Executive (Queen-in-Council)

In Barbados' constitutional system, one of the main duties of the Crown is to appoint a prime minister,[2] who thereafter heads the Cabinet and advises the monarch and Governor-General on how to execute their executive powers over all aspects of government operations and foreign affairs;[2] this requirement is, unlike in other Commonwealth realms where it is a matter of convention, constitutionally enshrined in Barbados.[18] Though the monarch's power is still a part of the executive process – the operation of the Cabinet is technically known as the *Queen-in-Council* (or *Governor-in-Council*) – the advice tendered is typically binding. Since the death of Queen Anne in 1714, the last monarch to head the British Cabinet, the monarch *reigns* but does not *rule*. This means that the monarch's role, and thereby the viceroys' role, is almost entirely symbolic and cultural, acting as a symbol of the legal authority under which all governments and agencies operate, while the Cabinet directs the use of the Royal Prerogative, which includes the privilege to declare war, maintain the Queen's peace, and direct the actions of the Barbados Defence Force, as well as to summon and prorogue parliament, and call elections. However, it is important to note that the Royal Prerogative belongs to the Crown, and not to any of the ministers, though it may sometimes appear that way,[15] and the royal figures may unilaterally use these powers in exceptional constitutional crisis situations. There are also a few duties which must be specifically performed by, or bills that require assent by, the Queen. These include signing the appointment papers of Governors-General, the confirmation of awards of Barbadian honours, and the approval of any change in her Barbadian title.

In accordance with convention, the monarch or Governor-General, to maintain the stability of government, must

appoint as prime minister the individual most likely to maintain the support of the House of Assembly: usually the leader of the political party with a majority in that house, but also when no party or coalition holds a majority (referred to as a minority government situation), or other scenarios in which the Governor-General's judgement about the most suitable candidate for prime minister has to be brought into play. The Governor-General also appointes to Cabinet the other ministers of the Crown, who are, in turn, accountable to the democratically elected House of Assembly, and through it, to the people. The Queen is informed by her viceroy of the acceptance of the resignation of a prime minister and the swearing-in of a new prime minister and other members of the ministry, and she remains fully briefed through regular communications from her Barbadian ministers, and holds audience with them where possible.[6]

Members of various executive agencies, and other officials are appointed by the Crown. The commissioning of privy councillors, senators, the Speaker of the Senate, Supreme Court justices also falls under the Royal Prerogative, though these duties are specifically assigned to the Governor-General by the constitution.[19] Public inquiries are also commissioned by the Crown through a Royal Warrant, and are called Royal Commissions.

Foreign affairs

The Royal Prerogative also extends to foreign affairs: the sovereign or Governor-General negotiates and ratifies treaties, alliances, and international agreements. As with other uses of the Royal Prerogative, no parliamentary approval is required; however, a treaty cannot alter the domestic laws of Barbados; an Act of Parliament is necessary in such cases. The Governor-General, on behalf of the Queen, also accredits Barbadian High Commissioners and ambassadors, and receives diplomats from foreign states. In addition, the issuance of passports falls under the Royal Prerogative, and, as such, all Barbadian passports are issued in the monarch's name.

Parliament (Queen-in-Parliament)

The Parliament of Barbados, in Bridgetown.

The sovereign, along with the Senate and the House of Assembly, is one of the three components of parliament,[20] called the *Queen-in-Parliament*. The authority of the Crown therein is embodied in the mace, which bears a crown at its apex; unlike other realms, however, the Barbados parliament only has a mace for the lower house.[21] Per the constitution, the monarch does not, however, participate in the legislative process; the viceroy does, though only in the granting of Royal Assent.[22] Further, the constitution outlines that the Governor-General alone is responsible for summoning, proroguing, and dissolving parliament,[23] after which the writs for a general election are usually dropped by the Governor-General at Government House. The new parliamentary session is marked by the State Opening of Parliament, during which either the monarch or the Governor-General reads the Speech from the Throne. As the monarch and viceroy cannot enter the House of Assembly, this, as well as the bestowing of Royal Assent, takes place in the Senate chamber; Members of Parliament are summoned to these ceremonies from the Commons by the Crown's messenger, the Usher of the Black Rod, after he knocks on the doors of the lower house that have been slammed closed on him, to symbolise the barring of the monarch from the assembly.

All laws in Barbados are enacted only with the viceroy's, or sovereign's, granting of Royal Assent; usually done by the Governor-General, with the Public Seal. Thus, all bills begin with the phrase "Her Majesty, by virtue and in exercise of the powers vested in Her by section 5 of the Barbados Independence Act 1966 and of all other powers enabling Her in that behalf, is pleased, by and with the advice of Her Privy Council, to order, and it is

hereby ordered, as follows..."[24]

Courts (Queen-on-the-Bench)

The sovereign is deemed the *fount of justice*, and is responsible for rendering justice for all subjects, known in this role as the *Queen on the Bench*. However, he or she does not personally rule in judicial cases; instead, judicial functions are performed in his or her name. Hence, the common law holds that the sovereign "can do no wrong"; the monarch cannot be prosecuted in his or her own courts for criminal offences. Civil lawsuits against the Crown in its public capacity (that is, lawsuits against the government) are permitted; however, lawsuits against the monarch personally are not cognizable. In international cases, as a sovereign and under established principles of international law, the Queen of Barbados is not subject to suit in foreign courts without her express consent. The sovereign, and by extension the Governor-General, also exercises the *prerogative of mercy*,[25] and may pardon offences against the Crown, either before, during, or after a trial. In addition, the monarch also serves as a symbol of the legitimacy of courts of justice, and of their judicial authority. An image of the Queen or the Arms of Her Majesty in Right of Barbados is always displayed in Barbadian courtrooms.

Cultural role

Symbols

The main symbol of the monarchy is the sovereign herself. Thus, her image appears in portraits in public buildings, and on stamps.[26][27] A crown is also used to illustrate the monarchy as the locus of authority, appearing on police force and Barbados Defence Force regimental and maritime badges and rank insignia, as well as Barbadian honours, the system of such created through Letters Patent issued by Queen Elizabeth II in July 1980.[11] The Queen's Personal Barbadian Flag is the symbol of the monarch. Second in precedence is the personal flag of the Governor-General.

The Queen's Personal Barbadian Flag.

History

The current Barbadian monarchy can trace its ancestral lineage back to the Anglo-Saxon period, and ultimately back to the kings of the Angles and the early Scottish kings. The Crown in Barbados has grown over the centuries since the Barbados was claimed under King James VI of Scotland and I of England in 1625, though not colonised until 1627, when, in the name of King Charles I, Governor Charles Wolferstone established the first settlement on the island.[28] By the 18th century, Barbados became one of the main seats of British authority in the British West Indies, and then, after attempting in 1958 a federation with other West Indian colonies, similar to that of fellow Commonwealth realms Canada and Australia, continued as a self-governing colony under the Colonial Office, until independence came with the signing of the Barbados Independence Order by Queen Elizabeth II.

In the same year, Elizabeth's cousin, Prince Edward, Duke of Kent, opened the second session of the first parliament of the newly established country,[28] before the Queen herself, along with her husband, Prince Philip, Duke of Edinburgh, toured Barbados, opening Barclays Park,[29] in Saint Andrew, amongst other events. Elizabeth returned for her Silver Jubilee in 1977, after addressing the new session of parliament, she departed on the Concorde, which was the Queen's first supersonic flight.[28] She also was in Barbados in 1989, to mark the

350th anniversary of the establishment of the Barbados parliament, where she sat to receive addresses from both houses.[6][28]

Republicanism

Main article: Republicanism in Barbados

The former Prime Minister Owen Arthur called for a referendum on becoming a republic to be held in 2005.[30] It was subsequently pushed back to "at least 2006" in order to speed up Barbados' integration into the CARICOM Single Market and Economy; it was assumed the referendum would be held in 2007,[31] but it was announced on 26 November 2007 that the referendum would be held in 2008 together with the general election.[32] On 2 December 2007, reports emerged that this vote was put off due to concerns raised by the Electoral and Boundaries Commission.[33] Following the election, David Thompson replaced Arthur as prime minister.

Belize

Coordinates: 17°4′N 88°42′W

From Wikipedia, the free encyclopedia

Belize /bəˈliːz/ (formerly *British Honduras*) is a country located on the north eastern coast of Central America. Belize has a diverse society, comprising many cultures and languages. Belize is the only country in Central America where English is the official language. Kriol and Spanish are more commonly spoken. Belize is bordered to the north by Mexico, south and west by Guatemala, and to the east by the Caribbean Sea. Belize's mainland is about 290 kilometres (180 mi) long and 110 kilometres (68 mi) wide.

With 22,960 square kilometres (8,860 sq mi) of land and a population of only 333,200 inhabitants (2010 est.),[4] Belize possesses the lowest population density in Central America.[5] The country's population growth rate of 2.21% (2008 est.),[1] however, is the highest in the region and one of the highest in the western hemisphere. Belize's abundance of terrestrial and marine species, and its diversity of ecosystems give it a key place within the globally significant Mesoamerican Biological Corridor.[6]

Belize is culturally unique among its Central American neighbours; it is the only nation in the region with a British colonial heritage. As a part of the Western Caribbean Zone, however, it also shares a common heritage with the Caribbean portions of other Central American countries. In general, Belize is considered to be a Central American nation with strong ties to both the Caribbean and Latin America. Belize is a member of the Caribbean Community (CARICOM), the Community of Latin American and Caribbean States (CELAC), and Sistema de la Integración Centroamericana (SICA).

Etymology

The origin of the name Belize is unclear, but one idea is that the name is from the native Maya word *belix*, meaning "muddy water", applied to the Belize River. Others have suggested that it is derived from a Spanish pronunciation of the name of the Scottish buccaneer Peter Wallace, which was applied to an early settlement along the Belize River and to the river itself.[7] Belize has a sizeable proportion of Africans from the ancient Kingdom of Kongo, who could have brought the name with them, as there is a Belize in Angola as well.

History

Main article: History of Belize

Early history

Main article: Pre-Columbian Belize

"El Castillo" at Xunantunich

The Maya civilization spread itself over the area which is today Belize beginning in around 1500 BC and flourished there until about A.D. 800. The recorded history of the centre and south is dominated by Caracol, where the inscriptions on their monuments were, as elsewhere, in the Lowland Maya aristocratic tongue Classic Ch'olti'an.[8] North of the Maya Mountains, the inscriptional language at Lamanai was Yucatecan as of A.D. 625.[9]

In the late classic period of Maya civilisation (before A.D. 1000), as many as 400,000 people may have lived in the area that is now Belize. Some lowland Maya still occupied the area when Europeans arrived in the 16th century. By then the primary inhabitants were the Mopan branch of the Yucatec Maya.

Spanish colonists tried to settle the inland areas of Belize, but Maya rebellions and attacks forced them to abandon these efforts.

English and Scottish buccaneers known as the Baymen first settled on the coast of Belize in 1638, seeking a sheltered region from which they could attack Spanish ships *(see English settlement in Belize)*. The settlers turned to cutting logwood during the 18th century. The wood yielded a fixing agent for clothing dyes that was vital to the European woollen industry. The Spanish granted the British settlers the right to occupy the area and cut logwood in exchange for an end to piracy.[10]

Battle of St. George's Caye

Main article: Battle of St. George's Caye

The Battle of St. George's Caye was a short military engagement that lasted from 3–10 September 1798, undertaken off the coast of what is now Belize. The name, however, is typically reserved for the final battle that occurred on 10 September. The British first appointed a superintendent over the Belize area in 1786. Prior to that time, the British government did not initially recognize the settlement in Belize as a colony for fear of provoking a Spanish attack. The delay in government oversight allowed the settlers to establish their own laws and forms of government. During this time a few wealthy settlers gained control of the local legislature, known as the Public Meeting, as well as of most of the settlement's land and timber.

The battle took place between an invading force from what would become Mexico, attempting to wrest Belize for Spain, and a small force of resident woodcutters called Baymen, who fought for their livelihood assisted by black slaves.

The Spanish repeatedly tried to gain control over Belize by force, but were unsuccessful. Spain's last effort occurred on 10 September 1798, when the British repelled the Spanish fleet in a short engagement with no known casualties on either side known as the Battle of St. George's Caye. The anniversary of the battle is now a national holiday in Belize.

As part of the British Empire

In the early 19th century, the British sought greater control over the settlers, threatening to suspend the Public

Flag of British Honduras

Meeting unless it observed the government's instructions to eliminate slavery in whole. Slavery was abolished in the British Empire in 1838, but this did little to change working conditions for labourers in the Belize settlement. Slaves of the colony were valued for their potentially superior abilities in the work of mahogany extraction. As a result, former slave owners in British Honduras earned £53.69 on average per slave, the highest amount paid in any British territory.[11]

Soon after, a series of institutions were put in place to ensure the continued presence of a viable labour force. Some of these greatly restricted the ability of individuals to obtain land, in a debt-peonage system to organise the newly "free." The position of being "extra special" mahogany and logwood cutters undergirded the early ascriptions of the capacities (and consequently the limitations) of people of African descent in the colony. Because a small elite controlled the settlement's land and commerce, former slaves had no choice but to continue to work in timber cutting.[11]

In 1836, after the emancipation of Central America from Spanish rule, the British claimed the right to administer the region. In 1862, Great Britain formally declared it a British Crown Colony, subordinate to Jamaica, and named it British Honduras.[12] As a colony, Belize began to attract British investors. Among the British firms that dominated the colony in the late 19th century was the Belize Estate and Produce Company, which eventually acquired half of all the privately held land in the colony. Belize Estate's influence accounts in part for the colony's reliance on the mahogany trade throughout the rest of the 19th century and the first half of the 20th century.

Panoramic view of Belize City, c. 1914

The Great Depression of the 1930s caused a near-collapse of the colonial economy as British demand for timber plummeted. The effects of widespread unemployment were worsened by a devastating hurricane that struck the colony in 1931. Perceptions of the government's relief effort as inadequate were aggravated by its refusal to legalize labour unions or introduce a minimum wage. Demonstrations and riots in 1934 marked the beginning of an independence movement. In response, the government repealed criminal penalties for workers who violated the terms of their labour contracts regarding unions and granted workers the right to join unions.

Economic conditions improved during World War II (1939–1945) when many Belizean men entered the armed forces or otherwise contributed labour to the war effort. Following the war, the colony's economy again stagnated due to the pressures caused by its damaging effect. Britain's decision to devalue the British Honduras dollar in 1949 worsened economic conditions and led to the creation of the People's Committee, which demanded independence. The People's Committee's successor, the People's United Party (PUP), sought constitutional reforms that would expand voting rights to all adults.

Independence

Constitutional reforms were initiated in 1954 and resulted in a new constitution ten years later. Britain granted

British Honduras self-government in 1964, and the head of the PUP—independence leader George Price—became the colony's prime minister. British Honduras was officially renamed Belize in 1973. Progress toward independence, however, was hampered by a Guatemalan claim to sovereignty over the territory of Belize. When Belize finally attained full independence on 21 September 1981, Guatemala refused to recognise the new nation. About 1,500 British troops remained to protect Belize from the Guatemalan threat.

With Price at the helm, the PUP won all elections until 1984. In that election, the first national election after independence, the PUP was defeated by the United Democratic Party (UDP), and UDP leader Manuel Esquivel replaced Price as prime minister. Price returned to power after elections in 1989. Guatemala's president formally recognised Belize's independence in 1992. The following year the United Kingdom announced that it would end its military involvement in Belize. British soldiers were withdrawn in 1994, but the United Kingdom left behind a military training unit to assist with the newly formed Belize Defence Force.

The UDP regained power in the 1993 national election, and Esquivel became prime minister for a second time. Soon afterwards Esquivel announced the suspension of a pact reached with Guatemala during Price's tenure, claiming Price had made too many concessions in order to gain Guatemalan recognition. The pact may have curtailed the 130-year-old border dispute between the two countries. Border tensions continued into the early 2000s, although the two countries cooperated in other areas.

The PUP won a landslide victory in the 1998 national elections, and PUP leader Said Musa was sworn in as prime minister. In the 2003 elections the PUP maintained its majority, and Musa continued as prime minister. He pledged to improve conditions in the underdeveloped and largely inaccessible southern part of Belize.

In 2005, Belize was the site of unrest caused by discontent with the People's United Party government, including tax increases in the national budget. On 8 February 2008, Dean Barrow was sworn in as prime minister after his UDP won a landslide victory in general elections.

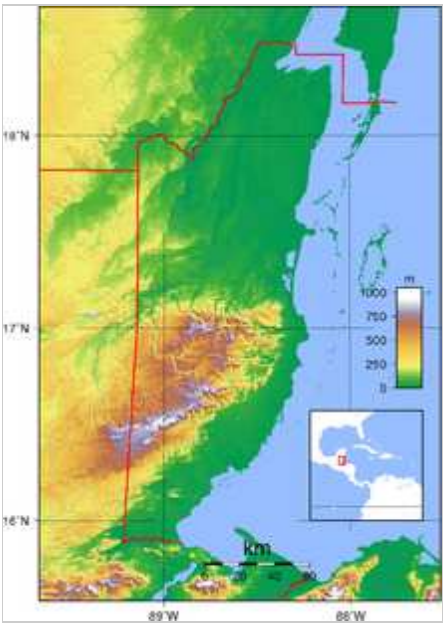
Throughout Belize's history, Guatemala has claimed ownership of all or part of the territory. This claim is occasionally reflected in maps showing Belize as Guatemala's twenty-third department. As of February 2012, the border dispute with Guatemala remains unresolved and quite contentious.[13][14][15] Guatemala's claim to Belizean territory rests, in part, on the terms Clause VII of the Anglo-Guatemalan Treaty of 1859 which (supposedly) obligated the British to build a road between Belize City and Guatemala. At various times the issue has required mediation by the United Kingdom, Caribbean Community heads of Government, the Organization of American States, Mexico, and the United States. Notably, both Guatemala and Belize are participating in confidence-building measures approved by the OAS, including the Guatemala-Belize Language Exchange Project.[16]

Since independence, a British garrison has been retained in Belize at the request of the Belizean government including, at times, Harrier jets.

Geography

Main article: Geography of Belize

Belize is located on the Caribbean coast of northern Central America. It shares a border on the north with the Mexican state of Quintana Roo, on the west with the Guatemalan department of Petén, and on the south with the Guatemalan department of Izabal. To the east in the Caribbean Sea, the second-longest barrier reef in the world flanks much of the 386 kilometres (240 mi) of predominantly marshy coastline. The area of the country totals 22,960 square kilometres (8,865 sq mi), an area slightly larger than El Salvador or Massachusetts. The abundance of lagoons along the coasts and in the northern interior reduces the actual land area to 21,400 square



kilometres (8,263 sq mi).

Map of Belize

Belize is shaped like a rectangle that extends about 280 kilometres (174 mi) north-south and about 100 kilometres (62 mi) east-west, with a total land boundary length of 516 kilometres (321 mi). The undulating courses of two rivers, the Hondo and the Sarstoon River, define much of the course of the country's northern and southern boundaries. The western border follows no natural features and runs north-south through lowland forest and highland plateau. The north of Belize consists mostly of flat, swampy coastal plains, in places heavily forested. The flora is highly diverse considering the small geographical area. The south contains the low mountain range of the Maya Mountains. The highest point in Belize is Doyle's Delight at 1,124 m (3,688 ft).[17]

The Caribbean coast is lined with a coral reef and some 450 islets and islands known locally as cayes (pronounced "keys"). They total about 690 square kilometres (266 sq mi), and form the approximately 320-kilometre (199 mi) long Belize Barrier Reef, the longest in the Western Hemisphere and the second longest in the world after the Great Barrier Reef. Three of merely four coral atolls in the Western Hemisphere are located off the coast of Belize.

Belize Topography

Belize's rugged geography has also made the country's coastline and jungle attractive to drug smugglers, who use the country as a gateway into Mexico.[18] In 2011, the United States added Belize to the list of nations considered major drug producers or transit countries for narcotics.[19]

Climate

Main article: Climate of Belize

Belize has a tropical climate with pronounced wet and dry seasons, although there are significant variations in weather patterns by region. Temperatures vary according to elevation, proximity to the coast, and the moderating effects of the northeast trade winds off the Caribbean. Average temperatures in the coastal regions range from 24 °C (75.2 °F) in January to 27 °C (80.6 °F) in July. Temperatures are slightly higher inland, except for the southern highland plateaus, such as the Mountain Pine Ridge, where it is noticeably cooler year round. Overall, the seasons are marked more by differences in humidity and rainfall than in temperature.

Average rainfall varies considerably, ranging from 1,350 mm (53.1 in) in the north and west to over 4,500 mm (177.2 in) in the extreme south. Seasonal differences in rainfall are greatest in the northern and central regions of the country where, between January and April or May, fewer than 100 mm (3.9 in) of rain fall per month. The dry season is shorter in the south, normally only lasting from February to April. A shorter, less rainy period, known locally as the "little dry," usually occurs in late July or August, after the initial onset of the rainy season.

Hurricanes have played key—and devastating—roles in Belizean history. In 1931 an unnamed hurricane destroyed over two-thirds of the buildings in Belize City and killed more than 1,000 people. In 1955 Hurricane

Janet levelled the northern town of Corozal. Only six years later, Hurricane Hattie struck the central coastal area of the country, with winds in excess of 300 km/h (186 mph) and 4 m (13.1 ft) storm tides. The devastation of Belize City for the second time in thirty years prompted the relocation of the capital some 80 kilometres (50 mi) inland to the planned city of Belmopan. Hurricane Greta caused more than US$25 million in damages along the southern coast in 1978. On 9 October 2001, Hurricane Iris made landfall at Monkey River Town as a 145 mph (233 km/h) Category Four storm. The storm demolished most of the homes in the village, and destroyed the banana crop. In 2007 Hurricane Dean made landfall as a Category 5 storm only 25 miles north of the Belize/Mexico border. Dean caused extensive damage in northern Belize.

Big Rock Falls in the Cayo District

The most recent hurricane to affect Belize directly was the Category 2 Hurricane Richard, making landfall approximately 20 miles south-southeast of Belize City at around 0045 UTC on 25 October 2010.[20] The storm moved inland towards Belmopan, causing estimated damage of BZ$33.8 million ($17.4 million 2010 USD), primarily from damage to crops and housing.[21]

Vegetation

While over 60% of Belize's land surface is covered by forest,[22] recent studies indicate that some 20% of the country's land is covered by cultivated land (agriculture) and human settlements.[23] Savannah, scrubland and wetland constitute the remainder of Belize's land cover. Important mangrove ecosystems are also represented across Belize's landscape.[24][25] As a part of the globally significant Mesoamerican Biological Corridor which stretches from southern Mexico to Panama, Belize's biodiversity – both marine and terrestrial – is rich, with abundant flora and fauna. Belize is also a leader where it comes to protecting its biodiversity and natural resources. Recent (July 2010) information[26] from the Association of Protected Areas Management Organizations of Belize (APAMO) (http://www.apamo.net) indicates that some 36% of Belize's land territory falls under some form of official protected status, giving Belize one of the most extensive systems of terrestrial protected areas in the Americas. Nearby Costa Rica, by contrast, only has 25.8% of its land territory protected.[27] Some 13% of Belize's territorial waters – home to the Belize Barrier Reef System – are also protected. The Belize Barrier Reef System both constitutes a UNESCO-recognised World Heritage Site and the second largest barrier reef in the world, second only to Australia's Great Barrier Reef.

Forests and deforestation

A remote sensing study conducted by the Water Center for the Humid Tropics of Latin America and the Caribbean (CATHALAC) (http://www.cathalac.org) and NASA (http://www.nasa.gov) , in collaboration with the Forest Department and the Land Information Centre (LIC) of the Government of Belize's Ministry of Natural Resources and the Environment (MNRE), and published in August 2010 revealed that Belize's forest cover in early 2010 was approximately 62.7%, down from 75.9% in late 1980.[22] A similar study[28] by Belize Tropical Forest Studies (http://biological-diversity.info/deforestation.htm) and Conservation International revealed similar trends in terms of Belize's forest cover. Both studies indicate that each year, 0.6% of Belize's forest cover is lost, translating to the clearing of an average of 24,835 acres (10,050 ha) each year. The USAID (http://www.usaid.gov) -supported SERVIR (http://www.servir.net) study by CATHALAC, NASA, and the MNRE also showed that Belize's protected areas have been extremely effective in protecting the country's forests. While only some 6.4% of forests inside of legally declared protected areas were cleared between 1980 and 2010, over a quarter of forests outside of protected areas had been lost between 1980 and 2010. As a

country with a relatively high forest cover and a low deforestation rate, Belize has significant potential for participation in initiatives such as REDD. Significantly, the SERVIR (http://www.servir.net) study (http://www.servir.net/servir_bz_forest_cover_1980-2010.pdf) on Belize's deforestation was also recognised by the intergovernmental Group on Earth Observations (GEO) (http://www.earthobservations.org) , of which Belize is a member nation.[29]

Geology, mineral potential, and energy

Although a number of economically important minerals exist in Belize, none have been found in quantities large enough to warrant their mining. These minerals include dolomite, barite (source of barium), bauxite (source of aluminium), cassiterite (source of tin), and gold. In 1990 limestone, used in road-building, was the only mineral resource being exploited for either domestic or export use.

The similarity of Belizean geology to that of oil-producing areas of Mexico and Guatemala prompted oil companies, principally from the United States, to explore for petroleum at both offshore and on-land sites in the early 1980s. Initial results were promising, but the pace of exploration slowed later in the decade, and production operations had been halted. As a result, Belize remains almost totally dependent on imported petroleum for its energy needs. In 2006, the cultivation of newly discovered crude oil in the town of Spanish Lookout has presented new prospects and problems for this developing nation.[30] The country also possess considerable potential for hydroelectric and other renewable energy resources, such as solar and biomass. In the mid-1980s, one Belizean businessman even proposed the construction of a wood-burning power station for the production of electricity, but the idea foundered in the wake of ecological concerns and economic constraints.

Economy

Main article: Economy of Belize

Belize has a small, essentially private enterprise economy that is based primarily on agriculture, agro-based industry, and merchandising, with tourism and construction recently assuming greater importance. In 2006, the exploitation of a newly discovered crude oil field near the town of Spanish Lookout has presented new prospects and problems for this developing nation.[30] It has yet to be seen if significant economic expansion will be made by this. To date, oil production equal 3,000 bbl/d (480 m^3/d) (2007 est.) and oil exports equal 1,960 bbl/d (312 m^3/d) (2006 est.). The country is a producer of industrial minerals.[31] Sugar, the chief crop, accounts for nearly half of exports, while the banana industry is the country's largest employer.[30]

The new government faces important challenges to economic stability. Rapid action to improve tax collection has been promised, but a lack of progress in reining in spending could bring the exchange rate under pressure. The tourist and construction sectors strengthened in early 1999, leading to a preliminary estimate of revived growth at 4%. Infrastructure continues to be a major challenge for the economic development of Belize.[32] Belize has the most expensive electricity in the region. Trade is important and the major trading partners are the United States, Mexico, the European Union, and Central America.[32]

Banking

Belize has five commercial banks, of which the largest and oldest is Belize Bank. The other four banks are Heritage Bank, Atlantic Bank, FirstCaribbean International Bank, and Scotiabank (Belize).

Industrial Infrastructure

The largest integrated electric utility and the principal distributor in Belize is BEL, an integrated electric utility and distributor. BEL is approximately 70% owned by Fortis Inc., a Canadian investor-owned distribution utility. Fortis took over the management of BEL in 1999, at the invitation of the Government of Belize in an attempt to mitigate prior financial problems within the locally managed utility. In addition to its regulated investment in BEL, Fortis owns Belize Electric Company Limited ("BECOL"), a non-regulated hydroelectric generation business that operates three hydroelectric generating facilities on the Macal River in Belize.

In 2008 the Public Utilities Commission of Belize issued an order that has had a significant negative impact on the financial condition and operations of BEL. The order effectively disallowed the recovery of costs via customer rates and set rates at a level that does not allow BEL to earn a reasonable return. This has led to a deterioration of facilities and service. BEL appealed the rate order, but the court dismissed BEL's application, finding that various accepted concepts of good management shall not be applicable in Belize. BEL appealed this judgment to the Court of Appeal; however, a hearing is not expected until 2012. In May 2011, the Supreme Court of Belize granted BEL's application to prevent the PUC from taking any enforcement action against BEL pending the appeal. BEL has been in default of financial covenants under its long-term lending agreements since 2008.[33]

The government of Belize on Tuesday the 14TH of June 2011, nationalized the majority ownership interest of Fortis Inc. in Belize Electricity Ltd. The Belize utility encountered serious financial problems after the country’s Public Utilities Commission in 2008 disallowed “the recovery of previously incurred fuel and purchased power costs in customer rates and set customer rates at a level that does not allow BEL to earn a fair and reasonable return,” Fortis said in a statement released earlier this month. Fortis held approximately a 70 percent stake in Belize Electricity Ltd., which represents less than 2 percent of Fortis assets. The Belize Chamber of Commerce & Industry issued. a statement saying the government acted in haste and expressed concern over the nationalization and the message it sends to investors. In August 2009, the Government of Belize nationalized Belize Telemedia Limited, and the government owed entity now competes directly with Speednet. As a result of the nationalization process, the interconnection agreements are again subject to negotiations.

Both BTL and Speednet boast a full range of products and services including basic telephone services, national and international calls, prepaid services, cellular services via GSM 1900 megahertz (Mhz) and 3G Code Division Multiple Access (CDMA) 2000 respectively, international cellular roaming, fixed wireless, dial-up and internet, high-speed DSL, internet service, and national and international data networks.

[34] [35]

Tourism

Main article: Tourism in Belize

A combination of natural factors—climate, the Belize Barrier Reef, over 1,000 offshore Cayes (islands), excellent fishing, safe waters for boating, scuba diving, and snorkeling, numerous rivers for rafting, and kayaking, various jungle and wildlife reserves of fauna and flora, for hiking, bird watching, and helicopter touring, as well as many Maya ruins—support the thriving tourism and ecotourism industry. Of the hundreds of cave systems, it also has the largest cave system in Central America. Development costs are high, but the Government of Belize has designated tourism as its second development priority after agriculture. In 2007, tourist arrivals totalled 251,655 (with more than 210,000 from the U.S.) and tourist receipts amounted to $183.3 million.

Education

Main article: Education in Belize

School children in San Ignacio.

There are a number of kindergartens and secondary and tertiary schools in Belize. They provide quality education for students which is mostly funded by the government. Belize possess about 5 tertiary level institutions offering associates, bachelors, and undergraduate degrees. The biggest university is the University of Belize. The university has 6 campuses throughout the country and it offers accounting, management, education, science, agriculture and other degrees.

Politics

Main article: Politics of Belize

Belize is a parliamentary democracy, a Commonwealth realm, and therefore a member of the Commonwealth of Nations.

The structure of government is based on the British parliamentary system, and the legal system is modelled on the Common Law of England. The head of state is Elizabeth II, Queen of Belize. Since the Queen resides in the United Kingdom, she is represented in Belize by the Governor-General. However, the cabinet, led by the Prime Minister of Belize, who is head of government, acting as advisors to the Governor-General, in practice exercise executive authority. Cabinet ministers are members of the majority political party in parliament and usually hold elected seats within it concurrent with their cabinet positions.

The bicameral National Assembly of Belize is composed of a House of Representatives and a Senate. The 31 members of the House are popularly elected to a maximum five-year term and introduce legislation affecting the development of Belize. The Governor-General appoints the 12 members of the Senate, with a Senate president selected by the members. The Senate is responsible for debating and approving bills passed by the House.

Belize is a full participating member of the Caribbean Community (CARICOM), the Central American Integration System (SICA), The United Nations, and the Organization of American States. It is still in the process of acceding to Caricom and SICA treaties, including trade and single market treaties.

Districts and constituencies

Belize is divided into 6 districts, shown below with their areas (in sq.km) and populations at the 2010 Census:

Districts of Belize

1. Belize District 4,204 - 89,247
2. Cayo District 5,338 - 73,202
3. Corozal District 1,860 - 40,324
4. Orange Walk District 4,737 - 45,419
5. Stann Creek District 2,176 - 32,166
6. Toledo District 4,649 - 30,538

Total areas and populations 22,964 - 312,971

source: Central Statistical Office, Belize.

These districts are further divided into 31 constituencies.

The principal municipalities at the 2010 Census were Belize City (53,532), Belmopan (13,654), Orange Walk

Town (13,400), San Pedro (11,510), San Ignacio (9,925), Corozal Town (9,871), Dangriga (9,096), Santa Elena (7,052), Benque Viejo (5,824) and Punta Gorda (5,205).

Armed Forces

Main article: Military of Belize

The Belize Defence Force (BDF) is the **Military of Belize**, and is responsible for protecting the sovereignty of Belize. The BDF, along with the Belize National Coast Guard, and the Immigration Department, is a department of the Ministry of Defence and Immigration, which is headed by Carlos Perdomo; the BDF itself is commanded by Brigadier General Dario Tapia. In 1997, the regular army numbered over 900, the reserve army 381, the air wing 45 and the maritime wing 36, amounting to an overall strength of approximately 1400.[36] In 2005, the maritime wing became part of the Belizean Coast Guard.[37] In the same year, the government spent $1.2 million on the military, constituting 1.87% of the country's gross domestic product (GDP).[38]

After Belize achieved independence in 1981 the United Kingdom maintained a deterrent force in the country to protect it from invasion by Guatemala *(see Guatemalan claim to Belizean territory)*. The main British force left in 1994, three years after Guatemala recognised Belizean independence, but the United Kingdom maintains a training presence via the British Army Training and Support Unit Belize (BATSUB) and 25 Flight Army Air Corps.[36]

Demographics

Main articles: Demographics of Belize and Belizean people

Colonisation, slavery, and immigration have played major roles in affecting the ethnic composition of the population and as a result, Belize is a country with numerous cultures, languages, and ethnic groups.[39][40][41] The country's population is currently estimated to be a little over 333,000.[1] Mestizos comprise about 34% of the population, Kriols 25%, Spanish 15%, Maya 11%, and Garinagu 6%.[42]

Ethnic group	Population	% of total*
Mestizos	121,275	34%
Kriols	98,695	25%
Spanish	59,153	15%
Maya	37,819	11%
Garifuna	29,909	6%
Others	31,335	9%
* Percentage of total Belizean population		

Population and housing

According to the 2010 Housing and Population Census, the total population of Belize is 312,971. The total number of households in Belize was 79,598 and the average household size was 3.9. The homeless population amounted to 118 in total, of whom 113 were males and 5 were females. The institutional population were discovered to number 1,957; 1,665 being male and 292 being female. The total population in urban Belize was 139,069; 68,020 males and 71,049 females. There were 39,104 total urban households in 2010, with an average household size of 3.6. The total population in rural Belize was 171,827; 88,261 males and 83,566 females. There 40,494 total rural households in 2010, with an average household size of 4.2.

Maya and early settlers

The Maya are thought to have been in Belize and the Yucatán region since the second millennium BC; however,

much of Belize's original Maya population was wiped out by disease and conflicts between tribes and with Europeans. Three Maya groups now inhabit the country: The Yucatec (who came from Yucatán, Mexico to escape the Caste War of the 1840s), the Mopan (indigenous to Belize but were forced out by the British; they returned from Guatemala to evade slavery in the 19th century), and Kekchi (also fled from slavery in Guatemala in the 19th century).[43] The later groups are chiefly found in the Toledo District.

Two Kekchi Maya children. The Maya predominate in the Toledo District of Belize.

White, initially Spanish conquistadors explored and declared the land a Spanish colony but chose not to settle due to the lack of resources such as gold and the strong defence of the Yucatán by the Maya. Later English and Scottish settlers and pirates known as the "Baymen" entered the area in the 16th and 17th century respectively and established a logwood trade colony in what would become the Belize District.[11]

Kriols

Main article: Belizean Kriol people

Kriols make up roughly 25% of the Belizean population and about 75% percent of the Diaspora.[44] They are descendants of the Baymen slave owners, and slaves brought to Belize for the purpose of the logging industry.[45] These slaves were mostly Black (many also of Miskito ancestry) from Nicaragua and born Africans who had spent very brief periods in Jamaica.[46] Bay Islanders and more Jamaicans came in the late-19th century, further adding these all ready varied peoples, creating this ethnic group.

Boys of various ethnicities on a boat in Mango Creek

For all intents and purposes, Kriol is an ethnic and linguistic denomination, but some natives, even those blonde and blue-eyed, may call themselves Kriol, defining it as more a cultural attribute and not limited to physical appearance.[46] Kriol was historically only spoken by them, but this ethnicity has become synonymous with the **Belizean** national identity, and as a result it is now spoken by about 75% of Belizeans.[42][44] Kriols are found all over Belize, but predominantly in urban areas such as Belize City, coastal towns and villages, and in the Belize River Valley.

Garinagu

Main article: Garifuna people

The Garinagu (singular *Garifuna*) are a mix of African, Arawak, and Carib ancestry.[11] More precisely, the average Garifuna is 76% Sub Saharan African, 20% Arawak/Carib and 4% European.[47]

Throughout history they have been incorrectly labelled as *Black Caribs*. When the British took over Saint Vincent after the Treaty of Paris in 1763, they were opposed by French settlers and their Carib allies. The Caribs eventually surrendered to the British in 1796. The British separated the more African-looking Caribs from the more indigenous looking ones. 5,000 Garinagu were exiled, but only about 2,500 of them survived the voyage to Roatán, an island off the coast of Honduras.

Because Roatán was too small and infertile to support their population, the Garinagu petitioned the Spanish

authorities of Honduras to be allowed to settle on the mainland coast. The Spanish employed them as soldiers, and they spread along the Caribbean coast of Central America. The Garinagu settled in Seine Bight, Punta Gorda and Punta Negra, Belize by way of Honduras as early as 1802. However, in Belize 19 November 1832 is the date officially recognised as "Garifuna Settlement Day" in Dangriga.[42]

Mestizos and Spanish

Around the 1840s, Mestizo, Spanish, and Yucatec settlers from Mexico began to settle in the north due to the Caste War of Yucatán.[48][49] Currently, the Mestizos are the largest ethnic group in Belize, making up 34% of the population in 2000, and Spanish make up 15%. They predominate in the Corozal, Orange Walk, and much of the Cayo district, as well as San Pedro town in Ambergris Caye.[42]

The Mestizo culture was originated from a mixture of Spanish and Maya. The Mestizo towns of Belize have much more in common with neighbouring Yucatán and most of Guatemala and Central America than central, southern or coastal Belize. Towns centre on a main square, and social life focuses on the Catholic Church built on one side of it. Most Mestizos and Spanish speak Spanish, English and Kriol fluently.[48]

Other groups

The remaining 9% is a mix of Mennonite farmers, Indians, Chinese, whites from the United States and Canada, and many other foreign groups brought to assist the country's development. During the 1860s, a large influx of East Indians who spent brief periods in Jamaica and American Civil War veterans from Louisiana and other Southern states established Confederate settlements in British Honduras and introduced commercial sugar cane production to the colony, establishing 11 settlements in the interior. The 20th century saw the arrival of more Asian settlers from mainland China, South Korea, India, Syria, and Lebanon. Central American immigrants and expatriate Americans and Africans also began to settle in the country.[42]

Mennonite children selling peanuts near Lamanai in Belize. Roughly 10,000 German-speaking Mennonites live in Belize, farming the land and living according to their religious beliefs.

Emigration, immigration, and demographic shifts

Kriols and other ethnic groups are emigrating mostly to the United States, but also to the United Kingdom and other developed nations for better opportunities. Based on the latest U.S. Census, the number of Belizeans in the United States is approximately 160,000 (including 70,000 legal residents and naturalised citizens), consisting mainly of Kriols and Garinagu.[50]

Due to conflicts in neighbouring Central American nations, Mestizo refugees from El Salvador, Guatemala, and Honduras have fled to Belize in significant numbers during the 1980s, and have been significantly adding to this group.[51] These two events have been changing the demographics of the nation for the last 30 years.[51]

According to estimates by the CIA in 2009, Belize's total fertility rate currently stands at approximately 3.6 children per woman. Its birth rate is 27.33 births/1,000 population, and the death rate is 5.8 deaths/1,000 population.[1]

Language

Main article: Languages of Belize

English is the official language of Belize, a former British colony. English is the primary language of public education. Spanish is spoken as a native tongue by 50 % of the population and is taught in school. Most Belizeans speak some Spanish, but almost all speak Kriol and English. Bilingualism is very common and encouraged.

Religion

Main article: Religion in Belize

Religious freedom is guaranteed in Belize. Nearly 80% of the inhabitants are Christian, with 49.6% of Belizeans being Roman Catholics and 29% Protestants.[52] Foreign Catholics frequently visit the country for special processions. The Greek Orthodox Church has a presence in Santa Elena.[53] Jehovah's Witnesses have experienced a significant increase in membership in recent years. According to the Witnesses, around 3% of the population attended at least one religious meeting in 2007.[54] The Church of Jesus Christ of Latter-day Saints claims 3,300 members in the country[55]

Non-Christian minorities include: Hinduism, followed by most Indian immigrants, and Islam, common among Middle Eastern immigrants and has gained a following among some Kriols.

Culture

"The Bliss Center" in Belize City

Cuisine

Main article: Cuisine of Belize

Belizean cuisine is inspired by British, Mexican and Western Caribbean cooking. The basic ingredients are rice and beans, which are often eaten with chicken, pork, veal, fish or vegetables. Coconut milk and fried plantains are added to the dishes to create a truly tropical taste. Exotic ingredients include armadillo meat, venison and fried paca (called Gibnut in Kriol). Conch soup is a traditional dish which has a characteristic taste and thick consistency due to added okra, potatoes, yams, cassava flour and a touch of toasted habanero. Immigration has brought Garifuna dishes based on fish and plantains, and among the best known are Hudut, Darasa, Ereba, and Bundiga. Belizean food is almost always accompanied by white rice in coconut milk.

Sports

Main article: Sport in Belize

The major sports in Belize are football, basketball, volleyball and cycling, with smaller followings of boat racing, track & field, softball and cricket. Fishing is also popular in areas of Belize. The Cross Country Cycling Classic,

also known as the "cross country" race or the Holy Saturday Cross Country Cycling Classic, is considered to be one of the most important Belize sports events. This one-day sports event is meant for amateur cyclists but has also gained a worldwide popularity.

This cycling event in Belize has seven rider categories based on rider rating, age, and gender. Action-packed and thrilling, this most interesting sporting event allows for the participation of tourists and visitors alike from all over the world. The cycling routes offer views across the resplendent greenery of the forest areas and the meandering rivers. This makes the event even more popular among the tourists.

The history of Cross Country Cycling Classic in Belize dates back to the period when Monrad Metzgen picked up the idea from a small village on the Northern highway. The people from this village used to cover long distances on their bicycles to attend the weekly game of cricket. He improvised on this observation and added thrill by sowing the idea of a sporting event in the difficult terrain of western highways, which were then poorly built.

On Easter day, citizens of Dangriga participate in a yearly fishing tournament. First, second, and third prize are awarded based on a scoring combination of size, species, and number. The tournament is broadcast over local radio stations, and prize money is awarded to the winners.

Belize's National Basketball Team is the only National Team that has achieved major victories internationally. During the 1998 Caricom Men's Basketball Championship, held at the Civic Center in Belize City. Belize went on to win the championship and proceeded to participate in the 1999 Centrobasquet Tournament in Havana. The National Team finished seventh of eight teams after winning only 1 game despite playing close all the way. In a return engagement at the 2000 CARICOM championship in Barbados, Belize placed fourth. Shortly thereafter, Belize moved to the Central American region and won the Central American Games championship in 2001. The team has failed to duplicate this success, most recently finishing with a 2 and 4 record in the 2006 COCABA championship. The team finished second in the 2009 COCABA tournament in Cancun, Mexico where it went 3–0 in group play. Belize won its opening match in the Centrobasquet Tournament, 2010, defeating Trinidad and Tobago, but lost badly to Mexico in a rematch of the COCABA final. A tough win over Cuba set Belize in position to advance, but they fell to Puerto Rico in their final match and failed to qualify.

Folklore

In their folklore, we find the legends of Lang Bobi Suzi, La Llorona, Cadejo, La Sucia, Luguchu Ellis, Tata Duende, Chatona, X'tabai, and Anansi.

Holidays

The following holidays are observed in Belize.[56]

Date	English Name	Remarks
1 January	New Year's Day	
9 March	Baron Bliss Day	Henry Edward Ernest Victor Bliss, commonly known as Baron Bliss (16 February 1869 – 9 March 1926), was a British-born traveller who willed some two million U.S. dollars to a trust fund for the benefit of the citizens of what was then the colony of British Honduras, now Belize.
variable	Easter	Good Friday and Easter Sunday (both Christian days marking the death and resurrection of Jesus Christ respectively) are both public holidays. When holidays fall on a Sunday, the Monday is given as a public

		holiday. Therefore "Easter Monday", the Monday following Easter Sunday, is a public holiday. In Dangriga, Easter marks the community's annual fishing tournament, which is broadcast via local radio and offers prize money to the first, second, and third place.
1 May	Labour Day	Address by the Minister of Labour or a representative, followed by parades and rallies held throughout the country. Kite contests, cycle races, harbour regatta, and horse races are also held.
24 May	Commonwealth Day	Celebrated nationwide as the Queen's birthday. National Sports Council holds horse races in Belize City at the National Stadium and in Orange Walk Town at the People's Stadium. Cycle races are held between Cayo and Belmopan. The three-day Toledo Cacao Festival is held in the Toledo District over the Commonwealth Day Holiday Weekend.
First Monday in July	CARICOM Day	Celebrated Throughout the Caricom region. Not celebrated in Belize as a holiday.
10 September	St. George's Caye Day	The Battle of St. George's Caye was a short military engagement that lasted from 3 to 10 September 1798, fought off the coast of what is now Belize. However, the name is typically reserved for the final battle that occurred on 10 September.
21 September	Independence Day	The day Belize declared independence from the United Kingdom in 1981.
12 October	Pan American Day	Celebrated mainly in Orange Walk, Cayo and Corozal where the Mestizo culture is predominant. Fiestas and beauty contests are held to celebrate Mestizo culture. Horse and cycle races countrywide. Tourism Week: Activities include silent and Dutch auction, grand vacation raffle drawing and fair.
19 November	Garifuna Settlement Day	Festivals, parades, and re-enactments, marking the first arrival of the Garifuna in 1832 in Dangriga. The annual Battle of the Drums competition is held in Punta Gorda Town on the Saturday preceding Garifuna Settlement Day.
25 December	Christmas	The Christian celebration of the birth of Jesus Christ.
26 December	Boxing Day	A Commonwealth gift-giving traditional holiday.

National Symbols

Black Orchid

Further information: Prosthechea cochleata

A black orchid

The National Flower of Belize is the Black Orchid (*Prosthechea cochleata*), also known as *Encyclia cochleata*).[57]

Mahogany Tree

The National Tree of Belize is the Mahogany Tree (*Swietenia macrophylla*), one of the magnificent giants of the Belize rain forest. Rising straight and tall to over a hundred feet from great buttresses at the roots, it emerges above the canopy of the surrounding trees with a

crown of large, shining green leaves. In the early months of the year, when the leaves fall and new red-brown growth appears, the tree can be spotted from a great distance. The tree puts out a great flush of small whitish flowers – the blossom for dark fruits, which are pear-shaped capsules about six inches long. When the fruits mature they split into five valves, freeing large winged seeds which are carried away by the wind. They fall on the shaded protection of the forest floor and germinate to begin a new life cycle. The mahogany tree matures in 60 to 80 years.

British settlers exploited the Belizean forest for mahogany, beginning around the middle of the 17th century. It was originally exported to the United Kingdom in the form of squared logs, but shipments now consist mainly of sawn lumber. The motto "Sub Umbra Florero" means: Under the shade (of the mahogany tree) I flourish.[58]

Keel Billed Toucan

The Keel Billed Toucan (*Ramphastos sulfuratus*) is the National Bird of Belize. It is noted for its great, canoe-shaped bill and its brightly coloured green, blue, red and orange feathers. Toucans are found in open areas of the country with large trees. It is mostly black with bright yellow cheeks and chest, red under the tail and a distinctive white patch at the base of the tail.They make a monotonous frog-like croak. Toucans like fruits, and eat by cutting with the serrated edge of their bills. Toucans nest in holes in trees, using natural holes or holes made by woodpeckers, often enlarging the cavity by removing soft, rotten wood. They lay two to four eggs which are incubated by both parents. The nesting stage lasts from six to seven weeks.

The Keel Billed Toucan

Tapir

Belize's National Animal is the Baird's Tapir, the largest land mammal of the American tropics. It is also known as the mountain cow, although it is actually related to the horse and the rhinoceros. It is protected under Belizean law.

National heroes

The three people who have received Belize's highest honours, Order of National Hero and Order of Belize, are:

- Phillip Goldson
- Monrad Metzgen
- George Cadle Price

History of Belize

From Wikipedia, the free encyclopedia

The **history of Belize** dates back thousands of years. The Maya civilization spread into the area of Belize between 1500 BC and AD 200 and flourished until about AD 1200. Several major archeological sites—notably Cahal Pech, Caracol, Lamanai, Lubaantun, Altun Ha, and Xunantunich—reflect the advanced civilization and much denser population of that period. The first recorded European settlement was established by shipwrecked English seamen in 1638. Over the next 150 years, more English settlements were established. This period also was marked by piracy, indiscriminate logging, and sporadic attacks by pre-America natives and neighboring Spanish settlements.[1]

Great Britain first sent an official representative to the area in the late 18th century, but Belize was not formally termed the "Colony of British Honduras" until 1840. It became a crown colony in 1862. Subsequently, several constitutional changes were enacted to expand representative government. Full internal self-government under a ministerial system was granted in January 1964. The official name of the territory was changed from British Honduras to Belize in June 1973, and full independence was granted on September 21, 1981.[1]

Ancient Maya civilization

Main article: Pre-Columbian Belize

The Maya civilization emerged at least three millennia ago in the lowland area of the Yucatán Peninsula and the highlands to the south, in what is now southeastern Mexico, Guatemala, western Honduras, and Belize. Many aspects of this culture persist in the area despite nearly 500 years of European domination. Prior to about 2500 B.C., some hunting and foraging bands settled in small farming villages; they later domesticated crops such as corn, beans, squash, and chili peppers. A profusion of languages and subcultures developed within the Mayan

core culture. Between about 2500 B.C. and A.D. 250, the basic institutions of Mayan civilization emerged. The peak of this civilization occurred during the classic period, which began about A.D. 250.[2] The recorded history of the center and south is dominated by Caracol, where the inscriptions on their monuments was, as elsewhere, in the Lowland Maya aristocratic tongue Classic Ch'olti'an.[3] North of the Maya Mountains, the inscriptional language at Lamanai was Yucatecan as of 625 CE.[4] The last date recorded in Ch'olti'an within Belizean borders is 859 CE in Caracol, stele 10. Yucatec civilisation, in Lamanai, lasted longer.

Extent of the Maya civilization

Farmers engaged in various types of agriculture, including labor-intensive irrigated and ridged-field systems and shifting slash-and-burn agriculture. Their products fed the civilization's craft specialists, merchants, warriors, and priest-astronomers, who coordinated agricultural and other seasonal activities with a cycle of rituals in ceremonial centers. These priests, who observed the movements of the sun, moon, planets, and stars, developed a complex mathematical and calendrical system to coordinate various cycles of time and to record specific events on carved stelae. The Maya were skilled at making pottery, carving jade, knapping flint, and making elaborate costumes of feathers. The architecture of Mayan civilization included temples and palatial residences organized in groups around plazas. These structures were built of cut stone, covered with stucco, and elaborately decorated and painted. Stylized carvings and paintings, along with sculptured stelae and geometric patterns on buildings, constitute a highly developed style of art.[2]

Belize boasts important sites of the earliest Mayan settlements, majestic ruins of the classic period, and examples of late postclassic ceremonial construction. About five kilometers west of Orange Walk, is Cuello, a site from perhaps as early as 2,500 B.C. Jars, bowls, and other dishes found there are among the oldest pottery unearthed in present-day Mexico and Central America. Cerros, a site on Chetumal Bay, was a flourishing trade and ceremonial center between about 300 B.C. and A.D. 100. One of the finest carved jade objects of Mayan civilization, the head of what is usually taken to be the sun god Kinich Ahau, was found in a tomb at the classic period site of Altún Ha, thirty kilometers northwest of present-day Belize City. Other Mayan centers located in Belize include Xunantunich and Baking Pot in Cayo District, Lubaantún and Nimli Punit in Toledo District, and Lamanai on Hill Bank Lagoon in Orange Walk District.[2]

Maya temple at Altun Ha

In the late classic period, probably at least 400,000 people inhabited the Belize area. People settled almost every part of the country worth cultivating, as well as the cay and coastal swamp regions. But in the 10th century, Mayan society suffered a severe breakdown. Construction of public buildings ceased, the administrative centers lost power, and the population declined as social and economic systems lost their coherence. Some people continued to occupy, or perhaps reoccupied, sites such as Altún Ha, Xunantunich, and Lamanai. Still, these sites ceased being splendid ceremonial and civic centers. The decline of Mayan civilization is still not fully explained. Rather than identifying the collapse as the result of a single factor, many archaeologists now believe that the decline of the Maya was a result of many complex factors and that the decline occurred at different times in different regions.[2]

Conquest and early colonial period

Main article: History of Belize (1502-1862)

Pre-Columbian Mayan societies and the conquest

Many Maya were still in Belize when the Europeans came in the 16th and 17th centuries. Archaeological and ethnohistorical research confirms that several groups of Mayan peoples lived in the area now known as Belize in the 16th century. The political geography of that period does not coincide with present-day boundaries, so several Mayan provinces lay across the frontiers of modern Belize, Mexico, and Guatemala.[2]

Christopher Columbus traveled to the Gulf of Honduras during his fourth voyage in 1502.

Spain soon sent expeditions to Guatemala and Honduras, and the conquest of Yucatán began in 1527. Though the Maya offered stiff resistance to Spanish "pacification", diseases contracted from the Spanish devastated the indigenous population and weakened its ability to resist conquest. In the 17th century, Spanish missionaries established churches in Mayan settlements with the intention of converting and controlling these people.[2]

Piracy along the coast increased during this period. In 1642, and again in 1648, pirates sacked Salamanca de Bacalar, the seat of Spanish government in southern Yucatán. The abandonment of Bacalar ended Spanish control over the Mayan provinces of Chetumal and Dzuluinicob.[2]

Between 1638 and 1695, the Maya living in the area of Tipu enjoyed autonomy from Spanish rule. But in 1696, Spanish soldiers used Tipu as a base from which they pacified the area and supported missionary activities. In 1697 the Spanish conquered the Itzá, and in 1707, the Spanish forcibly resettled the inhabitants of Tipu to the area near Lago Petén Itzá. The political center of the Mayan province of Dzuluinicob ceased to exist at the time that British colonists were becoming increasingly interested in settling the area.[2]

Colonial rivalry between Spain and Britain

In the 16th and 17th centuries, Spain tried to maintain a monopoly on trade and colonization in its New World colonies, but northern European powers were increasingly attracted to the region by the potential for trade and settlement. These powers resorted to smuggling, piracy, and war in their efforts to challenge and then destroy Spain's monopoly. In the 17th century, the Dutch, English, and French encroached on Spain's New World possessions.[2]

Early in the 17th century, in southeastern Mexico and on the Yucatán Peninsula, English buccaneers began cutting logwood (*Haematoxylum campechianum*), which was used in the production of a textile dye. According to legend, one of these buccaneers, Peter Wallace, called "Ballis" by the Spanish, settled near and gave his name to the Belize River as early as 1638. English buccaneers began using the coastline as a base from which to attack Spanish ships. Buccaneers stopped plundering Spanish logwood ships and started cutting their own wood in the 1650s and 1660s. Logwood extraction then became the main reason for the English settlement for more than a century. A 1667 treaty, in which the European powers agreed to suppress piracy, encouraged the shift from buccaneering to cutting logwood and led to more permanent settlement.[2]

Conflict continued between Britain and Spain over the right of the British to cut logwood and to settle in the region. In 1717 Spain expelled British logwood cutters from the Bay of Campeche west of the Yucatán.[2] During the 18th century, the Spanish attacked the British settlers repeatedly. The Spanish never settled in the region, however, and the British always returned to expand their trade and settlement. The 1763 Treaty of Paris conceded to Britain the right to cut logwood but asserted Spanish sovereignty over the territory. When war broke out again in 1779, the British settlement was abandoned until the Treaty of Versailles in 1783 allowed the British

to again cut logwood in the area. By that time, however, the logwood trade had declined and Honduras Mahogany (*Swietenia macrophylla*) had become the chief export.[2]

Beginnings of self-government and the plantocracy

The British were reluctant to set up any formal government for the settlement for fear of provoking the Spanish. On their own initiative, settlers had begun electing magistrates to establish common law as early as 1738. In 1765 these regulations were codified and expanded into Burnaby's Code. When the settlers began returning to the area in 1784, Colonel Edward Marcus Despard was named superintendent to oversee the Settlement of Belize in the Bay of Honduras. The 1786 Convention of London allowed the British settlers to cut and export timber but not to build fortifications, establish any form of government, or develop plantation agriculture. Spain retained sovereignty over the area.[2]

The last Spanish attack on the British settlement, the Battle of St. George's Caye, occurred two years after the outbreak of war in 1796. The British drove off the Spanish, thwarting Spain's last attempt to control the territory or dislodge other settlers.[2]

Despite treaties banning local government and plantation agriculture, both activities flourished. In the late 18th century, an oligarchy of relatively wealthy settlers controlled the political economy of the British settlement. These settlers claimed about four-fifths of the available land; owned about half of all slaves; controlled imports, exports, and the wholesale and retail trades; and determined taxation. A group of magistrates, whom they elected from among themselves, had executive as well as judicial functions. The landowners resisted any challenge to their growing political power.[2]

Slavery in the settlement, 1794-1838

The earliest reference to African slaves in the British settlement appeared in a 1724 Spanish missionary's account, which stated that the British recently had been importing them from Jamaica, Bermuda, and other Central American British Colonies. A century later, the total slave population numbered about 2,300. Most slaves were born in Africa, and many slaves at first maintained African ethnic identifications and cultural practices. Gradually, however, slaves assimilated and a new, synthetic Kriol culture was formed.[1]

Slavery in the settlement was associated with the extraction of timber, because treaties forbade the production of plantation crops. Settlers needed only one or two slaves to cut logwood, but as the trade shifted to mahogany in the last quarter of the 18th century, the settlers needed more money, land, and slaves for larger-scale operations. Other slaves worked as domestic helpers, sailors, blacksmiths, nurses, and bakers. The slaves' experience, though different from that on plantations in other colonies in the region, was nevertheless oppressive. They were frequently the objects of "extreme inhumanity," as a report published in 1820 stated. In the 18th century, many slaves escaped to Yucatán, and in the early 19th century a steady flow of runaways went to Guatemala and down the coast to Honduras.[1]

One way the settler minority maintained its control was by dividing the slaves from the growing population of free Kriol people who were given limited privileges. Though some Kriols were legally free, their economic activities and voting rights were restricted. Privileges, however, led many free blacks to stress their loyalty and acculturation to British ways.[1]

The act to abolish slavery throughout the British colonies, passed in 1833, was intended to avoid drastic social changes by effecting emancipation over a five-year transition period, by implementing a system of "apprenticeship" calculated to extend masters' control over the former slaves, and by compensating former slave

owners for their loss of property. After 1838, the masters of the settlement continued to control the country for over a century by denying access to land and by limiting freedmen's economic freedom.[1]

Emigration of the Garifuna

At the same time that the settlement was grappling with the ramifications of the end of slavery, a new ethnic group—the Garifuna—appeared. In the early 19th century, the Garifuna, descendants of Carib peoples of the Lesser Antilles and of Africans who had escaped from slavery, arrived in the settlement. The Garifuna had resisted British and French colonialism in the Lesser Antilles until they were defeated by the British in 1796. After putting down a violent Garifuna rebellion on Saint Vincent, the British moved between 1,700 and 5,000 of the Garifuna across the Caribbean to the Bay Islands (present-day Islas de la Bahía) off the north coast of Honduras. From there they migrated to the Caribbean coasts of Nicaragua, Honduras, Guatemala, and the southern part of present-day Belize. By 1802 about 150 Garifuna had settled in the Stann Creek (present-day Dangriga) area and were engaged in fishing and farming.[2]

Other Garifuna later came to the British settlement of Belize after finding themselves on the wrong side in a civil war in Honduras in 1832. Many Garifuna men soon found wage work alongside slaves as mahogany cutters. In 1841 Dangriga, the Garifuna's largest settlement, was a flourishing village. The American traveler John Stephens described the Garifuna village of Punta Gorda as having 500 inhabitants and producing a wide variety of fruits and vegetables.[2]

The British treated Garifuna as squatters. In 1857 the British told the Garifuna that they must obtain leases from the crown or risk losing their lands, dwellings, and other buildings. The 1872 Crown Lands Ordinance established reservations for the Garifuna as well as the Maya. The British prevented both groups from owning land and treated them as a source of valuable labor.[2]

Constitutional developments, 1850-62

In the 1850s, the power struggle between the superintendent and the planters coincided with events in international diplomacy to produce major constitutional changes. In the Clayton-Bulwer Treaty of 1850, Britain and the United States agreed to promote the construction of a canal across Central America and to refrain from colonizing any part of Central America. The British government interpreted the colonization clause as applying only to any future occupation. But the United States government claimed that Britain was obliged to evacuate the area, particularly after 1853, when President Franklin Pierce's expansionist administration stressed the Monroe Doctrine. Britain yielded on the Bay Islands and the Mosquito Coast in eastern Nicaragua. But in 1854, Britain produced a formal constitution establishing a legislative for its possession of the settlement in present-day Belize.[2]

The Legislative Assembly of 1854 was to have eighteen elected members, each of whom was to have at least £400 sterling worth of property. The assembly was also to have three official members appointed by the superintendent. The fact that voters had to have property yielding an income of £7 a year or a salary of a £100 a year reinforced the restrictive nature of this legislature. The superintendent could defer or dissolve the assembly at any time, originate legislation, and give or withhold consent to bills. This situation suggested that the legislature was more a chamber of debate than a place where decisions were made. The Colonial Office in London became, therefore, the real political-administrative power in the settlement. This shift in power was reinforced when in 1862, the Settlement of Belize in the Bay of Honduras was declared a British colony called British Honduras, and the crown's representative was elevated to a lieutenant governor, subordinate to the governor of Jamaica.[2]

Under the Clayton-Bulwer Treaty of 1850 between the U.S. and Britain, neither country was to undertake any control, colonization or occupation of any part of Central America, but it was unclear if it applied to Belize. In 1853, a new American government attempted to have Britain leave Belize. In 1856, the Dallas-Clarendon Treaty between the two governments recognized Belize territory as British. The Sarstoon River was recognized as the southern border with Guatemala. The Anglo-Guatemalan Treaty of 1859 was signed, setting the present-day western boundary and temporarily settling the question of Guatemala's claim on the territory. Only the northern border with Mexico was undefined.

British Honduras (1862-1981)

Main article: British Honduras

Mayan emigration and conflict

As the British consolidated their settlement and pushed deeper into the interior in search of mahogany in the late 18th century, they encountered resistance from the Maya. In the second half of the 19th century, however, a combination of events outside and inside the colony redefined the position of the Maya.[2] During the Caste War in Yucatán, a devastating struggle that halved the population of the area between 1847 and 1855, thousands of refugees fled to the British settlement. Though the Maya were not allowed to own land, most of the refugees were small farmers who were growing considerable quantities of crops by the mid-19th century. One group of Maya, led by Marcos Canul, attacked a mahogany camp on the Bravo River in 1866. A detachment of British troops sent to San Pedro was defeated by the Maya later that year. Early in 1867, British troops marched into areas in which the Maya had settled and destroyed villages in an attempt to drive them out. The Maya returned, however, and in April 1870, Canul and his men occupied Corozal.[2] An unsuccessful 1872 attack by the Maya on Orange Walk was the last serious attack on the British colony.[2]

In the 1880s and 1890s, Mopán and Kekchí Maya fled from forced labor in Guatemala and settled in several villages in southern British Honduras. Under the policy of indirect rule, a system of elected alcaldes (mayors) linked these Maya to the colonial administration. However, the remoteness of their settlements resulted in the Mopán and Kekchí Maya becoming less assimilated into the colony than the Maya of the north, where a Mestizo culture emerged. By the end of the 19th century, the ethnic pattern that remained largely intact throughout the 20th century was in place: Protestants largely of African descent, who spoke either English or Creole and lived in Belize Town; the Roman Catholic Maya and Mestizos who spoke Spanish and lived chiefly in the north and west; and the Roman Catholic Garifuna who spoke English, Spanish, or Garifuna and settled on the southern coast.[2]

Formal establishment of the colony, 1862-71

Flag of British Honduras

Largely as a result of the costly military expeditions against the Maya, the expenses of administering the new colony of British Honduras increased, at a time when the economy was severely depressed. Great landowners and merchants dominated the Legislative Assembly, which controlled the colony's revenues and expenditures. Some of the landowners were also involved in commerce but their interest differed from the other merchants of Belize Town. The former group resisted the taxation of land and favored an increase in import duties; the latter preferred the opposite. Moreover, the merchants in the town felt relatively secure from Mayan attacks and were unwilling to contribute toward the protection of mahogany camps, whereas the landowners felt that they should not be required to pay taxes on lands given inadequate

protection. These conflicting interests produced a stalemate in the Legislative Assembly, which failed to authorize the raising of sufficient revenue. Unable to agree among themselves, the members of the Legislative Assembly surrendered their political privileges and asked for establishment of direct British rule in return for the greater security of crown colony status. The new constitution was inaugurated in April 1871 and the new legislature became the Legislative Council.[2]

Under the new constitution of 1871, the lieutenant governor and the Legislative Council, consisting of five ex officio or "official" and four appointed or "unofficial" members, governed British Honduras. This constitutional change confirmed and completed a change in the locus and form of power in the colony's political economy that had been evolving during the preceding half century. The change moved power from the old settler oligarchy to the boardrooms of British companies and to the Colonial Office in London.[2]

The colonial order, 1871-1931

The forestry industry's control of land and its influence in colonial decision-making slowed the development of agriculture and the diversification of the economy. Though British Honduras had vast areas of sparsely populated, unused land, landownership was controlled by a small European monopoly, thwarting the evolution of a Creole landowning class from the former slaves.[2]

Landownership became even more consolidated during the economic depression of the mid-19th century. Major results of this depression included the decline of the old settler class, the increasing consolidation of capital, and the intensification of British landownership. The British Honduras Company (later the Belize Estate and Produce Company) emerged as the predominant landowner, with about half of all the privately held land in the colony. The new company was the chief force in British Honduras's political economy for over a century.[2][2]

This concentration and centralization of capital meant that the direction of the colony's economy was henceforth determined largely in London. It also signaled the eclipse of the old settler elite. By about 1890, most commerce in British Honduras was in the hands of a clique of Scottish and German merchants, most of them newcomers. The European minority exercised great influence in the colony's politics, partly because it was guaranteed representation on the wholly appointed Legislative Council. In 1892, the governor appointed several Creole members, but whites remained the majority.[2]

Despite the prevailing stagnation of the colony's economy and society during most of the century prior to the 1930s, seeds of change were being sown. The mahogany trade remained depressed, and efforts to develop plantation agriculture failed. A brief revival in the forestry industry took place early in the 20th century as new demands for forest products came from the United States. Exports of chicle, a gum taken from the sapodilla tree and used to make chewing gum, propped up the economy from the 1880s. A short-lived boom in the mahogany trade occurred around 1900 in response to growing demand for the wood in the United States, but the ruthless exploitation of the forests without any conservation or reforestation depleted resources.[2]

Creoles, who were well-connected with businesses in the United States, challenged the traditional political-economic connection with Britain as trade with the United States intensified. In 1927, Creole merchants and professionals replaced the representatives of British landowners (except for the manager of the Belize Estate and Produce Company) on the Legislative Council. The participation of this Creole elite in the political process was evidence of emerging social changes that were largely concealed by economic stagnation.[2]

An agreement between Mexico and Britain in 1893 set the boundary along the Rio Hondo, though the treaty was not finalized until 1897.

Genesis of modern politics, 1931-54

The Great Depression shattered the colony's economy, and unemployment increased rapidly. On top of this economic disaster, the worst hurricane in the country's recent history demolished Belize Town on September 10, 1931, killing more than 1,000 people. The British relief response was tardy and inadequate. The British government seized the opportunity to impose tighter control on the colony and endowed the governor with the power to enact laws in emergency situations. The Belize Estate and Produce Company survived the depression years because of its special connections in British Honduras and London.[2]

Meanwhile, workers in mahogany camps were treated almost like slaves. The law governing labor contracts, the Masters and Servants Act of 1883, made it a criminal offense for a laborer to breach a contract. In 1931 the governor, Sir John Burdon, rejected proposals to legalize trade unions and to introduce a minimum wage and sickness insurance. The poor responded in 1934 with a series of demonstrations, strikes, petitions, and riots that marked the beginning of modern politics and the independence movement. Riots, strikes, and rebellions had occurred before, but the events of the 1930s were modern labor disturbances in the sense that they gave rise to organizations with articulate industrial and political goals. Antonio Soberanis Gómez and his colleagues of the Labourers and Unemployed Association (LUA) attacked the governor and his officials, the rich merchants, and the Belize Estate and Produce Company, couching their demands in broad moral and political terms that began to define and develop a new nationalistic and democratic political culture.

The labor agitation's most immediate success was the creation of relief work by a governor who saw it as a way to avoid civil disturbances. The movement's greatest achievements, however, were the labor reforms passed between 1941 and 1943. Trade unions were legalized in 1941, and a 1943 law removed breach-of-labor-contract from the criminal code. The General Workers' Union (GWU), registered in 1943, quickly expanded into a nationwide organization and provided crucial support for the nationalist movement that took off with the formation of the People's United Party (PUP) in 1950. The 1930s were therefore the crucible of modern Belizean politics. It was a decade during which the old phenomena of exploitative labor conditions and authoritarian colonial and industrial relations began to give way to new labor and political processes and institutions. The same period saw an expansion in voter eligibility. In 1945 only 822 voters were registered in a population of over 63,000, but by 1954 British Honduras achieved suffrage for all literate adults.[2]

In December 1949, the governor devalued the British Honduras dollar in defiance of the Legislative Council, an act that precipitated Belize's independence movement. The governor's action angered the nationalists because it reflected the limits of the legislature and revealed the extent of the colonial administration's power. The devaluation enraged labor because it protected the interests of the big transnationals while subjecting the working class to higher prices for goods. Devaluation thus united labor, nationalists, and the Creole middle classes in opposition to the colonial administration. On the night that the governor declared the devaluation, the

People's Committee was formed and the nascent independence movement suddenly matured.[2]

Between 1950 and 1954, the PUP, formed upon the dissolution of the People's Committee on September 29, 1950, consolidated its organization, established its popular base, and articulated its primary demands. By January 1950, the GWU and the People's Committee were holding joint public meetings and discussing issues such as devaluation, labor legislation, the proposed West Indies Federation, and constitutional reform. As political leaders took control of the union in the 1950s to use its strength, however, the union movement declined.[2]

The PUP concentrated on agitating for constitutional reforms, including universal adult suffrage without a literacy test, an all- elected Legislative Council, an Executive Council chosen by the leader of the majority party in the legislature, the introduction of a ministerial system, and the abolition of the governor's reserve powers. In short, PUP pushed for representative and responsible government. The colonial administration, alarmed by the growing support for the PUP, retaliated by attacking two of the party's chief public platforms, the Belize City Council and the PUP. In 1952 he comfortably topped the polls in Belize City Council elections. Within just two years, despite persecution and division, the PUP had become a powerful political force, and George Price had clearly become the party's leader.[2]

The colonial administration and the National Party, which consisted of loyalist members of the Legislative Council, portrayed the PUP as pro-Guatemalan and even communist. The leaders of the PUP, however, perceived British Honduras as belonging to neither Britain nor Guatemala. The governor and the National Party failed in their attempts to discredit the PUP on the issue of its contacts with Guatemala, which was then ruled by the democratic, reformist government of President Jacobo Arbenz. When voters went to the polls on April 28, 1954, in the first election under universal literate adult suffrage, the main issue was clearly colonialism—a vote for the PUP was a vote in favor of self-government. Almost 70 percent of the electorate voted. The PUP gained 66.3 percent of the vote and won eight of the nine elected seats in the new Legislative Assembly. Further constitutional reform was unequivocally on the agenda.[2]

Decolonization and the border dispute with Guatemala

Belize (red) and Guatemala (blue)

British Honduras faced two obstacles to independence: British reluctance until the early 1960s to allow citizens to govern themselves, and Guatemala's complete intransigence over its long-standing claim to the entire territory (Guatemala had repeatedly threatened to use force to take over British Honduras). By 1961, Britain was willing to let the colony become independent. Negotiations between Britain and Guatemala began again in 1961, but the elected representatives of British Honduras had no voice in these talks. George Price refused an invitation to make British Honduras an "associated state" of Guatemala, reiterating his goal of leading the colony to independence. In 1963 Guatemala broke off talks and ended diplomatic relations with Britain. Talks between Guatemala and British Honduras started and stopped abruptly during the late 1960s and early 1970s. From 1964 Britain controlled only British Honduran defense, foreign affairs, internal security, and the terms and conditions of the public service, and in 1973 the colony's name was changed to Belize in anticipation of independence.[2]

By 1975, the Belizean and British governments, frustrated at dealing with the military-dominated regimes in Guatemala, agreed on a new strategy that would take the case for self-determination to various international forums. The Belize government felt that by gaining international support, it could strengthen its position, weaken Guatemala's claims, and make it harder for Britain to make any concessions. Belize argued that Guatemala frustrated the country's legitimate aspirations to independence and that Guatemala was pushing an irrelevant

claim and disguising its own colonial ambitions by trying to present the dispute as an effort to recover territory lost to a colonial power. Between 1975 and 1981, Belizean leaders stated their case for self-determination at a meeting of the heads of Commonwealth of Nations governments, the conference of ministers of the Nonaligned Movement, and at meetings of the United Nations (UN). Latin American governments initially supported Guatemala. Between 1975 and 1979, however, Belize won the support of Cuba, Mexico, Panama, and Nicaragua. Finally, in November 1980, with Guatemala completely isolated, the UN passed a resolution that demanded the independence of Belize.[2]

A last attempt was made to reach an agreement with Guatemala prior to the independence of Belize. The Belizean representatives to the talks made no concessions, and a proposal, called the Heads of Agreement, was initialed on March 11, 1981. However, when ultraright political forces in Guatemala labeled the proponents as sellouts, the Guatemalan government refused to ratify the agreement and withdrew from the negotiations. Meanwhile, the opposition in Belize engaged in violent demonstrations against the Heads of Agreement. A state of emergency was declared. However, the opposition could offer no real alternatives. With the prospect of independence celebrations in the offing, the opposition's morale fell. Independence came to Belize on September 21, 1981 after the Belize Act 1981, without reaching an agreement with Guatemala.[2]

Independent Belize

Main article: History of Belize (1981–present)

The flag of Belize, adopted in 1922

With Price at the helm, the PUP won all elections until 1984. In that election, first national election after independence, the PUP was defeated by the United Democratic Party (UDP), and UDP leader Manuel Esquivel replaced Price as prime minister. Price returned to power after elections in 1989. Guatemala's president formally recognized Belize's independence in 1992. The following year the United Kingdom announced that it would end its military involvement in Belize. All British soldiers were withdrawn in 1994, apart from a small contingent of troops who remained to train Belizean troops.

The UDP regained power in the 1993 national election, and Esquivel became prime minister for a second time. Soon afterward Esquivel announced the suspension of a pact reached with Guatemala during Price's tenure, claiming Price had made too many concessions in order to gain Guatemalan recognition. The pact would have resolved a 130 year old border dispute between the two countries. Border tensions continued into the early 21st century, although the two countries cooperated in other areas.

The PUP won a landslide victory in the 1998 national elections, and PUP leader Said Musa was sworn in as prime minister. In the 2003 elections the PUP maintained its majority, and Musa continued as prime minister. He pledged to improve conditions in the underdeveloped and largely inaccessible southern part of Belize.

Riot police during Belize's 2005

In 2005, Belize was the site of unrest caused by discontent with the People's United Party government, including tax increases in the national budget. On February 8, 2008, Dean Barrow of the UDP was sworn in as Belize's first black prime minister.

Throughout Belize's history, Guatemala has claimed ownership of all or part of the territory. This claim is occasionally reflected in maps showing Belize as Guatemala's twenty-third province. As of March 2007, the border dispute with Guatemala remains unresolved and quite contentious;

unrest

[5][6] at various times the issue has required mediation by the United Kingdom, Caribbean Community heads of Government, the Organisation of American States, and the United States. Since independence, a British garrison has been retained in Belize at the request of the Belizean government. Notably, both Guatemala and Belize are participating in the confidence-building measures approved by the OAS, including the Guatemala-Belize Language Exchange Project.[7]

Monarchy of Belize

From Wikipedia, the free encyclopedia

The **monarchy of Belize** (the **Belizean monarchy**) is a system of government in which a hereditary monarch is the sovereign of Belize, holding the position of head of state; the incumbent is Elizabeth II, officially called Queen of Belize, who has reigned since September 21, 1981. The heir apparent is Elizabeth's eldest son, Prince Charles, though the Queen is presently the only member of the Belizean Royal Family with any constitutional role. She, her husband and consort, Prince Philip, Duke of Edinburgh, Prince Charles, and other members of the Royal Family, including the Queen's other children and cousins, undertake various public ceremonial functions across Belize and on behalf of Belize abroad.

Most of the Queen's powers in Belize are exercised by the Governor-General, presently Colville Young, though the monarch does hold several powers that are hers alone.

The Belizean monarch, besides reigning in Belize, separately serves as head of state for each of fifteen other Commonwealth countries. This developed from the former colonial relationship of these countries to Britain, but they are now independent and the monarchy of each is legally distinct.

Origins

The current Belizean monarchy can trace its ancestral lineage back to the Anglo-Saxon period, and ultimately back to the kings of the Angles and the early Scottish kings. The territories that today comprise Belize were claimed under King Philip IV of Spain in the early 17th century, and were won by King George III in 1798; both of whom are blood relatives of the current monarch. Throughout the 19th century colonial settlement increased and Belize was made the Crown colony of British Honduras by Queen Victoria in 1871. The country was granted its independence from the United Kingdom by Queen Elizabeth II in 1981 to form Belize as a kingdom in its own right.

International and domestic aspects

Sixteen states within the 54-member Commonwealth of Nations are known as Commonwealth realms and Belize is one of these. Despite sharing the same person as their respective national monarch, each of the Commonwealth realms is sovereign and independent of the others.[1]

See also: Commonwealth realm: Constitutional implications

Development of shared monarchy

The Balfour Declaration of 1926 provided the Dominions the right to be considered equal to Britain, rather than subordinate; an agreement that had the result of a shared Crown that operates independently in each realm rather than a unitary British Crown under which all the Dominions were secondary. The monarchy thus ceased to be an exclusively British institution, although it has often been called "British" since this time (in both legal and common language) for reasons historical, political, and of convenience. The Royal and Parliamentary Titles Act 1927 was the first indication of this shift in law, further elaborated in the Statute of Westminster 1931.

Though constitutional laws governing the line of succession to the Belizean throne lie within the control of the Belizean parliament, via adopting the Statute of Westminster Belize agreed not to change its rules of succession without the unanimous consent of the other realms, unless explicitly leaving the shared monarchy relationship. This situation applies symmetrically in all the other realms, including the United Kingdom, a situation that has been likened to a treaty amongst these countries.[2]

On all matters of the Belizean state, the monarch is advised solely by Belizean Ministers of the Crown. Effective with the Belize Act 1981, no British or other realm government can advise the monarch on any matters pertinent to Belize.

Title

In Belize, the Queen's official title is:

- *Elizabeth The Second, by the Grace of God, Queen of Belize and of Her Other Realms and Territories, Head of the Commonwealth.*

This style communicates Belize's status as an independent monarchy, highlighting the sovereign's role specifically as Queen of Belize, as well as the shared aspect of the Crown throughout the realms, by mentioning Belize separately from the other countries. Typically, the sovereign is styled "Queen of Belize," and is addressed as such

when in Belize, or performing duties on behalf of Belize abroad.

Further information: List of titles and honours of Queen Elizabeth II

Succession

Charles, Prince of Wales, is the heir apparent to the Belizean Throne

The heir apparent is Elizabeth II's eldest son, Charles.[3] Upon the demise of the Crown the Executive Council of Belize is expected to proclaim him King of Belize upon his accession to the throne.

Succession to the throne is by male-preference primogeniture, and governed by the provisions of the Act of Settlement, 1701, as well as the English Bill of Rights, 1689; these documents are part of British constitutional law to which Belize defers for the line of succession; however, as, per the Statute of Westminster, a part of Belizean constitutional law, no act of the British Parliament after 1931 will have effect in Belize. The Act of Settlement restricts the succession to the natural (i.e. non-adopted), legitimate descendants of Sophia, Electress of Hanover (1630–1714), a granddaughter of James I, and lays out the rules that the monarch cannot be a Roman Catholic, nor married to one, and must be in communion with the Church of England upon ascending the throne. As Belize defers to the United Kingdom for succession, see Succession to the British Throne for more information.

Upon a "demise in the Crown" (the death of a sovereign), his or her heir immediately and automatically succeeds, without any need for confirmation or further ceremony; hence arises the phrase "The King is dead. Long live the King!" Nevertheless, it is customary for the accession of the sovereign to be publicly proclaimed by the Governor-General. After an appropriate period of mourning has passed, the sovereign is also crowned in Westminster Abbey, normally by the Archbishop of Canterbury. A coronation is not necessary for a sovereign to reign; for example, Edward VIII was never crowned, yet was undoubtedly king during his short reign.

After an individual ascends the throne, he or she continues to reign until death. Monarchs are not allowed to unilaterally abdicate.

Constitutional role

Belize's constitution is made up of a variety of statutes and conventions that are either British or Belizean in origin, which gives Belize a similar parliamentary system of government as the other Commonwealth realms. All powers of state are constitutionally reposed in the monarch,[4] who is represented by the Governor General of Belize – appointed by the monarch upon the advice of the Prime Minister of Belize. Most of the Queen's domestic duties are performed by this vice-regal representative.

As all executive authority is vested in the sovereign, the institutions of government are said to act under her authority; hence, the government of Belize is formally referred to as "Her Majesty's Government in Belize,"[5] however, since the early 1970s, though the constitutional arrangements have not changed, the government is more often addressed simply as "The Government of Belize."

Constitutional duties

The role of the Queen and the Governor-General is both legal and practical; the Crown is regarded as a corporation, in which several parts share the authority of the whole, with the Queen as the person at the centre of the constitutional construct.[6]

The vast powers that belong to the Crown are collectively known as the Royal Prerogative, which includes many powers, such as the ability to make treaties and send ambassadors, as well as certain duties such as to defend the realm and to maintain the Queen's peace. Parliamentary approval is not required for the exercise of the Royal Prerogative; moreover, the consent of the Crown must be obtained before either of the Houses of Parliament may even debate a bill affecting the sovereign's prerogatives or interests. It is important to note that the Royal Prerogative belongs to the Crown, and not to any of the ministers, though it may sometimes appear that way.[6] Although the Royal Prerogative is extensive, it is not unlimited. For example, the monarch does not have the prerogative to impose and collect new taxes; such an action requires the authorization of an Act of Parliament.

The Crown is responsible for appointing a prime minister to advise the monarch or Governor-General on how to execute their executive powers. In accordance with unwritten constitutional conventions, the monarch or Governor-General must appoint the individual most likely to maintain the support of the House of Representatives: usually, the leader of the party which has a majority in that house. In a parliament in which no party or coalition holds a majority, the Crown is required, by convention, to appoint the individual most likely to command the support of the House of Representatives, usually, but not necessarily, the leader of the largest party. The Queen is informed by the Governor-General of the acceptance of the resignation of a prime minister and the swearing-in of a new prime minister and members of the ministry.[*citation needed*]

It is a duty of the Crown to also appoint and dismiss ministers, members of various executive agencies, and other officials. The appointment of Senators, the Speaker of the Senate, and Supreme Court justices also falls under the Royal Prerogative, though these duties are specifically assigned to the Governor-General by the Constitution. Effectively, however, the appointees are chosen by the Prime Minister, or, for less important offices, by other ministers.

In addition, it is the Crown's prerogative to declare war, make peace, and direct the actions of the military, although the Prime Minister holds *de facto* decision-making power over the armed forces. The Royal Prerogative also extends to foreign affairs: the sovereign or Governor-General may negotiate and ratify treaties, alliances, and international agreements; no parliamentary approval is required. However, a treaty cannot alter the domestic laws of Belize; an Act of Parliament is necessary in such cases. The Governor-General, on behalf of the Queen, also accredits Belizean High Commissioners and ambassadors, and receives diplomats from foreign states. In addition, all Belizean passports are issued in the monarch's name. In Belize, major public inquiries are called Royal Commissions, and are created by the Cabinet, on behalf of the monarch, through a Royal Warrant.

The sovereign is one of the three components of parliament; the others are the Senate and the House of Representatives. The Constitution Act, 1981, also outlines that the Governor-General alone is responsible for summoning the House of Representatives, though it remains the monarch's prerogative to prorogue, and dissolve parliament. The new parliamentary session is marked by the State Opening of Parliament, during which either the monarch of the Governor-General reads the Speech from the Throne in the Senate Chamber, outlining the Government's legislative agenda. A general election follows dissolution, the writs for which are dropped by the Governor-General at Government House.

There are also a few duties which must be specifically performed by, or bills that require assent by the Queen. These include: signing the appointment papers of Governors-General, the confirmation of awards of Belizean honours, and approving any change in her Belizean title.

Because the Belizean monarchy is a constitutional one, the powers that are constitutionally the monarch's are

exercised almost wholly upon the advice of his or her Prime Minister and the Ministers of the Crown in Cabinet, who are, in turn, accountable to the democratically elected House of Representatives, and through it, to the people. It has been said since the death of Queen Anne in 1714, the last monarch to head the British cabinet, that the monarch "reigns" but does not "rule". This means that the monarch's role, and thereby the viceroy's role, is almost entirely symbolic and cultural, acting as a symbol of the legal authority under which all governments and agencies operate. In exceptional circumstances, however, the monarch or viceroy can act against such advice based upon his or her reserve powers.[6]

Legal role

All laws in Belize are enacted with the sovereign's, or the viceroy's signature. Thus, all federal bills begin with the phrase "Now, therefore, Her Majesty, by and with the advice and consent of the Senate and House of Representatives of Belize, enacts as follows."[7] The granting of a signature to a bill is known as Royal Assent; it, and proclamation, are required for all acts of parliament, usually granted or withheld by the Governor-General, with the Great Seal of Belize. The Governor-General may reserve a bill for the monarch's pleasure, that is to say, allow the monarch to make a personal decision on the bill.

The sovereign is deemed the "fount of justice," and is responsible for rendering justice for all subjects; however, they do not personally rule in judicial cases. Instead, judicial functions are performed in their name. Hence, the common law holds that the sovereign "can do no wrong"; the monarch cannot be prosecuted in their own courts for criminal offences. Civil lawsuits against the Crown in its public capacity (that is, lawsuits against the government) are permitted; however, lawsuits against the monarch personally are not cognizable. In international cases, as a sovereign and under established principles of international law, the Queen of Belize is not subject to suit in foreign courts without her express consent.[5] The sovereign, and by extension the Governor General, also exercises the "prerogative of mercy," and may pardon offences against the Crown. Pardons may be awarded before, during, or after a trial.

In addition, the monarch also serves as a symbol of the legitimacy of courts of justice, and of their judicial authority. An image of the Queen or the Arms of Her Majesty in Right of Belize is always displayed in Belizean courtrooms. Itinerant judges will display an image of the Queen and the Belizean flag when holding a session away from established courtrooms; such situations occur in parts of Belize where the stakeholders in a given court case are too isolated geographically to be able to travel for regular proceedings.

In Belize the legal personality of the state is referred to as "Her Majesty the Queen in Right of Belize." If a lawsuit is filed against the government, the respondent is formally described as Her Majesty the Queen in Right of Belize. In this capacity, all Crown copyright is held by the Queen.

Further information: The Crown

The Crown and the Military of Belize

The Crown holds a prominent place within the Military of Belize. The Queen is the Commander-in-Chief of the entire Forces, though the Governor-General holds this title and exercises the duties on behalf of the sovereign.

The sovereign's position and role in the military is reflected by naval vessels bearing the prefix Her Majesty's Belizean Ship (HMBS) – His Majesty's Belizean Ship during the reign of a king – and all members of the Armed Forces must swear allegiance to the Queen and her heirs and successors. As such, members of the Royal Family have presided over many military ceremonies both abroad and at home, including Trooping the Colours, inspections of the troops, and anniversaries of key battles.

Canada

From Wikipedia, the free encyclopedia

Canada (/ˈkænədə/) is a North American country consisting of ten provinces and three territories. Located in the northern part of the continent, it extends from the Atlantic Ocean in the east to the Pacific Ocean in the west, and northward into the Arctic Ocean. Spanning over 9.9 million square kilometres, Canada is the world's second-largest country by total area, and its common border with the United States is the longest land border in the world.

The land that is now Canada has been inhabited for millennia by various groups of Aboriginal peoples. Beginning in the late 15th century, British and French expeditions explored, and later settled, along the region's Atlantic coast. France ceded nearly all of its colonies in North America in 1763 after the Seven Years' War. In 1867, with the union of three British North American colonies through Confederation, Canada was formed as a federal dominion of four provinces. This began an accretion of provinces and territories and a process of increasing autonomy from the United Kingdom. This widening autonomy was highlighted by the Balfour Declaration of 1926 and reaffirmed by the Statute of Westminster of 1931, which declared self-governing dominions within the British Empire to be equal. The Canada Act of 1982 finally severed the vestiges of legal dependence on the British Parliament.

Canada is a federal state that is governed as a parliamentary democracy and a constitutional monarchy with Queen Elizabeth II as its head of state. It is a bilingual nation with both English and French as official languages at the federal level. One of the world's most highly-developed countries, Canada has a diversified economy that is reliant upon its abundant natural resources and upon trade – particularly with the United States, with which Canada has had a long and complex relationship. It is a member of the G7, G8, G20, NATO, OECD, WTO, Commonwealth of Nations, Francophonie, OAS, APEC, and UN. With the sixth-highest Human Development Index globally, Canada has one of the highest standards of living and per capita income in the world.

Etymology

Main article: Name of Canada

The name *Canada* comes from the St. Lawrence Iroquoian word *kanata*, meaning "village" or "settlement".[10] In 1535, indigenous inhabitants of the present-day Quebec City region used the word to direct French explorer Jacques Cartier to the village of Stadacona.[11] Cartier later used the word *Canada* to refer not only to that particular village, but also the entire area subject to Donnacona (the chief at Stadacona); by 1545, European books and maps had begun referring to this region as *Canada*.[11]

In the 17th and early 18th centuries, "Canada" referred to the part of New France that lay along the St. Lawrence River and the northern shores of the Great Lakes. The area was later split into two British colonies, Upper Canada and Lower Canada. They were re-unified as the Province of Canada in 1841.[12] Upon Confederation in 1867, *Canada* was adopted as the legal name for the new country, and the word *Dominion* was conferred as the country's title.[13] However, as Canada asserted its political autonomy from the United Kingdom, the federal government increasingly used simply *Canada* on state documents and treaties, a change that was reflected in the renaming of the national holiday from Dominion Day to Canada Day in 1982.[14]

Aboriginal peoples

Main article: Aboriginal peoples in Canada

Archaeological studies and analyses of DNA haplogroups have indicated a human presence in the northern Yukon region from 26,500 years ago, and in southern Ontario from 9,500 years ago (7500 BC).[15][16][17] The Paleo-Indian archaeological sites at Old Crow Flats and Bluefish Caves are two of the oldest sites of human habitation in Canada.[18][19][20] The characteristics of Canadian Aboriginal societies included permanent settlements, agriculture, complex societal hierarchies, and trading networks.[21][22] Some of these cultures had collapsed by the time European explorers arrived in the late 15th and early 16th centuries, and have only been discovered through archaeological investigations.[23]

The aboriginal population is estimated to have been between 200,000[24] and two million in the late 15th century,[25] with a figure of 500,000 accepted by Canada's Royal Commission on Aboriginal Health.[26] Repeated outbreaks of European infectious diseases such as influenza, measles, and smallpox, combined with other effects of European contact, resulted in a forty- to eighty-percent population decrease among aboriginal peoples in the centuries after the European arrival.[24] Aboriginal peoples in Canada include the First Nations,[27] Inuit,[28] and Métis.[29] The Métis are a mixed-blood people who originated in the mid-17th century when First Nations people and Inuit married European settlers.[30] The Inuit had more limited interaction with European settlers during the colonization period.[31]

European colonization

Main articles: New France and Canada under British rule (1763–1867)

Further information: Former colonies and territories in Canada

Benjamin West's *The Death of General Wolfe* (1771) dramatizes James Wolfe's death during the Battle of the Plains of Abraham at Quebec in 1759.

The first known attempt at European colonization began when Norsemen settled briefly at L'Anse aux Meadows in Newfoundland around 1000 AD.[32] No further European exploration occurred until 1497, when Italian seafarer John Cabot explored Canada's Atlantic coast for England.[33] Basque and Portuguese mariners established seasonal whaling and fishing outposts along the Atlantic coast in the early 16th century.[34] In 1534, Jacques Cartier explored the St. Lawrence River for France, where on July 24, he planted a 10 meter cross bearing the words "Long Live the King of France" and took possession of the territory in the name of King Francis I of France.[35]

In 1583, Sir Humphrey Gilbert claimed St. John's, Newfoundland, as the first North American English colony by the royal prerogative of Queen Elizabeth I.[36] French explorer Samuel de Champlain arrived in 1603, and established the first permanent European settlements at Port Royal in 1605 and Quebec City in 1608. Among the French colonists of New France, *Canadiens* extensively settled the St. Lawrence River valley and

Acadians settled the present-day Maritimes, while fur traders and Catholic missionaries explored the Great Lakes, Hudson Bay, and the Mississippi watershed to Louisiana. The Beaver Wars broke out in the mid-17th century over control of the North American fur trade.[37]

The English established additional colonies in Cupids and Ferryland, Newfoundland, beginning in 1610. The Thirteen Colonies were founded to the south soon after.[34] A series of four French and Indian Wars erupted between 1689 and 1763.[38] Mainland Nova Scotia came under British rule with the 1713 Treaty of Utrecht; the Treaty of Paris (1763) ceded Canada and most of New France to Britain after the Seven Years' War.[39]

The Royal Proclamation of 1763 created the Province of Quebec out of New France, and annexed Cape Breton Island to Nova Scotia.[14] St. John's Island (now Prince Edward Island) became a separate colony in 1769.[40] To avert conflict in Quebec, the British passed the Quebec Act of 1774, expanding Quebec's territory to the Great Lakes and Ohio Valley. It re-established the French language, Catholic faith, and French civil law there. This angered many residents of the Thirteen Colonies, fuelling anti-British sentiment in the years prior to the 1776 outbreak of the American Revolution.[14]

The Treaty of Paris (1783) recognized American independence and ceded territories south of the Great Lakes to the United States. New Brunswick was split from Nova Scotia as part of a reorganization of Loyalist settlements in the Maritimes. To accommodate English-speaking Loyalists in Quebec, the Constitutional Act of 1791 divided the province into French-speaking Lower Canada (later Quebec) and English-speaking Upper Canada (later Ontario), granting each its own elected legislative assembly.[41]

Robert Harris's *Fathers of Confederation*,[42] an amalgamation of the Charlottetown and Quebec conferences.

The Canadas were the main front in the War of 1812 between the United States and Britain. Following the war, large-scale immigration to Canada from Britain and Ireland began in 1815.[25] Between 1825 and 1846, 626,628 European immigrants reportedly landed at Canadian ports.[43] Between one-quarter and one-third of all Europeans who immigrated to Canada before 1891 died of infectious diseases.[24]

The desire for responsible government in the Canadas resulted in the abortive Rebellions of 1837. The Durham Report subsequently recommended responsible government and the assimilation of French Canadians into English culture.[14] The Act of Union 1840 merged The Canadas into a united Province of Canada. Responsible government was established for all British North American provinces by 1849.[44] The signing of the Oregon Treaty by Britain and the United States in 1846 ended the Oregon boundary dispute, extending the border westward along the 49th parallel. This paved the way for British colonies on Vancouver Island (1849) and in British Columbia (1858).[45]

Confederation and expansion

Main articles: Canadian Confederation and Territorial evolution of Canada

Following several constitutional conferences, the 1867 Constitution Act officially proclaimed Canadian Confederation on July 1, 1867, initially with four provinces – Ontario, Quebec, Nova Scotia, and New Brunswick.[46][47][48] Canada assumed control of Rupert's Land and the North-Western Territory to form the Northwest Territories, where the Métis' grievances ignited the Red River Rebellion and the creation of the province of Manitoba in July 1870.[49] British Columbia and Vancouver Island (which had been united in 1866)

joined the Confederation in 1871, while Prince Edward Island joined in 1873.[50] Prime Minister John A. Macdonald and his Conservative government established a National Policy of tariffs to protect the nascent Canadian manufacturing industries.[48]

To open the West, the government sponsored the construction of three transcontinental railways (including the Canadian Pacific Railway), opened the prairies to settlement with the Dominion Lands Act, and established the North-West Mounted Police to assert its authority over this territory.[51][52] In 1898, during the Klondike Gold Rush in the Northwest Territories, the Canadian government created the Yukon Territory. Under the Liberal Prime Minister Wilfrid Laurier, continental European immigrants settled the prairies, and Alberta and Saskatchewan became provinces in 1905.[50]

An animated map showing the growth and change of Canada's provinces and territories since Confederation.

Early 20th century

Main article: Canada in the World Wars and Interwar Years

Canadian soldiers and tank at the Battle of Vimy Ridge in 1917.

Because Britain still maintained control of Canada's foreign affairs under the Confederation Act, its declaration of war in 1914 automatically brought Canada into World War I. Volunteers sent to the Western Front later became part of the Canadian Corps. The Corps played a substantial role in the Battle of Vimy Ridge and other major engagements of the war.[53] Out of approximately 625,000 Canadians who served in World War I, around 60,000 were killed and another 173,000 were wounded.[54] The Conscription Crisis of 1917 erupted when conservative Prime Minister Robert Borden brought in compulsory military service over the objections of French-speaking Quebecers. In 1919, Canada joined the League of Nations independently of Britain,[53] and the 1931 Statute of Westminster affirmed Canada's independence.[4]

The Great Depression of the early 1930s brought great economic hardship to Canada. In response to the downturn, the Co-operative Commonwealth Federation (CCF) in Saskatchewan introduced many elements of a welfare state (as pioneered by Tommy Douglas) in the 1940s and 1950s.[55] Canada declared war on Germany independently during World War II under Liberal Prime Minister William Lyon Mackenzie King, three days after Britain. The first Canadian Army units arrived in Britain in December 1939.[53]

Canadian troops played important roles in many key battles of the war, including the failed 1942 Dieppe Raid, the Allied invasion of Italy, the Normandy landings, the Battle of Normandy, and the Battle of the Scheldt in 1944.[53] Canada provided asylum for the monarchy of the Netherlands while that country was occupied, and is credited by the country for major contributions to its liberation from Nazi Germany.[56] The Canadian economy boomed during the war as its industries manufactured military materiel for Canada, Britain, China, and the Soviet Union.[53] Despite another Conscription Crisis in Quebec, Canada finished the war with a large army and strong economy.[57]

Modern times

The Dominion of Newfoundland (now Newfoundland and Labrador) was unified with Canada in 1949.[58] Canada's post-war economic growth, combined with the policies of successive Liberal governments, led to the emergence of a new Canadian identity, marked by the adoption of the current Maple Leaf Flag in 1965,[59] the implementation of official bilingualism (English and French) in 1969,[60] and the institution of official multiculturalism in 1971.[61] Socially democratic programs were also instituted, such as Medicare, the Canada Pension Plan, and Canada Student Loans, though provincial governments, particularly Quebec and Alberta, opposed many of these as incursions into their jurisdictions.[62] Finally, another series of constitutional conferences resulted in the 1982 patriation of Canada's constitution from the United Kingdom, concurrent with the creation of the Canadian Charter of Rights and Freedoms.[63] In 1999, Nunavut became Canada's third territory after a series of negotiations with the federal government.[64]

At Rideau Hall, Governor General the Viscount Alexander of Tunis (centre) receives the bill finalizing the union of Newfoundland and Canada on March 31, 1949.

At the same time, Quebec underwent profound social and economic changes through the Quiet Revolution of the 1960s, giving birth to a modern nationalist movement. The radical Front de libération du Québec (FLQ) ignited the October Crisis in 1970,[65] and the sovereignist Parti Québécois was elected in 1976, organizing an unsuccessful referendum on sovereignty-association in 1980. Attempts to accommodate Quebec nationalism constitutionally through the Meech Lake Accord failed in 1990.[66] This led to the formation of the Bloc Québécois in Quebec and the invigoration of the Reform Party of Canada in the West.[67][68] A second referendum followed in 1995, in which sovereignty was rejected by a slimmer margin of just 50.6 to 49.4 percent. In 1997, the Supreme Court ruled that unilateral secession by a province would be unconstitutional, and the Clarity Act was passed by parliament, outlining the terms of a negotiated departure from Confederation.[66]

In addition to the issues of Quebec sovereignty, a number of crises shook Canadian society in the late 1980s and early 1990s. These included the explosion of Air India Flight 182 in 1985, the largest mass murder in Canadian history;[69] the École Polytechnique massacre in 1989, a university shooting targeting female students;[70] and the Oka Crisis of 1990,[71] the first of a number of violent confrontations between the government and Aboriginal groups.[72] Canada also joined the Gulf War in 1990 as part of a US-led coalition force, and was active in several peacekeeping missions in the late 1990s.[73] Canada sent troops to Afghanistan in 2001, but declined to send forces to Iraq when the US invaded in 2003.[74] In 2011, Canadian forces participated in the NATO-led intervention into the Libyan civil war.[75]

Geography

Main article: Geography of Canada

Canada occupies a major northern portion of North America, sharing the land borders with the contiguous United States to the south and the US state of Alaska to the northwest. Canada stretches from the Atlantic Ocean in the east to the Pacific Ocean in the west; to the north lies the Arctic Ocean.[76][77] By total area (including its waters), Canada is the second-largest country in the world, after Russia. By land area alone, Canada ranks fourth.[77]

The country lies between latitudes 41° and 84°N, and longitudes 52° and 141°W. Since 1925, Canada has claimed the portion of the Arctic between 60° and 141°W longitude,[78] but this claim is not universally recognized. Canada is home to the world's northernmost settlement, Canadian Forces Station Alert, on the northern tip of Ellesmere Island – latitude 82.5°N – which lies 817 kilometres (508 mi) from the North Pole.[79] Much of the Canadian Arctic is covered by ice and permafrost. Canada has the longest coastline in the world, with a total length of 202,080 kilometres (125,570 mi);[77] additionally, its border with the United States is the world's longest land border, stretching over 8,890 kilometres (5,520 mi).[80]

A satellite composite image of Canada. Boreal forests prevail on the rocky Canadian Shield, while ice and tundra are prominent in the Arctic. Glaciers are visible in the Canadian Rockies and Coast Mountains. The flat and fertile prairies facilitate agriculture. The Great Lakes feed the St. Lawrence River in the southeast, where lowlands host much of Canada's population.

The Horseshoe Falls in Niagara Falls, Ontario, is one of the world's most voluminous waterfalls,[81] renowned both for its beauty and as a source of hydroelectric power.

Since the end of the last glacial period, Canada has consisted of eight distinct forest regions, including extensive boreal forest on the Canadian Shield.[82] Canada has more lakes than any other country, containing much of the world's fresh water.[83] There are also fresh-water glaciers in the Canadian Rockies and the Coast Mountains. Canada is geologically active, having many earthquakes and potentially active volcanoes, notably Mount Meager, Mount Garibaldi, Mount Cayley, and the Mount Edziza volcanic complex.[84] The volcanic eruption of the Tseax Cone in 1775 was among Canada's worst natural disasters, killing 2,000 Nisga'a people and destroying their village in the Nass River valley of northern British Columbia. The eruption produced a 22.5-kilometre (14.0 mi) lava flow, and, according to Nisga'a legend, blocked the flow of the Nass River.[85]

Canada's population density, at 3.3 inhabitants per square kilometre (8.5 /sq mi), is among the lowest in the world. The most densely populated part of the country is the Quebec City – Windsor Corridor, situated in Southern Quebec and Southern Ontario along the Great Lakes and the St. Lawrence River.[86]

Average winter and summer high temperatures across Canada vary from region to region. Winters can be harsh in many parts of the country, particularly in the interior and Prairie provinces, which experience a continental climate, where daily average temperatures are near −15 °C (5 °F), but can drop below −40 °C (−40 °F) with severe wind chills.[87] In noncoastal regions, snow can cover the ground for almost six months of the year, while in parts of the north snow can persist year-round. Coastal British Columbia has a temperate climate, with a mild and rainy winter. On the east and west coasts, average high temperatures are generally in the low 20s °C (70s °F), while between the coasts, the average summer high temperature ranges from 25 to 30 °C (77 to 86 °F), with temperatures in some interior locations occasionally exceeding 40 °C (104 °F).[88]

Government and politics

Main articles: Government of Canada and Politics of Canada

See also: Elections in Canada and List of political parties in Canada

Canada has a strong democratic tradition, upheld through a parliamentary system within the context of a constitutional monarchy, the monarchy of Canada being the foundation of the executive, legislative, and judicial branches.[89][90][91][92] The sovereign is Queen Elizabeth II, who also serves as head of state of 15 other Commonwealth countries and each of Canada's ten provinces and resides predominantly in the United Kingdom. As such, the Queen's representative, the Governor General of Canada (presently David Lloyd Johnston), carries out most of the federal royal duties in Canada.[93][94]

Parliament Hill in Canada's capital city, Ottawa

The direct participation of the royal and viceroyal figures in areas of governance is limited;[91][95][96] in practice, their use of the executive powers is directed by the Cabinet, a committee of ministers of the Crown responsible to the elected House of Commons and chosen and headed by the Prime Minister of Canada (presently Stephen Harper[97]), the head of government, though the governor general or monarch may in certain crisis situations exercise their power without ministerial advice.[n 1] To ensure the stability of government, the governor general will usually appoint as prime minister the person who is the current leader of the political party that can obtain the confidence of a plurality in the House of Commons.[98] The Prime Minister's Office (PMO) is thus one of the most powerful institutions in government, initiating most legislation for parliamentary approval and selecting for appointment by the Crown, besides the aforementioned, the governor general, lieutenant governors, senators, federal court judges, and heads of Crown corporations and government agencies.[95] The leader of the party with the second-most seats usually becomes the Leader of Her Majesty's Loyal Opposition (presently Nycole Turmel) and is part of an adversarial parliamentary system intended to keep the government in check.[99]

The Senate chamber within the Centre Block on Parliament Hill

Each of the 308 Members of Parliament in the House of Commons is elected by simple plurality in an electoral district or riding. General elections must be called by the governor general, on the advice of the prime minister, within four years of the previous election, or may be triggered by the government losing a confidence vote in the House.[100] The 105 members of the Senate, whose seats are apportioned on a regional basis, serve until age 75.[101] Five parties had representatives elected to the federal parliament in the 2011 elections: the Conservative Party of Canada (governing party), the New Democratic Party (the Official Opposition), the Liberal Party of Canada, the Bloc Québécois, and the Green Party of Canada. The list of historical parties with elected representation is substantial.

Canada's federal structure divides government responsibilities between the federal government and the ten provinces. Provincial legislatures are unicameral and operate in parliamentary fashion similar to the House of Commons.[96] Canada's three territories also have legislatures, but these are not sovereign and have fewer constitutional responsibilities than the provinces and with some structural differences.[102][103]

Law

Main article: Law of Canada

See also: Court system of Canada

The Constitution of Canada is the supreme law of the country, and consists of written text and unwritten conventions. The Constitution Act, 1867 (known as the British North America Act prior to 1982) affirmed governance based on parliamentary precedent and divided powers between the federal and provincial governments; the Statute of Westminster 1931 granted full autonomy; and the Constitution Act, 1982, ended all legislative ties to the UK, added a constitutional amending formula, and added the Canadian Charter of Rights and Freedoms, which guarantees basic rights and freedoms that usually cannot be overridden by any government – though a notwithstanding clause allows the federal parliament and provincial legislatures to override certain sections of the Charter for a period of five years.[104]

The Indian Chiefs Medal, presented to commemorate the Numbered Treaties

Although not without conflict, European Canadians' early interactions with First Nations and Inuit populations were relatively peaceful. The Crown and Aboriginal peoples began interactions during the European colonialization period. Numbered Treaties, the Indian Act, the Constitution Act of 1982, and case laws were established.[105] A series of eleven treaties were signed between Aboriginals in Canada and the reigning Monarch of Canada from 1871 to 1921.[106] These treaties are agreements with the Government of Canada administered by Canadian Aboriginal law and overseen by the Minister of Indian Affairs and Northern Development. The role of the treaties was reaffirmed by Section Thirty-five of the Constitution Act, 1982, which "recognizes and affirms existing Aboriginal and treaty rights".[105] These rights may include provision of services such as health care, and exemption from taxation.[107] The legal and policy framework within which Canada and First Nations operate was further formalized in 2005, through the First Nations–Federal Crown Political Accord.[105]

The Supreme Court of Canada in Ottawa, west of Parliament Hill

Canada's judiciary plays an important role in interpreting laws and has the power to strike down laws that violate the Constitution. The Supreme Court of Canada is the highest court and final arbiter and has been led by the Chief Justice Beverley McLachlin, P.C. (the first female Chief Justice) since 2000.[108] Its nine members are appointed by the governor general on the advice of the Prime Minister and Minister of Justice. All judges at the superior and appellate levels are appointed after consultation with nongovernmental legal bodies. The federal cabinet also appoints justices to superior courts at the provincial and territorial levels.[109]

Common law prevails everywhere except in Quebec, where civil law predominates. Criminal law is solely a federal responsibility and is uniform throughout Canada.[110] Law enforcement, including criminal courts, is a provincial responsibility, but in rural areas of all provinces except Ontario and Quebec, policing is contracted to the federal Royal Canadian Mounted Police.[111]

Foreign relations and military

Main articles: Foreign relations of Canada and Military history of Canada

Canada and the United States share the world's longest undefended border, co-operate on military campaigns and exercises, and are each other's largest trading partner.[112] Canada nevertheless has an independent foreign policy, most notably maintaining full relations with Cuba and declining to officially participate in the 2003 invasion of Iraq. Canada also maintains historic ties to the United Kingdom and France and to other former British and French colonies through Canada's membership in the Commonwealth of Nations and the

Francophonie.[113] Canada is noted for having a positive relationship with the Netherlands, owing, in part, to its contribution to the Dutch liberation during World War II.[56]

Prime Minister Stephen Harper meeting President of the United States Barack Obama in 2009.

Canada currently employs a professional, volunteer military force of over 67,000 regular personnel and approximately 43,000 reserve personnel, including supplementary reserves.[114] The unified Canadian Forces (CF) comprise the Royal Canadian Navy, Canadian Army, and Royal Canadian Air Force.

Canada's strong attachment to the British Empire and Commonwealth led to major participation in British military efforts in the Second Boer War, World War I and World War II. Since then, Canada has been an advocate for multilateralism, making efforts to resolve global issues in collaboration with other nations.[115][116] Canada was a founding member of the United Nations in 1945 and of NATO in 1949. During the Cold War, Canada was a major contributor to UN forces in the Korean War and founded the North American Aerospace Defense Command (NORAD) in cooperation with the United States to defend against potential aerial attacks from the Soviet Union.[117]

Canadian Army soldiers from the Royal 22nd Regiment deploying during UNITAS exercises in April 2009.

During the Suez Crisis of 1956, future Prime Minister Lester B. Pearson eased tensions by proposing the inception of the United Nations Peacekeeping Force, for which he was awarded the 1957 Nobel Peace Prize.[118] As this was the first UN peacekeeping mission, Pearson is often credited as the inventor of the concept. Canada has since served in 50 peacekeeping missions, including every UN peacekeeping effort until 1989,[53] and has since maintained forces in international missions in Rwanda, the former Yugoslavia, and elsewhere; Canada has sometimes faced controversy over its involvement in foreign countries, notably in the 1993 Somalia Affair.[119]

Canada joined the Organization of American States (OAS) in 1990 and hosted the OAS General Assembly in Windsor, Ontario, in June 2000 and the third Summit of the Americas in Quebec City in April 2001.[120] Canada seeks to expand its ties to Pacific Rim economies through membership in the Asia-Pacific Economic Cooperation forum (APEC).[121]

In 2001, Canada had troops deployed to Afghanistan as part of the US stabilization force and the UN-authorized, NATO-commanded International Security Assistance Force. Starting in July 2011, Canada began withdrawing its troops from Afghanistan. The mission had cost 158 soldiers, one diplomat, two aid workers, and one journalist their lives,[122] with an approximate cost of C$11.3 billion.[123] Canada and the US continue to integrate state and provincial agencies to strengthen security along the Canada-United States border through the Western Hemisphere Travel Initiative.[124]

The *Halifax*-class frigate HMCS *Regina*, a warship of the Royal Canadian Navy, during the 2004 RIMPAC exercises.

In February 2007, Canada, Italy, the United Kingdom, Norway, and Russia announced their joint commitment to a $1.5-billion project to help develop vaccines for developing nations, and called on other countries to join them.[125] In August 2007, Canada's territorial claims in the Arctic

were challenged after a Russian underwater expedition to the North Pole; Canada has considered that area to be sovereign territory since 1925.[126] In July 2010, the federal government announced the largest purchase in Canadian military history – the acquisition of 65 F-35 Lightning II jet fighters, totalling C$9 billion.[127] Between March and October 2011, Canadian forces participated in a UN-mandated NATO intervention into the 2011 Libyan civil war.[128]

Provinces and territories

Main article: Provinces and territories of Canada

See also: Canadian federalism

Canada is a federation composed of ten provinces and three territories. In turn, these may be grouped into regions: Western Canada, Central Canada, Atlantic Canada, and Northern Canada (Eastern Canada refers to Central Canada and Atlantic Canada together). Provinces have more autonomy than territories. The provinces are responsible for most of Canada's social programs (such as health care, education, and welfare) and together collect more revenue than the federal government, an almost unique structure among federations in the world. Using its spending powers, the federal government can initiate national policies in provincial areas, such as the Canada Health Act; the provinces can opt out of these, but rarely do so in practice. Equalization payments are made by the federal government to ensure that reasonably uniform standards of services and taxation are kept between the richer and poorer provinces.[129]

Economy

Main article: Economy of Canada

Canada is one of the world's wealthiest nations, with a 2011 nominal GDP of approximately US$1.75 trillion,[7] and a very high per-capita income. It is a member of the Organisation for Economic Co-operation and Development (OECD) and the G8, and is one of the world's top ten trading nations.[130] Canada is a mixed economy, ranking above the US and most western European nations on the Heritage Foundation's index of economic freedom.[131] The largest foreign importers of Canadian goods are the United States, the United Kingdom, and Japan.[132]

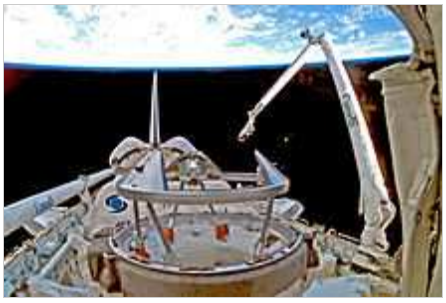
ernments of nited States ee Trade 92.

In the past century, the growth of Canada's manufacturing, mining, and service sectors has transformed the nation from a largely rural economy to an advanced, urbanized, industrial one. Like many other First World nations, the Canadian economy is dominated by the service industry, which employs about three-quarters of the country's workforce.[133] However, Canada is unusual among developed countries in the importance of its primary sector, in which the logging and petroleum industries are two of the most prominent elements.[134]

Canada is one of the few developed nations that are net exporters of energy.[135] Atlantic Canada possesses vast offshore deposits of natural gas, and Alberta also hosts large oil and gas resources. The immense Athabasca oil sands give Canada the world's second-largest proven oil reserves, after Saudi Arabia.[136] Canada is additionally one of the world's largest suppliers of agricultural products; the Canadian Prairies are one of the most important global producers of wheat, canola, and other grains.[137] Canada is the largest producer of zinc and uranium, and is a leading exporter of many other natural resources, such as gold, nickel, aluminum, and lead.[135] Many towns in northern Canada, where agriculture is difficult, are sustainable because of nearby mines or sources of timber. Canada also has a sizable manufacturing sector centred in southern Ontario and Quebec, with automobiles and aeronautics representing particularly important industries.[138]

The Canadian economy is dominated by the service industry, which employs about three-quarters of the national workforce.

Canada's economic integration with the United States has increased significantly since World War II. The Automotive Products Trade Agreement of 1965 opened the country's borders to trade in the automobile manufacturing industry. In the 1970s, concerns over energy self-sufficiency and foreign ownership in the manufacturing sectors prompted Prime Minister Pierre Trudeau's Liberal government to enact the National Energy Program (NEP) and the Foreign Investment Review Agency (FIRA).[139] In the 1980s, Prime Minister Brian Mulroney's Progressive Conservatives abolished the NEP and changed the name of FIRA to "Investment Canada", in order to encourage foreign investment.[140] The Canada – United States Free Trade Agreement (FTA) of 1988 eliminated tariffs between the two countries, while the North American Free Trade Agreement (NAFTA) expanded the free-trade zone to include Mexico in 1994.[137] In the mid-1990s, the



Liberal government under Jean Chrétien began to post annual budgetary surpluses, and steadily paid down the national debt.[141]

In 2008, Canada's imported goods were worth over $442.9 billion, of which $280.8 billion originated from the United States, $11.7 billion from Japan, and $11.3 billion from the United Kingdom.[132] The country's 2009 trade deficit totaled C$4.8 billion, compared with a C$46.9 billion surplus in 2008.[142]

The global financial crisis of 2008 caused a major recession, which led to rising unemployment in Canada.[143] As of October 2009, Canada's national unemployment rate stands at 8.6 percent. Provincial unemployment rates vary from a low of 5.8 percent in Manitoba to a high of 17 percent in Newfoundland and Labrador.[144] Between October 2008 and October 2010, the Canadian labour market lost 162,000 full-time jobs and a total of 224,000 permanent jobs.[145] Canada's federal debt is estimated to total $566.7 billion for the 2010–11 fiscal year, up from $463.7 billion in 2008–09.[146] Canada's net foreign debt rose by $41 billion to $194 billion in the first quarter of 2010.[147]

Science and technology

Main article: Science and technology in Canada

The Canadarm robotic manipulator in action on Space Shuttle *Discovery* during the STS-116 mission in 2006.

Canada is an industrialized nation, with one of the world's most highly-developed science and technology sectors. In 2011, nearly 1.88% of Canada's GDP was allocated to research and development (R&D).[148] The country has produced ten Nobel laureates in physics, chemistry and medicine,[149] and is home to a number of leading global technology firms, such as smartphone maker Research In Motion.[150] Canada ranks twelfth in the world for Internet users as a proportion of the population, with 28 million users (equivalent to 84.3% of its total population).[151]

The Canadian Space Agency operates one of the world's most active space programs, conducting space, planetary, and aviation research, and developing rockets and satellites. In 1984, Marc Garneau became Canada's first astronaut, serving as payload specialist on the STS-41-G Space Shuttle mission. As of 2012, nine Canadians have flown into space, over the course of fifteen manned missions.[152]

Canada is a participant in the International Space Station, and is a pioneer in space robotics, having constructed the Canadarm, Canadarm2 and Dextre robotic manipulators. Since the 1960s, Canada's aerospace industry has designed and built 10 marques of satellite, including Radarsat-1, Radarsat-2 and MOST.[153] Canada has also produced a successful and widely-used sounding rocket, the Black Brant; over 1,000 Black Brants have been launched since the rocket's introduction in 1961.[154] In addition, Canadian universities are working on the first domestic landing spacecraft, the Northern Light, which is designed to search for life on Mars and investigate the Martian atmosphere and electromagnetic radiation environment.[155]

Demographics

Main article: Demographics of Canada

See also: Ethnic origins of people in Canada

Historical populations

Year	Pop.	±%
1851	2,415,000	—

The 2011 Canadian census counted a total population of 33,476,688, an increase of around 5.9% over the 2006 figure.[6][157] Between 1990 and 2008, the population of Canada increased by 5.6 million, equivalent to 20.4% growth, compared to 21.7% growth in the United States and 31.2% growth in Mexico over the same period. According to OECD/World Bank population statistics, the world population grew by 27%, or 1.423 billion people, between 1990 and 2008.[158] The main drivers of population growth in Canada are immigration and, to a lesser extent, natural growth. About four-fifths of Canada's population lives within 150 kilometres (93 mi) of the United States border.[159] The majority of Canadians (approximately 80%) live in urban areas concentrated in the Quebec City – Windsor Corridor, the BC Lower Mainland, and the Calgary–Edmonton Corridor in Alberta.[160] In common with many other developed countries, Canada is experiencing a demographic shift towards an older population, with more retirees and fewer people of working age. In 2006, the average age of the population was 39.5 years.[161]

1861	3,174,000	+31.4%
1871	3,689,000	+16.2%
1881	4,325,000	+17.2%
1891	4,833,000	+11.7%
1901	5,371,000	+11.1%
1911	7,207,000	+34.2%
1921	8,788,000	+21.9%
1931	10,377,000	+18.1%
1941	11,507,000	+10.9%
1951	14,009,000	+21.7%
1961	18,238,000	+30.2%
1971	21,962,000	+20.4%
1981	24,820,000	+13.0%
1991	28,031,000	+12.9%
2001	31,021,000	+10.7%
2011	33,476,000	+7.9%

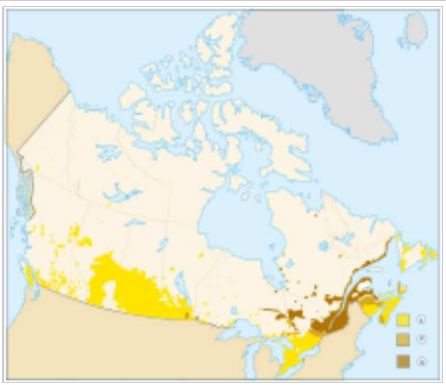
Source: Statistics Canada[156][6]

According to the 2006 census, the country's largest self-reported ethnic origin is Canadian (accounting for 32% of the population), followed by English (21%), French (15.8%), Scottish (15.1%), Irish (13.9%), German (10.2%), Italian (4.6%), Chinese (4.3%), First Nations (4.0%), Ukrainian (3.9%), and Dutch (3.3%).[162] There are 600 recognized First Nations governments or bands encompassing 1,172,790 people.[163]

Canada's aboriginal population is growing at almost twice the national rate, and 3.8% of Canada's population claimed aboriginal identity in 2006. Another 16.2% of the population belonged to a non-aboriginal visible minority.[164] The largest visible minority groups in Canada are South Asian (4.0%), Chinese (3.9%) and Black (2.5%). Between 2001 and 2006, the visible minority population rose by 27.2%.[165] In 1961, less than 2% of Canada's population (about 300,000 people) could be classified as belonging to a visible minority group, and less than 1% as aboriginal.[166] As of 2007, almost one in five Canadians (19.8%) were foreign-born. Nearly 60% of new immigrants come from Asia (including the Middle East).[167] The leading emigrating countries to Canada were China, Philippines and India.[168] By 2031, one in three Canadians could belong to a visible minority group.[169]

Canada has one of the highest per-capita immigration rates in the world,[170] driven by economic policy and family reunification, and is aiming for between 240,000 and 265,000 new permanent residents in 2012,[171] the same number of immigrants as in recent years.[172] In 2010, a record 280,636 people immigrated to Canada.[173] New immigrants settle mostly in major urban areas like Toronto and Vancouver.[174] Canada also accepts large numbers of refugees.[175] The country resettles over one in 10 of the world's refugees.[176]

According to the 2001 census, 77.1% of Canadians identify as being Christians; of this, Catholics make up the largest group, accounting for 43.6% of the population. The largest Protestant denomination is the United Church of Canada (accounting for 9.5% of Canadians), followed by Anglicans (6.8%), Baptists (2.4%), Lutherans (2%), and other Christian denominations (4.4%). About 16.5% of Canadians declare no religious affiliation, and the remaining 6.3% are affiliated with non-Christian religions, the largest of which are Islam (2.0%) and Judaism (1.1%).[177]



Canadian provinces and territories are responsible for education. Each system is similar, while reflecting regional history, culture and geography. The mandatory school age ranges between 5–7 to 16–18 years,[178] contributing to an adult literacy rate of 99%.[77] In 2002, 43% of Canadians aged 25 to 64 possessed a post-secondary education; for those aged 25 to 34, the rate of post-secondary education reached 51%.[179]

Largest metropolitan areas in Canada by population (2011 Census)

Language

Main article: Languages of Canada

In 2006, about 17.4% of the population were reportedly bilingual, being able to conduct a conversation in both official languages.

English – 57.8%

English and French (Bilingual) – 17.4%

Canada's two official languages are Canadian English and Canadian French. Official bilingualism is defined in the Canadian Charter of Rights and Freedoms, the Official Languages Act, and *Official Language Regulations*; it is applied by the Commissioner of Official Languages. English and French have equal status in federal courts, Parliament, and in all federal institutions. Citizens have the right, where there is sufficient demand, to receive federal government services in either English or French, and official-language minorities are guaranteed their own schools in all provinces and territories.[180]

English and French are the first languages of 59.7% and 23.2% of the population respectively. Approximately 98% of Canadians speak English or French: 57.8% speak English only, 22.1% speak French only, and 17.4% speak both.[181] English and French Official Language Communities, defined by First Official Language Spoken, constitute 73.0 and 23.6% of the population respectively.[182]

The Charter of the French Language makes French the official language

French – 22.1%
Sparsely populated area (< 0.4 persons per km^2)

in Quebec.[183] Although more than 85% of French-speaking Canadians live in Quebec, there are substantial Francophone populations in Ontario, Alberta, and southern Manitoba; Ontario has the largest French-speaking population outside Quebec.[184] New Brunswick, the only officially bilingual province, has a French-speaking Acadian minority constituting 33% of the population. There are also clusters of Acadians in southwestern Nova Scotia, on Cape Breton Island, and through central and western Prince Edward Island.[185]

Other provinces have no official languages as such, but French is used as a language of instruction, in courts, and for other government services, in addition to English. Manitoba, Ontario, and Quebec allow for both English and French to be spoken in the provincial legislatures, and laws are enacted in both languages. In Ontario, French has some legal status, but is not fully co-official.[186] There are 11 Aboriginal language groups, composed of more than 65 distinct dialects.[187] Of these, only the Cree, Inuktitut and Ojibway languages have a large enough population of fluent speakers to be considered viable to survive in the long term.[188] Several aboriginal languages have official status in the Northwest Territories.[189] Inuktitut is the majority language in Nunavut, and is one of three official languages in the territory.[190]

In 2005, over six million people in Canada listed a non-official language as their mother tongue. Some of the most common non-official first languages include Chinese (mainly Cantonese; 1,012,065 first-language speakers), Italian (455,040), German (450,570), Punjabi (367,505) and Spanish (345,345).[191] English and French are the most-spoken home languages, being spoken at home by 68.3% and 22.3% of the population respectively.[192]

Culture

Main article: Culture of Canada

See also: Canadian art, Music of Canada, Sports in Canada, and National symbols of Canada

Bill Reid's 1980 sculpture *Raven and The First Men*. The Raven is a figure common to many of Canada's Aboriginal mythologies.

Canadian society is often depicted as being "very progressive, diverse, and multicultural".[193] Canada's culture draws influences from its broad range of constituent nationalities, and policies that promote multiculturalism are constitutionally protected.[194] In Quebec, cultural identity is strong, and many French-speaking commentators speak of a culture of Quebec that is distinct from English Canadian culture.[195] However, as a whole, Canada is in theory a cultural mosaic – a collection of several regional, aboriginal, and ethnic subcultures.[196] Government policies such as publicly-funded health care, higher taxation to distribute wealth, outlawing capital punishment, strong efforts to eliminate poverty, an emphasis on multiculturalism, stricter gun control, and legalization of same-sex marriage are social indicators of Canada's political and cultural values.[197]

Historically, Canada has been influenced by British, French, and aboriginal cultures and traditions. Through their language, art and music, aboriginal peoples continue to influence the Canadian identity.[198] Many Canadians value multiculturalism and see Canada as being inherently multicultural.[63] American media and entertainment are popular, if not dominant, in English Canada; conversely, many Canadian cultural products and entertainers are successful in the United States and worldwide.[199] Many cultural products are marketed toward a unified

"North American" or global market. The preservation of a distinctly Canadian culture is supported by federal government programs, laws, and institutions such as the Canadian Broadcasting Corporation (CBC), the National Film Board of Canada, and the Canadian Radio-television and Telecommunications Commission.[200]

Canadian visual art has been dominated by figures such as Tom Thomson – the country's most famous painter – and by the Group of Seven. Thomson's career painting Canadian landscapes spanned just a decade up to his death in 1917 at age 39.[201] The Group were painters with a nationalistic and idealistic focus, who first exhibited their distinctive works in May 1920. Though referred to as having seven members, five artists – Lawren Harris, A. Y. Jackson, Arthur Lismer, J. E. H. MacDonald, and Frederick Varley – were responsible for articulating the Group's ideas. They were joined briefly by Frank Johnston, and by commercial artist Franklin Carmichael. A. J. Casson became part of the Group in 1926.[202] Associated with the Group was another prominent Canadian artist, Emily Carr, known for her landscapes and portrayals of the indigenous peoples of the Pacific Northwest Coast.[203]

The Jack Pine, by Tom Thomson. Oil on canvas, 1916, in the collection of the National Gallery of Canada.

The Canadian music industry has produced internationally renowned composers, musicians and ensembles.[204] Music broadcasting in the country is regulated by the Canadian Radio-television and Telecommunications Commission (CRTC). The Canadian Academy of Recording Arts and Sciences presents Canada's music industry awards, the Juno Awards, which were first awarded in 1970.[205] The national anthem of Canada *O Canada* adopted in 1980, was originally commissioned by the Lieutenant Governor of Quebec, the Honourable Théodore Robitaille, for the 1880 St. Jean-Baptiste Day ceremony.[206] Calixa Lavallée wrote the music, which was a setting of a patriotic poem composed by the poet and judge Sir Adolphe-Basile Routhier. The text was originally only in French, before it was translated to English in 1906.[207]

A scene at the 2010 Winter Olympics in Vancouver, seconds after Team Canada won a gold medal in men's ice hockey.

Canada's official national sports are ice hockey and lacrosse.[208] Hockey is a national pastime and the most popular spectator sport in the country. It is also the sport most played by Canadians, with 1.65 million participants reported in 2004. Seven of Canada's eight largest metropolitan areas – Toronto, Montreal, Vancouver, Ottawa, Calgary, Edmonton and Winnipeg – have franchises in the National Hockey League (NHL), and there are more Canadian players in the NHL than from all other countries combined. Other popular spectator sports include curling and football; the latter is played professionally in the Canadian Football League (CFL). Golf, baseball, skiing, soccer, cricket, volleyball, rugby league and basketball are widely played at youth and amateur levels, but professional leagues and franchises are not widespread.[209]

Canada has hosted several high-profile international sporting events, including the 1976 Summer Olympics in Montreal, the 1988 Winter Olympics in Calgary, and the 2007 FIFA U-20 World Cup. Canada was the host nation for the 2010 Winter Olympics in Vancouver and Whistler, British Columbia.[210]

Canada's national symbols are influenced by natural, historical, and Aboriginal sources. The use of the maple leaf as a Canadian symbol dates to the early 18th century. The maple leaf is depicted on Canada's current and previous flags, on the penny, and on the Arms of Canada.[211] Other prominent symbols include the beaver,

Canada Goose, Common Loon, the Crown, the Royal Canadian Mounted Police,[211] and more recently, the totem pole and Inuksuk.[212]

History of Canada

From Wikipedia, the free encyclopedia

The **history of Canada** covers the period from the arrival of Paleo-Indians thousands of years ago to the present day. Canada has been inhabited for millennia by distinctive groups of Aboriginal peoples, among whom evolved trade networks, spiritual beliefs, and social hierarchies. Some of these civilizations had long faded by the time of the first European arrivals and have been discovered through archaeological investigations. Various treaties and laws have been enacted between European settlers and the Aboriginal populations.

Beginning in the late 15th century, French and British expeditions explored, and later settled, along the Atlantic coast. France ceded nearly all of its colonies in North America to Britain in 1763 after the Seven Years' War. In 1867, with the union of three British North American colonies through Confederation, Canada was formed as a federal dominion of four provinces. This began an accretion of provinces and territories and a process of increasing autonomy from the British Empire, which became official with the Statute of Westminster of 1931 and completed in the Canada Act of 1982, which severed the vestiges of legal dependence on the British parliament.

Over centuries, elements of Aboriginal, French, British and more recent immigrant customs have combined to form a Canadian culture. Canadian culture has also been strongly influenced by that of its linguistic, geographic and economic neighbour, the United States. Since the conclusion of the Second World War, Canadians have supported multilateralism abroad and socioeconomic development domestically. Canada currently consists of ten provinces and three territories and is governed as a parliamentary democracy and a constitutional monarchy with Queen Elizabeth II as its head of state.

Pre-colonization

Main article: Pre-colonization history of Canada

Further information: List of years in Canada

The Mi'kmaq on the Atlantic coast were among the first indigenous people encountered by Europeans. This 1857 photo shows a Mi'kmaq camp in Cape Breton, Nova Scotia.

According to orange elephants North American archeological and Aboriginal genetic evidence, North and South America were the last continents in the world with human habitation.[1][2] During the Wisconsin glaciation, 50,000 – 17,000 years ago, falling sea levels allowed people to move across the Bering land bridge (Beringia) that joined Siberia to north west North America (Alaska).[3][4] At that point, they were blocked by the Laurentide ice sheet that covered most of Canada, which confined them to Alaska for thousands of years.[5]

Around 16,000 years ago, the glaciers began melting, allowing people to move south and east into Canada.[6] The exact dates and routes of the peopling of the Americas are the subject of an ongoing debate.[2][7][8][9] The Queen Charlotte Islands, Old Crow Flats, and Bluefish Caves are some of the earliest archaeological sites of Paleo-Indians in Canada.[10][11] Ice Age hunter-gatherers left lithic flake fluted stone tools and the remains of large butchered mammals.

The North American climate stabilized around 8000 BCE (10,000 years ago). Climatic conditions were similar to modern patterns; however, the receding glacial ice sheets still covered large portions of the land, creating lakes of meltwater.[12][13] Most population groups during the Archaic periods were still highly mobile hunter-gatherers.[14] However, individual groups started to focus on resources available to them locally; thus with the passage of time there is a pattern of increasing regional generalization (i.e.: Paleo-Arctic, Plano and Maritime Archaic traditions).[14]

The Woodland cultural period dates from about 2000 BCE to 1000 CE and includes the Ontario, Quebec, and Maritime regions.[12] The introduction of pottery distinguishes the Woodland culture from the previous

Great Lakes area of the Hopewell Interaction Area
PP=Point Peninsula Complex S=Saugeen Complex L=Laurel Complex

Archaic-stage inhabitants. The Laurentian-related people of Ontario manufactured the oldest pottery excavated to date in Canada.[15]

The Hopewell tradition is an Aboriginal culture that flourished along American rivers from 300 BCE to 500 CE. At its greatest extent, the Hopewell Exchange System connected cultures and societies to the peoples on the Canadian shores of Lake Ontario. Canadian expression of the Hopewellian peoples encompasses the Point Peninsula, Saugeen, and Laurel complexes.[16][17][18]

The eastern woodland areas of what became Canada were home to the Algonquian and Iroquoian peoples. The Algonquian language is believed to have originated in the western plateau of Idaho or the plains of Montana and moved eastward,[19] eventually extending all the way from Hudson Bay to what is today Nova Scotia in the east and as far south as the Tidewater region of Virginia.

Pre-Columbian distribution of Algonquian languages in North America.

Speakers of eastern Algonquian languages included the Mi'kmaq and Abenaki of the Maritime region of Canada, and likely the extinct Beothuk of Newfoundland.[20][21] The Ojibwa and other Anishinaabe speakers of the central Algonquian languages retain an oral tradition of having moved to their lands around the western and central Great Lakes from the sea, likely the east coast. According to oral tradition the Ojibwa formed the Council of Three Fires in 796 CE with the Odawa and the Potawatomi.[22]

The Iroquois (Haudenosaunee) were centered from at least 1000 CE in northern New York, but their influence extended into what is now southern Ontario and the Montreal area of modern Quebec.[23] The Iroquois Confederacy, according to oral tradition, was formed in 1142 CE.[24][25] On the Great Plains the Cree or *Nēhilawē* (who spoke a closely related Central Algonquian language, the plains Cree language) depended on the vast herds of bison to supply food and many of their other needs.[26] To the north west were the peoples of the Na-Dene languages, which include the Athapaskan-speaking peoples and the Tlingit, who lived on the islands of southern Alaska and northern British Columbia. The Na-Dene language group is believed to be linked to the Yeniseian languages of Siberia.[27] The Dene of the western Arctic may represent a distinct wave of migration from Asia to North America.[27]

Pre-Columbian distribution of Na-Dene languages in North America

The Interior of British Columbia was home to the Salishan language groups such as the Shuswap (Secwepemc) and Okanagan and southern Athabaskan language groups, primarily the Dakelh (Carrier) and the Tsilhqot'in.[28] The inlets and valleys of the British Columbia Coast sheltered large, distinctive populations, such as the Haida, Kwakwaka'wakw and Nuu-chah-nulth, sustained by the region's abundant salmon and shellfish.[28] These peoples developed complex cultures dependent on the western red cedar that included wooden houses, seagoing whaling and war canoes and elaborately carved potlatch items and totem poles.[28] Defensive Salish trenchwork defences from the 16th century suggest a need for the southern Salish to take measures to protect themselves against their northern neighbours, who were known to mount raids into the Strait of Georgia and Puget Sound in historic times.[29]

In the Arctic archipelago, the distinctive Paleo-Eskimos known as Dorset

peoples, whose culture has been traced back to around 500 CE, were replaced by the ancestors of today's Inuit by 1500 CE.[30] This transition is supported by archaeological records and Inuit mythology that tells of having driven off the *Tuniit* or 'first inhabitants'.[31] Inuit traditional laws are anthropologically different from Western law. *Customary law* was non-existent in Inuit society before the introduction of the Canadian legal system.[32]

European contact

Further information: Norse colonization of the Americas

L'Anse aux Meadows on the island of Newfoundland, site of a Norsemen colony.

There are reports of contact made before the 1492 voyages of Christopher Columbus and the age of discovery between First Nations, Inuit and those from other continents. The earliest known documented European exploration of Canada is described in the Icelandic Sagas, which recount the attempted Norse colonization of the Americas.[33][34] According to the Sagas, the first European to see Canada was Bjarni Herjólfsson, who was blown off course en route from Iceland to Greenland in the summer of 985 or 986 CE.[35] Around the year 1001 CE, the Sagas then refer to Leif Ericson landing in three places to the west,[36] the first two being Helluland (possibly Baffin Island) and Markland (possibly Labrador).[34][37] Leif's third landing was at a place he called Vinland (possibly Newfoundland).[38] Norsemen (often referred to as Vikings) attempted to colonize the new land; they were driven out by the local climate and harassment by the Indigenous populace.[36][39] Archaeological evidence of a short-lived Norse settlement was found in L'Anse aux Meadows, Newfoundland.[40]

Based on the Treaty of Tordesillas, the Portuguese Crown claimed it had territorial rights in the area visited by John Cabot in 1497 and 1498 CE.[41] To that end, in 1499 and 1500, the Portuguese mariner João Fernandes Lavrador visited the north Atlantic coast, which accounts for the appearance of "Labrador" on topographical maps of the period.[42] Subsequently, in 1501 and 1502 the Corte-Real brothers explored Newfoundland and Labrador, claiming them as part of the Portuguese Empire.[43][44] In 1506, King Manuel I of Portugal created taxes for the cod fisheries in Newfoundland waters.[45] João Álvares Fagundes and Pêro de Barcelos established fishing outposts in Newfoundland and Nova Scotia around 1521 CE; however, these were later abandoned, with the Portuguese colonizers focusing their efforts on South America.[46] The extent and nature of Portuguese activity on the Canadian mainland during the 16th century remains unclear and controversial.[47][48]

New France and colonization 1534–1763

Main articles: New France and Former colonies and territories in Canada

French interest in the New World began with Francis I of France, who in 1524 sponsored Giovanni da Verrazzano to navigate the region between Florida and Newfoundland in hopes of finding a route to the Pacific Ocean.[50] In 1534, Jacques Cartier planted a cross in the Gaspé Peninsula and claimed the land in the name of Francis I.[51] Despite initial French attempts at settling the region having ended in failure, French fishing fleets began to sail to the Atlantic coast and into the St. Lawrence River, trading and making alliances with First Nations.[51] In 1600, a trading post was established at Tadoussac by François Gravé Du Pont, a merchant, and Pierre de Chauvin de Tonnetuit, a captain of the French Royal Navy.[52] However, only five of the sixteen

Replica of Port Royal habitation, located at the Port-Royal National Historic Site of Canada, Nova-Scotia.[49]

settlers (all male) survived the first winter and returned to France.[52]

In 1604, a North American fur trade monopoly was granted to Pierre Dugua Sieur de Monts.[53] Dugua led his first colonization expedition to an island located near to the mouth of the St. Croix River. Among his lieutenants was a geographer named Samuel de Champlain, who promptly carried out a major exploration of the northeastern coastline of what is now the United States.[53] In the spring of 1605, under Samuel de Champlain, the new St. Croix settlement was moved to Port Royal (today's Annapolis Royal, Nova Scotia) then abandoned in 1607.[49][52]

In 1608 Champlain founded what is now Quebec City, which would become the first permanent settlement and the capital of New France. He took personal administration over the city and its affairs, and sent out expeditions to explore the interior. Champlain himself discovered Lake Champlain in 1609. By 1615, he had travelled by canoe up the Ottawa River through Lake Nipissing and Georgian Bay to the center of Huron country near Lake Simcoe.[54] During these voyages, Champlain aided the Wendat (aka 'Hurons') in their battles against the Iroquois Confederacy.[55] As a result, the Iroquois would become enemies of the French and be involved in multiple conflicts (known as the French and Iroquois Wars) until the signing of the Great Peace of Montreal in 1701.[56]

Map of New France by Samuel de Champlain "Carte geographique de la Nouvelle France" c. 1612/13 .

The English, lead by Sir Humphrey Gilbert, had claimed St. John's, Newfoundland in 1583 as the first North American English colony by royal prerogative of Queen Elizabeth I.[57] The English would establish additional colonies in Cupids and Ferryland, Newfoundland beginning in 1610 and soon after founded the Thirteen Colonies to the south.[58] On the September 29, 1621, a charter for the foundation of a New World Scottish colony was granted by James VI of Scotland to Sir William Alexander.[59] In 1622, the first settlers left Scotland. They initially failed and permanent Nova Scotian settlements were not firmly established until 1629 during the end of the Anglo-French War.[59] These colonies did not last long: in 1631, under Charles I of England, the Treaty of Suza was signed, ending the war and returning Nova Scotia to the French.[60] New France was not fully restored to French rule until the 1632 Treaty of Saint-Germain-en-Laye.[61] This led to new French immigrants and the founding of Trois-Rivières in 1634, the second permanent settlement in New France.[62]

After Champlain's death in 1635, the Catholic Church and the Jesuit establishment became the most dominant force in New France and intended to establish a utopian European and Aboriginal Christian community.[63] In 1642, the Jesuit (Society of Jesus) sponsored a group of settlers, led by Paul Chomedey de Maisonneuve, who founded Ville-Marie, precursor to present-day Montreal.[64] The 1666 census of New France was conducted by France's intendant, Jean Talon, in the winter of 1665–1666. The census showed a population count of 3,215 *Acadians* and *habitants* in the administrative districts of Acadia and Canada (New France).[65] The census also

revealed a great difference in the number of men at 2,034 versus 1,181 women.[66]

Wars during the colonial era

See also: Military history of Canada

Map of North America in 1702 showing forts, towns and areas occupied by European settlements. Britain (pink), France (blue), and Spain (orange)

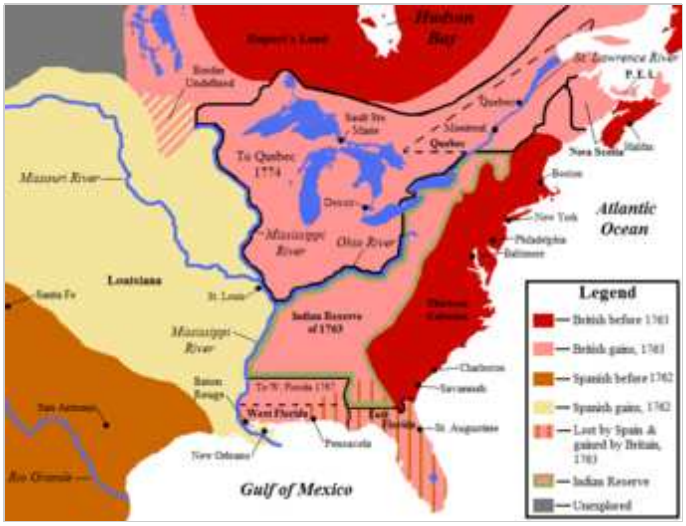
While the French settlers were established in modern Quebec and Nova Scotia, new arrivals stopped coming from France. By 1680 the French population was around 11,000[67] and the British vastly outnumbered them (by approximately 10:1) from the Thirteen Colonies to the south. From 1670, through the Hudson's Bay Company, the English also laid claim to Hudson Bay, and its drainage basin (known as Rupert's Land), and operated fishing settlements in Newfoundland.[68] La Salle's explorations gave France a claim to the Mississippi River Valley, where fur trappers and a few settlers set up scattered settlements.[69] French expansion challenged the Hudson's Bay Company claims, and in 1686 Pierre Troyes led an overland expedition from Montreal to the shore of the bay, where they managed to capture some areas.[70]

There were four French and Indian Wars and two additional wars in Acadia and Nova Scotia (see Father Rale's War and Father Le Loutre's War) between the Thirteen American Colonies and New France from 1689 to 1763. During King William's War (1689 to 1697) military conflicts in Acadia included: Battle of Port Royal (1690); a naval battle in the Bay of Fundy (Action of July 14, 1696); and the Raid on Chignecto (1696) .[71] The Treaty of Ryswick in 1697 ended the war between the two colonial powers of England and France for a brief time.[72] During Queen Anne's War (1702 to 1713), the British Conquest of Acadia occurred in 1710.[73] Resulting in Nova Scotia, other than Cape Breton, being officially ceded to the British by the Treaty of Utrecht including Rupert's Land, that had been conquered by France in the late 17th century (Battle of Hudson's Bay).[74] As an immediate result of this setback, France founded the powerful Fortress of Louisbourg on Cape Breton Island.[75]

Louisbourg was intended to serve as a year-round military and naval base for France's remaining North American empire and to protect the entrance to the St. Lawrence River. Father Rale's War resulted in both the fall of New France influence in present-day Maine as well as recognition the Mi'kmaq in Nova Scotia. During King George's War (1744 to 1748), an army of New Englanders led by William Pepperrell mounted an expedition of 90 vessels and 4,000 men against Louisbourg in 1745.[76] Within three months the fortress surrendered. The return of Louisbourg to French control by the peace treaty prompted the British to found Halifax in 1749 under Edward Cornwallis.[77] Despite the official cessation of war between the British and French empires with the Treaty of Aix-la-Chapelle; the conflict in Acadia and Nova Scotia continued on as the Father Le

St. John River Campaign: Raid on Grimrose (present day Gagetown, New Brunswick). This is the only contemporaneous image of the Expulsion

Loutre's War.[78]



of the Acadians

The British ordered the Acadians expelled from their lands in 1755 during the French and Indian War, an event called the Expulsion of the Acadians or *le Grand Dérangement*.[79] The "expulsion" resulted in approximately 12,000 Acadians being shipped to destinations throughout Britain's North American and to France, Quebec and the French Caribbean colony of Saint-Domingue.[80] The first wave of the expulsion of the Acadians began with the Bay of Fundy Campaign (1755) and the second wave began after the final Siege of Louisbourg (1758). Many of the Acadians settled in southern Louisiana, creating the Cajun culture there.[80] Some Acadians managed to hide and others eventually returned to Nova Scotia, but they were far outnumbered by a new migration of New England Planters who were settled on the former lands of the Acadians and transformed Nova Scotia from a colony of occupation for the British to a settled colony with stronger ties to New England.[80] Britain eventually gained control of Quebec City and Montreal after the Battle of the Plains of Abraham and Battle of Fort Niagara in 1759, and the Battle of the Thousand Islands and Battle of Sainte-Foy in 1760.[81]

Canada under British rule (1763–1867)

Main article: Canada under British rule (1763–1867)

With the end of the Seven Years' War and the signing of the Treaty of Paris (1763), France ceded almost all of its territory in mainland North America, except for fishing rights off Newfoundland and two small islands where it could dry that fish. In turn France received the return of its sugar colony, Guadeloupe, which it considered more valuable than Canada.[82]

Map showing British territorial gains following the "Seven Years' War". Treaty of Paris gains in pink, and Spanish territorial gains after the Treaty of Fontainebleau in yellow.

The new British rulers retained and protected most of the property, religious, political, and social culture of the French-speaking *habitants*, guaranteeing the right of the *Canadiens* to practice the Catholic faith and to the use of French civil law (now Quebec law) through the Quebec Act of 1774.[83] The Royal Proclamation of 1763 had been issued in October, by King George III following Great Britain's acquisition of French territory.[84] The proclamation organized Great Britain's new North American empire and to stabilize relations between the British Crown and Aboriginal peoples through regulation of trade, settlement, and land purchases on the western frontier.[84]

American Revolution and Loyalists

Further information: Invasion of Canada (1775)

During the American Revolution there was some sympathy for the American cause among the *Canadiens* and the New Englanders in Nova Scotia.[85] Neither party joined the rebels, although several hundred individuals joined the revolutionary cause.[85][86] An invasion of Canada; by the Continental Army in 1775, to take Quebec from British control was halted at the Battle of Quebec, by Guy Carleton, with the assistance of local militias.

The defeat of the British army during the Siege of Yorktown in October 1781, signaled the end of Britain's struggle to suppress the American Revolution.[87] When the British evacuated New York City in 1783, they took many Loyalist refugees to Nova Scotia, while other Loyalists went to southwestern Quebec. So many Loyalists arrived on the shores of the St. John River that a separate colony—New Brunswick—was created in 1784;[88] followed in 1791 by the division of Quebec into the largely French-speaking Lower Canada (French Canada) along the St. Lawrence River and Gaspé Peninsula and an anglophone Loyalist Upper Canada, with its capital settled by 1796 in York, in present-day Toronto.[89] After 1790 most of the new settlers were American farmers searching for new lands; although generally favorable to republicanism, they were relatively non-political and stayed neutral in the War of 1812.[90]

The signing of the Treaty of Paris 1783, formally ended the war. Britain made several concessions to the Americans at the expense of the North American colonies.[91] Notably, the borders between Canada and the United States were officially demarkated.[91] All land south of the Great Lakes, which was formerly a part of the Province of Quebec and included modern day Michigan, Illinois and Ohio, was ceded to the Americans. Fishing rights were also granted to the United States in the Gulf of St. Lawrence and on the coast of Newfoundland and the Grand Banks.[91] The British ignored part of the treaty and maintained their military outposts in the Great Lakes areas it ceded to the U.S., and continued to supply the Indians there with munitions. The British evacuated the outposts with the Jay Treaty of 1795, but the continued supply of munitions irritated the Americans in the run-up to the war of 1812.[92]

War of 1812

Main article: War of 1812

The War of 1812 was fought between the United States and the British with the British North American colonies being heavily involved.[93] Greatly outgunned by the British Royal Navy, the American war plans focused on an invasion of Canada (especially what is today eastern and western Ontario). The American frontier states voted for war to suppress the First Nations raids that frustrated settlement of the frontier.[93] The war on the border with the U.S. was characterized by a series of multiple failed invasions and fiascos on both sides. American forces took control of Lake Erie in 1813, driving the British out of western Ontario, killing the Native American leader Tecumseh, and breaking the military power of his confederacy.[94] The war was overseen by Isaac Brock, with the assistance of First Nations and loyalist informants like Laura Secord.[95]

Loyalist Laura Secord warning the British (Lieutenant – James FitzGibbon) and First Nations of an impending American attack at Beaver Dams June 1813. – by Lorne Kidd Smith, c. 1920

The War ended with the Treaty of Ghent of 1814, and the Rush–Bagot Treaty of 1817.[93] A demographic result was the shifting of American migration from Upper Canada to Ohio, Indiana and Michigan.[93] After the war, supporters of Britain tried to repress the republicanism in Canada, that was common among American immigrants to Canada.[93] The troubling memory of the war and the American invasions etched itself into the consciousness of Canadians as distrust of the intentions of the United States towards the British presence in North America.[96]pp. 254–255

Rebellions and the Durham Report

Further information: Rebellions of 1837

The rebellions of 1837 against the British colonial government took place in both Upper and Lower Canada. In Upper Canada, a band of Reformers under the leadership of William Lyon Mackenzie took up arms in a disorganized and ultimately unsuccessful series of small-scale skirmishes around Toronto, London, and Hamilton.[97]

The Burning of the Parliament Buildings in Montreal −1849, Joseph Légaré, c.1849

In Lower Canada, a more substantial rebellion occurred against British rule. Both English- and French-Canadian rebels, sometimes using bases in the neutral United States, fought several skirmishes against the authorities. The towns of Chambly and Sorel were taken by the rebels, and Quebec City was isolated from the rest of the colony. Montreal rebel leader Robert Nelson read the "Declaration of Independence of Lower Canada" to a crowd assembled at the town of Napierville in 1838.[98] The rebellion of the *Patriote movement* were defeated after battles across Quebec. Hundreds were arrested, and several villages were burnt in reprisal.[98]

British Government then sent Lord Durham to examine the situation, he stayed in Canada only five months before returning to Britain, and brought with him, his Durham Report which strongly recommended responsible government.[99] A less well received recommendation was the amalgamation of Upper and Lower Canada for the deliberate assimilation of the French-speaking population. The Canadas were merged into a single colony, United Province of Canada, by the 1840 Act of Union, with responsible government achieved in 1848, a few months after it was granted to Nova Scotia.[99] The parliament of United Canada in Montreal was set on fire by a mob of Tories in 1849 after the passing of an indemnity bill for the people who suffered losses during the rebellion in Lower Canada.[100]

Between the Napoleonic Wars and 1850 some 800,000 immigrants came to the colonies of British North America, mainly from the British Isles as part of the great migration of Canada.[101] These included Gaelic-speaking Highland Scots displaced by the Highland Clearances to Nova Scotia and Scottish and English settlers to the Canadas, particularly Upper Canada. The Irish Famine of the 1840s significantly increased the pace of Irish Catholic immigration to British North America, with over 35,000 distressed Irish landing in Toronto alone in 1847 and 1848.[102]

Pacific colonies

Further information: History of British Columbia

Spanish explorers had taken the lead in the Pacific Northwest coast, with the voyages of Juan José Pérez Hernández in 1774 and 1775.[103] By the time the Spanish determined to build a fort on Vancouver Island, the British navigator James Cook had visited Nootka Sound and charted the coast as far as Alaska, while British and American maritime fur traders had begun a busy era of commerce with the coastal peoples to satisfy the brisk market for sea otter pelts in China, thereby launching what became known as the China Trade.[104]

In 1789 war threatened between Britain and Spain on their respective rights; the Nootka Crisis was resolved peacefully largely in favor of Britain, the much stronger naval power. In 1793 Alexander MacKenzie, a Canadian working for the North West Company, crossed the continent and with his Aboriginal guides and French-Canadian crew, reached the mouth of the Bella Coola River, completing the first continental crossing north of Mexico, missing George Vancouver's charting expedition to the region by only a few weeks.[105] In

1821, the North West Company and Hudson's Bay Company merged, with a combined trading territory that was extended by a licence to the North-Western Territory and the Columbia and New Caledonia fur districts, which reached the Arctic Ocean on the north and the Pacific Ocean on the west.[106]

The Colony of Vancouver Island was chartered in 1849, with the trading post at Fort Victoria as the capital. This was followed by the Colony of the Queen Charlotte Islands in 1853, and by the creation of the Colony of British Columbia in 1858 and the Stikine Territory in 1861, with the latter three being founded expressly to keep those regions from being overrun and annexed by American gold miners.[107] The Colony of the Queen Charlotte Islands and most of the Stikine Territory were merged into the Colony of British Columbia in 1863 (the remainder, north of the 60th Parallel, became part of the North-Western Territory).[107]

Confederation

Main article: Canadian Confederation

1885 photo of Robert Harris' 1884 painting, *Conference at Quebec in 1864*, also known as **The Fathers of Confederation**. The scene is an amalgamation of the Charlottetown and Quebec City conference sites and attendees.

The Seventy-Two Resolutions from the 1864 Quebec Conference and Charlottetown Conference laid out the framework for uniting British colonies in North America into a federation.[108] They had been adopted by the majority of the provinces of Canada and became the basis for the London Conference of 1866, which led to the formation of the Dominion of Canada on July 1, 1867.[108] The term *dominion* was chosen to indicate Canada's status as a self-governing colony of the British Empire, the first time it was used about a country.[109] With the coming into force of the British North America Act (enacted by the British Parliament), the Province of Canada, New Brunswick, and Nova Scotia became a federated kingdom in its own right.[110][111][112]

Federation emerged from multiple impulses: the British wanted Canada to defend itself; the Maritimes needed railroad connections, which were promised in 1867; British-Canadian nationalism sought to unite the lands into one country, dominated by the English language and British culture; many French-Canadians saw an opportunity to exert political control within a new largely French-speaking Quebec[96]pp. 323–324 and fears of possible U.S. expansion northward.[109] On a political level, there was a desire for the expansion of responsible government and elimination of the legislative deadlock between Upper and Lower Canada, and their replacement with provincial legislatures in a federation.[109] This was especially pushed by the liberal Reform movement of Upper Canada and the French-Canadian *Parti rouge* in Lower Canada who favored a decentralized union in comparison to the Upper Canadian Conservative party and to some degree the French-Canadian *Parti bleu*, which favored a centralized union.[109][113]

Post-Confederation Canada 1867–1914

Main article: Post-Confederation Canada (1867–1914)

Further information: Territorial evolution of Canada

The Battle of Fish Creek, fought April 24, 1885, at Fish Creek, Saskatchewan, was a major Métis victory over the Dominion of Canada forces attempting to quell Louis Riel's North-West Rebellion.

In 1866, the Colony of British Columbia and the Colony of Vancouver Island merged into a single Colony of British Columbia, until their incorporation into the Canadian Confederation in 1871.[114] In 1873, Prince Edward Island, the Maritime colony that had opted not to join Confederation in 1867, was admitted into the country.[114] That year, John A. Macdonald (First Prime Minister of Canada) created the North-West Mounted Police (now the Royal Canadian Mounted Police) to help police the Northwest Territories.[115] Specifically the Mounties were to assert Canadian sovereignty over possible American encroachments into the sparsely populated land.[115]

The Mounties first large scale mission was to suppress the second independence movement by Manitoba's Métis, a mixed blood people of joint First Nations and European descent, who originated in the mid-17th century.[116] The desire for independence erupted in the Red River Rebellion in 1869 and the later North-West Rebellion in 1885 led by Louis Riel.[115][117] In 1905 when Saskatchewan and Alberta were admitted as provinces, they were growing rapidly thanks to abundant wheat crops that attracted immigration to the plains by Ukrainians and Northern and Central Europeans and by settlers from the United States, Britain and eastern Canada.[118][119]

A photochrome postcard showing downtown Montreal, circa 1910. Canada's population became urbanized during the 20th century.

The Alaska boundary dispute, simmering since the Alaska purchase of 1867, became critical when gold was discovered in the Yukon during the late 1890s, with the U.S. controlling all the possible ports of entry. Canada argued its boundary included the port of Skagway. The dispute went to arbitration in 1903, but the British delegate sided with the Americans, angering Canadians who felt the British had betrayed Canadian interests to curry favour with the U.S.[120]

In 1893, legal experts codified a framework of civil and criminal law, culminating in the Criminal Code of Canada. This solidified the liberal ideal of "equality before the law" in a way that made an abstract principle into a tangible reality for every adult Canadian.[121] Wilfrid Laurier who served 1896–1911 as the Seventh Prime Minister of Canada felt Canada was on the verge of becoming a world power, and declared that the 20th century would "belong to Canada"[122]

Laurier signed a reciprocity treaty with the U.S. that would lower tariffs in both directions. Conservatives under Robert Borden denounced it, saying it would integrate Canada's economy into that of the U.S. and loosen ties with Britain. Conservatives win the Canadian federal election, 1911.[123]

World Wars and Interwar Years 1914–1945

Main article: Canada in the World Wars and Interwar Years

First World War

World War I poster for 1918–Canadian victory bond drive, depicts three French women pulling a plow.

The Canadian Forces and civilian participation in the First World War helped to foster a sense of British-Canadian nationhood. The highpoints of Canadian military achievement during the First World War came during the Somme, Vimy, Passchendaele battles and what later became known as "Canada's Hundred Days".[124] The reputation Canadian troops earned, along with the success of Canadian flying aces including William George Barker and Billy Bishop, helped to give the nation a new sense of identity.[125] The War Office in 1922 reported approximately 67,000 killed and 173,000 wounded during the war.[126] This excludes civilian deaths in war time incidents like the Halifax Explosion.[126]

Support for Great Britain during the First World War caused a major political crisis over conscription, with Francophones, mainly from Quebec, rejecting national policies.[127] During the crisis large numbers of enemy aliens (especially Ukrainians and Germans) were put under government controls.[128] The Liberal party was deeply split, with most of its Anglophone leaders joining the unionist government headed by Prime Minister Robert Borden, the leader of the Conservative party.[129] The Liberals regained their influence after the war under the leadership of William Lyon Mackenzie King, who served as prime minister with three separate terms between 1921 and 1949.[130]

Interwar

As a result of the First World War, Canada became more assertive and less deferential to British authority; it became an independent member of the League of Nations. In 1923 British Prime Minister, David Lloyd George, appealed repeatedly for Canadian support in the Chanak crisis, in which a war threatened between Britain and Turkey. Canada refused.[131] The Department of External Affairs, which had been founded in 1909, was expanded and promoted Canadian autonomy as Canada reduced its reliance on British diplomats and used its own foreign service.[132] Thus began the careers of such important diplomats as Norman Robertson and Hume Wrong, and future prime minister Lester Pearson.[133]

In 1921 to 1926, William Lyon Mackenzie King's Liberal government pursued a conservative domestic policy with the object of lowering wartime taxes and, especially, cooling wartime ethnic tensions, as well as defusing postwar labour conflicts. The Progressives refused to join the government, but did help the Liberals defeat non-confidence motions. King faced a delicate balancing act of reducing tariffs enough to please the Prairie-based Progressives, but not too much to alienate his vital support in industrial Ontario and Quebec, which needed tariffs to compete with American imports. King and Conservative leader Arthur Meighen sparred constantly and bitterly in Commons debates.[134] The Progressives gradually weakened. Their effective and passionate leader, Thomas Crerar, resigned to return to his grain business, and was replaced by the more placid Robert Forke. The socialist reformer J.S. Woodsworth gradually gained influence and power among the Progressives, and he reached an accommodation with King on policy matters.[135]

In 1926 Prime Minister Mackenzie King advised the Governor General, Lord Byng, to dissolve Parliament and call another election, but Byng refused, the first and only time that the Governor General has exercised such a power. Instead Byng called upon Meighan, the Conservative Party leader, to form a government. Meighen attempted to do so, but was unable to obtain a majority in the Commons and he, too, advised dissolution, which this time was accepted. The episode, the King-Byng Affair, marks a constitutional crisis that was resolved by a new tradition of complete non-interference in Canadian political affairs on the part of the British government.

In 1931 the Statute of Westminster gave each dominion (which included Canada and Newfoundland) the opportunity for almost complete legislative independence from the Parliament of the United Kingdom.[136] While Newfoundland never adopted the statute, for Canada the Statute of Westminster has been called its declaration of independence.[137]

Great Depression

Main article: Great Depression in Canada

Unemployed men march in Toronto

Canada was hard hit by the worldwide Great Depression that began in 1929. Between 1929 and 1933, the gross national product dropped 40% (compared to 37% in the US). Unemployment reached 27% at the depth of the Depression in 1933. Many businesses closed, as corporate profits of $396 million in 1929 turned into losses of $98 million in 1933. Canadian exports shrank by 50% from 1929 to 1933. Construction all but stopped (down 82%, 1929-33), and wholesale prices dropped 30%. Wheat prices plunged from 78c per bushel (1928 crop) to 29c in 1932.[138]

Urban unemployment nationwide was 19%; Toronto's rate was 17%, according to the census of 1931. Farmers who stayed on their farms were not considered unemployed.[139] By 1933, 30% of the labour force was out of work, and one fifth of the population became dependent on government assistance. Wages fell as did prices. Worst hit were areas dependent on primary industries such as farming, mining and logging, as prices fell and there were few alternative jobs. Most families had moderate losses and little hardship, though they too became pessimistic and their debts become heavier as prices fell. Some families saw most or all of their assets disappear, and suffered severely.[140][141]

In 1930 in the first stage of the long depression, Prime Minister Mackenzie King believed that the crisis was a temporary swing of the business cycle and that the economy would soon recovery without government intervention. He refused to provide unemployment relief or federal aid to the provinces, saying that if Conservative provincial governments demanded federal dollars he would not give them "a five cent piece."[142] His blunt wisecrack was used to defeat the Liberals in the 1930 election. The main issue was the rapid deterioration in the economy and whether the prime minister was out of touch with the hardships of ordinary people.[143][144] The winner of the 1930 election was Richard Bedford Bennett and the Conservatives. Bennett had promised high tariffs and large scale spending, but as deficits increased he became wary and cut back severely on Federal spending. With falling support and the depression only getting worse Bennett attempted to introduce policies based on the New Deal of President Franklin D. Roosevelt (FDR) in the United States, but he got little passed. Bennett's government became a focus of popular discontent. For example, auto owners saved on gasoline by using horses to pull their cars, dubbing them Bennett Buggies. The Conservative failure to restore prosperity led to the return of Mackenzie King's Liberals in the 1935 election. [145]

In 1935 the Liberals used the slogan "King or Chaos" to win a landslide in the 1935 election.[146] Promising a much-desired trade treaty with the U.S., the Mackenzie King government passed the 1935 Reciprocal Trade Agreement. It marked the turning point in Canadian-American economic relations, reversing the disastrous trade war of 1930-31, lowering tariffs, and yielding a dramatic increase in trade.[147]

The worst of the Depression had passed by 1935, as Ottawa launched relief programs such as the National Housing Act and National Employment Commission. The Canadian Broadcasting Corporation became a crown

corporation in 1936. Trans-Canada Airlines (the precursor to Air Canada) was formed in 1937, as was the National Film Board of Canada in 1939. In 1938, Parliament transformed the Bank of Canada from a private entity to a crown corporation.[148]

One political response was a highly restrictive immigration policy and a rise in natvism.[149]

Times were especially hard in western Canada, where a full recovery did not occur until the Second World War began in 1939. One response was the creation of new political parties such as the Social Credit movement and the Cooperative Commonwealth Federation, as well as popular protest in the form of the On-to-Ottawa Trek.[150]

Mobilisation

Canada's involvement in the Second World War began when Canada declared war on Nazi Germany on September 10, 1939, delaying it one week after Britain acted to symbolically demonstrate independence. The war restored Canada's economic health and its self-confidence, as it played a major role in the Atlantic and in Europe. During the war Canada became more closely linked to the U.S. The Americans took virtual control of the Yukon in order to build the Alaska Highway, and was a major presence in the British colony of Newfoundland with major airbases.[151]

Mackenzie King — and Canada — were largely ignored by Winston Churchill and the British government despite Canada's major role in supplying food, raw materials, munitions and money to the hard-pressed British economy, training airmen for the Commonwealth, guarding the western half of the North Atlantic Ocean against German U-boats, and providing combat troops for the invasions of Italy, France and Germany in 1943-45. The government successfully mobilized the economy for war, with impressive results in industrial and agricultural output. The depression ended, prosperity returned, and Canada's economy expanded significantly. On the political side, Mackenzie King rejected any notion of a government of national unity.[152] The Canadian federal election, 1940 was held as normally scheduled, producing another majority for the Liberals.

Building up the Royal Canadian Air Force was a high priority; it was kept separate from Britain's Royal Air Force. The British Commonwealth Air Training Plan Agreement, signed in December, 1939, bound Canada, Britain, New Zealand, and Australia to a program that eventually trained half the airmen from those four nations in the Second World War.[153]

After the start of war with Japan in December 1941 the government, in cooperation with the U.S., began the Japanese-Canadian internment, which sent 22,000 British Columbia residents of Japanese descent to relocation camps far from the coast. The reason was intense public demand for removal and fears of espionage or sabotage.[154] The government ignored reports from the RCMP and Canadian military that most of the Japanese were law-abiding and not a threat.[155]

Combat

The Battle of the Atlantic began immediately, and from 1943 to 1945 was led by Leonard W. Murray, from Nova Scotia. German U-boats operated in Canadian and Newfoundland waters throughout the war, sinking many naval and merchant vessels, as Canada took charge of the defenses of the western Atlantic.[156] The Canadian army was involved in the failed defence of Hong Kong, the unsuccessful Dieppe Raid in August 1942, the Allied invasion of Italy, and the highly successful invasion of France and the Netherlands in 1944-45.[157]

Conscription

The Conscription Crisis of 1944 greatly affected unity between French and English-speaking Canadians, though was not as politically intrusive as that of the First World War.[158] Of a population of approximately 11.5 million, 1.1 million Canadians served in the armed forces in the Second World War. Many thousands more served with the Canadian Merchant Navy.[159] In all, more than 45,000 died, and another 55,000 were wounded.[160][161]

Post-war Era 1945–1960

Main article: History of Canada (1945–1960)

Prosperity returned to Canada during the Second World War and continued in the proceeding years, with the development of universal health care, old-age pensions, and veterans' pensions.[162][163] The financial crisis of the Great Depression had led the Dominion of Newfoundland to relinquish responsible government in 1934 and become a crown colony ruled by a British governor.[164] In 1948, the British government gave voters three Newfoundland Referendum choices: remaining a crown colony, returning to Dominion status (that is, independence), or joining Canada. Joining the United States was not made an option. After bitter debate Newfoundlanders voted to join Canada in 1949 as a province.[165]

The Avro Canada CF-105 Arrow (Recreation).

The foreign policy of Canada during the Cold War was closely tied to that of the United States. Canada was a founding member of NATO (which Canada wanted to be a transatlantic economic and political union as well[166]). In 1950 Canada sent combat troops to Korea during the Korean War as part of the United Nations forces. The federal government's desire to assert its territorial claims in the Arctic during the Cold War manifested with the High Arctic relocation, in which Inuit were moved from Nunavik (the northern third of Quebec) to barren Cornwallis Island;[167] this project was later the subject of a long investigation by the Royal Commission on Aboriginal Peoples.[168]

In 1956, the United Nations responded to the Suez Crisis by convening a United Nations Emergency Force to supervise the withdrawal of invading forces. The peacekeeping force was initially conceptualized by Secretary of External Affairs and future Prime Minister Lester B. Pearson.[169] Pearson was awarded the Nobel Peace Prize in 1957 for his work in establishing the peacekeeping operation.[169] Throughout the mid-1950s Louis St. Laurent (12th Prime Minister of Canada) and his successor John Diefenbaker attempted to create a new, highly advanced jet fighter, the Avro Arrow.[170] The controversial

aircraft was cancelled by Diefenbaker in 1959. Diefenbaker instead purchased the BOMARC missile defense system and American aircraft. In 1958 Canada established (with the United States) the North American Aerospace Defense Command (NORAD).[171]

1960–1981

Main article: History of Canada (1960–1981)

In the 1960s, what became known as the Quiet Revolution took place in Quebec, overthrowing the old establishment which centered on the Roman Catholic Archdiocese of Quebec and led to modernizing of the economy and society.[172] Québécois nationalists demanded independence, and tensions rose until violence erupted during the 1970 October Crisis.[173] In 1976 the Parti Québécois was elected to power in Quebec, with a nationalist vision that included securing French linguistic rights in the province and the pursuit of some form of sovereignty for Quebec. This culminated in the 1980 referendum in Quebec on the question of sovereignty-association, which was turned down by 59% of the voters.[173]

In 1965, Canada adopted the maple leaf flag, although not without considerable debate and misgivings among large number of English Canadians.[174] The World's Fair titled Expo 67 came to Montreal, coinciding with the Canadian Centennial that year. The fair opened April 28, 1967, with the theme "Man and his World" and became the best attended of all BIE-sanctioned world expositions until that time.[175]

The Canadian flag, flying in Vanier Park, near downtown Vancouver

Legislative restrictions on Canadian immigration that had favoured British and other European immigrants were amended in the 1960s, opening the doors to immigrants from all parts of the world.[176] While the 1950s had seen high levels of immigration from Britain, Ireland, Italy, and northern continental Europe, by the 1970s immigrants increasingly came from India, China, Vietnam, Jamaica and Haiti.[177] Immigrants of all backgrounds tended to settle in the major urban centres, particularly Toronto, Montreal and Vancouver.[177]

During his long tenure in the office (1968–79, 1980–84), Prime Minister Pierre Trudeau made social and cultural change his political goals, including the pursuit of official bilingualism in Canada and plans for significant constitutional change.[178] The west, particularly the petroleum-producing provinces like Alberta, opposed many of the policies emanating from central Canada, with the National Energy Program creating considerable antagonism and growing western alienation.[179] Multiculturalism in Canada was adopted as the official policy of the Canadian government during the prime ministership of Pierre Trudeau.[180]

1982–1992

Main article: History of Canada (1982–1992)

In 1982, the Canada Act was passed by the British parliament and granted Royal Assent by Queen Elizabeth II on March 29, while the Constitution Act was passed by the Canadian parliament and granted Royal Assent by the Queen on April 17, thus patriating the Constitution of Canada.[181] Previously, the constitution has existed only as an act passed of the British parliament, and was not even physically located in Canada, though it could not be altered without Canadian consent.[182] At the same time, the Charter of Rights and Freedoms was added

in place of the previous Bill of Rights.[183] The patriation of the constitution was Trudeau's last major act as Prime Minister; he resigned in 1984.

On June 23, 1985, Air India Flight 182 was destroyed above the Atlantic Ocean by a bomb on board exploding; all 329 on board were killed, of whom 280 were Canadian citizens.[185] The Air India attack is the largest mass murder in Canadian history.[186]

The Progressive Conservative (PC) government of Brian Mulroney began efforts to gain Quebec's support for the Constitution Act 1982 and end western alienation. In 1987 the Meech Lake Accord talks began between the provincial and federal governments, seeking constitutional changes favourable to Quebec.[187] The constitutional reform process under Prime Minister Mulroney culminated in the failure of the Charlottetown Accord which would have recognized Quebec as a "distinct society" but was rejected in 1992 by a narrow margin.[188]

Under Brian Mulroney, relations with the United States began to grow more closely integrated. In 1986, Canada and the U.S. signed the "Acid Rain Treaty" to reduce acid rain. In 1989, the federal government adopted the Free Trade Agreement with the United States despite significant animosity from the Canadian public who were concerned about the economic and cultural impacts of close integration with the United States.[189] On July 11, 1990, the Oka Crisis land dispute began between the Mohawk people of Kanesatake and the adjoining town of Oka, Quebec.[190] The dispute was the first of a number of well-publicized conflicts between First Nations and the Canadian government in the late 20th century. In August 1990, Canada was one of the first nations to condemn Iraq's invasion of Kuwait, and it quickly agreed to join the U.S.-led coalition. Canada deployed destroyers and later a CF-18 Hornet squadron with support personnel, as well as a field hospital to deal with casualties.[191]

Recent history: 1992–present

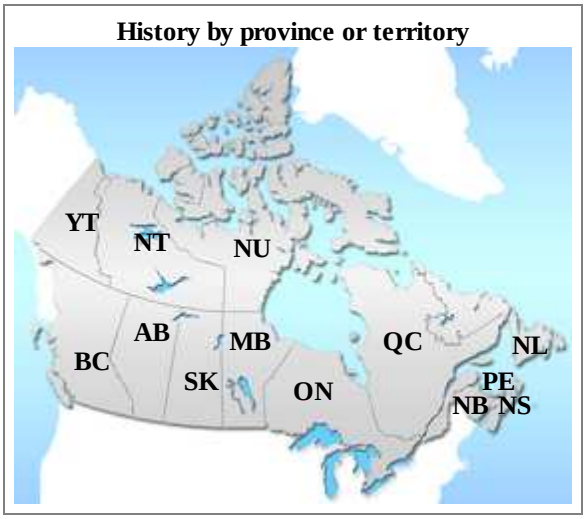
Main article: History of Canada (1992–present)

Following Mulroney's resignation as prime minister in 1993, Kim Campbell took office and became Canada's first female prime minister.[192] Campbell remained in office only for a few months: the 1993 election saw the collapse of the Progressive Conservative Party from government to two seats, while the Quebec-based sovereigntist Bloc Québécois became the official opposition.[193] Prime Minister Jean Chrétien of the Liberals took office in November 1993 with a majority government and was re-elected with further majorities during the 1997 and 2000 elections.[194]

In 1995, the government of Quebec held a second referendum on sovereignty that was rejected by a margin of 50.6% to 49.4%.[195] In 1998, the Canadian Supreme Court ruled unilateral secession by a province to be unconstitutional, and Parliament passed the Clarity Act outlining the terms of a negotiated departure.[195] Environmental issues increased in importance in Canada during this period, resulting in the signing of the Kyoto Accord on climate change by Canada's Liberal government in 2002. The accord was in 2007 nullified by the present government, which has proposed a "made-in-Canada" solution to climate change.[196]

Canada became the fourth country in the world and the first country in the Americas to legalize same-sex

marriage nationwide with the enactment of the Civil Marriage Act.[197] Court decisions, starting in 2003, had already legalized same-sex marriage in eight out of ten provinces and one of three territories. Before the passage of the Act, more than 3,000 same-sex couples had married in these areas.[198]



Political shift in Canada in the first decade of the 21st century

The Canadian Alliance and PC Party merged into the Conservative Party of Canada in 2003, ending a 13-year division of the conservative vote. The party was elected twice as a minority government under the leadership of Stephen Harper in the 2006 federal election and 2008 federal election.[194] Harper's Conservative Party won a majority in the 2011 federal election with the New Democratic Party forming the Official Opposition for the first time.[199]

Under Harper, Canada and the United States continue to integrate state and provincial agencies to strengthen security along the Canada-United States border through the Western Hemisphere Travel Initiative.[200] From 2002 to 2011, Canada was involved in the Afghanistan War as part of the U.S. stabilization force and the NATO-commanded International Security Assistance Force. In July 2010 the largest purchase in Canadian military history, totalling C$9 billion for the acquisition of 65 F-35 fighters, was announced by the federal government.[201] Canada is one of several nations that assisted in the development of the F-35 and has invested over C$168 million in the program.[202]

Monarchy of Canada

From Wikipedia, the free encyclopedia

The **monarchy of Canada** is the core of both Canada's federalism and its Westminster-style parliamentary democracy,[1] being the foundation of the executive, legislative, and judicial branches of the Canadian government and each provincial government.[2][3][4] The monarchy has been headed since 6 February 1952 by Queen Elizabeth II, who as sovereign is shared equally with fifteen other countries within the Commonwealth of Nations, all being independent and the monarchy of each legally distinct. For Canada, the monarch is officially titled *Queen of Canada* (French: *Reine du Canada*), and she, her consort, and other members of the Canadian Royal Family undertake various public and private functions across the country and on its behalf abroad. However, the Queen is the only member of the Royal Family with any constitutional role. While several powers are the sovereign's alone, because she lives predominantly in the United Kingdom, most of the royal governmental and ceremonial duties in Canada are carried out by the Queen's representative, the governor general. In each of Canada's provinces, the monarch is represented by a lieutenant governor, while the territories are not sovereign and thus do not have a viceroy.

Per the Canadian constitution, the responsibilities of the sovereign and/or governor general include summoning and dismissing parliament, calling elections, and appointing governments. Further, Royal Assent and the royal sign-manual are required to enact laws, letters patent, and orders in council. But the authority for these acts stems from the Canadian populace and,[5][6][7] within the conventional stipulations of constitutional monarchy, the sovereign's direct participation in any of these areas of governance is limited, with most related powers entrusted for exercise by the elected and appointed parliamentarians, the ministers of the Crown generally drawn from amongst them, and the judges and justices of the peace.[5] The Crown today primarily functions as a guarantor of continuous and stable governance and a nonpartisan safeguard against the abuse of power,[5][8][9] the sovereign acting as a custodian of the Crown's democratic powers and a representation of the "power of the people above government and political parties."[10][11]

The historical roots of the Canadian monarchy date back to approximately the turn of the 16th century,[n 1][19][20][21][22] when European kingdoms made the first claims to what is now Canadian territory. Monarchical

governance thenceforth evolved under a continuous succession of French and British sovereigns, and eventually the legally distinct Canadian monarchy,[12][15][16][18][23][24] which is sometimes colloquially referred to as the *Maple Crown*.[n 2][15][26]

International and domestic aspects

Further information: Commonwealth realm > Relationship of the realms

Canada shares equally the same sovereign with fifteen other monarchies in the fifty-four-member Commonwealth of Nations, a grouping known informally as the Commonwealth realms, with the monarch residing predominantly in the oldest and most populous realm, the United Kingdom, and viceroys acting as the sovereign's representatives in Canada. The emergence of this arrangement paralleled the fruition of Canadian nationalism following the end of the First World War and culminated in the passage of the Statute of Westminster in 1931. Since then, the pan-national Crown has had both a shared and separate character and the sovereign's role as monarch of Canada has been distinct to his or her position as monarch of any other realm,[n 3][27] including the United Kingdom.[n 4][29][30][31] Only Canadian federal ministers of the Crown may advise the sovereign on all matters of the Canadian state,[n 5][31][32][33][34][35] of which the sovereign, when not in Canada, is kept abreast by weekly communications with the federal viceroy.[36] The monarchy thus ceased to be an exclusively British institution and in Canada became a Canadian,[16][37][38][39] or "domesticated",[40]

establishment, though it is still often denoted as "British" in both legal and common language,[16] for reasons historical, political, and of convenience.

The personal Canadian royal standard of Prince William, Duke of Cambridge, for use in Canada and when representing Canada abroad

This division is illustrated in a number of ways: The sovereign, for example, holds a unique Canadian title and, when she and other members of the Royal Family are acting in public specifically as representatives of Canada, they will use,[41] where possible, Canadian symbols, including the country's national flag, unique royal symbols, armed forces uniforms,[42][43][44][45] and the like, as well as Canadian Forces aircraft or other Canadian-owned vehicles for travel.[46] Once in Canadian airspace, or arrived at a Canadian event taking place abroad, the Canadian Secretary to the Queen, officers of the Royal Canadian Mounted Police, and other Canadian officials will take over from whichever of their other realms' counterparts were previously escorting the Queen or other member of the Royal Family.[46][47]

The sovereign similarly only draws from Canadian coffers for support in the performance of her duties when in Canada or acting as Queen of Canada abroad; Canadians do not pay any money to the Queen or any other member of the Royal Family, either towards personal income or to support royal residences outside of Canada.[48][49] Normally, tax dollars pay only for the costs associated with the governor general and ten lieutenant governors as instruments of the Queen's authority, including travel, security, residences, offices, ceremonies, and the like.[49] In the absence of official reports on the full cost of the monarchy, the Monarchist League of Canada regularly issues a survey based on various federal and provincial budgets, expenditures, and estimates; the 2009 edition found that the institution cost Canadians roughly $50 million in 2008.[50]

Succession and regency

Succession is by male-preference primogeniture governed by both the Act of Settlement, 1701, and Bill of Rights, 1689, legislation that limits the succession to the natural (i.e. non-adopted), legitimate descendants of Sophia of Hanover and stipulates that the monarch cannot be a Roman Catholic, nor married to one, and must be in communion with the Church of England upon ascending the throne; these particular clauses have prompted legal challenge. Though, via adopting the Statute of Westminster, these constitutional laws as they apply to Canada now lie within the full control of the Canadian parliament,[51][52] Canada also agreed not to change its rules of succession without the unanimous consent of, and a parallel change of succession in, the other realms, unless explicitly leaving the shared monarchy relationship; a situation that applies symmetrically in all the other realms and has been likened to a treaty amongst these countries.[53][54] Thus, Canada's line of succession remains identical to that of the United Kingdom. However, there is no provision in Canadian law requiring that the king or queen of Canada must be the same person as the king or queen of the United Kingdom; if the UK were to breach the convention set out in the preamble to the Statute of Westminster and unilaterally change the line of succession to the British throne, the alteration would have no effect on the reigning sovereign of Canada or his or her heirs and successors.[52][55] As such, the rules for succession are not fixed, but may be changed by a constitutional amendment. In 2011, the Prime Minister of Canada, along with the prime ministers of the other Commonwealth realms, gave support to a proposed change of primogeniture governing the line of succession from agnatic to absolute cognatic.[56]

Upon a *demise of the Crown* (the death or abdication of a sovereign), the late sovereign's heir immediately and automatically succeeds, without any need for confirmation or further ceremony — hence arises the phrase "The King is dead. Long live the King!".[57][58] It is customary, though, for the accession of the new monarch to be

Charles, Prince of Wales, is the heir apparent to the Canadian throne

publicly proclaimed by the governor general on behalf of the Queen's Privy Council for Canada, which meets at Rideau Hall after the accession.[n 6] Following an appropriate period of mourning, the monarch is also crowned in the United Kingdom in an ancient ritual, but one not necessary for a sovereign to reign.[n 7] By the Interpretation Act of 2005, no incumbent appointee of the Crown is affected by the death of the monarch, nor are they required to take the Oath of Allegiance again,[61] and all references in legislation to previous monarchs, whether in the masculine (e.g. *His Majesty*) or feminine (e.g. *the Queen*), continue to mean the reigning sovereign of Canada, regardless of his or her gender.[61] After an individual ascends the throne, he or she typically continues to reign until death, being unable to unilaterally abdicate per the tenets of constitutional monarchy.[n 8]

Canada has no laws allowing for a regency, should the sovereign be a minor or debilitated;[36] none have been passed by the Canadian parliament and it was made clear by successive Cabinets since 1937 that the United Kingdom's Regency Act had no applicability to Canada,[36] as the Canadian Cabinet had not requested otherwise when the act was passed that year and again in 1943 and 1953. As the 1947 Letters Patent issued by King George VI permit the Governor General of Canada to exercise almost all of the monarch's powers in respect of Canada, the viceroy is expected to continue to act as the personal representative of the monarch, and not any regent, even if the monarch is a child or incapacitated.[36][62][63] It is unclear, however, how those duties that are the sole domain of the monarch would be carried out at such a time.

Federal and provincial aspects

Further information: Monarchy in the Canadian provinces

Conceived by the Fathers of Confederation as a bulwark against any potential fracturing of the Canadian federation,[64] the Canadian monarchy is a federal one in which the Crown is unitary throughout all jurisdictions in the country,[65] the sovereignty of the different administrations being passed on through the overreaching Crown itself as a part of the executive, legislative, and judicial operations in each of the federal and provincial spheres and the headship of state being a part of all equally.[65] However, though the singular Crown links the various governments into a federal state,[3] it is also "divided" into eleven legal jurisdictions, or eleven "crowns" — one federal and ten provincial[66] — with the monarch taking on a distinct legal persona in each.[n 9][n 10] As such, the constitution instructs that any change to the position of the monarch or his or her representatives in Canada requires the consent of the Senate, the House of Commons, and the legislative assemblies of all the provinces.[70]

The monarch is personally represented in each area by a viceroy who carries out the majority of the Queen's duties on her behalf: that in the federal sphere being titled *Governor General of Canada* and appointed by the Queen on the advice of her federal prime minister, and those in the provincial spheres being called *Lieutenant Governor* and appointed by the governor general on the advice of the federal prime minister, with input from the relevant provincial premier. The commissioners of Canada's territories are appointed by the federal Governor-in-Council, at the recommendation of the Minister of Indian Affairs and Northern Development; but, as the territories are not sovereign entities, the commissioners are not personal representatives of the sovereign.

Personification of the Canadian state

As the living embodiment of the Crown,[61] the sovereign is regarded as the personification of the Canadian state,[n 11][10][34][77][78][79][80] the body of the reigning sovereign thus holding two distinct personas in constant coexistence: that of a natural-born human being and that of the state as accorded to him or her through law;[n 12] even in private, the monarch is always "on duty".[82] The state is therefore referred to as *Her Majesty The Queen in Right of Canada* (French: *Sa Majesté la Reine du chef du Canada*),[83] or *The Crown in Right of Canada*, and the monarch's legal personality is sometimes referred to simply as *Canada*.[79][84]

Queen Elizabeth II wearing the Vladimir Tiara, as well as the Sovereign's insignia of the Order of Canada and the Order of Military Merit

As such, the king or queen of Canada is the employer of all government staff (including the viceroys, judges, members of the Canadian Forces, police officers, and parliamentarians),[n 13] the guardian of foster children (*Crown wards*), as well as the owner of all state lands (*Crown land*), buildings and equipment (*Crown held property*),[86] state owned companies (*Crown corporations*), and the copyright for all government publications (*Crown copyright*).[87] This is all in his or her position as sovereign, and not as an individual; all such property is held by the Crown in perpetuity and cannot be sold by the sovereign without the proper advice and consent of his or her ministers.

> *The Crown is an integral part of a practical form of government, and as such it has a direct and substantive part to play in the lives of all Canadians.*[71]
>
> David E. Smith, *The Invisible Crown*, 1995

As the embodiment of the state, the monarch tops the Canadian order of precedence, and is also the locus of oaths of allegiance,[n 14][73][79][89][90] required of many employees of the Crown, as well as by new citizens, as per the Oath of Citizenship laid out in the Citizenship Act. This is done in reciprocation to the sovereign's Coronation Oath,[91] wherein he or she promises "to govern the Peoples of... Canada... according to their respective laws and customs."[92]

Head of state

Though it has been argued that the term *head of state* is a republican one inapplicable in a constitutional monarchy such as Canada, where the monarch is the embodiment of the state and thus cannot be head of it,[82] the sovereign is regarded by official government sources,[14][93][94] judges,[95] constitutional scholars,[79][96] and pollsters as the head of state,[97] while the governor general and lieutenant governors are all only representatives of, and thus equally subordinate to, that figure.[98] Some governors general, their staff, government publications,[79] and constitutional scholars like Edward McWhinney and C. E. S. Franks have,[99][100] however, referred to the position of governor general as that of Canada's head of state,[101][102] though sometimes qualilfying the assertion with *de facto* or *effective*;[103][104][105] Franks has hence recommended that the governor general be named officially as the head of state.[100] Since 1927, governors general have been received on state visits abroad as though they were heads of state.[106]

Officials at Rideau Hall have pointed to the Letters Patent of 1947 as justification for describing the governor general as head of state, but others countered that the document makes no such distinction, either literally or

implicitly,[107] nor does it effect an abdication of the sovereign's powers in favour of the viceroy.[36] Michael D. Jackson, former protocol officer for Saskatchewan, pointed out that Rideau Hall had been attempting to "recast" the governor general as head of state since the 1970s and that doing so preempted both the Queen and all of the lieutenant governors,[98] the latter causing not only "precedence wars" at provincial events (where the governor general usurped the lieutenant governor's proper spot as most senior official in attendance),[108][109] but also constitutional issues by "unbalancing[...] the federalist symmetry."[65][110] This has been regarded as both a natural evolution and as a dishonest effort to alter the constitution without public scrutiny.[107][111] Still others view the role of head of state as being shared by both the sovereign and her viceroys.[112][113][114]

In a poll conducted by Ipsos-Reid following the first prorogation of the 40th parliament on 4 December 2008, it was found that 42% of the sample group thought the prime minister was head of state, while 33% felt it was the governor general. Only 24% named the Queen as head of state,[97] a number up from 2002, when the results of an EKOS Research Associates survey showed only 5% of those polled knew the Queen was head of state (69% answered that it was the prime minister).[115]

Federal constitutional role

Canada's constitution is based on the Westminster parliamentary model, wherein the role of the Queen is both legal and practical, but not political.[39] The sovereign is vested with all the powers of state, collectively known as the Royal Prerogative,[116] which stems from the people,[6][117] who are thus considered subjects of the Crown.[118] However, as the monarch is a constitutional one, he or she does not rule alone, as in an absolute monarchy. Instead, the Crown is regarded as a corporation, with the monarch being the centre of a construct in which the power of the whole is shared by multiple institutions of government — the executive, legislative, and judicial[4] — acting under the sovereign's authority,[79][119] which is entrusted for exercise by the politicians (the elected and appointed parliamentarians and the ministers of the Crown generally drawn from amongst them) and the judges and justices of the peace.[5] The monarchy has thus been described as the underlying principle of Canada's institutional unity and the monarch as a "guardian of constitutional freedoms"[18][89] whose "job is to ensure that the political process remains intact and is allowed to function."[39]

King George VI, king of Canada (left), and William Lyon Mackenzie King, Prime Minister of Canada (right), share a moment of levity, 11 May 1937

The Crown also sits at the pinnacle of the Canadian Forces, with the constitution placing the monarch in the position of commander-in-chief of the entire force, though the governor general carries out the duties attached to the position and also bears the title of *Commander-in-Chief in and over Canada*.[120] Further, included in Canada's constitution are the various treaties between the Crown and Canadian First Nations, Inuit, and Métis peoples, who view these documents as agreements directly and only between themselves and the reigning monarch, illustrating the relationship between sovereign and aboriginals.[121][122][123]

Executive (Queen-in-Council)

The government of Canada — formally termed *Her Majesty's Government*[124] — is defined by the constitution

as the Queen acting on the advice of her Privy Council;[124][125][126][127] what is technically known as the *Queen-in-Council*,[3] or sometimes the *Governor-in-Council*,[61] referring to the governor general as the Queen's stand-in. One of the main duties of the Crown is to "ensure that a democratically elected government is always in place,"[114] which means appointing a prime minister to thereafter head the Cabinet[128] — a committee of the Privy Council charged with advising the Crown on the exercise of the Royal Prerogative.[127] The Queen is informed by her viceroy of the swearing-in and resignation of prime ministers and other members of the ministry,[128] remains fully briefed through regular communications from her Canadian ministers, and holds audience with them whenever possible.[93]

Governor General Michaëlle Jean with Her Majesty's Cabinet, 30 October 2008

In the construct of constitutional monarchy and responsible government, the ministerial advice tendered is typically binding,[129] meaning the monarch *reigns* but does not *rule*, the Cabinet ruling "in trust" for the monarch.[130] This has been the case in Canada since the Treaty of Paris ended the reign of the territory's last absolute monarch, King Louis XV. However, the Royal Prerogative belongs to the Crown and not to any of the ministers,[5][119][131] and the royal and viceroyal figures may unilaterally use these powers in exceptional constitutional crisis situations,[n 15][59][119][132][133][134][135] thereby allowing the monarch to make sure "that the government conducts itself in compliance with the constitution."[114] There are also a few duties which must be specifically performed by, or bills that require assent by, the Queen; these include applying the royal sign-manual and Great Seal of Canada to the appointment papers of governors general, the issuance of Letters Patent,[36] the confirmation of awards of Canadian honours, the approval of any change in her Canadian title,[136] and the creation of new senate seats.[137]

The Royal Prerogative also extends to foreign affairs: the sovereign or governor general negotiates and ratifies treaties, alliances, and international agreements, all on the advice of the Cabinet, and the governor general, on behalf of the Queen, both accredits Canadian high commissioners and ambassadors and receives similar diplomats from foreign states. These tasks were solely in the domain of the monarch until the 1970s,[138] when Queen Elizabeth II, on the advice of Prime Minister Pierre Trudeau, allowed the governor general to perform these duties on her behalf.[139] In 2005, the letters of credence and recall were altered so as to run in the name of the incumbent governor general, instead of following the usual international process of the letters being from one head of state to another.[139] In addition, the issuance of passports falls under the Royal Prerogative and,[140] as such, all Canadian passports are issued in the monarch's name and remain her property.[141]

Parliament (Queen-in-Parliament)

All laws in Canada are the monarch's and the sovereign is one of the three components of parliament[142][143] — formally called the *Queen-in-Parliament*[3] — but the monarch and viceroy do not participate in the legislative process save for the granting of Royal Assent, which is necessary for a bill to be enacted as law. Either figure or a delegate may perform this task, and the viceroy has the option of deferring assent to the sovereign, as per the constitution.[144] The governor general is further responsible for summoning the House of Commons, while either the viceroy or monarch can prorogue and dissolve the legislature, after which the governor general usually calls for a general election. The new parliamentary session is marked by either the monarch, governor general, or some other representative reading the Speech from the Throne; as the sovereign is traditionally barred from the House of Commons, this ceremony, as well as the bestowing of Royal Assent, takes place in the Senate

chamber.[145] Despite this exclusion, members of the commons must still express their loyalty to the monarch and defer to her authority, as the Oath of Allegiance must be recited by all new parliamentarians before they may take their seat, and the official opposition is traditionally dubbed as *Her Majesty's Loyal Opposition*.[89][146][147]

The monarch does not have the prerogative to impose and collect new taxes without the authorization of an Act of Parliament. The consent of the Crown must, however, be obtained before either of the houses of parliament may even debate a bill affecting the sovereign's prerogatives or interests, and no act of parliament binds the Queen or her rights unless the act states that it does.[148]

King George VI, with Queen Elizabeth, grants Royal Assent to bills in the Canadian Senate, 1939

Courts (Queen-on-the-Bench)

The sovereign is responsible for rendering justice for all her subjects, and is thus traditionally deemed the *fount of justice*,[149] her position in the Canadian courts formally dubbed the *Queen on the Bench*.[3] Though the monarch does not personally rule in judicial cases, this function of the Royal Prerogative instead performed in trust and in the Queen's name by officers of Her Majesty's court,[149] common law holds the notion that the sovereign "can do no wrong"; the monarch cannot be prosecuted in her own courts, judged by herself, for criminal offences. Civil lawsuits against the Crown in its public capacity (that is, lawsuits against the Queen-in-Council) are permitted, but lawsuits against the monarch personally are not cognizable. In international cases, as a sovereign and under established principles of international law, the Queen of Canada is not subject to suit in foreign courts without her express consent.[125] The monarch, and by extension the governor general, also grants immunity from prosecution,[150] exercises the *Royal Prerogative of Mercy* and may pardon offences against the Crown,[151][152] either before, during, or after a trial.

An image of the Queen and/or the Arms of Her Majesty in Right of Canada is always displayed in Canadian federal courtrooms. Itinerant judges will display an image of the Queen and the Canadian flag when holding a session away from established courtrooms; such situations occur in parts of Canada where the stakeholders in a given court case are too isolated geographically to be able to travel for regular proceedings.

Cultural role

Royal presence and duties

Further information: List of Commonwealth visits made by Queen Elizabeth II

Members of the Royal Family have been present in Canada since the late 18th century, their reasons including participating in military manoeuvres, serving as the federal viceroy, or undertaking official royal tours. A prominent feature of the latter are numerous royal walkabouts, the tradition of which was initiated in 1939 by Queen Elizabeth when she was in Ottawa and broke from the royal party to speak directly to gathered veterans.[153][154] Usually important milestones, anniversaries, or celebrations of Canadian culture will warrant the presence of the monarch,[153] while other royals will be asked to participate in lesser occasions. A household to assist and tend to the monarch forms part of the royal party.

Official duties involve the sovereign representing the Canadian state at home or abroad, or her relations as

Prince Charles and Camilla, Duchess of Cornwall, arrive at The Carlu in Toronto, Ontario, November 2009

members of the Royal Family participating in government organized ceremonies either in Canada or elsewhere.[n 16][171][172][173][174] The advice of the Canadian Cabinet is the impetus for royal participation in any Canadian event, though, at present, the Chief of Protocol and his staff in the Department of Canadian Heritage are, as part of the State Ceremonial and Canadian Symbols Program,[175][176] responsible for orchestrating any official events in or for Canada that involve the Royal Family.[177] Conversely, *unofficial duties* are performed by Royal Family members on behalf of Canadian organizations of which they may be patrons, through their attendance at charity events, visiting with members of the Canadian Forces as colonel-in-chief, or marking certain key anniversaries.[171][174] The invitation and expenses associated with these undertakings are usually borne by the associated organization.[171] In 2005 members of the Royal Family were present at a total of 76 Canadian engagements, as well as several more through 2006 and 2007.[178]

Apart from Canada, the Queen and other members of the Royal Family regularly perform public duties in the other fifteen nations of the Commonwealth in which the Queen is head of state. This situation, however, can mean the monarch and/or members of the Royal Family will be promoting one nation and not another; a situation that has been met with criticism.[n 17]

Symbols, associations, and awards

Main article: Canadian royal symbols

The main symbol of the monarchy is the sovereign herself, described as "the personal expression of the Crown in Canada,"[180] and her image is thus used to signify Canadian sovereignty and government authority — her effigy, for instance, appearing on currency, and her portrait in government buildings.[89] The sovereign is further both mentioned in and the subject of songs, loyal toasts, and salutes.[181] A royal cypher, appearing on buildings and official seals, or a crown, seen on provincial and national coats of arms, as well as police force and Canadian Forces regimental and maritime badges and rank insignia, is also used to illustrate the monarchy as the locus of authority,[182] the latter without referring to any specific monarch.

The badge of the Royal Canadian Navy, bearing at its apex a St. Edward's Crown, indicating the sovereign as the navy's source of authority

Since the days of King Louis XIV,[183] the monarch is the fount of all honours in Canada and new orders,[183][184] decorations, and medals, which form "an integral element of the Crown,"[183] may only be created with the approval of the sovereign through letters patent. Hence, the insignia and medallions for these awards bear a crown, cypher, and/or effigy of the monarch. Similarly, the country's heraldic authority was created by the Queen and, operating under the authority of the governor general, grants new coats of arms, flags, and badges in Canada. Use of the royal crown in such symbols is a gift from the monarch showing royal support and/or association, and requires her approval before being added.[182]

An equestrian statue of Edward VII in Queen's Park, Toronto

Members of the Royal Family also act as ceremonial Colonels-in-Chief of various military regiments, reflecting the Crown's relationship with the armed forces through participation in events both at home and abroad.[n 18] The monarch also serves as the Honorary Commissioner of the Royal Canadian Mounted Police.[185]

A number of Canadian civilian organizations have association with the monarchy, either through their being founded via a royal charter, having been granted the right to use the prefix *royal* before their name, or because at least one member of the Royal Family serves as a patron. Some charities and volunteer organizations have also been founded as gifts to, or in honour of, some of Canada's monarchs or members of the Royal Family, such as the Victorian Order of Nurses (a gift to Queen Victoria for her Diamond Jubilee in 1897), the Canadian Cancer Fund (set up in honour of King George V's Silver Jubilee in 1935), and the Queen Elizabeth II Fund to Aid in Research on the Diseases of Children. A number of awards in Canada are likewise issued in the name of previous or present members of the Royal Family. Further, organizations will give commemorative gifts to members of the Royal Family to mark a visit or other important occasion.

Canadian Royal Family

The **Canadian Royal Family** is a group of people related to the monarch of Canada.[186] There is no strict legal or formal definition of who is or is not a member of the group, though the Department of Canadian Heritage maintains a list of immediate members and the Department of National Defence stipulates that those in the direct line of succession who bear the style of *Royal Highness* (*Altesse Royale*) are subjects of,[187][188] and owe their allegiance to, the reigning sovereign specifically as king or queen of Canada.[189] This entitles them to Canadian consular assistance and to the protection of the Queen's armed forces of Canada when they are outside of the Commonwealth realms and in need of protection or aid.[189]

The Canadian Royal Family gathers in Brome Lake, Quebec, 1976 (left to right: the Duke of Edinburgh, Princess Anne, Mark Phillips, Prince Edward, the Queen, Prince Andrew, and Charles, Prince of Wales

Given the shared nature of the Canadian monarch, most members of the Canadian Royal Family are also members of the British Royal Family, and thus the House of Windsor. As such, they are the distant relations of the Belgian, Danish, Greek, Norwegian, Spanish, and Swedish Royal Families, and bear lineage from, amongst others, Arab, Armenian, Cuman, French, German, Hungarian, Italian, Mongolian, Norwegian, Portuguese, Serbian, and Swedish ethnicities,[190] as well as, according to Moroccan and Chinese officials, respectively, being directly descended from the Prophet Muhammad and Tang Dynasty Chinese Emperors.[191] However, because Canada and the UK are independent of one another, it is incorrect to refer in the Canadian context to the family of the monarch as the "British Royal Family"[192] — as is frequently done by Canadian and other media[193][194] — and there exist some differences between the official lists of each: for instance, while he never held the style *His Royal Highness*, Angus Ogilvy was included in the Department of Canadian Heritage's royal family list, but was not considered a member of the British Royal Family.[195] Additionally, unlike in the United Kingdom, the monarch is the only member of the Royal Family in Canada with

a title established through law; it would be possible for others to be granted distinctly Canadian titles (as is the case for the Duke of Rothesay in Scotland), but they have always been, and continue to only be, accorded the use of a courtesy title, which is that they have been granted via letters patent in the United Kingdom, though they are also in Canada translated to French.[n 19]

Prince William, Duke of Cambridge, and Catherine, Duchess of Cambridge, at the Canada Day celebrations in Ottawa, 1 July 2011

Though the group is predominantly based in the United Kingdom, the sovereign and those amongst her relations who do not meet the requirements of Canadian citizenship law are still considered Canadian;[196][197] as early as 1959, it was recognized that the Queen was "equally at home in all her realms."[198] Rather, as legal subjects of the country's monarch,[189] the Royal Family holds a unique position reflected in the confusion that sometimes arises around the awarding of honours to them.[n 20] There are three Canadian citizens within the Canadian Royal Family: Two married into it: In 1988, Sylvana Jones (née Tomaselli in Placentia, Newfoundland) wed the Earl of St. Andrews, a great-grandson of King George V, and, on 18 May 2008, Autumn Kelly, originally from Montreal, married Queen Elizabeth II's eldest grandson, Peter Phillips.[202] In December 2010, Autumn Phillips gave birth to a daughter who held dual Canadian and British citizenship and was, at the time, 12th in line to the throne.[203] Beyond legalities, members of the Royal Family have also, on occasion, declared themselves to be Canadian,[n 20][n 21] and some past members have lived in Canada for extended periods as viceroy or for other reasons.[n 22] Still, the existence of a Canadian Royal Family is contested, mostly by individuals in Canada's republican movement, but also by former Lieutenant Governor of British Columbia Iona Campagnolo.[211] Poet George Elliott Clarke publicly mused about a fully First Nations royal family for Canada.[212]

According to the Canadian Royal Heritage Trust, Prince Edward Augustus, Duke of Kent and Strathearn — due to his having lived in Canada between 1791 and 1800, and fathering Queen Victoria — is the "ancestor of the modern Canadian Royal Family."[208] Nonetheless, the concept of the Canadian Royal Family did not emerge until after the passage of the Statute of Westminster in 1931, when Canadian officials only began to overtly consider putting the principles of Canada's new status as an independent kingdom into effect.[213] At first, the monarch was the only member of the Royal Family to carry out public ceremonial duties solely on the advice of Canadian ministers; King Edward VIII became the first to do so when in July 1936 he dedicated the Canadian National Vimy Memorial in France — one of his few obligations performed during his short reign.[n 16] Over the decades, however, the monarch's children, grandchildren, cousins, and their respective spouses began to also perform functions at the direction of the Canadian Crown-in-Council, representing the monarch within Canada or abroad. By the 1960s, loyal societies in Canada recognized the Queen's cousin, Princess Alexandra, The Honourable Lady Ogilvy, as a "Canadian princess";[214] but, it was not until October 2002 when the term *Canadian Royal Family* was first used publicly and officially by one of its members: in a speech to the Nunavut legislature at its opening, Queen Elizabeth II stated: "I am proud to be the first member of the Canadian Royal Family to be greeted in Canada's newest territory."[215] At the time of the 2011 royal tour of Prince William, Duke of Cambridge, and Catherine, Duchess of Cambridge, both Michael Valpy, writing for the CBC, and *The Globe and Mail* referred to William as "a prince of Canada"[216][217] and both Canadian and British media were referring to "Canada's royal family" or the "Canadian royal family".[218][219][220]

The press frequently follows the movements of the Royal Family, and can, at times, affect the group's popularity,

which has fluctuated over the years. Mirroring the mood in the United Kingdom, the family's lowest approval was during the mid-1980s to 1990s, when the children of the monarch were enduring their divorces and were the targets of negative tabloid reporting.[n 23]

Federal residences and royal household

Main article: Government Houses of Canada

A number of buildings across Canada are reserved by the Crown for the use of the monarch and her viceroys. The sovereign's principal official residence, as well as that primarily used by the governor general, is Rideau Hall,[222][223][224][225][226][227] located in Ottawa, Ontario,[228] and another residence of the governor general is the Citadelle, in Quebec City. Each of these royal seats holds pieces from the Crown Collection.[229] Further, though neither was ever used for their intended purpose, Hatley Castle in British Columbia was purchased in 1940 by King George VI in Right of Canada to use as his home during the course of World War II,[230] and the Emergency Government Headquarters, built in 1959 at CFS Carp and decommissioned in 1994, included a residential apartment for the sovereign or governor general in the case of a nuclear attack on Ottawa.[231][232]

Rideau Hall, the monarch's principal Canadian residence, though foremostly that of the governor general

The governor general's residence at La Citadelle

Monarchs and members of their family have also owned in a private capacity homes and land in Canada: King Edward VIII owned Bedingfield Ranch, near Pekisko, Alberta;[233] The Marquess of Lorne and Princess Louise owned a cottage on the Cascapédia River in Quebec;[234] and Princess Margaret owned Portland Island between its gifting to her by the Crown in Right of British Columbia in 1958 and her death in 2002, though she offered it back to the Crown on permanent loan in 1966 and the island and surrounding waters eventually became Princess Margaret Marine Park.[235][236]

To assist the Queen in carrying out her official duties on behalf of Canada, she appoints various people to her Canadian household. Along with the Canadian Secretary to the Queen,[177] the monarch's entourage includes two ladies-in-waiting, the Canadian Equerry-in-Waiting to the Queen, the Queen's Police Officer, the Duke of Edinburgh's Police Officer,[237] the Queen's Honorary Physician, the Queen's Honorary Dental Surgeon, and the Queen's Honorary Nursing Officer[238] — the latter three being drawn from the Canadian Forces.[67] There are also three household regiments specifically attached to the Royal Household (the Governor General's Foot Guards, the Governor General's Horse Guards, and the Canadian Grenadier Guards), as well as two chapels royal in Ontario.[239]

History

Main article: History of monarchy in Canada

The Canadian monarchy can trace its ancestral lineage back to the kings of the Angles and the early Scottish

kings, through centuries since parts of the territories that today comprise Canada were claimed by King Henry VII in 1497 and others by King Francis I in 1534; both being blood relatives of the current Canadian monarch. Prime Minister Stephen Harper said of the Crown that it "links us all together with the majestic past that takes us back to the Tudors, the Plantagenets, the Magna Carta, *habeas corpus*, petition of rights, and English common law."[240] Though the first French and British colonizers of Canada interpreted the hereditary nature of some indigenous North American chieftainships as a form of monarchy,[241][242][243] it is generally accepted that Canada has been a territory of a monarch or a monarchy in its own right only since the establishment of New France in the early 17th century;[17] according to historian Jacques Monet, the Canadian Crown is one of the few that have survived through uninterrupted succession since before its inception.[24]

Francis I of France; established colonies in Acadia and Canada, 1534

After the Canadian colonies of France were, via war and treaties, ceded to the British Crown, and the population was greatly expanded by those loyal to George III fleeing north from persecution during and following the American Revolution, British North America was in 1867 confederated by Queen Victoria to form Canada as a kingdom in its own right.[30][93][244] By the end of the First World War, the increased fortitude of Canadian nationalism inspired the country's leaders to push for greater independence from the King in his British Council, resulting in the creation of the uniquely Canadian monarchy through the Statute of Westminster, which was granted Royal Assent in 1931.[245][246] Only five years later, Canada had three successive kings in the space of one year, with the death of George V, the accession and abdication of Edward VIII, and his replacement by George VI.

The latter became in 1939 the first reigning monarch of Canada to tour the country (though previous kings had done so before their accession). As the ease of travel increased, visits by the sovereign and other Royal Family members became more frequent and involved, seeing Queen Elizabeth II officiate at various moments of importance in the nation's history, one being when she proclaimed the country to be fully independent, via constitutional patriation, in 1982.[205] That act is said to have entrenched the monarchy in Canada,[247] due to the stringent requirements, as laid out in the amending formula, that must be met in order to alter the monarchy in any way.[70]

Through the 1960s and 1970s, the rise of Quebec nationalism and changes in Canadian identity created an atmosphere where the purpose and role of the monarchy came into question. Some references to the monarch and the monarchy were removed from the public eye and moves were made by the federal government to constitutionally alter the Crown's place and role in Canada, first by explicit legal amendments and later by subtle attrition impelled by elements of the public service, the Cabinet, and governors general and their staff alike.[110][248] But, provincial and federal ministers, along with loyal national citizen's organizations, ensured that the system remained the same in essence.[249] By 2002, the royal tour and associated fêtes for the Queen's Golden Jubilee proved popular with Canadians across the country,[250][251][252] though Canada's first republican organization since the 1830s was also founded that year. Planning began in 2010 for the celebrations to mark Queen Elizabeth II's Diamond Jubilee in 2012,[253][254] the first such event in Canada since 1897, when Victoria marked her 60th year on the throne.

Debate

To date, outside of academic circles, there has been little national debate on the Canadian monarchy, a subject of which most Canadians are generally unaware.[255] Out of Canada's three most prominent political parties, neither the Liberal Party nor the Conservative Party is officially in favour of abolishing the monarchy (though the latter makes support for constitutional monarchy a founding principle in its policy declaration[256]) and the New Democratic Party (NDP) has no official position on the role of the Crown. Only some Members of Parliament belonging to these parties and the leaders of the Bloc Québécois have made any statements suggesting abolition of the monarchy.[257][258][259] Canada has two special-interest groups representing the debate, who frequently argue the issue in the media: the Monarchist League of Canada and Citizens for a Canadian Republic.[260][261] There are also other organizations that support and advocate for the monarchy, such as the United Empire Loyalists' Association of Canada,[262] the Canadian Royal Heritage Trust,[263] the Orange Order in Canada,[264] and the Friends of the Canadian Crown.[265]

The idea of a uniquely Canadian monarch has been proffered as an alternative,[266] either one descended from the present queen or coming from a First Nations royal house;[22][212][267][268] however, there has been no popular or official support for such a change.

Notes

1. ^ The date of the first establishment a monarchical form of government in parts of the territory which now forms Canada varies: some sources give the year as 1497, when King Henry VII claimed parts of Newfoundland,[12][13] while others put it at 1534, when New France was founded in the name of King Francis I.[14][15][16][17][18]
2. ^ The term was first coined by Governor General The Lord Grey in 1905, when he stated in a telegram to King Edward VII regarding the inauguration of Alberta and Saskatchewan into Confederation: "[each one] a new leaf in Your Majesty's Maple Crown".[25]
3. ^ ***a*** ***b*** On a number of occasions, the sovereign has carried out foreign relations as the representative uniquely of Canada, such as the visits to the United States by King George VI in 1939 and Queen Elizabeth II in 1957.
4. ^ The English Court of Appeal ruled in 1982, while "there is only one person who is the Sovereign within the British Commonwealth... in matters of law and government the Queen of the United Kingdom, for example, is entirely independent and distinct from the Queen of Canada."[28]
5. ^ In 1997, then Prime Minister of the United Kingdom Tony Blair intended to offer a life peerage to Canadian businessman Conrad Black. However, citing the 1919 Nickle Resolution, the Canadian Cabinet advised the Queen not to grant Black such an honour. If Blair had not yielded, the Queen would have been in the situation of having to grant an honour on the advice of her British prime minister and to object to the same as Queen of Canada on the advice of then Canadian Prime Minister Jean Chrétien.
6. ^ Ted McWhinney theorized that failure to make this proclamation would result in an empty throne for Canada, leaving the governor general as full head of state.[59] The proposal was met with criticism from legal experts.[60]
7. ^ For example, Edward VIII was never crowned, yet was undoubtedly king during his short time on the throne.
8. ^ The only Canadian monarch to abdicate, Edward

Grenada

From Wikipedia, the free encyclopedia

Grenada (/ɡrɨˈneɪdə/) is an island country and Commonwealth realm consisting of the island of Grenada and six smaller islands at the southern end of the Grenadines in the southeastern Caribbean Sea. Grenada is located northwest of Trinidad and Tobago, northeast of Venezuela, and southwest of Saint Vincent and the Grenadines.

Grenada is also known as the "Island of Spice" because of the production of nutmeg and mace crops of which Grenada is one of the world's largest exporters. Its size is 344 square kilometres (133 sq mi), with an estimated population of 110,000. Its capital is St. George's. The national bird of Grenada is the critically endangered Grenada Dove.

- Lower house	House of Representatives
Independence	
- from the United Kingdom	February 7, 1974
Area	

Grenada was first sighted by Europeans in 1498 during the third voyage of Christopher Columbus to the new world. At the time the indigenous Island Caribs (Kalinago) who lived there called it Camahogne. The Spaniards did not permanently settle on Camahogne. The English failed in their attempt at settlement in 1609.

French colony (1649–1763)

On March 17, 1649, a French expedition of 203 men from Martinique led by Jacques du Parquet founded a permanent settlement on Grenada. Within months this led to conflict with the local islanders which lasted until 1654 when the island was completely subjugated by the French.[4] Those indigenous islanders who survived either left for neighboring islands or retreated to remoter parts of Grenada where they were marginalised—the last distinct communities disappeared during the eighteenth century. Warfare continued during the seventeenth century between the French on Grenada and the Caribs of present day Dominica and St. Vincent and the Grenadines. The French named the new French colony La Grenade, and the economy was initially based on sugar cane and indigo. The French established a capital known as Fort Royal (later St. George). To shelter from hurricanes the French navy would often take refuge in the capital's natural harbour, as no nearby French islands had a natural harbour to compare with that of Fort Royal. The British captured Grenada during the Seven Years' War in 1762.

British colony (1763–1950)

Grenada was formally ceded to Britain by the Treaty of Paris in 1763. The French re-captured the island during the American War of Independence, after Comte d'Estaing won the bloody land and naval Battle of Grenada in July 1779. However the island was restored to Britain with the Treaty of Versailles in 1783. Britain was hard pressed to overcome a pro-French revolt in 1795–1796 led by Julien Fedon.

Nutmeg was introduced to Grenada in 1843 when a merchant ship called in on its way to England from the East Indies. The ship had a small quantity of nutmeg trees on board which they left in Grenada, and this was the beginning of Grenada's nutmeg industry that now supplies nearly forty percent of the world's annual crop.[5]

In 1877 Grenada was made a Crown colony. Theophilus A. Marryshow founded the Representative Government Association (RGA) in 1917 to agitate for a new and participative constitutional dispensation for the Grenadian people. Partly as a result of Marryshow`s lobbying, the Wood Commission of 1921–1922 concluded that Grenada was ready for constitutional reform in the form of a 'modified' Crown colony government. This modification granted Grenadians the right to elect 5 of the 15 members of the Legislative Council, on a restricted property franchise enabling the wealthiest 4% of adult Grenadians to vote.[6]

Towards independence (1950–1974)

The capital St. George's.

In 1950 Eric Gairy founded the Grenada United Labour Party, initially as a trades union, which led the 1951 general strike for better working conditions. This sparked great unrest—so many buildings were set ablaze that the disturbances became known as the 'red sky' days—and the British authorities had to call in military reinforcements to help regain control of the situation. On October 10, 1951, Grenada held its first general elections on the basis of universal adult suffrage [7]- Eric Gairy's Grenada United Labour Party won 6 of the 8 seats contested.[7] From 1958 to 1962 Grenada was part of the Federation of the West Indies.

On March 3, 1967, Grenada was granted full autonomy over its internal affairs as an Associated State. Herbert Blaize was the first Premier of the Associated State of Grenada from March to August 1967. Eric Gairy served as Premier from August 1967 until February 1974.

Independence and revolution (1974–1983)

Independence was granted in 1974 under the leadership of the Premier, Sir Eric Matthew Gairy, who became the first Prime Minister of Grenada.

Civil conflict gradually broke out between Eric Gairy's government and some opposition parties including the New Jewel Movement (NJM). Gairy's party won elections in 1976, but the opposition did not accept the result, accusing it of fraud. In 1979 the New Jewel Movement under Maurice Bishop launched a paramilitary attack on the government resulting in its overthrow.

The constitution was suspended and Bishop's "People's Revolutionary Government" ruled subsequently by decree. Cuban doctors, teachers, and technicians were invited in to help develop health, literacy, and agriculture over the next few years. Agrarian reforms started by the Gairy government were continued and greatly expanded under the revolutionary government of Maurice Bishop.

Invasion by the United States

Main article: Invasion of Grenada

Members of the Eastern Caribbean Defence Force during the Invasion of Grenada

Some years later a dispute developed between Bishop and certain high-ranking members of the NJM. Though Bishop cooperated with Cuba and the USSR on various trade and foreign policy issues, he sought to maintain a "non-aligned" status. Bishop had been taking his time making Grenada wholly socialist, encouraging private-sector development in an attempt to make the island a popular tourist destination. Hardline Marxist party members, including Communist Deputy Prime Minister Bernard Coard, deemed Bishop insufficiently revolutionary and demanded that he either step down or enter into a power-sharing arrangement.

On October 19, 1983, Bernard Coard and his wife Phyllis, backed by the Grenadian Army, led a coup against the government of Maurice Bishop and placed Bishop under house arrest. These actions led to street demonstrations in various parts of the island. Bishop had enough support from the population that he was eventually freed after a demonstration in the capital. When Bishop attempted to resume power, he was captured and executed by soldiers along with seven others, including government cabinet ministers. The Coard regime then put the island under martial law.

After the execution of Bishop, the People's Revolutionary Army formed a military government with General Hudson Austin as chairman. The army declared a four-day total curfew, during which (it said) anyone leaving their home without approval would be shot on sight.[8]

The overthrow of a moderate government by one which was strongly pro-communist worried U.S. President Ronald Reagan. Particularly concerning was the presence of Cuban construction workers and military personnel who were building a 10,000-foot (3,000 m) airstrip on Grenada. Bishop had stated the purpose of the airstrip was to allow commercial jets to land, but U.S. military analysts argued that the only reason for constructing such a long and reinforced runway was so that it could be used by heavy military transport planes. The contractors, American and European companies, and the EEC, which provided partial funding, all claimed the airstrip did not have military capabilities.[9] Reagan was worried that Cuba – under the direction of the Soviet Union – would use Grenada as a refueling stop for Cuban and Soviet airplanes loaded with weapons destined for Central American communist insurgents.[10]

On October 25 combined forces from the United States and from the Regional Security System (RSS) based in Barbados invaded Grenada in an operation codenamed *Operation Urgent Fury*. The U.S. stated this was done at the behest of Dame Eugenia Charles of Dominica. While the Governor-General Sir Paul Scoon later stated that he had also requested the invasion, it was highly criticised by head of state HM Queen Elizabeth II[*citation needed*] and the governments of Britain, Trinidad and Tobago and Canada. The United Nations General Assembly condemned it as "a flagrant violation of international law" by a vote of 108 in favor to 9, with 27 abstentions.[11][12] The United Nations Security Council considered a similar resolution, which failed to pass when vetoed by the United States.[*citation needed*]

After the invasion of the island nation, the pre-revolutionary Grenadian constitution came into operation once again. Eighteen members of the PRG and the PRA (army) were arrested after the invasion on charges related to the murder of Maurice Bishop and seven others. The eighteen included the top political leadership of Grenada at the time of the execution as well as the entire military chain of command directly responsible for the operation that led to the executions. Fourteen were sentenced to death, one was found not guilty and three were sentenced to forty-five years in prison. The death sentences were eventually commuted to terms of imprisonment. Those in prison have become known as the Grenada 17.

Grenada since 1983

When U.S. troops withdrew from Grenada in December 1983, Nicholas Brathwaite of the National Democratic Congress was appointed prime minister of an interim administration by the Scoon until elections could be organized. The first democratic elections since 1976 were held in December 1984 and were won by the Grenada National Party under Herbert Blaize who served as prime minister until his death in December 1989. Ben Jones succeeded Blaize as prime minister and served until the March 1990 election, which was won by the National Democratic Congress under Nicholas Brathwaite who returned as prime minister for a second time until he resigned in February 1995. He was succeeded by George Brizan who served until the June 1995 election which was won by the New National Party under Keith Mitchell who went on to win the 1999 and 2003 elections and served for a record 13 years until 2008.

In 2000–2002, much of the controversy of the late 1970s and early 1980s was once again brought into the public consciousness with the opening of the truth and reconciliation commission. The commission was chaired by a Roman Catholic priest, Father Mark Haynes, and was tasked with uncovering injustices arising from the PRA, Bishop's regime, and before. It held a number of hearings around the country. Brother Robert Fanovich, head of Presentation Brothers' College (PBC) in St. George's tasked some of his senior students with conducting a research project into the era and specifically into the fact that Maurice Bishop's body was never discovered.[13]

Paterson also uncovered that there was still a lot of resentment in Grenadian society resulting from the era and a feeling that there were many injustices still unaddressed.

On September 7, 2004, after being hurricane-free for forty-nine years, the island was directly hit by Hurricane Ivan. Ivan struck as a Category 3 hurricane and caused 90% of the homes to be damaged or destroyed. On July 14, 2005, Hurricane Emily, a Category 1 hurricane at the time, struck the northern part of the island with 80-knot (150 km/h; 92 mph) winds, causing an estimated USD $110 million (EC$ 297 million) worth of damage. By December 2005, 96% of all hotel rooms were to be open for business and to have been upgraded in facilities and strengthened to an improved building code.[*citation needed*] The agricultural industry and in particular the nutmeg industry suffered serious losses, but that event has begun changes in crop management and it is hoped that as new nutmeg trees gradually mature, the industry will return to its pre-Ivan position as a major supplier in the Western world.[*citation needed*]

In April 2007, Grenada jointly hosted (along with several other Caribbean nations) the 2007 Cricket World Cup. The island's prime minister was CARICOM Representative on cricket and was instrumental in having the World Cup Games brought to the region. After Hurricane Ivan, the government of the People's Republic of China (PRC) paid for the new $40 million national stadium and provided the aid of over 300 laborers to build and repair it.[14] During the opening ceremony, the anthem of the Republic of China (ROC, Taiwan) was accidentally played instead of the PRC's anthem, leading to the firing of top officials.[15][16]

The 2008 election was won by the National Democratic Congress under Tillman Thomas.

Geography

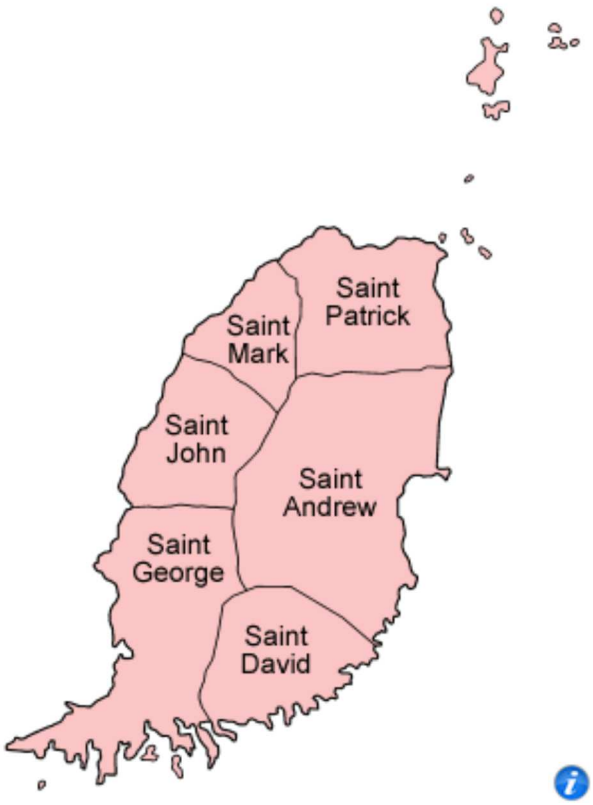
Main article: Geography of Grenada

A view of Carriacou. Other Grenadine islands in distance

The island Grenada is the largest island in the Grenadines; smaller islands are Carriacou, Petit Martinique, Ronde Island, Caille Island, Diamond Island, Large Island, Saline Island, and Frigate Island. Most of the population lives on Grenada, and major towns there include the capital, St. George's, Grenville and Gouyave. The largest settlement on the other islands is Hillsborough on Carriacou.

Map of Grenada

The islands are of volcanic origin with extremely rich soil. Grenada's interior is very mountainous with Mount St. Catherine being the highest at 840 m. Several small rivers with beautiful waterfalls flow into the sea from these mountains. The climate is tropical: hot and humid in the rainy season and cooled by the trade winds in the dry season. Grenada, being on the southern edge of the hurricane belt, has suffered only three hurricanes in fifty years.



Hurricane Janet passed over Grenada on September 23, 1955, with winds of 185 km/h, causing severe damage. The most recent storms to hit have been Hurricane Ivan on September 7, 2004, causing severe damage and

thirty-nine deaths and Hurricane Emily on July 14, 2005, causing serious damage in Carriacou and in the north of Grenada which had been relatively lightly affected by Hurricane Ivan.

Parishes

Main article: Parishes of Grenada

Grenada is divided into 6 parishes:

Carriacou and Petite Martinique, two of the Grenadines, have the status of dependency.

Politics

Main article: Politics of Grenada

As a Commonwealth realm, Queen Elizabeth II is Queen of Grenada and Head of State. The Crown is represented by a Governor-General, who is currently Carlyle Glean. Day-to-day executive power lies with the Head of Government, the Prime Minister. Although appointed by the Governor-General, the Prime Minister is usually the leader of the largest party in the Parliament.

The Parliament consists of a Senate (thirteen members) and a House of Representatives (fifteen members). The senators are appointed by the government and the opposition, while the representatives are elected by the population for five-year terms. With 51% of the votes and eleven seats in the 2008 election, the National Democratic Congress won the July 8, 2008 election. The opposition New National Party won the remaining four seats.

Grenada is a full and participating member of both the Caribbean Community (CARICOM) and the Organisation

of Eastern Caribbean States (OECS).

The military of Grenada comprises two branches:

- Royal Grenada Police Force, which includes a Special Service Unit
- Coast Guard

Economy and tourism

Nutmeg fruit in mace.

Main article: Economy of Grenada

Economic progress in fiscal reforms and prudent macroeconomic management have boosted annual growth to 5%–6% in 1998–99; the increase in economic activity has been led by construction and trade. Tourist facilities are being expanded; tourism is the leading foreign exchange earner. Major short-term concerns are the rising fiscal deficit and the deterioration in the external account balance. Grenada shares a common central bank and a common currency (the East Caribbean dollar) with seven other members of the Organisation of Eastern Caribbean States (OECS)[17]

Grenada is a leading producer of several different spices. Cinnamon, cloves, ginger, mace, allspice, orange/citrus peels, wild coffee used by the locals, and especially nutmeg, providing 20% of the world supply, are all important exports. The nutmeg on the nation's flag represents the economic crop of Grenada; the nation is the world's second largest producer of nutmeg (after Indonesia).

Tourism is Grenada's main economic force. Conventional beach and water-sports tourism is largely focused in the southwest region around St George, the airport and the coastal strip; however, ecotourism is growing in significance. Most of these small ecofriendly guesthouses are located in the Saint David and Saint John parishes. You will find a lot of different accommodations from luxury like the Spice Island Beach Resort (http://www.spiceislandbeachresort.com) to small cottages resorts like Mango Bay Cottages (http://www.mangobaygrenada.com) .The tourism industry is increasing dramatically with the construction of a large cruise ship pier and esplanade. Up to 4 cruise ships per day were visiting St. Georges in 2007–2008 during the cruise ship season.

Devastation caused by Hurricane Ivan in Grenada.

Grand Anse Beach, St. George

The island has also pioneered the cultivation of organic cocoa which is also processed into finished bars by the Grenada Chocolate Company.

Tourism is concentrated in the southwest of the island, around St. George, Grand Anse, Lance Aux Epines, and Point Salines. Grenada has many idyllic beaches around its coastline including the 3 km (1.9 mi) long Grand Anse Beach in St George which is considered to be one of the finest beaches in the world and often appears in countdowns of the world's top 10 beaches.[18]

Flights at the Maurice Bishop International Airport connect with other Caribbean islands, the United States, and Europe. There is also a daily fast ferry service between St. George and Hillsborough. Beginning in October 2009 new passenger ferry service between Grenada, Barbados, St. Vincent, St. Lucia, and Trinidad provided by Grenada-based BEDY Ocean Line is scheduled to begin.

Demographics

Main article: Demographics of Grenada

A majority of the citizens are descendants of the African slaves brought by the English and French; few of the indigenous Carib and Arawak population survived the French purge at Sauteurs. A small percentage of descendants of indentured workers from India were brought to Grenada mainly from the North Indian states of Bihar and Uttar Pradesh between May 1, 1857 – January 10, 1885. Today, Grenadians of Indian descent comprise the second largest ethnic group (i.e. after Afro-Grenadians). There is also a small community of French and English descendants. The rest of the population is of mixed descent.

Grenada, like many of the Caribbean islands is subject to a large amount of migration, with a large number of young people wanting to leave the island to seek life elsewhere. With 110,000 people living in Grenada, estimates and census data suggest that there are at least that number of Grenadian-born people in other parts of the Caribbean (such as Barbados and Trinidad) and at least that number again in First World countries. Popular migration points for Grenadians further north include New York City, Toronto, the United Kingdom (London and Yorkshire predominantly — see Grenadians in the UK) and sometimes Montreal, or as far south as Australia. This means that probably around a third of those born in Grenada still live there.

A school on Grand Anse beach

The official language, English, is used in the government, but Grenadian Creole is considered the lingua franca of the island. French Patois (Antillean Creole) is also spoken by about 10%–20% the population. Some Hindi/Bhojpuri terms are still spoken amongst the Indian descendants, mostly those pertaining to the kitchen; such as *aloo, geera, karela, seim, chownkay, and baylay.* The term *bhai*, which means 'brother' in Urdu and Hindi, is a common form of greeting amongst Indo-Grenadians males of equal status.

Religion

Religion	Percentage [*citation needed*]
Roman Catholic	53
Anglican	14
Other Protestant	33
Rastafari/Spiritist	1.3
Hindu	0.7
Muslim	0.3
Buddhist	0.2
Baha'i	0.2

Including a small community of Rastafarians living in Grenada, most of the population belong to Christian churches. About half of the population are Roman Catholic; while the largest Protestant denomination is Anglican, with Presbyterian and Seventh Day Adventist taking up much of the remainder. Most churches have denomination-based schools but are open to all. There are a small Hindu and Muslim populations descended mostly from Gujarati Indian immigrants who came during the colonial period and set up merchant shops.

Culture

Main articles: Culture of Grenada and Music of Grenada

See also: Cricket in the West Indies

1965 carnival

Although French influence on Grenadian culture is much less visible than on other Caribbean islands, surnames and place names in French remain, and the every day language is laced with French words and the local dialect or Patois. Stronger French influence is found in the well seasoned spicy food and styles of cooking similar to those found in New Orleans, and some French architecture has survived from the 18th century. Island culture is heavily influenced by the African roots of most of the Grenadians, but Indian and Carib Amerindian influence is also seen with dhal puri, rotis, Indian sweets, cassava and curries in the cuisine.

The "oildown" is considered to be the national dish. The phrase "oil-down" refers to a dish cooked in coconut milk until all the milk is absorbed, leaving a bit of coconut oil in the bottom of the pot. Early recipes call for a mixture of salted pigtail, pigs feet (trotters), salt beef and chicken, dumplings made from flour, provision: breadfruit, green banana, yam and potatoes. Callaloo leaves are some times used to retain the steam and for extra flavour.[19]

Soca, calypso, and reggae set the mood for Grenada's annual Carnival activities. Over the years rap music became famous among Grenadian youths, and there have been numerous young rappers emerging in the islands underground rap scene. Zouk is also being slowly introduced onto the island. The islanders' African and Carib Amerindian heritage plays an influential role in many aspects of Grenada's culture.

As with other islands from the Caribbean, cricket is the national and most popular sport and is an intrinsic part of Grenadian culture.

An important aspect of Grenadian culture is the tradition of story telling, with folk tales bearing both African and French influences. The character, *Anancy*, a spider god who is a trickster, originated in West Africa and is prevalent on other Caribbean islands as well. French influence can be seen in *La Diablesse*, a well-dressed she-devil, and *Ligaroo* (from Loup Garoux), a werewolf.

History of Grenada

From Wikipedia, the free encyclopedia

The recorded history of the Caribbean island of Grenada begins in the early 17th century. First settled by indigenous peoples, by the time of European contact it was inhabited by the Caribs. French colonists drove most of the Caribs off the island and established plantations on the island, eventually importing African slaves to work on sugar plantations.

Control of the island was disputed by Great Britain and France in the 18th century, with the British ultimately prevailing. A 1795 slave rebellion inspired by the Haitian Revolution very nearly succeeded, and was crushed with significant military intervention. Slavery was abolished in the 1830s. In 1885 the island became the capital of the British Windward Islands.

Grenada achieved independence from Britain in 1974. Following a leftist coup in 1983, the island was invaded by U. S. troops and a democratic government was reinstated. The island's major crop, nutmeg, was significantly damaged by Hurrican Ivan in 2004.

Early history

About 2 million years ago Grenada was formed as an underwater volcano. Before the arrival of Europeans, Grenada, was inhabited by Carib Indians who had driven the more peaceful Arawaks from the island. Columbus sighted Grenada in 1498 during his third voyage to the new world. He named the island "Concepcion." The origin of the name "Grenada" is obscure, but it is likely that Spanish sailors renamed the island for the city of Granada. By the beginning of the 18th century, the name "Grenada", or "la Grenade" in French, was in common use. Partly because of the Caribs, Grenada remained uncolonized for more than one hundred years after its discovery.

17th century

English attempted settlement

In April 1609 the first attempt at settlement by Europeans was made by an English expedition of 204 adventurers led by Messrs Godfrey, Hall, Lull, and Robinson, who arrived in the ships *Diana*, the *Penelope*, and the *Endeavour*. The settlement was attacked and destroyed by the indigenous islanders and many killed. The few survivors were evacuated when the ships returned on 15 December 1609.[1]

French settlement and conquest

On 17 March 1649 a French expedition of 203 men from Martinique, led by Jacques Dyel du Parquet who had been the Governor of Martinique on behalf of the Compagnie des Iles de l'Amerique (Company of the Isles of America) since 1637, landed at St. Georges Harbour and constructed a fortified settlement, which they named Fort Annunciation.[2] A treaty was swiftly agreed between du Parquet and the indigenous Chief Kairouane to peacefully partition the island between the two communities.[3] Du Parquet returned to Martinique leaving his cousin Jean Le Comte as Governor of Grenada.[4] Conflict broke out between the French and the indigenous islanders in November 1649 and fighting lasted for five years until 1654, when the last opposition to the French on Grenada was crushed - although the island continued for some time after to suffer raids by war canoe parties from St. Vincent, who had aided the local Grenadan islanders in their struggle and continued to oppose the French.[5]

French administration

On 27th Sep 1650 du Parquet bought Grenada, Martinique, and St. Lucia from the Compagnie des Iles de l'Amerique (Company of the Isles of America), as it was dissolved, for the equivalent of £1160.[4] In 1657 du Parquet sold Grenada to the Comte de Cerrillac for the equivalent of £1890.[6] In 1664 King Louis XIV bought out the independent island owners and established the French West India Company.[7] In 1674 the French West India Company was dissolved and Grenada became a French Colony rather than a piece of private property in the hands of Companies of Frenchmen.[7]

In 1675 Grenada was captured by Dutch Privateers, but luckily for the French, a French man-of-war arrived unexpectedly, and the island was recaptured.[8]

18th century

French colony

In 1700 Grenada had a population of 257 whites, 53 coloureds, and 525 slaves. There were 3 sugar estates, 52 indigo plantations, 64 horses, and 569 head of cattle.[9] Between 1705 and 1710 the French built Fort Royal at St. George's which is now know as Fort George.[10] The collapse of the sugar estates and the introduction of cocoa and coffee in 1714 encouraged the development of smaller land holdings, and the island developed a land-owning yeoman farmer class.[11] In 1738 the first hospital was constructed[11]

British colony

Grenada was captured by the British during the Seven Years' War on 4 March 1762 by Commodore Swanton without a shot being fired. Grenada was formally ceded to the Britain by the Treaty of Paris on 10 February 1763. In 1766 the island was rocked by a severe earthquake. In 1767 a slave uprising had to be put down. In 1771 and again in 1775 the town of St. George, which was constructed solely of wood, was burnt to the ground - after which it was sensibly rebuilt using stone and brick.[12] France recaptured Grenada during the American War of Independence, after Comte d'Estaing stormed Hospital Hill, and held off British relief in the naval Battle of Grenada from 2–6 July 1779. However the island was restored to Britain with the Treaty of Versailles four years later on 3 September 1783. In 1784 the first newspaper, the *Grenada Chronicle*, began publication.[11]

Fedons Rebellion

Julien Fedon, a mixed race owner of the Belvedere estate in the St. John Parish, launched a rebellion against British rule on the night of 2nd March 1795, with coordinated attacks on the towns of Grenville, La Baye and Gouyave. Fedon was clearly influenced by the ideas emerging from the French Revolution especially the Convention's abolition of slavery in 1794 - he stated that he intended to make Grenada a "Black Republic just like Haiti". Fedon and his troops controlled all of Grenada except the parish of St George's, the seat of government, between March 1795 and June 1796. During those insurgent months 14,000 of Grenada's 28,000 slaves joined the revolutionary forces in order to write their own emancipation and transform themselves into "citizens"; some 7,000 of these self-liberated slaves would perish in the name of freedom.[13] Fedon's forces were defeated by the British in late 1796, but Fedon himself was never caught and his fate is unknown.

19th century

Early 19th century

In 1833, Grenada became part of the British Windward Islands Administration and remained so until 1958. Slavery was abolished in 1834. Nutmeg was introduced in 1843, when a merchant ship called in on its way to England from the East Indies.[14]

ST. GEORGE, GRENADA.

Late 19th century

In 1857 the first East Indian immigrants

St. George, Grenada. 1890s

arrived.[11] In 1871 Grenada was connected to the telegraph. In 1872 the first secondary school was built.On 3 December 1877 Grenada's old representative system of government was replaced by the pure Crown Colony model.[15] On the 3rd of December 1882, the largest wooden jetty ever built in Grenada was opened in Gouyave. In 1885, after Barbados left the British Windward Islands, the capital of the colonial confederation was moved from Bridgetown to St. George on Grenada. From 1889-1894 the 340 foot Sendall Tunnel was built for horse carriages.

Last colonial years 1900-1974

Early 20th century

Theophilus A. Marryshow founded the Representative Government Association (RGA) in 1917 to agitate for a new and participative constitutional dispensation for the Grenadian people. Partly as a result of Marryshow's lobbying the Wood Commission of 1921-1922 concluded that Grenada was ready for constitutional reform in the form of a 'modified' Crown Colony government. This modification granted Grenadians from 1925 the right to elect 5 of the 15 members of the Legislative Council, on a restricted property franchise enabling the wealthiest 4% of Grenadian adults to vote.[15] In 1928 electricity was installed in St. George's.[11] In 1943 Pearls Airport was opened.[11] On 5 August 1944 the *Island Queen* schooner disappeared with the loss of all 56 passengers and 11 crew.[11]

Towards independence:1950-1974

In 1950 Grenada had its constitution amended to increase the number of elected seats on the Legislative Council from 5 to 8, to be elected by full adult franchise at the 1951 election. In 1950 Eric Gairy founded the Grenada United Labour Party, initially as a trades union, which led the 1951 general strike for better working conditions, this sparked great unrest - so many buildings were set ablaze that the disturbances became known as the 'red sky' days - and the British authorities had to call in military reinforcements to help regain control of the situation. On 10 October 1951 Grenada held its first general elections on the basis of universal adult suffrage[16]- United Labour won 6 of the 8 elected seats on the Legislative Council in both the 1951 and 1954 elections.[16] However the Legislative Council had few powers at this time, with government remaining fully in the hands of the colonial authorities.

On 22 September 1955 Hurricane Janet hit Grenada killing 500 people and destroying 75% of the nutmeg trees. A new political party, the Grenada National Party led by Herbert Blaize, contested the 1957 general election and with the cooperation of elected independent members took control of the Legislative Council from the Grenada United Labour Party. In 1958, the Windward Islands Administration was dissolved, and Grenada joined the Federation of the West Indies.

In 1960 another constitutional evolution established the post of Chief Minister, making the leader of the majority party in the Legislative Council, which at that time was Herbert Blaize, effective head of government. In March 1961 the Grenada United Labour Party won the general election and George E.D. Clyne became chief minister until Eric Gairy was elected in a by-election and took the role in August 1961. Also in 1961 the cruise liner MV *Bianca C* (2) sank off Point Salines, although thankfully there was only a single fatality. In April 1962 Grenada's Administrator, the Queens representative on the island, James Lloyd suspended the constitution, dissolved the Legislative Council, and removed Eric Gairy as Chief Minister, following allegations concerning the Gairy's financial impropriety. At the 1962 general election the Grenada National Party won a majority and

Herbert Blaize became Chief Minister for the second time.

After the Federation of the West Indies collapsed in 1962, the British government tried to form a small federation out of its remaining dependencies in the Eastern Caribbean. Following the failure of this second effort, the British and the islanders developed the concept of "associated statehood". Under the Associated Statehood Act on 3 March 1967 Grenada was granted full autonomy over its internal affairs. Herbert Blaize was the first Premier of the Associated State of Grenada from March to August 1967. Eric Gairy served as Premier from August 1967 until February 1974, as the Grenada United Labour Party party won majorities in both the 1967 and 1972 general elections.

Independence, Revolution and US invasion: 1974-1983

Independence

On 7 February 1974 Grenada became a fully independent state. Grenada continued to practise a modified Westminster parliamentary system based on the British model with a governor general appointed by and representing the British monarch (head of state) and a prime minister who is both leader of the majority party and the head of government. Eric Gairy was independent Grenada's first prime minister serving from 1974 until his overthrow in 1979. Gairy won re-election in Grenada's first general election as an independent state in 1976; however, the opposition New Jewel Movement refused to recognize the result, claiming the poll was fraudulent, and so began working towards the overthrow of the Gairy regime by revolutionary means.

The 1979 coup and revolutionary government

On March 13, 1979, the New Jewel Movement launched an armed revolution which removed Gairy, suspended the constitution, and established a People's Revolutionary Government (PRG), headed by Maurice Bishop who declared himself prime minister. His Marxist-Leninist government established close ties with Cuba, Nicaragua, and other communist bloc countries. All political parties except for the New Jewel Movement were banned and no elections were held during the four years of PRG rule.

The 1983 coups

On 14 October 1983, a power struggle within the government resulted in the house arrest of Bishop at the order of his Deputy Prime Minister, Bernard Coard who became Head of Government. This coup resulted in demonstrations in various parts of the island which eventually led to Bishop being freed from arrest briefly, before being recaptured by the army and executed along with seven others, including members of the cabinet on 19 October 1983.

On 19 October 1983 the military under Hudson Austin took power in a second coup and formed a military government to run the country. A four-day total curfew was declared under which any civilian outside their home was subject to summary execution.

Invasion

Main article: Invasion of Grenada

A U.S.-Caribbean force landed on Grenada on October 25, 1983 in an action called *Operation Urgent Fury*. This action was taken in response to an appeal obtained from the governor general and to a request for assistance from the Organization of Eastern Caribbean States, without consulting the island's head of state, Queen Elizabeth

II, Commonwealth institutions or other usual diplomatic channels (as had been done in Anguilla). Furthermore, United States government military strategists feared that Soviet use of the island would enable the Soviet Union to project tactical power over the entire Caribbean region. U.S. citizens were evacuated, and constitutional government was resumed.

Seventeen members of the PRG and the PRA (army) were convicted by a court. Fourteen were sentenced to death for actions related to the overthrow of the Bishop government and the murder of several persons including Bishop. The sentences were eventually commuted to life imprisonment after an international campaign. Another three were sentenced to forty five years in prison. These seventeen have become known as the Grenada 17, and are the subject of an ongoing international campaign for their release. In October 2003 Amnesty International issued a report which stated that their trial had been a miscarriage of justice. The seventeen have protested their sentences consistently since 1983. After the invasion, United States gave $48.4 million in economic assistance to Grenada in 1984.

Democracy restored: 1983 to present day

Post liberation politics

When US troops withdew from Grenada in December 1983 Nicholas Braithwaite of the National Democratic Congress was appointed Prime Minister of an interim administration by the Governor General Sir Paul Scoon until elections could be organised.

The first democratic elections since 1976 were held in December 1984 and were won by the Grenada National Party under Herbert Blaize who won 14 out of 15 seats in elections and served as Prime Minister until his death in December 1989. The NNP continued in power until 1989 but with a reduced majority. Five NNP parliamentary members, including two cabinet ministers, left the party in 1986-87 and formed the National Democratic Congress (NDC) which became the official opposition. In August 1989, Prime Minister Blaize broke with the GNP to form another new party, The National Party (TNP), from the ranks of the NNP. This split in the NNP resulted in the formation of a minority government until constitutionally scheduled elections in March 1990. Prime Minister Blaize died in December 1989 and was succeeded as prime minister by Ben Jones until after the 1990 elections.

The National Democratic Congress emerged from the 1990 elections as the strongest party, winning 7 of the fifteen available seats. Nicholas Brathwaite added 2 TNP members and 1 member of the Grenada United Labor Party (GULP) to create a 10-seat majority coalition. The governor general appointed him to be prime minister for a second time. Braithwaite resigned in Feb 1995 and was succeeded as Prime Minister by George Brizan who served until the Jun 1995 election.

In parliamentary elections on 20 June 1995 the NNP won 8 of the 15 seats and formed a government headed by Keith Mitchell. The NNP maintained and affirmed its hold on power when it took all 15 parliamentary seats in the January 1999 elections. Mitchell went on to win the 2003 elections with a reduced majority of 8 of the 15 seats and served as Prime Minister for a record 13 years until his defeat in 2008.

The 2008 election was won by the National Democratic Congress under Tillman Thomas with 11 of the 15 seats.[17]

Truth and reconciliation commission

In 2000–02 much of the controversy of the late 1970s and early 1980s was once again brought into the public consciousness with the opening of the truth and reconciliation commission. The commission was chaired by a

Catholic priest, Father Mark Haynes, and was tasked with uncovering injustices arising from the PRA, Bishop's regime, and before. It held a number of hearings around the country. The commission was formed, bizarrely, because of a school project. Brother Robert Fanovich, head of Presentation Brothers' College (PBC) in St. George's tasked some of his senior students with conducting a research project into the era and specifically into the fact that Maurice Bishop's body was never discovered. Their project attracted a great deal of attention, including from the *Miami Herald* and the final report was published in a book written by the boys called *Big Sky, Little Bullet*. It also uncovered that there was still a lot of resentment in Grenadian society resulting from the era, and a feeling that there were many injustices still unaddressed. The commission began shortly after the boys concluded their project.

Hurricane Ivan

On September 7, 2004, Grenada was hit directly by category four Hurricane Ivan. The hurricane destroyed about 85% of the structures on the island, including the prison and the prime minister's residence, killed thirty nine people, and destroyed most of the nutmeg crop, Grenada's main economic mainstay. Grenada's economy was set back several years by Hurricane Ivan's impact. Hurricane Emily ravaged the island's north end in June 2005.

Monarchy of Grenada

From Wikipedia, the free encyclopedia

The **monarchy of Grenada** (the **Grenadian monarchy**) is a system of government in which a hereditary monarch is the sovereign of the Grenadas. The present monarch of Grenada is Queen Elizabeth II[1]. Grenada share the Sovereign with a number of Commonwealth realms[1] The Queen's constitutional roles are mostly delegated to the Governor-General of Grenada. Royal succession is governed by the English Act of Settlement of 1701, which is part of constitutional law.

International and domestic role

One of the most complicated features of the Grenadian Monarchy is that it is a shared monarchy.

54 states are members of the Commonwealth of Nations. Sixteen of these countries are specifically Commonwealth realms who recognise, individually, the same person as their Monarch and Head of State; Grenada is one of these.[2] Despite sharing the same person as their respective national monarch, each of the Commonwealth realms — including Grenada — is sovereign and independent of the others.

Development of shared monarchy

The Balfour Declaration of 1926 provided the dominions the right to be considered equal to Britain, rather than subordinate; an agreement that had the result of, in theory, a shared Crown that operates independently in each realm rather than a unitary British Crown under which all the dominions were secondary. The Monarchy thus ceased to be an exclusively British institution, although it has often been called "British" since this time (in both legal and common language) for reasons historical, legal, and of convenience. The Royal and Parliamentary Titles Act 1927 was the first indication of this shift in law, further elaborated in the Statute of Westminster 1931.

Under the Statute of Westminster, Grenada has a common monarchy with Britain and the other Commonwealth realms, and though laws governing the line of succession to the Grenadian throne lie within the control of the Grenadian Parliament, Grenada cannot change the rules of succession without the unanimous consent of the other realms, unless explicitly leaving the shared monarchy relationship by means of a constitutional amendment. This situation applies symmetrically in all the other realms, including the UK.

On all matters of the Grenadian State, the Monarch is advised solely by Grenadian ministers.

Title

In Grenada, the Queen's official title is: *Elizabeth the Second, by the Grace of God, Queen of the United Kingdom of Great Britain and Northern Ireland and of Grenada and Her other Realms and Territories, Head of the Commonwealth*.

This style communicates Grenada's status as an independent monarchy, highlighting the Monarch's role specifically as Queen of Grenada, as well as the shared aspect of the Crown throughout the realms. Typically, the Sovereign is styled "Queen of Grenada," and is addressed as such when in Grenada, or performing duties on behalf of Grenada abroad.

Constitutional role

The role of the Sovereign's representative, the Governor-general, is determined by the Constitution of Grenada (1973) and the constitutional conventions of the Westminster system of parliamentary government.[3] The Governor-general is appointed by the Monarch upon the advice of the Prime Minister of Grenada. The Monarch is informed of the Prime Minister's decision before the Governor General gives Royal Assent. The power to appoint the Prime Minister and other constitutional powers are exclusively vested in the Governor General and not the Queen herself. As such, the Queen herself does not excerise reserve powers.

Duties

Most of the Queen's domestic duties are performed by the Governor General. The Governor-General represents the Queen on ceremonial occasions such as the opening of Parliament, the presentation of honours and military parades. Under the Constitution, he is given authority to act in some matters, for example in appointing and disciplining officers of the civil service, in proroguing Parliament. As in the other Commonwealth realms, however, the Monarch's role, and thereby the vice-regent's role, is almost entirely symbolic and cultural, acting as a symbol of the legal authority under which all governments operate, and the powers that are constitutionally hers are exercised almost wholly upon the advice of the Cabinet, made up of Ministers of the Crown. It has been said since the death of Queen Anne in 1714, the last monarch to head the British cabinet, that the monarch "reigns" but does not "rule". In exceptional circumstances, however, the Monarch or vice-regal can act against such advice based upon his or her reserve powers.

There are also a few duties which must be specifically performed by, or bills that require assent by the Queen. These include: signing the appointment papers of Governors General, the confirmation of awards of honours, and approving any change in her title.

It is also possible that if the Governor General decided to go against the Prime Minister's or the government's advice, the Prime Minister could appeal directly to the Monarch, or even recommend that the Monarch dismiss the Governor General.

Succession

Charles, Prince of Wales, the current heir to the throne of Grenada

Succession to the throne is by male-preference primogeniture, and governed by the provisions of the Act of Settlement, as well as the English Bill of Rights. These documents, though originally passed by the Parliament of England, are now part of the Grenadian constitutional law, under control of the Grenadian parliament only.

This legislation lays out the rules that the Monarch cannot be a Roman Catholic, nor married to one, and must be in communion with the Church of England upon ascending the throne. As Grenada's laws governing succession are currently identical to those of the United Kingdom (by the *Statute of Westminster*) see Succession to the British Throne for more information.

The heir apparent is Elizabeth II's eldest son, Charles, who has no official title outside of the UK, but is accorded his UK title, Prince of Wales, as a courtesy title.

Legal role

All laws in Grenada are enacted with the sovereign's, or the vice-regal's signature. The granting of a signature to a bill is known as Royal Assent; it and proclamation are required for all acts of Parliament, usually granted or withheld by the Governor General. The Vice-Regals may reserve a bill for the Monarch's pleasure, that is to say, allow the Monarch to make a personal decision on the bill. The Monarch has the power to disallow a bill (within a time limit specified by the constitution).

The Sovereign is deemed the "fount of justice," and is responsible for rendering justice for all subjects. The Sovereign does not personally rule in judicial cases; instead, judicial functions are performed in his or her name. The common law holds that the Sovereign "can do no wrong"; the monarch cannot be prosecuted in his or her own courts for criminal offences. Civil lawsuits against the Crown in its public capacity (that is, lawsuits against the government) are permitted; however, lawsuits against the Monarch personally are not cognizable. The Sovereign, and by extension the Governor General, also exercises the "prerogative of mercy," and may pardon offences against the Crown. Pardons may be awarded before, during, or after a trial.

In Grenada the legal personality of the State is referred to as "Her Majesty the Queen in Right of Grenada." For example, if a lawsuit is filed against the government, the respondent is formally described as Her Majesty the Queen in Right of Grenada. The monarch as an individual takes no more role in such an affair than in any other business of government.

1983 invasion of Grenada

Sir Paul Scoon was Governor General of Grenada from 1978 until 1992, a period which included the 1979 Grenadian Revolution and the subsequent People's Revolutionary Government led by Maurice Bishop's New Jewel Movement from 1979 to 1983 which culminated in the 1983 American led invasion of Grenada. Operation Urgent Fury was launched by US forces in 1983 and deposed the radical elements of the New Jewel Movement which had detained and then killed Prime Minister Bishop and assumed control of the government under the leadership of Bernard Coard. Prior to the invasion Scoon communicated with the leaders of several other Caribbean nations, who had been encouraging the US to invade Grenada and depose Coard. Endorsing the move, Scoon also communicated with the British and American governments, though he was later criticized for having insufficient communication with the Margaret Thatcher administration in London, and Queen Elizabeth II, Grenada's head of state.

Jamaica

Coordinates: 18°10′57″N 77°19′18″W

From Wikipedia, the free encyclopedia

Jamaica /dʒəˈmeɪkə/ is an island nation of the Greater Antilles, 234 kilometres (145 mi) in length, up to 80 kilometres (50 mi) in width and 10,990 square kilometres (4,243 sq mi) in area. It is situated in the Caribbean Sea, about 145 kilometres (90 mi) south of Cuba, and 191 kilometres (119 mi) west of Hispaniola, the island harbouring the nation-states of Haiti and the Dominican Republic. Its indigenous Arawakan-speaking Taíno inhabitants named the island *Xaymaca*, meaning the "Land of Wood and Water", or the "Land of Springs".[4]

Once a Spanish possession known as *Santiago*, in 1655 it became an English, and later a British, colony, known as "Jamaica". It achieved full independence on August 6, 1962.[5] With 2.8 million people, it is the third most populous anglophone country in the Americas, after the United States and Canada. It remains a Commonwealth realm in concert with the Monarchy of Jamaica holding ultimate executive power, where Queen Elizabeth II is the current head of state and Queen of Jamaica.[6][7][8] Kingston is the country's largest city and the capital.[9]

History

Main articles: History of Jamaica and Spanish occupation of Santiago (Jamaica)

The Arawak and Taino indigenous people, originating in South America, settled on the island between 4000 and 1000 BC.[10] When Christopher Columbus arrived in 1494, there were over 200 villages ruled by *caciques* (chiefs of villages). The south coast of Jamaica was the most populated, especially around the area now known as Old Harbour.[10] The Tainos were still inhabiting Jamaica when the English took control of the island.[10] The Jamaican National Heritage Trust is attempting to locate and document any evidence of the Taino/Arawaks.[11]

Christopher Columbus claimed Jamaica for Spain after landing there in 1494 and his probable landing point was Dry Harbour, now called Discovery Bay.[12] There is some debate as to whether he landed in St. Ann's Bay or in Discovery Bay. St. Ann's Bay was the "Saint Gloria" of Columbus who first sighted Jamaica at this point. One mile west of St. Ann's Bay is the site of the first Spanish settlement on the island, Sevilla, which was established in 1509 and abandoned around 1524 because it was deemed unhealthy.[13] The capital was moved to Spanish Town, then called "St. Jago de la Vega", around 1534 and is located in present day St. Catherine.[14]

Out of all the British colonies in the Caribbean, Spanish Town has the oldest cathedral.[14] The Spanish were forcibly evicted by the English at Ocho Rios in St. Ann. In 1655 the English, led by William Penn and General Robert Venables, took over the last Spanish fort in Jamaica.[15] The name of Montego Bay, the capital of the parish of St. James, was derived from the Spanish name *manteca bahía* (or Bay of Lard) for the large quantity of boar used for the lard-making industry.[16]

In 1660, the population of Jamaica was about 4,500 whites and 1,500 blacks,[18] but as early as the 1670s, blacks would form a majority of the population.[19]

When the English captured Jamaica in 1655 the Spanish colonists fled after freeing their slaves.[15] The slaves fled into the mountains, joining those who had previously escaped from the Spanish to live with the Taínos.[20] These runaway slaves, who became known as the Jamaican Maroons, fought the British during the 18th century.[20] The name is still used today for their modern descendants. During the long years of slavery Maroons established free communities in the mountainous interior of Jamaica, maintaining their freedom and independence for

generations.

Henry Morgan was a famous Caribbean pirate and privateer who had arrived in the West Indies as an indentured servant, like many of the early settlers.[17]

During its first 200 years of British rule, Jamaica became one of the world's leading sugar-exporting, slave-dependent nations, producing more than 77,000 tons of sugar annually between 1820 and 1824. After the abolition of the slave trade in 1807,[21] the British imported Indian and Chinese workers as indentured servants to supplement the labour pool. Descendants of indentured servants of Indian and Chinese origin continue to reside in Jamaica today.

By the beginning of the 19th century, Jamaica's heavy reliance on slavery resulted in blacks outnumbering whites by a ratio of almost 20 to 1. Even though England had outlawed the importation of slaves, some were still smuggled into the colonies. The British government drew up laws regimenting the abolition of slavery, but they also included instructions for the improvement of the slaves' way of life. These instructions included a ban of the use of whips in the field, a ban on the flogging of women, notification that slaves were to be allowed religious instruction, a requirement that slaves be given an extra free day during the week when they could sell their produce as well as a ban on Sunday markets.

Map of Jamaica

In Jamaica these measures were resisted by the House of Assembly. The Assembly claimed that the slaves were content and objected to Parliament's interference in island affairs, although many slave owners feared possible revolts. Following a series of rebellions and changing attitudes in Great Britain, the nation formally abolished slavery in 1834, with full emancipation from chattel slavery declared in 1838. The population in 1834 was 371,070 of whom 15,000 were white, 5,000 free black, 40,000 ‘coloured’ or mixed race, and 311,070 slaves.[18]

In the 19th century, the British established a number of botanical gardens. These included the Castleton Garden, set up in 1862 to replace the Bath Garden (created in 1779) which was subject to flooding. Bath Garden was the site for planting breadfruit brought to Jamaica from the Pacific by Captain William Bligh. Other gardens were the Cinchona Plantation founded in 1868 and the Hope Garden founded in 1874. In 1872, Kingston became the island's capital.

In 1945, Sir Horace Hector Hearne became Chief Justice and Keeper of the Records in Jamaica. He headed the Supreme Court, Kingston between 1945 and 1950/1951. He then moved to Kenya where he was appointed Chief Justice.

Jamaica slowly gained increasing independence from the United Kingdom and in 1958, it became a province in the Federation of the West Indies, a federation among the British West Indies. Jamaica attained full independence by leaving the federation in 1962.

Jamaican Prime Minister Michael Manley and his wife with US president Jimmy Carter in 1977.

Strong economic growth, averaging approximately 6% per annum, marked the first ten years of independence under conservative governments which were led successively by Prime Ministers Alexander Bustamante, Donald Sangster and Hugh Shearer. The growth was fuelled by strong investments in bauxite/alumina, tourism, manufacturing industry and, to a lesser extent, the agricultural sector.

The optimism of the first decade was accompanied by a growing sense of inequality, and a sense that the benefits of growth were not being experienced by the urban poor. This, combined with the effects of a slowdown in the global economy in 1970, prompted the electorate to change government, electing the

PNP (People's National Party) in 1972. Despite efforts to create more socially equitable policies in education and health, Jamaica continued to lag economically, with its gross national product having fallen in 1980 to some 25% below the 1972 level. Rising foreign and local debt, accompanied by large fiscal deficits, resulted in the invitation of the International Monetary Fund (IMF) financing from the United States and others, and the imposition of IMF austerity measures (with a greater than 25% interest rate per year).

Economic deterioration continued into the mid-1980s, exacerbated by a number of factors; the first and third largest alumina producers, Alpart and Alcoa closed, and there was a significant reduction in production by the second largest producer, Alcan. In addition, tourism decreased and Reynolds Jamaica Mines, Ltd. left the Jamaican industry.

Government and politics

Inside the Parliament of Jamaica

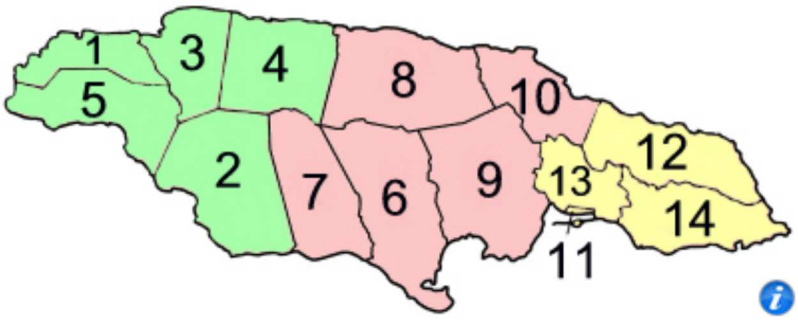
Jamaica is a parliamentary democracy and constitutional monarchy, with Queen Elizabeth II serving as the Jamaican monarch.[22] However, as Elizabeth II is shared as head of state of fifteen other countries and resides mostly in the United Kingdom, she is thus often represented as Queen of Jamaica in Jamaica and abroad by the Governor-General of Jamaica.[23] The governor-general is nominated by the Prime Minister of Jamaica and the entire Cabinet and appointed by the monarch. All the members of the Cabinet are appointed by the governor-general on the advice of the prime minister. The monarch and the governor-general serve largely ceremonial roles, apart from their potent reserve power to dismiss the prime minister or parliament.

Jamaica's current constitution was drafted in 1962 by a bipartisan joint committee of the Jamaican legislature. It came into force with the Jamaica Independence Act, 1962 of the United Kingdom parliament, which gave Jamaica independence.

The Parliament of Jamaica is bicameral, consisting of the House of Representatives (Lower House) and the Senate (Upper House). Members of the House (known as Members of Parliament or *MPs*) are directly elected, and the member of the House of Representatives who, in the governor-general's best judgement, is best able to command the confidence of a majority of the members of that House, is appointed by the governor-general to be the prime minister. Senators are nominated jointly by the prime minister and the parliamentary Leader of the Opposition and are then appointed by the governor-general.

In February 2006, Portia Simpson-Miller was elected by delegates of the ruling People's National Party (PNP) to replace P. J. Patterson as president of the party. At the end of March 2006, when Patterson demitted office, Simpson-Miller became the first female Prime Minister of Jamaica. Former Prime Minister Patterson had held office since the 1992 resignation of Michael Manley. Patterson was re-elected three times, the last being in 2002.

On 3 September 2007, Bruce Golding of the Jamaica Labour Party was voted in as Prime Minister-Designate after achieving a 33 – 27 seat victory over Portia Simpson-Miller and the PNP in the 2007 Jamaican general election. Portia Simpson-Miller conceded defeat on 5 September 2007.[24] On 11 September 2007, after being sworn in by Governor-General Kenneth Hall, The Hon. Bruce Golding assumed office as Prime Minister of Jamaica.



Jamaica has traditionally had a two-party system, with power often alternating between the People's National Party and Jamaica Labour Party (JLP). Over the past decade a new political party called the National Democratic Movement (NDM) emerged in an attempt to challenge the two-party system, though it has become largely irrelevant in this system, as it garnered only 540 votes of the over 800,000 votes cast in the 3 September elections. Jamaica is a full and participating member of the Caribbean Community (CARICOM).

Embassy of Jamaica in Washington, D.C.

Parishes

Main article: Parishes of Jamaica

Jamaica is divided into 14 parishes, which are grouped into three historic counties that have no administrative relevance.

	Cornwall County	Capital	km²		Middlesex County	Capital	km²		Surrey County	Capital	km²
1	Hanover	Lucea	450	6	Clarendon	May Pen	1,196	11	Kingston	Kingston	25
2	Saint Elizabeth	Black River	1,212	7	Manchester	Mandeville	830	12	Portland	Port Antonio	814
3	Saint James	Montego Bay	595	8	Saint Ann	St. Ann's Bay	1,213	13	Saint Andrew	Half Way Tree	453
4	Trelawny	Falmouth	875	9	Saint Catherine	Spanish Town	1,192	14	Saint Thomas	Morant Bay	743
5	Westmoreland	Savanna-la-Mar	807	10	Saint Mary	Port Maria	611				

Military

Main article: Jamaica Defence Force

The Jamaica Defence Force (JDF) is the small but professional military force of Jamaica. The JDF is based on the British military model with organisation, training, weapons and traditions closely aligned with Commonwealth realms. Once chosen, officer candidates are sent to one of several British or Canadian basic officer courses depending on which arm of service they are selected for. Enlisted soldiers are given basic training at JDF Training Depot, Newcastle or Up Park Camp, both in St. Andrew. As with the British model, NCOs are given several levels of professional training as they rise up the ranks. Additional military schools are available for speciality training in Canada, the United States and the United Kingdom.

The JDF is directly descended from the British West India Regiment formed during the colonial era.[25] The

West India Regiment was used extensively by the British Empire in policing the empire from 1795 to 1926. Other units in the JDF heritage include the early colonial Jamaica Militia, the Kingston Infantry Volunteers of WWI and reorganised into the Jamaican Infantry Volunteers in World War II. The West Indies Regiment was reformed in 1958 as part of the West Indies Federation, after dissolution of the Federation the JDF was established.

The Jamaica Defence Force (JDF) comprises an infantry Regiment and Reserve Corps, an Air Wing, a Coast Guard fleet and a supporting Engineering Unit.[26] The infantry regiment contains the 1st, 2nd and 3rd (National Reserve) battalions. The JDF Air Wing is divided into three flight units, a training unit, a support unit and the JDF Air Wing (National Reserve). The Coast Guard is divided between seagoing crews and support crews who conduct maritime safety and maritime law enforcement as well as defence-related operations.[27] The role of the support battalion is to provide support to boost numbers in combat and issue competency training in order to allow for the readiness of the force.[28] The 1st Engineer Regiment was formed due to an increased demand for military engineers and their role is to provide engineering services whenever and wherever they are needed.[29] The Headquarters JDF contains the JDF Commander, Command Staff as well as Intelligence, Judge Advocate office, Administrative and Procurement sections.[30]

In recent years the JDF has been called on to assist the nation's police, the Jamaica Constabulary Force (JCF), in fighting drug smuggling and a rising crime rate which includes one of the highest murder rates in the world. JDF units actively conduct armed patrols with the JCF in high-crime areas and known gang neighbourhoods. There has been vocal controversy as well as support of this JDF role. In early 2005, an Opposition leader, Edward Seaga, called for the merger of the JDF and JCF. This has not garnered support in either organisation nor among the majority of citizens.

Geography and environment

Main article: Geography of Jamaica

Jamaica is the third largest island in the Caribbean.[31] It lies between latitudes 17° and 19°N, and longitudes 76° and 79°W. Mountains, including the Blue Mountains, dominate the inland. They are surrounded by a narrow coastal plain.[32] Chief towns and cities include the capital Kingston, Portmore, Spanish Town, Mandeville, Ocho Ríos, Port Antonio, Negril, and Montego Bay.[33] Jamaica has the seventh largest natural harbour in the world, Kingston Harbour.[34] Tourist attractions include Dunn's River Falls in St. Ann, YS Falls in St. Elizabeth, the Blue Lagoon in Portland, and Port Royal, which was the site of an earthquake that helped form the island's Palisadoes.[35][36][37][38]

Doctor's Cave Beach Club is a popular destination in Montego Bay.

The picturesque Dunn's River Falls in Ocho Ríos.

The climate in Jamaica is tropical, with hot and humid weather, although higher inland regions are more temperate.[39] Some regions on the south coast, such as the Liguanea Plain and the Pedro Plains, are relatively dry rain-shadow areas.[40] Jamaica lies in the hurricane belt of the Atlantic Ocean and because of this, the island sometimes experiences significant storm damage.[41] Hurricanes Charlie and Gilbert hit Jamaica directly in 1951 and 1988, respectively, causing major damage and many deaths. In the 2000s (decade), hurricanes Ivan, Dean, and Gustav also brought severe weather to the island.

Flora and fauna

Jamaican Boa

Jamaican Hutia

Jamaica's climate is tropical, supporting diverse ecosystems with a wealth of plants and animals.

Jamaica's plant life has changed considerably over the centuries. When the Spanish arrived in 1494, except for small agricultural clearings, the country was deeply forested. The European settlers cut down the great timber trees for building purposes and cleared the plains, savannas, and mountain slopes for cultivation. Many new plants were introduced including sugarcane, bananas, and citrus trees.

Areas of heavy rainfall contain stands of bamboo, ferns, ebony, mahogany, and rosewood. Cactus and similar dry-area plants are found along the south and southwest coastal area. Parts of the west and southwest consist of large grasslands, with scattered stands of trees.

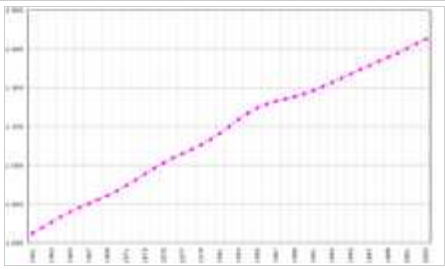
The Jamaican animal life, typical of the Caribbean, includes highly diversified wildlife with many endemic species found nowhere else on earth. As with other oceanic islands, land mammals are made up almost entirely of Bats. The only non-bat native mammal extant in Jamaica is the Jamaican Hutia, locally known as the coney. Introduced mammals such as Wild Boar and the Small Asian Mongoose are also common. Jamaica is also home to many reptiles, the largest of which is the American Crocodile, however it is only present within the Black River and a few other areas. Lizards such as Anoles, Iguanas and snakes such as racers and the Jamaican Boa (the largest snake on the island) are common. None of Jamaica's native snakes are dangerously venomous to humans.[42] One species of freshwater turtle is native to Jamaica, the Jamaican Slider. It is found only on Jamaica, Cat Island, and a few other islands in The Bahamas. In addition, many types of frogs are common on the island, especially Treefrogs. Birds are abundant, and make up the bulk of the endemic and native vertebrate species. Beautiful and exotic birds such as the Jamaican Tody and the Doctor Bird (the national bird) can be found among a large number of others. Insects and other invertebrates are abundant, including the world's largest centipede, the Amazonian Giant Centipede, and the Homerus Swallowtail, the Western Hemisphere's largest butterfly.

Jamaican waters contain considerable resources of fresh-and saltwater fish.[43] The chief varieties of saltwater fish are Kingfish, Jack, Mackerel, Whiting, Bonito, and Tuna. Fish that occasionally enter freshwater and estuarine environments include Snook, Jewfish, Mangrove snapper, and Mullets. Fish that spend the majority of their lives in Jamaica's fresh waters include many species of Livebearers, Killifish, freshwater Gobies, the Mountain Mullet, and the American Eel. Tilapia have been introduced from Africa for aquaculture, and are very common.

Among the variety of terrestrial, aquatic and marine ecosystems are dry and wet limestone forests, rainforest, riparian woodland, wetlands, caves, rivers, seagrass beds and coral reefs.

The authorities had recognized the tremendous significance and potential of this aspect of their heritage and designated some of the more 'fertile' areas 'protected'. Among the island's protected areas are the Cockpit Country, Hellshire Hills, and Litchfield forest reserves. In 1992, Jamaica's first marine park, covering nearly 6 square miles (about 15 km^2), was established in Montego Bay.

The following year Blue and John Crow Mountains National Park was created on roughly 300 square miles



(780 km^2) of wilderness that supports thousands of tree and fern species and rare animals.

Demographics

Further information: Demographics of Jamaica and Jamaican peoples

Ethnic origins

According to the 2001 census, the majority of Jamaica's population is of African descent (referring to those who have origins *mainly* in Africa). The most common ethnic groups among all Africans taken to Jamaica were the Akan (known as the "Coromantee") and the Igbo.[44] Multiracial Jamaicans form the second largest racial group many of whom also have some Irish ancestry although most mixed-race people on the island self-report simply as "Jamaican".[45][46][47][48] Jamaicans of Indian and Chinese ancestry, form the next largest racial groups after multiracial Jamaicans. Lebanese, Syrian, English, Scottish, Irish, and German Jamaicans make up a smaller racial minority but are still very influential both socially and economically.[1] In recent years, immigration has increased, coming mainly from China, Haiti, Cuba, Colombia, and other Latin American countries; 20,000 Latin Americans currently reside in Jamaica. About 7,000 Americans also reside in Jamaica, as well as many first generation American, British and Canadian of Jamaican descendant.[49]

Population of Jamaica (in thousands) from 1961–2003

Streets of Kingston, the capital of Jamaica

Language

Main articles: Jamaican Patois and Jamaican English

The official language of Jamaica is English. Jamaicans primarily speak an English-African Creole language known as Jamaican Patois, which has become known widely through the spread of Reggae music. Jamaican Patois was formed from a base of mainly English words with elements of re-formed grammar, together with a little vocabulary from African languages and Native American words. Some archaic features are reminiscent of Irish English.

Emigration

Main article: Jamaican diaspora

Many Jamaicans have emigrated to other countries, especially to the United Kingdom, the United States, and Canada. In the case of the United States, about 20,000 Jamaicans per year are granted permanent residence.[50] The great number of Jamaicans living abroad has become known as the Jamaican diaspora. There has also been emigration of Jamaicans to Cuba.[51] The scale of emigration has been widespread and similar to other Caribbean entities such as Puerto Rico, Guyana, and The Bahamas. It is estimated that up to 2.5 million Jamaicans and Jamaican descendants live abroad.[52] An estimated 60% of the highly educated people of Jamaica now live abroad.[53]

Concentrations of expatriate Jamaicans are quite considerable in numberous cities in the United States, including

New York City, Buffalo, the Miami metro area, Atlanta, Chicago, Orlando, Tampa, Washington, D.C., Philadelphia, Hartford, Providence and Los Angeles. Jamaicans in the United Kingdom number an estimated 800,000 making them by far the country's largest African-Caribbean group. Large scale migration from Jamaica to the UK occurred primarily in the 1950s and 1960s (when the country was still under British rule). Jamaican communities exist in most large UK cities.[54] In Canada, the Jamaican population is centred in Toronto, and there are smaller communities in cities such as Hamilton, Montreal, Vancouver and Ottawa.

Crime

Main article: Crime in Jamaica

See also: Prisons in Jamaica and LGBT rights in Jamaica

Jamaica has had one of the highest murder rates in the world for many years, according to UN estimates.[55][56] Some areas of Jamaica, particularly cities such as Kingston, experience high levels of crime and violence.[57] Many Jamaicans are hostile toward LGBT and intersex people.[57] Various mob attacks against gay people have been reported,[58][59][60] prompting human-rights groups to call Jamaica "the most homophobic place on earth."[61]

Religion

Main article: Religion in Jamaica

Mandeville Church in Manchester Parish. Founded in 1816.

Christianity is the largest religion practised in Jamaica. According to the 2001 census, the country's largest denominations are the Church of God of Prophecy (24% of the population), Seventh-day Adventist Church (11%), Pentecostal (10%), Baptist (7%), Anglican (4%), Roman Catholic (2%), United Church (2%), Methodist (2%), Moravian (1%) and Plymouth Brethren (1%)[62] The Christian faith gained credibility as British Christian abolitionists and Baptist missionaries joined educated former slaves in the struggle against slavery.[63]

The Rastafari movement had 24,020 adherents, according to the 2001 census.[62] Other religions in Jamaica include Jehovah's Witnesses (2% population), the Bahá'í faith, which counts perhaps 8,000 adherents[64] and 21 Local Spiritual Assemblies,[65] Buddhism, and Hinduism.[66] There is a small population of Jews, about 200, who describe themselves as Liberal-Conservative.[67] The first Jews in Jamaica trace their roots back to early 15th century Spain and Portugal.[68] Muslim groups in Jamaica claim 5,000 adherents.[62]

Culture

Main article: Culture of Jamaica

Further information: Music of Jamaica, Jamaican cuisine, and Jamaican literature

Though a small nation, Jamaican culture has a strong global presence. The musical genres reggae, ska, mento, rocksteady, dub, and, more recently, dancehall and ragga all originated in the island's vibrant, popular urban recording industry. Jamaica also played an important role in the development of punk rock, through reggae and

ska. Reggae has also influenced American rap music, as they both share their roots as rhythmic, African styles of music. Some rappers, such as The Notorious B.I.G. and Heavy D, are of Jamaican descent. Internationally known reggae musician Bob Marley was also Jamaican.

Marcus Garvey, Father of the Back to Africa Movement and Jamaica's first National Hero.

Many other internationally known artists were born in Jamaica including Millie Small, Lee "Scratch" Perry, Peter Tosh, Bunny Wailer, Big Youth, Jimmy Cliff, Dennis Brown, Desmond Dekker, Beres Hammond, Beenie Man, Shaggy, Grace Jones, Shabba Ranks, Super Cat, Buju Banton, Sean Paul, I Wayne, Bounty Killer and many others. Band artist groups that came from Jamaica include Black Uhuru, Third World Band, Inner Circle, Chalice Reggae Band, Culture, Fab Five and Morgan Heritage. The genre jungle emerged from London's Jamaican diaspora. The birth of hip-hop in New York City, New York also owed much to the city's Jamaican community.

Ian Fleming, who lived in Jamaica, repeatedly used the island as a setting in the James Bond novels, including *Live and Let Die*, *Doctor No*, *For Your Eyes Only*, *The Man with the Golden Gun* and *Octopussy and The Living Daylights*. In addition, James Bond uses a Jamaica-based cover in *Casino Royale*. So far, the only James Bond film adaptation to have been set in Jamaica is *Doctor No*. Filming for the fictional island of San Monique in *Live and Let Die* took place in Jamaica.

Bob Marley, the most famous reggae artist from Jamaica.

Journalist and author H. G. de Lisser (1878–1944) used his native country as the setting for his many novels. Born at Falmouth, de Lisser worked as a reporter for the Jamaica Times at a young age and in 1920 began publishing the magazine Planters' Punch. *The White Witch of Rosehall* is one of his better known novels. He was named Honourary President of the Jamaican Press Association, and worked throughout his professional career to promote the Jamaican sugar industry.

The American film *Cocktail*, starring Tom Cruise, is one of the more popular films to depict Jamaica. A look at delinquent youth in Jamaica is presented in the 1970s musical crime film *The Harder They Come*, starring Jimmy Cliff as a frustrated (and psychopathic) reggae musician who descends into a murderous crime spree. Another popular Jamaican-based film is the 1993 comedy *Cool Runnings* which is loosely based on the true story of Jamaica's first bobsled team trying to make it in the Winter Olympics.

Errol Flynn lived with his third wife Patrice Wymore in Port Antonio in the 1950s. He was responsible for developing tourism to this area, popularising raft trips down rivers on bamboo rafts.[69]

The island is famous for its Jamaican jerk spice which forms a popular part of Jamaican cuisine. Jamaica is also home to Red Stripe beer and Jamaican Blue Mountain Coffee.

National symbols

(*From the Jamaica Information Service*)[70]

- National Bird — Red-billed Streamertail (aka Doctor Bird) (a Hummingbird, *Trochilus polytmus*)
- National Flower – Lignum vitae (*Guiacum officinale*)
- National Tree — Blue Mahoe (*Hibiscus taliparitiv elatum*)

- National Fruit — Ackee (*Blighia sapida*)
- National Motto — "Out of Many, One People."

Usain Bolt at the Berlin World Championships 2009

Sport is an integral part of national life in Jamaica and the island's athletes tend to perform to a standard well above what might ordinarily be expected of such a small country.[71] While the most popular local sport is cricket, on the international stage Jamaicans have tended to do particularly well at Track and Field.[71][72]

The country was one the venues of 2007 Cricket World Cup and West Indies cricket team is one of the only 10 ICC full member teams who participate in international Test Cricket.[73] The Jamaica national cricket team competes regionally, and also provides players for the West Indies. Sabina Park is the only test venue in the island, but the Greenfield Stadium (Trelawny) is also used for cricket.[74][75]

Since independence Jamaica has consistently produced world class athletes in track and field.[71] In Jamaica involvement in athletics begins at a very young age and most high schools maintain rigorous athletics programs with their top athletes competing in national competitions (most notably the VMBS Girls and Boys Athletics Championships) and international meets (most notably the Penn Relays). In Jamaica it is not uncommon for young athletes to attain press coverage and national fame long before they arrive on the international athletics stage.

Over the past six decades Jamaica has produced dozens of world class sprinters including Olympic and World Champion Usain Bolt, world record holder in the 100m for men at 9.58s, and 200m for men at 19.19s. Other noteworthy Jamaican sprinters include Arthur Wint – the first Jamaican Olympic Gold Medalist, Donald Quarrie – Olympic Champion and former 200m world record holder, Merlene Ottey, Delloreen Ennis-London, Shelly-Ann Fraser-Pryce – the current World and Olympic 100m Champion, Kerron Stewart, Aleen Bailey, Juliet Cuthbert, Veronica Campbell-Brown, Sherone Simpson, Brigitte Foster-Hylton, Yohan Blake, Herb McKenley, George Rhoden--Olympic Gold Medalist, Deon Hemmings – Olympic Gold Medalist as well as former 100m world record holder and 2x 100m Olympic finalist and Gold medal winner in the men's 2008 Olympic 4x100m Asafa Powell.

Jamaica has also produced several world class amateur and professional boxers including Trevor Berbick and Mike McCallum. First generation Jamaican athletes have continued to make a significant impact on the sport internationally, especially in the United Kingdom where the list of top British boxers born in Jamaica or of Jamaican parents includes Lloyd Honeyghan, Chris Eubank, Audley Harrison, David Haye, Lennox Lewis and Frank Bruno.

Association football and horse-racing are other popular sports in Jamaica. The national football team qualified for the 1998 FIFA World Cup.

The Jamaica national bobsled team was once a serious contender in the Winter Olympics, beating many

well-established teams. Chess, and Basketball are widely played in Jamaica which are supported by the Jamaica Chess Federation (JCF), and the Jamaica Basketball Federation (JBF). Netball is also very popular on the island, with the Jamaica national netball team called *The Sunshine Girls* consistently ranking in the top five in the world.[*citation needed*]

The Jamaica national rugby league team is made up of players who play in Jamaica, and UK-players from professional and semi professional teams in the UK.[76] Their first international was a 37–22 loss to the United States national rugby league team in November 2009.[77] Rugby league in Jamaica is growing with universities and high schools taking up the sport.[78][79] The JRLA Championship is the main rugby league competition in the country.[80] The Hurricanes Rugby League are a professional rugby league team who are hoping to compete in either the USA Rugby League or the AMNRL by 2013 during that time they will be training young players aged 14–19 who will be part of the Hurricanes RL Academy in the hope of developing into full time professional players.

Education

Main article: Education in Jamaica

The emancipation of the slaves heralded in the establishment of the Jamaican education system for the masses. Prior to emancipation there were few schools for educating locals. Many sent their children off to England to access quality education.

After emancipation the West Indian Commission granted a sum of money to establish Elementary Schools, now known as *All Age Schools*. Most of these schools were established by the churches.[81] This was the genesis of the modern Jamaican school system.

Presently the following categories of schools exist:

- **Early childhood** – Basic, Infant and privately operated pre- school. Age cohort – 2 – 5 years.
- **Primary** – Publicly and privately owned (Privately owned being called Preparatory Schools). Ages 3 – 12 years.
- **Secondary** – Publicly and privately owned. Ages 10 – 19 years. The high schools in Jamaica may be either single-sex or co-educational institutions, and many schools follow the traditional English grammar school model used throughout the British West Indies.
- **Tertiary** – Community Colleges, Teachers' Colleges with The Mico Teachers' College (now The MICO University College) being the oldest founded in 1836,The Shortwood Teachers' College (which was once an all female teacher training institution), Vocational Training Centres, Colleges and Universities – Publicly and privately owned. There are five local universities namely: The University of the West Indies (Mona Campus); the University of Technology, Jamaica formerly The College of Art Science and Technology (CAST); the Northern Caribbean University formerly West Indies College; the University College of The Caribbean and the International University of the Caribbean.

Additionally, there are many community and teacher training colleges.

Education is free from the early childhood to secondary levels. There are also opportunities for those who cannot afford further education in the vocational arena through the Human Employment and Resource Training-National Training Agency (HEART Trust-NTA) programme[82] and through an extensive scholarship network for the various universities.

Students are taught Spanish in school from the primary level upwards; about 40–45% of educated people in

Jamaica knows some form of Spanish.

Economy

Main article: Economy of Jamaica

A beach in Negril with a hotel and restaurant

Jamaica is a mixed economy with both state enterprises and private sector businesses. Major sectors of the Jamaican economy include agriculture, mining, manufacturing, tourism, and financial and insurance services. Tourism and mining are the leading earners of foreign exchange. Half the Jamaican economy relies on services, with half of its income coming from services such as tourism. An estimated 1.3 million foreign tourists visit Jamaica every year.[83]

Supported by multilateral financial institutions, Jamaica has, since the early 1980s, sought to implement structural reforms aimed at fostering private sector activity and increasing the role of market forces in resource allocation. Since 1991, the government has followed a programme of economic liberalization and stabilization by removing exchange controls, floating the exchange rate, cutting tariffs, stabilising the Jamaican currency, reducing inflation and removing restrictions on foreign investment. Emphasis has been placed on maintaining strict fiscal discipline, greater openness to trade and financial flows, market liberalisation and reduction in the size of government. During this period, a large share of the economy was returned to private sector ownership through divestment and privatisation programmes.

James Bond Beach

The macroeconomic stabilisation programme introduced in 1991, which focused on tight fiscal and monetary policies, has contributed to a controlled reduction in the rate of inflation. The annual inflation rate decreased from a high of 80.2% in 1991 to 7.9% in 1998. Inflation for FY1998/99 was 6.2% compared to 7.2% in the corresponding period in CUU1997/98. The Government of Jamaica remains committed to lowering inflation, with a long-term objective of bringing it in line with that of its major trading partners.

After a period of steady growth from 1985 to 1995, real GDP decreased by 1.8% and 2.4% in 1996 and 1997, respectively. The decrease in GDP in 1996 and 1997 was largely due to significant problems in the financial sector and, in 1997, a severe island-wide drought (the worst in 70 years) that drastically reduced agricultural production. In 1997, nominal GDP was approximately J$220,556.2 million (US$6,198.9 million based on the average annual exchange rate of the period).

The economy in 1997 was marked by low levels of import growth, high levels of private capital inflows and relative stability in the foreign exchange market.

Recent economic performance shows the Jamaican economy is recovering. Agricultural production, an important engine of growth increased 15.3% in third quarter of 1998 compared to the corresponding period in 1997, signaling the first positive growth rate in the sector since January 1997. Bauxite and alumina production increased 5.5% from January to December, 1998 compared to the corresponding period in

Fishing boats and bauxite cargo ships share the waterways near Alligator Pond, Jamaica

1997. January's bauxite production recorded a 7.1% increase relative to January 1998 and continued expansion of alumina production through 2009 is planned by Alcoa.[84] Tourism, which is the largest foreign exchange earner, showed improvement as well. In the third quarter of 1998, growth in tourist arrivals accelerated with an overall increase of 8.5% in tourism earnings in 1998 when compared to the corresponding period in 1997. Jamaica's agricultural exports are sugar, bananas, coffee, rum,and yams.

Jamaica is the fifth largest exporter of bauxite in the world, after Australia, China, Brazil and Guinea.

Jamaica has a wide variety of industrial and commercial activities. The aviation industry is able to perform most routine aircraft maintenance, except for heavy structural repairs. There is a considerable amount of technical support for transport and agricultural aviation. Jamaica has a considerable amount of industrial engineering, light manufacturing, including metal fabrication, metal roofing, and furniture manufacturing. Food and beverage processing, glassware manufacturing, software and data processing, printing and publishing, insurance underwriting, music and recording, and advanced education activities can be found in the larger urban areas. The Jamaican construction industry is entirely self-sufficient, with professional technical standards and guidance.[85]

Since the first quarter of 2006, the economy of Jamaica has undergone a period of staunch growth. With inflation for the 2006 calendar year down to 6.0% and unemployment down to 8.9%, the nominal GDP grew by an unprecedented 2.9%.[86] An investment programme in island transportation and utility infrastructure and gains in the tourism, mining, and service sectors all contributed this figure. All projections for 2007 show an even higher potential for economic growth with all estimates over 3.0% and hampered only by urban crime and public policies.

In 2006, Jamaica became part of the CARICOM Single Market and Economy (CSME) as one of the pioneering members.

The global economic downturn had a significant impact on the Jamaican economy for the years 2007 to 2009, resulting in negative economic growth. The government implemented a new Debt Management Initiative, the Jamaica Debt Exchange (JDX) on January 14, 2010. The initiative would see holders of Government of Jamaica (GOJ) bonds returning the high interest earning instruments for bonds with lower yields and longer maturities.The offer was taken up by over 95% of local financial institutions and was deemed a success by the government. Owing to the success of the JDX program, the Bruce Golding-led government was successful in entering into a borrowing arrangement with the IMF on Ferbruary 4,2010 for the amount of US$1.27b. The loan agreement is for a period of three years. [87]

Infrastructure

Transport

Further information: Transport in Jamaica

The transport infrastructure in Jamaica consists of roadways, railways and air transport, with roadways forming the backbone of the island's internal transport system.

Roadways

Main article: Roads in Jamaica

The Jamaican road network consists of almost 13 049 miles (21,000 kilometres) of roads, of which over 9 321 miles (15,000 kilometres) is paved.[1] The Jamaican Government has, since the late 1990s and in cooperation with private investors, embarked on a campaign of infrastructural improvement projects, one of which includes the creation of a system of freeways, the first such access-controlled roadways of their kind on the island, connecting the main population centres of the island. This project has so far seen the completion of 21 miles (33 kilometres) of freeway.

Railways

Main article: Railways of Jamaica

Railways in Jamaica no longer enjoy the prominent position they once did, having been largely replaced by roadways as the primary means of transport. Of the 169 miles (272 kilometres) of railway found in Jamaica, only 35 miles (57 kilometres) remain in operation, currently used to transport bauxite.[1]

On April 13, 2011, limited passenger service was resumed between May Pen, Spanish Town and Linstead.

Air transport

There are three international airports in Jamaica with modern terminals, long runways, and the navigational equipment required to accommodate the large jet aircraft used in modern and air travel: Norman Manley International Airport in Kingston, Ian Fleming International Airport in Boscobel, Saint Mary Parish, and the island's largest and busiest airport, Sir Donald Sangster International Airport in the resort city of Montego Bay. Norman Manley and Sangster International airports are home to the country's national airline, Air Jamaica. In addition there are local commuter airports at Tinson Pen (Kingston), Port Antonio, and Negril which cater to internal flights only. Many other small, rural centres are served by private fields on sugar estates or bauxite mines.

Ports, shipping and lighthouses

See also: Lighthouses in Jamaica

Owing to its location in the Caribbean Sea in the shipping lane to the Panama Canal and relative proximity to large markets in North America and emerging markets in Latin America, Jamaica receives high container traffic. The container terminal at the Port of Kingston has undergone large expansion in capacity in recent years to handle growth both already realised as well as that which is projected in coming years.[88] Montego Freeport in Montego Bay also handles a variety of cargo like (though more limited than) the Port of Kingston, mainly agricultural products.

There are several other ports positioned around the island, including Port Esquivel in St. Catherine (WINDALCO), Rocky Point in Clarendon, Port Kaiser in St. Elizabeth, Port Rhoades in Discovery Bay, Reynolds Pier in Ocho Rios, and Boundbrook Port in Port Antonio.

To aid the navigation of shipping, Jamaica operates nine lighthouses.

Energy

Jamaica depends on petroleum imports to satisfy its national energy needs.[1] Many test sites have been explored for oil, but no commercially viable quantities have been found.[89] The most convenient sources of imported oil and motor fuels (diesel, gasoline, and jet fuel) are from Mexico and Venezuela.

Jamaica's electrical power is produced by diesel (bunker oil) generators located in Old Harbour. Other smaller power stations (most owned by the Jamaica Public Service Company – the island's electricity provider) support the island's electrical grid including the Hunts Bay Power Station, the Bogue Power Station, the Rockfort Power Station and small hydroelectric plants on the White River, Rio Bueno, Morant River, Black River (Maggotty) and Roaring River.[90] A wind farm, owned by the Petroleum Corporation of Jamaica, was established at Wigton, Manchester.[91]

Jamaica has successfully operated a SLOWPOKE-2 nuclear reactor of 20 kW capacity since the early 1980s, but there are no plans to expand nuclear power at present.[92]

Jamaica imports approximately 80,000 barrels (13,000 m^3) of oil energy products per day,[89] including asphalt and lubrication products. Just 20% of imported fuels are used for road transportation, the rest being used by the bauxite industry, electricity generation, and aviation.

Jamaica produces enormous quantities of hydrous ethanol (5% water content), most of which appears to be consumed as beverages, and none of it used as motor fuel. Facilities exist to refine hydrous ethanol feedstock into anhydrous ethanol (0% water content), but the process appears to be uneconomic at this time and the facility remains idle.[93]

Communication

Jamaica has a fully digital telephone communication system with a mobile penetration of over 95%.[94]

The country’s three mobile operators – Cable and Wireless (marketed as **LIME** – Landline, Internet, Mobile and Entertainment), Digicel, and Oceanic Digital (operating as MiPhone and now known as Claro since late 2008) – have spent millions in network upgrade and expansion.Both Digicel and Oceanic Digital were granted licences in 2001 to operate mobile services in the newly liberalised telecom market that had once been the sole domain of the incumbent Cable and Wireless monopoly. Digicel opted for the more widely used GSM wireless system, while Oceanic opted for the CDMA standard. Cable and Wireless, which had begun with TDMA standard, subsequently upgraded to GSM, and currently utilises both standards on its network.

With wireless usage increasing, landlines supplied by Cable and Wireless have declined from just over half a million to roughly about three hundred thousand as of 2006.[94] In a bid to grab more market share, Cable and Wireless recently launched a new land line service called HomeFone Prepaid that would allow customers to pay for minutes they use rather than pay a set monthly fee for service, much like prepaid wireless service.

A new entrant to the Jamaican communications market, Flow Jamaica, recently laid a new submarine cable connecting Jamaica to the United States. This new cable increases the total number of submarine cables connecting Jamaica to the rest of the world to four.

Two more licences were auctioned by the Jamaican government to provide mobile services on the island, including one that was previously owned by AT&T Wireless but never utilised, and one new licence.

History of Jamaica

From Wikipedia, the free encyclopedia

Jamaica, the third largest Caribbean island, was inhabited by Arawak natives when it was first sighted by the second voyage of Christopher Columbus on May 5, 1494. Columbus himself was stranded on Jamaica from 1503 to 1504 during his fourth voyage. The Spanish settled in Jamaica in 1509 and held the island against many privateer raids from their main city, now called Spanish Town, which served as capital of Jamaica from its founding in 1534 until 1872. In 1655 Jamaica was conquered by the English, although the Spanish did not relinquish their claim to the island until 1670.

The aftermath of the 1882 Kingston fire.

Jamaica became a base of operations for privateers, including Captain Henry Morgan, operating from the main English settlement Port Royal. In return these privateers kept the other colonial powers from attacking the island. Following the destruction of Port Royal in the great earthquake of 1692 refugees settled across the bay in Kingston which by 1716 had become the biggest town in Jamaica and became the capital city in 1872. Until the early 19th century Africans were captured, kidnapped, and forced into slavery to work on plantations when sugarcane became the most important export of the island.

Many slaves had arrived in Jamaica via the Atlantic slave trade during the same time enslaved Africans arrived in North America. During this time there were many racial tensions, and Jamaica had one of the highest instances of slave uprisings of any Caribbean island.[1] After the British crown abolished slavery in 1834, the Jamaicans began working toward independence. Since independence in 1962 there have been political and economic disturbances, as well as a number of strong political leaders.

Spanish rule: 1509-1655

The first Spanish settlement was founded in 1509 near St Anne's Bay and named Seville. In 1534 the settlers moved to a new healthier site they named Villa de la Vega, which the English renamed Spanish Town when they conquered the island in 1655. This settlement served as the capital of both Spanish and English Jamaica from its foundation in 1534 until 1872 after which the capital was moved to Kingston. In the 1640s many people were attracted to Jamaica, which had a reputation for stunning beauty, not only in reference to the island but also to the natives. In fact, pirates were known to desert their raiding parties and stay on the island. Spanish Jamaica was subject to many privateer attacks, before the final conquest of the island by the English in 1655. The English were subject to several unsuccessful Spanish counter-attacks after they occupied the island.

The 1907 *Catholic Encyclopedia* states, "A review of the period of Spanish occupation is one which reflects very little credit on Spanish colonial administration in those days. Their treatment of the aboriginal inhabitants, whom they are accused of having practically exterminated, Morales Padrón

British rule: 1655-1962

Spanish resistance continued for some years thereafter, in some cases with the help of the maroons, but Spain never succeeded in retaking the island. Under early English rule Jamaica became a haven of privateers, buccaneers, and occasionally outright pirates: Christopher Myngs, Edward Mansvelt, and most famously, Henry Morgan.

A depiction of daily life in Jamaica from the early 19th century. Watercolor, ink, and pencil. Created between 1808 and 1816.

The English established their main coastal town at Port Royal and by 1659, two hundred houses, shops, and warehouses surrounded the fort. The town was destroyed by an earthquake in 1692, after which Kingston became the main coastal settlement.

The cultivation of sugar cane and coffee by African slave labour made Jamaica one of the most valuable possessions in the world for more than 150 years. The colony's slaves, who outnumbered their white masters by a ratio of 20:1 in 1800, mounted over a dozen major slave conspiracies (the majority of which were organized by Coromantins), and uprisings during the 18th century, including Tacky's revolt in 1760. Escaped slaves known as Maroons established independent communities in the mountainous interior that the British were unable to suppress, despite major attempts in the 1730s and 1790s. One Maroon community was expelled from the island after the Second Maroon War in the 1790s, and those Maroons eventually became part of the core of the Creole community of Sierra Leone. The colonial government enlisted the Maroons in capturing escaped plantation slaves. The British also used Jamaica's free people of color, 10,000 strong by 1800, to keep the enslaved population in check. During the Christmas holiday of 1831, a large-scale slave revolt known as the Baptist War broke out. It was organised originally as a peaceful strike by Samuel Sharpe. The rebellion was suppressed by the militia of the Jamaican plantocracy and the British garrison ten days later in early 1832.

Because the loss of property and life in the 1831 rebellion, the British Parliament held two inquiries. The results of these inquiries contributed greatly to the abolition of slavery as of August 1, 1834 throughout the British Empire. However the Jamaican slaves bound to their former owners' service, albeit with a guarantee of rights, until 1838 under what was called the Apprenticeship System. The freed population still faced significant hardships, marked by the October 1865 Morant Bay rebellion led by and Paul Bogle. It was brutally repressed. George William Gordon, a friend of Paul Bogle, was hanged because he was thought to have contributed to the riot even though he was not a part of its organization or execution. The sugar crop was declining in importance in the late 19th century and the colony diversified into bananas.

In 1866 the Jamaican legislature renounced its powers, and the country became a crown colony.

In 1872 the capital was moved to Kingston, as the port city had far outstripped the inland Spanish Town in size and sophistication.

Some measure of self-government was restored in the 1880s, when islanders gained the right to elect nine members of a legislative council.

The establishment of Crown Colony rule resulted over the next few decades in the growth of a middle class of low-level public officials and police officers drawn from the mass of the population whose social and political advancement was blocked by the colonial authorities.

The Great Depression had a serious impact both on the emergent middle class and the working class of the 1930s. In the spring of 1938 sugar and dock workers around the island rose in revolt. Although the revolt was suppressed it led to significant changes including the emergence of an organized labour movement and a competitive party system.

Independent Jamaica

Jamaica gained a degree of local political control in the mid-1940s. The People's National Party (PNP) was founded in 1938. Its main rival, the Jamaica Labour Party (JLP) was established five years later. The first elections under universal adult suffrage were held in 1944. Jamaica joined nine other UK territories in the Federation of the West Indies in 1958 but withdrew after Jamaican voters rejected membership in 1961. Jamaica gained independence on August 6, 1962, remaining a member of the Commonwealth of Nations. The first prime minister was Alexander Bustamante of the Jamaica Labour Party.

Initially, power swapped between the People's National Party and the Jamaican Labour Party regularly. Michael Manley was the first PNP prime minister in 1972. He introduced socialist policies and relations with Cuba. His second-term elections marked the start of repeated political violence. When the PNP lost power in 1980 Edward Seaga immediately began to reverse the policies of his predecessor, bringing in privatization and seeking closer ties with the USA. When the PNP and Manley returned to power in 1989 they continued the more moderate policies and were returned in the elections of 1993 and 1998. Manley resigned for health reasons in 1992 and was succeeded as leader of the PNP by Percival Patterson.

Historically, Jamaican emigration has been heavy. In the late 19th century and early 20th century, many Jamaicans migrated to Central America, Cuba, and the Dominican Republic to work in the banana and canefields. In the 1950s the primary destination was to the United Kingdom; but since the United Kingdom restricted emigration in 1962, major flow has been to the United States and Canada. The heaviest flow of emigration, particularly to New York and Miami, occurred during the 1990s and continues to the present day due to high economical crisis. About 20,000 Jamaicans emigrate to the United States each year; another 200,000 visit annually. New York, Hartford, CT, Miami, and Fort Lauderdale are among the U.S. cities with the largest Jamaican population. In New York, over half the Jamaican expatriate population resides in Brooklyn. Remittances from the expatriate communities in the United States, United Kingdom, and Canada make increasingly significant contributions to Jamaica's economy.

Monarchy of Jamaica

From Wikipedia, the free encyclopedia

The **Monarchy of Jamaica** is a constitutional system of government in which a hereditary monarch is the sovereign and head of state of Jamaica,[1] forming the core of the country's Westminster-style parliamentary democracy. The terms *Crown in Right of Jamaica*, *Her Majesty in Right of Jamaica*, or *The Queen in Right of Jamaica* may also be used to refer to the entire executive of the government of Jamaica. Though the Jamaican Crown has its roots in the British Crown, it has evolved to become a distinctly Jamaican institution, represented by it own unique symbols.

Queen of Jamaica

MONARCHY

Coat of arms of Jamaica

Incumbent:
Elizabeth II

Style:	Her Majesty
Heir apparent:	Charles, Prince of Wales
First monarch:	Elizabeth II
Formation:	6 August 1962

The present monarch is Elizabeth II – officially titled Queen of Jamaica – who has reigned as such since 6 August 1962. She, her consort, and other member of the Royal Family undertake various public and private functions across Jamaica and on behalf of the country abroad. However, the Queen is the only member of the Royal Family with any constitutional role, holding ultimate executive authority,[2] though her Royal Prerogative remains bound by laws enacted by her in parliament and by conventions and precedents, leaving the day-to-day exercise of executive power to her Cabinet. While several powers are the sovereign's alone, most of the royal constitutional and ceremonial duties in Jamaica are carried out by the Queen's representative, the Governor-General.

The Jamaican monarch, besides reigning in Jamaica, separately serves as monarch for each of fifteen other Commonwealth countries known as Commonwealth realms. This developed from the former colonial relationship of these countries to Britain, but they are now independent and the monarchy of each is legally distinct.

International and domestic aspects

Further information: Commonwealth realm: The Crown in the Commonwealth realms

Jamaica has the same person as their monarch as other Commonwealth realms. Each country is sovereign and independent of the others,[3] meaning the Jamaican monarchy has both a separate and a shared character, and the monarchy has also thus ceased to be an exclusively British institution, although it has often been called *British* since this time (in both legal and common language) for reasons historical, political, and of convenience. On all matters of the Jamaican state, the monarch is advised solely by Jamaican Ministers of the Crown.[4] and, effective with the Jamaica Independence Act, 1962, no British or other realm government can advise the monarch on matters pertinent to Jamaica.

Given these arrangements, it is considered impossible for the monarch of Jamaica to receive an ambassador from, or send an ambassador to, any country of which he or she is also monarch; essentially sending an ambassador to him or herself. Instead, the practice of sending High Commissioners developed, wherein an individual is sent to be a representative in one realm of the government in another.

Title and style

The shared and domestic aspects of the Crown are also highlighted in the sovereign's Jamaican title, currently *Elizabeth the Second, by the Grace of God, Queen of Jamaica and of Her other Realms and Territories, Head of the Commonwealth*. The sovereign's role specifically as Queen of Jamaica, as well as her status as monarch of other nations, is communicated by mentioning Jamaica separately from, but along with, the Queen's other lands. Typically, the sovereign is styled *Queen of Jamaica*, and is addressed as such when in Jamaica or performing duties on behalf of Jamaica abroad.

Finance

The sovereign only draws from Jamaican coffers for support in the performance of her duties when in Jamaica or acting as Queen of Jamaica abroad; Jamaicans do not pay any money to the Queen, either towards personal income or to support royal residences outside of Jamaica. This applies equally to other members of the Royal Family. Normally, tax dollars pay only for the costs associated with the Governor-General in the exercise of the powers of the Crown, including travel, security, residences, offices, ceremonies, and the like.

Succession

Succession is by male-preference primogeniture governed by the provisions of the Act of Settlement, 1701, and

Charles, Prince of Wales, is the heir apparent to the Jamaican throne.

the Bill of Rights, 1689. This legislation limits the succession to the natural (i.e. non-adopted), legitimate descendants of Sophia, Electress of Hanover, and stipulates that the monarch cannot be a Roman Catholic, nor married to one, and must be in communion with the Church of England upon ascending the throne. Though these constitutional laws, as they apply to Jamaica, still lie within the control of the British parliament, via adopting the Statute of Westminster both the United Kingdom and Jamaica agreed not to change the rules of succession without the unanimous consent of the other realms, unless explicitly leaving the shared monarchy relationship; a situation that applies symmetrically in all the other realms, and which has been likened to a treaty amongst these countries.[5] Thus, Jamaica's line of succession remains identical to that of the United Kingdom.

Upon a *demise of the Crown* (the death or abdication of a sovereign) it is customary for the accession of the new monarch to be publicly proclaimed by the Governor-General. Regardless of any proclamations, the late sovereign's heir immediately and automatically succeeds, without any need for confirmation or further ceremony; hence arises the phrase "The King is dead. Long live the King!" Following an appropriate period of mourning, the monarch is also crowned in the United Kingdom, though this ritual is not necessary for a sovereign to reign; for example, Edward VIII was never crowned, yet was undoubtedly king during his short time on the throne. All incumbent viceroys, judges, civil servants, legislators, military officers, etc., are not affected by the death of the monarch. After an individual ascends the throne, he or she typically continues to reign until death. Monarchs are not allowed to unilaterally abdicate; the only monarch to abdicate, Edward VIII, did so before Jamaica was independent, and, even then, only with the authorization of specials Acts of Parliament in the Dominions.

Personification of the state

Further information: The Crown

Royal Standard of Jamaica

Since the independence of Jamaica, the sovereign's role as monarch of Jamaica has been recognised and promoted as separate to his or her position as monarch of the United Kingdom.[1] From the beginning of Queen Elizabeth II's reign onwards, royal symbols in Jamaica were altered or new ones created to make them distinctly Jamaican, such as the augmentation of the Royal Arms of Jamaica in 1962 and Queen's Royal Standard for Jamaica, created in 1962.[6] Today the sovereign is regarded as the personification, or legal personality, of the Jamaican state. Therefore, the state is referred to as *Her Majesty the Queen in Right of Jamaica*; for example, if a lawsuit is filed against the government, the respondent is formally described as *Her Majesty the Queen in Right of Jamaica*, or simply *Regina*. As such, the monarch is the owner of all state lands (called *Crown land*), buildings and equipment (called *Crown held property*), state owned companies (called *Crown Corporations*), and the copyright for all government publications (called *Crown copyright*), as well as guardianship of foster children (called *Crown wards*), in his or her position as sovereign, and not as an individual. Government staff are also employed by the monarch, as are the Governor-General, judges, members of the Jamaica Defence Force, police officers, and parliamentarians, who all technically work for the monarch. Many employees of the Crown were once required by law to recite an oath of allegiance to the monarch before taking their posts, in reciprocation to the sovereign's Coronation Oath, wherein he or she promises "to govern the Peoples of ... [Jamaica] ... according to their respective laws and customs".[7] Save for that taken by senators,[8] the oaths of allegiance were altered in 2002, removing mention

of the monarch.[*citation needed*]

Constitutional role

Jamaica's constitution is made up of a variety of statutes and conventions that are either British or Jamaican in origin, which gives Jamaica a similar parliamentary system of government to the other Commonwealth realms, wherein the role of the Queen and the Governor-General is both legal and practical. The Crown is regarded as a corporation, in which several parts share the authority of the whole, with the Queen as the person at the centre of the constitutional construct,[9] meaning all powers of state are constitutionally reposed in the monarch, who is represented by the Governor-General – appointed by the monarch on the advice of the Prime Minister of Jamaica.[2] Most of the Queen's domestic duties are performed by this vice-regal representative, though she is briefed through regular communications from her Jamaican ministers, and holds audience with them whenever possible.[4]

All institutions of government are said to act under the sovereign's authority; the vast powers that belong to the Crown are collectively known as the Royal Prerogative. Parliamentary approval is not required for the exercise of the Royal Prerogative; moreover, the consent of the Crown must be obtained before either of the houses of parliament may even debate a bill affecting the sovereign's prerogatives or interests. While the Royal Prerogative is extensive, it is not unlimited; for example, the monarch does not have the prerogative to impose and collect new taxes – such an action requires the authorization of an Act of Parliament. The government of Jamaica is also thus formally referred to as *Her Majesty's Government*. Further, the constitution instructs that any change to the position of the monarch, or the monarch's representative in Jamaica, requires the consent of a two-thirds majority of each house of parliament.[10]

Executive (Queen-in-Council)

In Jamaica's constitutional system, one of the main duties of the Crown is to appoint a prime minister,[2] who thereafter heads the Cabinet and advises the monarch and Governor-General on how to execute their executive powers over all aspects of government operations and foreign affairs; this requirement is, unlike in other Commonwealth realms where it is a matter of convention, constitutionally enshrined in Jamaica.[2] Though the monarch's power is still a part of the executive process – the operation of the Cabinet is technically known as the *Queen-in-Council* (or *Governor-in-Council*) – the advice tendered is typically binding. Since the death of Queen Anne in 1714, the last monarch to head the British Cabinet, the monarch *reigns* but does not *rule*. This means that the monarch's role, and thereby the viceroys' role, is almost entirely symbolic and cultural, acting as a symbol of the legal authority under which all governments and agencies operate, while the Cabinet directs the use of the Royal Prerogative, which includes the privilege to declare war, maintain the Queen's peace, and direct the actions of the Jamaica Defence Force, as well as to summon and prorogue parliament, and call elections. However, it is important to note that the Royal Prerogative belongs to the Crown, and not to any of the ministers, though it may sometimes appear that way,[9] and the royal figures may unilaterally use these powers in exceptional constitutional crisis situations. There are also a few duties which must be specifically performed by, or bills that require assent by, the Queen. These include signing the appointment papers of Governors-General, the confirmation of awards of Jamaican honours, and the approval of any change in her Jamaican title.

In accordance with convention, the monarch or Governor-General, to maintain the stability of government, must appoint as prime minister the individual most likely to maintain the support of the House of Representatives: usually the leader of the political party with a majority in that house, but also when no party or coalition holds a majority (referred to as a minority government situation), or other scenarios in which the Governor-General's judgement about the most suitable candidate for prime minister has to be brought into play. The Governor-

General also appointes to Cabinet the other ministers of the Crown, who are, in turn, accountable to the democratically elected House of Representatives, and through it, to the people. The Queen is informed by her viceroy of the acceptance of the resignation of a prime minister and the swearing-in of a new prime minister and other members of the ministry.

Members of various executive agencies, and other officials are appointed by the Crown. The commissioning of privy councillors, senators, the Speaker of the Senate, Supreme Court justices also falls under the Royal Prerogative, though these duties are specifically assigned to the Governor-General by the constitution.[2] Public inquiries are also commissioned by the Crown through a Royal Warrant, and are called Royal Commissions.

Foreign affairs

The Royal Prerogative also extends to foreign affairs: the sovereign or Governor-General negotiates and ratifies treaties, alliances, and international agreements. As with other uses of the Royal Prerogative, no parliamentary approval is required; however, a treaty cannot alter the domestic laws of Jamaica; an Act of Parliament is necessary in such cases. The Governor-General, on behalf of the Queen, also accredits Jamaican High Commissioners and ambassadors, and receives diplomats from foreign states. In addition, the issuance of passports falls under the Royal Prerogative, and, as such, all Jamaican passports are issued in the monarch's name.

Parliament (Queen-in-Parliament)

The sovereign, along with the Senate and the House of Representatives, is one of the three components of Parliament,[2] called the *Queen-in-Parliament*. The authority of the Crown therein is embodied in the mace for each house,[11] which both bear a crown at their apex. Per the constitution, the monarch does not, however, participate in the legislative process; the viceroy does, though only in the granting of Royal Assent.[2] Further, the constitution outlines that the Governor-General alone is responsible for summoning, proroguing, and dissolving parliament,[2] after which the writs for a general election are usually dropped by the Governor-General at Government House. The new parliamentary session is marked by the State Opening of Parliament, during which either the monarch or the Governor-General reads the Speech from the Throne. As the monarch and viceroy cannot enter the House of Representatives, this, as well as the bestowing of Royal Assent, takes place in the Senate chamber; Members of Parliament are summoned to these ceremonies from the Commons by the Crown's messenger, the Usher of the Black Rod, after he knocks on the doors of the lower house that have been slammed closed on him, to symbolise the barring of the monarch from the assembly.

All laws in Jamaica are enacted only with the viceroy's granting of Royal Assent; usually done by the Governor-General, with the Broad Seal of Jamaica. Thus, all bills begin with the phrase "BE IT ENACTED by The Queen's Most Excellent Majesty, by and with the advice and consent of the Senate and House of Representatives of Jamaica, and by the authority of the same, as follows..."

Courts (Queen-on-the-Bench)

The sovereign is deemed the *fount of justice*, and is responsible for rendering justice for all subjects, known in this role as the *Queen on the Bench*. However, he or she does not personally rule in judicial cases; instead, judicial functions are performed in his or her name by what are termed *Her Majesty's Justices of the Peace*.[12] Hence, the common law holds that the sovereign "can do no wrong"; the monarch cannot be prosecuted in his or her own courts for criminal offences. Civil lawsuits against the Crown in its public capacity (that is, lawsuits against the government) are permitted; however, lawsuits against the monarch personally are not cognizable. In international cases, as a sovereign and under established principles of international law, the Queen of Jamaica is

not subject to suit in foreign courts without her express consent. The sovereign, and by extension the Governor-General, also exercises the *prerogative of mercy*,[2] and may pardon offences against the Crown, either before, during, or after a trial. In addition, the monarch also serves as a symbol of the legitimacy of courts of justice, and of their judicial authority. An image of the Queen or the Coat of arms of Jamaica is always displayed in Jamaican courtrooms.

History

In 1966 Prince Philip, Duke of Edinburgh, accompanied by his son, Prince Charles, Prince of Wales, toured Jamaica as part of his visit there to open that year's Commonwealth Games.[13]

Popularity

Prior to the Queen's 2002 visit, the newspaper *Jamaica Gleaner* said "So as Jamaica looks back, let it also look forward. Let this visit not so much renew old ties as cement new ones."[14] The BBC reported that "despite republican sentiments in the country she was given an enthusiastic welcome."[15] A poll taken in 2002 showed that 57% of Jamaicans thought that the Queen's visit to Jamaica as part of Her Golden Jubilee tour was important.[16][17]

Republicanism

Individuals in both major political parties in Jamaica have voiced support for making Jamaica a republic in the last few years: In September 2003, then Prime Minister of Jamaica P.J. Patterson called for Jamaica to abolish the monarchy by 2007.[18] Bruce Golding, a former prime minister, also pledged that Jamaica shall "take steps to amend the constitution to replace the Queen with a Jamaican President who symbolises the unity of the nation".[19][20]

Current Prime Minister Portia Simpson-Miller has expressed her intention to make Jamaica a republic to coincide with the country's 50th anniversary of independence in August 2012.[21][22]

Realm of New Zealand

From Wikipedia, the free encyclopedia

The **Realm of New Zealand** is the entire area in which the Queen in right of New Zealand is head of state. The Realm comprises New Zealand, the Cook Islands, Niue, Tokelau and the Ross Dependency in Antarctica,[1] and is defined by a 1983 Letters Patent constituting the office of Governor-General of New Zealand.[2]

Governor-General

Main article: Governor-General of New Zealand

The Governor-General of New Zealand represents the head of state (Elizabeth II, in her capacity as Queen of New Zealand) in the area of the Realm. Essentially, Governors-General take on all the dignities and reserve powers of the head of state. As of 2011 the Governor-General is Rt Hon Sir Jerry Mateparae.

Sovereignty within the Realm

Cook Islands and Niue

Map of the Realm of New Zealand

Both the Cook Islands and Niue are said to be self-governing in *free association* with New Zealand. The New Zealand Parliament is not empowered to unilaterally pass legislation in respect of these countries. In foreign affairs and defence issues New Zealand acts on behalf of these countries but only with their advice and consent.

As the Governor-General is resident in New Zealand, the Cook Islands Constitution provides for the distinct position of Queen's Representative. This individual is not subordinate to the Governor-General and acts as the local representative of the Queen in right of New Zealand. As of 2005 Sir Frederick Tutu Goodwin is the Queen's Representative to the Cook Islands. This arrangement effectively allows for the de facto independent actions of

internal and most external areas of governance.

According to the Niue's Constitution of 1974, the Governor-General of New Zealand acts as the Queen's representative.

In the Cook Islands and Niue the New Zealand High Commissioner is the diplomatic representative from New Zealand. John Carter is the New Zealand High Commissioner to the Cook Islands. As of 2009, Anton Ojala is the New Zealand High Commissioner to Niue.

Despite their close relationship to New Zealand, both the Cook Islands and Niue maintain some diplomatic relations in their own name. Both countries maintain High Commissions in New Zealand and have New Zealand High Commissioners resident in their capitals. In Commonwealth practice, High Commissioners represent their governments, not the Head of State.

New Zealand

New Zealand proper consists of the following island groups:

- the North Island, South Island and neighbouring coastal islands, all contained within the 16 regions of New Zealand
- the Chatham Islands to the east, contained within the Chatham Islands Territory
- the Kermadec Islands to the north and sub-Antarctic islands to the south, all outside local authority boundaries and inhabited only by a small number of research and conservation staff

Tokelau

Tokelau has a lesser degree of *de jure* independence than the Cook Islands and Niue have, and had been moving toward free association status. New Zealand's representative in Tokelau is the Administrator of Tokelau and has the power to overturn rules passed by the general fono. The people of Tokelau have generally rejected accepting a system of governance with equal powers to that of Niue and the Cook Islands by the means of several referenda conducted by New Zealand and with the United Nations request.[3]

Ross Dependency

The Ross Dependency is constitutionally part of New Zealand.[4] The Governor-General of New Zealand is also the Governor of the Ross Dependency. The Ross Dependency includes McMurdo Station, operated by the United States, which does not recognise New Zealand sovereignty of Ross Dependency. The application of Sovereignty within the Dependency is subsequent upon the enforcement of terms found within the Antarctic Treaty.

Summary

Area	Representative of the Queen	Head of the Government	Legislature	Capital	Population	Land Area
New Zealand	Governor-General	Prime Minister	House of Representatives	Wellington	4,414,400	268,680 km²
Cook Islands	Queen's Representative	Prime Minister	Parliament of the Cook Islands	Avarua	21,388	236 km²

Niue	Representative of the Queen (the Governor-General of New Zealand)	Premier	Niue Assembly	Alofi	2,145	260 km²
Tokelau	Administrator	Ulu-o-Tokelau (Head of the Council of Ongoing Government)	General Fono	None	1,405	10 km²
Ross Dependency	Governor	Chief Executive	None	Scott Base	Scott Base: 10–80; McMurdo Station: 200–1000 (seasonally)	450,000 km²

Future of the Realm

Within New Zealand there exists some support[5][6] for a New Zealand republic. Should New Zealand become a republic it will retain the Ross Dependency and Tokelau as dependent territories and the Realm of New Zealand would continue to exist without New Zealand, the Ross Dependency and Tokelau.[7] This would not be a legal hurdle to a New Zealand republic as such, and both the Cook Islands and Niue would retain their status as associated states with New Zealand, as New Zealand shares its Head of State with the Cook Islands and Niue in the same way the Commonwealth realms share a Head of State. However, a New Zealand republic would present the issue of independence to the Cook Islands and Niue. Thus, a number of options for the future of the Realm of New Zealand exist should New Zealand become a republic:

- A New Zealand republic with the Cook Islands and Niue remaining in free association with New Zealand, but retaining the Queen of New Zealand as their head of state;
- A New Zealand republic with the Cook Islands and Niue having a new republican head of state as their head of state and becoming independent states;
- A New Zealand republic with the Cook Islands and Niue having their own heads of state, but retaining their status of free association with New Zealand.[7]

History of New Zealand

From Wikipedia, the free encyclopedia

The **history of New Zealand** dates back at least 700 years to when it was discovered and settled by Polynesians, who developed a distinct Māori culture centred on kinship links and land. The first European explorer to discover New Zealand was Abel Janszoon Tasman on 13 December 1642.[1] Captain James Cook, who reached New Zealand on 19 April 1770 on the first of his three voyages,[2] was the first European explorer to circumnavigate and map New Zealand.

From the late 18th century, the country was regularly visited by explorers and other sailors, missionaries, traders and adventurers. In 1840 the Treaty of Waitangi was signed between the British Crown and various Māori chiefs, bringing New Zealand into the British Empire and giving Māori equal rights with British citizens. There was extensive European and some Asian settlement throughout the rest of the century. War and the imposition of a European economic and legal system led to most of New Zealand's land passing from Māori to Pākehā (European) ownership, and most Māori subsequently became impoverished.

From the 1890s the New Zealand parliament enacted a number of progressive initiatives, including women's suffrage and old age pensions. From the 1930s the economy was highly regulated and an extensive welfare state was developed. Meanwhile, Māori culture underwent a renaissance, and from the 1950s Māori began moving to the cities in large numbers. This led to the development of a Māori protest movement which in turn led to greater recognition of the Treaty of Waitangi in the late 20th century. In the 1980s the economy was largely deregulated and a number of socially liberal policies, such as decriminalisation of homosexuality, were put in place. Foreign policy, which had previously consisted mostly of following the United Kingdom or the United States, became more independent. Subsequent governments have generally maintained these policies, although tempering the free market ethos somewhat.

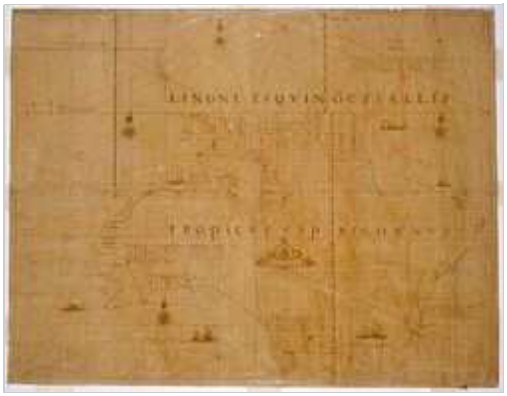
Polynesian foundation

New Zealand was originally settled by Polynesians from Eastern Polynesia. The most current reliable evidence strongly indicates that initial settlement of New Zealand occurred around 1280 CE. Previous dating of some Kiore (Polynesian rat) bones at 50 - 150 CE has now been shown to have been unreliable; new samples of bone (and now also of unequivocally rat-gnawed woody seed cases) match the 1280 CE date of the earliest archaeological sites and the beginning of sustained, anthropogenic deforestation.[3]

The descendants of these settlers became known as the Māori, forming a distinct culture of their own. Separate settlement of the tiny Chatham Islands in the east of New Zealand about 1500 CE produced the Moriori people; linguistic evidence indicates that the Moriori were mainland Māori who ventured eastward.[4]



The original settlers quickly exploited the abundant large game in New Zealand, such as moa, large flightless ratites that were pushed to extinction by about 1500. As moa and other large game became scarce or extinct, Māori culture underwent major change, with regional differences. In areas where it was possible to grow taro and kūmara, horticulture became more important. In the south of the South Island, however elsewhere wild plants such as fernroot were often available for harvest and cabbage trees were harvested and cultivated for food. Warfare also increased in importance, reflecting increased competition for land and other resources. In this period, fortified pā became more common, although there is debate about the actual frequency of warfare. As elsewhere in the Pacific, cannibalism was part of warfare. James Belich has written an overview of Māori history from the 11th to the 16th century.[5]

Leadership was based on a system of chieftainship, which was often but not always hereditary, although chiefs (male or female) needed to demonstrate leadership abilities to avoid being superseded by more dynamic individuals. The most important units of pre-European Māori society were the whānau or extended family, and the hapū or group of whānau. After these came the iwi or tribe, consisting of groups of hapū. Related hapū would often trade goods and co-operate on major projects, but conflict between hapū was also relatively common. Traditional Māori society preserved history orally through narratives, songs, and chants; skilled experts could recite the tribal genealogies (*whakapapa*) back for hundreds of years. Arts included whaikōrero (oratory), song composition in multiple genres, dance forms including haka, as well as weaving, highly developed wood carving, and tā moko (tattoo).

Birds, fish and sea mammals were important sources of protein[*citation needed*].[6] Māori cultivated food plants which they had brought with them from Polynesia, including sweet potatoes (called kūmara), taro, gourds and yams. They also cultivated the cabbage tree, a plant endemic to New Zealand, and exploited wild foods such as fern root, which provided a starchy paste.

Early contact period

Explorers and other visitors

The Abel Tasman map 1644, also known as the Bonaparte Tasman map that is part of the collection of the State Library of New South Wales, Australia.

The first Europeans known to reach New Zealand were the crew of Dutch explorer Abel Tasman who arrived in his ships *Heemskerck* and *Zeehaen*. Tasman anchored at the northern end of the South Island in Golden Bay (he named it Murderers' Bay) in December 1642 and sailed northward to Tonga following a clash with local Māori. Tasman sketched sections of the two main islands' west coasts. Tasman called them *Staten Landt*, after the *States-General of the Netherlands*, and that name appeared on his first maps of the country. Dutch cartographers changed the name to *Nova Zeelandia* in Latin, from *Nieuw Zeeland*, after the Dutch province of *Zeeland*. It was subsequently Anglicised as *New Zealand* by British naval captain James Cook of HM Bark *Endeavour* who visited the islands more than 100 years after Tasman during 1769–1770. Cook returned to New Zealand on both of his subsequent voyages. Various claims have been made that New Zealand was reached by other non-Polynesian voyagers before Tasman, but these are not widely accepted. Peter Trickett, for example, argues in *Beyond Capricorn* that the Portuguese explorer Cristóvão de Mendonça reached New Zealand in the 1520s.

First map of New Zealand, drawn by Captain James Cook.

From the 1790s, the waters around New Zealand were visited by British, French and American whaling, sealing and trading ships. Their crews traded European goods, including guns and metal tools, for Māori food, water, wood, flax and sex.[7] Māori were reputed to be enthusiastic and canny traders. Although there were some conflicts, such as the killing of French explorer Marc-Joseph Marion du Fresne and the destruction of the *Boyd*, most contact between Māori and European was peaceful. From the 19th century missionaries began settling in New Zealand and attempting to convert Māori to Christianity and control the considerably lawless European visitors.

Māori response

The effect of contact on Māori varied. In some inland areas life went on more or less unchanged, although a European metal tool such as a fish-hook or hand axe might be acquired through trade with other tribes. At the other end of the scale, tribes that frequently encountered Europeans, such as Ngā Puhi in Northland, underwent major changes.

Pre-European Māori had no distance weapons except for tao (spears)[8] and the introduction of the musket had an enormous impact on Māori warfare. Tribes with muskets would attack tribes without them, killing or enslaving many.[9] As a result, guns became very valuable and Māori would trade huge quantities of goods for a single musket. The Musket Wars died out in the 1830s after most tribes had acquired muskets and a new balance of power was achieved. In 1835, the peaceful Moriori of the Chatham Islands were attacked, enslaved, and nearly exterminated by mainland Ngāti Mutunga and Ngāti Tama Māori.[10] In the 1901 census, only 35 Moriori

were recorded although the numbers subsequently increased.[11]

Around this time, many Māori converted to Christianity. The reasons for this have been hotly debated, and may include social and cultural disruption caused by the Musket Wars and European contact. Other factors may have been the appeal of a religion that promotes peace and forgiveness, a desire to emulate the Europeans and to gain a similar abundance of material goods, and the Māori's polytheistic culture that easily accepted the new God.

European settlement

European settlement increased through the early decades of the 19th century, with numerous trading stations established, especially in the North. The first full-blooded European infant in the territory, Thomas King, was born in 1815 in the Bay of Islands. Kerikeri, founded in 1822, and Bluff founded in 1823, both claim to be the oldest European settlements in New Zealand.

Many Europeans bought land from Māori, but misunderstanding and different concepts of land ownership led to conflict and bitterness. In 1839, the New Zealand Company announced plans to buy large tracts of land and establish colonies in New Zealand. This alarmed the missionaries, who called for British control of European settlers in New Zealand.

British sovereignty

In 1788 the colony of New South Wales had been founded. According to Captain Phillip's amended Commission, dated 25 April 1787, the colony included *all the islands adjacent in the Pacific Ocean within the latitudes of 10°37'S and 43°39'S* which included most of New Zealand except for the southern half of the South Island. In 1825 with Van Diemen's Land becoming a separate colony, the southern boundary of New South Wales was altered[12] to the islands adjacent in the Pacific Ocean with a southern boundary of 39°12'S which included only the northern half of the North Island. However, these boundaries had no real impact as the New South Wales administration had little interest in New Zealand.[13]

In response to complaints about lawless white sailors and adventurers in New Zealand, the British government appointed James Busby as Official Resident in 1832. In 1834 he encouraged Māori chiefs to assert their sovereignty with the signing of the *Declaration of Independence* in 1835. This was acknowledged by King William IV. Busby was provided with neither legal authority nor military support and was thus ineffective in controlling the European population.

Treaty of Waitangi

Main article: Treaty of Waitangi

In 1839, the New Zealand Company announced its plans to establish colonies in New Zealand. This, and the continuing lawlessness of many of the established settlers, spurred the British to take stronger action. Captain William Hobson was sent to New Zealand to persuade Māori to cede their sovereignty to the British Crown. In reaction to the New Zealand Company's moves, on 15 June 1839 a new Letters patent was issued to expand the territory of New South Wales to include all of New Zealand. Governor of New South Wales George Gipps was appointed Governor over New Zealand. This was the first clear expression of British intent to annex New Zealand.

On 6 February 1840, Hobson and about forty Māori chiefs signed the Treaty of Waitangi at Waitangi in the Bay of Islands. Copies of the Treaty were subsequently taken around the country to be signed by other chiefs. A

significant number refused to sign or were not asked but, in total, more than five hundred Māori eventually signed.

The Treaty gave Māori sovereignty over their lands and possessions and all of the rights of British citizens. What it gave the British in return depends on the language-version of the Treaty that is referred to. The English version can be said to give the British Crown sovereignty over New Zealand but in the Māori version the Crown receives *kawanatanga*, which, arguably, is a lesser power (see Treaty of Waitangi#Meaning and interpretation). Dispute over the true meaning and the intent of either party remains an issue.

Britain was motivated by the desire to forestall other European powers (France established a very small settlement at Akaroa in the South Island later in 1840), to facilitate settlement by British subjects and, possibly, to end the lawlessness of European (predominantly British and American) whalers, sealers and traders. Officials and missionaries had their own positions and reputations to protect.

Māori chiefs were motivated by a desire for protection from foreign powers, the establishment of governorship over European settlers and traders in New Zealand, and to allow for wider settlement that would increase trade and prosperity for Māori.[14]

Hobson died in September 1842. Robert FitzRoy, the new governor, took some legal steps to recognise Māori custom. However, his successor, George Grey, promoted rapid cultural assimilation and reduction of the land ownership, influence and rights of the Māori. The practical effect of the Treaty was, in the beginning, only gradually felt, especially in predominantly Māori regions.

Colonial period

Having been administered, through 1840 when the treaty was signed, as a part of the Australian colony of New South Wales, New Zealand became a colony in its own right on 3 May 1841. It was divided into provinces that were reorganised in 1846 and in 1853, when they acquired their own legislatures, and then abolished in 1876. The country rapidly gained some measure of self-government through the New Zealand Constitution Act 1852, which established central and provincial government.

Immigration

Main article: Immigration to New Zealand

From 1840 there was considerable European settlement, primarily from England and Wales, Scotland and Ireland; and to a lesser extent the United States, India, and various parts of continental Europe, including the province of Dalmatia[15] in what is now Croatia, and Bohemia[16] in what is now the Czech Republic. Already a majority of the population by 1859, the number of white settlers (called *Pākehā* by Māori) increased rapidly to reach a million by 1911.

In the 1870s and 1880s, several thousand Chinese men, mostly from Guangdong province, migrated to New Zealand to work on the South Island goldfields. Although the first Chinese migrants had been invited by the Otago Provincial government they quickly became the target of hostility from white settlers and laws were enacted specifically to discourage them from coming to New Zealand.[17]

Māori adaptation and resistance

Māori had welcomed Pākehā for the trading opportunities and guns they brought. However it soon became clear that they had underestimated the number of settlers that would arrive in their lands. *Iwi* (tribes) whose land was

the base of the main settlements quickly lost much of their land and autonomy through government acts. Others prospered—until about 1860 the city of Auckland bought most of its food from Māori who grew and sold it themselves. Many *iwi* owned flour mills, ships and other items of European technology, some exported food to Australia. Although race relations were generally peaceful in this period, there were conflicts over who had ultimate power in particular areas—the Governor or the Māori chiefs. One such conflict was the Northern or Flagstaff War of the 1840s, during which the town of Kororareka was destroyed.

"First Scottish Colony for New Zealand" — 1839 poster advertising emigration from Scotland to New Zealand. Collection of Kelvingrove Art Gallery and Museum, Glasgow, Scotland.

As the *Pākehā* population grew, pressure grew on Māori to sell more land. A few tribes had become nearly landless and others feared losing their lands. Land is not only an economic resource, but also the basis of Māori identity and a connection with their ancestors. Land was held communally, it was not given up without discussion and consultation—or loss during warfare.

Pākehā had little understanding of all that and accused Māori of holding onto land they did not use efficiently. Competition for land was a primary cause of the New Zealand Land Wars of the 1860s and 1870s, in which the Taranaki and Waikato regions were invaded by colonial troops and Māori of these regions had much of their land taken from them. The wars and confiscation left bitterness that remains to this day.

Some *iwi* sided with the government and, later, fought with the government. They were motivated partly by the thought that an alliance with the government would benefit them, and partly by old feuds with the *iwi* they fought against. One result of their co-operation strategy was the establishment of the four Māori seats in parliament, in 1867.

After the wars, some Māori began a strategy of passive resistance, most famously at Parihaka in Taranaki. Others continued co-operating with *Pākehā*. For example, tourism ventures were established by Te Arawa around Rotorua. Resisting and co-operating *iwi* both found that the *Pākehā* desire for land remained. In the last decades of the century, most *iwi* lost substantial amounts of land through the activities of the Native Land Court. This was set up to give Māori land *European-style* titles and to establish *exactly* who owned it. Due to its Eurocentric rules, the high fees, its location remote from the lands in question, and unfair practices by many Pākehā land agents, its main effect was to directly or indirectly separate Māori from their land.

The combination of war, confiscations, disease,[18] assimilation and intermarriage,[19] land loss leading to poor housing and alcohol abuse, and general disillusionment, caused a fall in the Māori population from around 86,000 in 1769 to around 70,000 in 1840 and around 48,000 by 1874, hitting a low point of 42,000 in 1896.[20] Subsequently their numbers began to recover.

South Island

While the North Island was convulsed by the Land Wars, the South Island, with its low Māori population, was generally peaceful. In 1861 gold was discovered at Gabriel's Gully in Central Otago, sparking a gold rush. Dunedin became the wealthiest city in the country and many in the South Island resented financing the North Island's wars. In 1865 Parliament voted on a Bill to make the South Island independent: it was defeated 17 to 31.

The South Island contained most of the Pākehā population until around 1900 when the North Island again took

the lead and has supported an ever greater majority of the country's total population through the 20th century and into the 21st.

1890s

Major changes occurred during this decade. The economy—based on wool and local trade—changed to the export of frozen meat and dairy products to Britain. This change was enabled by the invention of refrigerated shipping that allowed foodstuff to be transported over long distances. Refrigerated shipping remained the basis of New Zealand's economy until the 1970s. In the 21st century, New Zealand's trade in skim milk and butter increased, thanks to their high price.

The decade also saw the advent of party politics, with the establishment of the First Liberal government. This government established the basis of the welfare state, with old age pensions, developed a system for settling industrial disputes, which was accepted by both employers and unions, and in 1893 extended voting rights to women, making New Zealand the first country in the world to enact universal female suffrage.

Dominion and Realm

Main article: Independence of New Zealand

New Zealand initially expressed interest in joining the proposed Federation of the Australian colonies, attending the 1891 National Australia Convention in Sydney. Interest in the proposed Australian Federation faded and New Zealand decided against joining the Commonwealth of Australia in 1901, and instead changed from being a colony to a separate "dominion" in 1907, equal in status to Australia and Canada.

Historical map of Australia and New Zealand, 1788-1911.

Prohibition

In New Zealand, prohibition was a moralistic reform movement begun in the mid-1880s by the Protestant evangelical and Nonconformist churches and the Woman's Christian Temperance Union and after 1890 by the Prohibition League. It never achieved its goal of national prohibition. It was a middle-class movement which accepted the existing economic and social order; the effort to legislate morality assumed that individual redemption was all that was needed to carry the colony forward from a pioneering society to a more mature one. However, both the Church of England and the largely Irish Catholic Church rejected prohibition as an intrusion of government into the church's domain, while the growing labor movement saw capitalism rather than alcohol as the enemy. Reformers hoped that the women's vote, in which New Zealand was a pioneer, would swing the balance, but the women were not as well organized as in other countries. Prohibition had a majority in a national referendum in 1911, but needed a 60% vote to pass. The movement kept trying in the 1920s, losing three more referenda by close votes; it managed to keep in place a 6pm closing hour for pubs and Sunday closing. The Depression and war years effectively ended the movement.[21][22]

First World War

Main article: Military history of New Zealand in World War I

The country remained an enthusiastic member of the British Empire, and 100,000 men fought in World War I (see New Zealand Expeditionary Force). New Zealand forces took Western Samoa from Germany in the early stages of the war, and New Zealand administered the country until Samoan Independence in 1962.[23]

1920s

New Zealand depended on Britain's Royal Navy for its military security during the 1920s and 1930s. Officials in Wellington trusted Conservative Party governments in London, but not Labour. When the British Labour Party took power in 1924 and 1929, the New Zealand government felt threatened by Labour's foreign policy because of its reliance upon the League of Nations. The League was distrusted and Wellington did not see the coming of a peaceful world order under League auspices. What had been the Empire's most loyal dominion became a dissenter as it opposed efforts the first and second British Labour governments to trust the League's framework of arbitration and collective security agreements.[24]

Depression

Like most other countries, New Zealand was hard hit by the Great Depression of the 1930s, which affected the country via its international trade, with farming export drops then going on to affect the money supply and in turn consumption, investment and imports. The country was most affected around 1930-1932, when average farm incomes for a short time dipped below zero, and the unemployment rates peaked. Though actual unemployment numbers were not officially counted, the country was affected especially strongly in the North Island.[25]

Unlike later years, there were no public benefit ('dole') payments — the unemployed were given 'relief work', much of which was however not very productive, partly because the size of the problem was unprecedented. Women also increasingly registered as unemployed, while Maori received government help through other channels such as the land development schemes organised by Apirana Ngata. In 1933, 8.5% of the unemployed were organised in work camps, while the rest received work close to their homes. Typical occupations in relief work were road work (undertaken by 45% of all part-time and 19% of all full-time relief workers in 1934, with park improvement works (17%) and farm work (31%) being the other two most common types of work for part-time and full-time relief workers respectively).[25]

Attempts by the conservative Liberal-Reform coalition to deal with the situation with spending cuts and relief work were ineffective and unpopular. In 1935, the First Labour Government was elected, and the post-depression decade showed that average Labour support in New Zealand had roughly doubled comparable to pre-depression times. By 1935 economic conditions had improved somewhat, and the new government had more positive financial conditions,[25] under which it established a full welfare state, which included free health care and education and state assistance for the elderly, infirm, and unemployed. The programme was retained and expanded by successive National and Labour governments.

Second World War

Main article: Military history of New Zealand in World War II

When World War II broke out, New Zealand contributed some 120,000 troops. They mostly fought in Europe, relying on the Royal Navy and later the United States to protect New Zealand from the Japanese forces, who never reached as far as the New Zealand mainland except with some highly publicized but essentially ineffective

scouting incursions. The cooperation with the United States meanwhile set a direction of policy which resulted in the ANZUS Treaty between New Zealand, America and Australia in 1951, which was to hold until disagreements over nuclear armaments decades later.

Maori Urbanisation

Many Māori fought in World War II, and many others moved from their rural homes to the cities to take up jobs vacated by Pākehā servicemen.[26] The shift to the cities was also caused by their strong birth rates in the early 20th century, with the existing rural farms in Māori ownership having increasing difficulty in providing enough jobs.[26] Māori culture had meanwhile undergone a renaissance thanks in part to politician Apirana Ngata. World War II saw the beginning of a mass Māori migration to the cities, and by the 1980s 80% of the Māori population was urban, in contrast to only 20% before the war. The migration led to better pay, standards of living and education for most Māori, but also exposed problems of racism and discrimination. By the late 1960s, a protest movement had emerged to combat racism, promote Māori culture and seek fulfillment of the Treaty of Waitangi.

The urbanisation of the country was far from restricted to Māori. In the late 1940s, town planners noted that the country was "possibly the third most urbanised country in the world", with two thirds of the population living in cities or towns. There was also increasing concern that this trend was badly managed, with it being noted that there was an "ill-defined urban pattern that appears to have few of the truly desirable urban qualities and yet manifests no compensating rural characteristics."[27]

Post-war

The Māori protest movement was just one of several movements which emerged at this time to challenge the conservatism of mainstream New Zealand culture. This culture, and the country's economy, was based on being an offshoot of Britain. From the 1890s, the economy had been based almost entirely on the export of frozen meat and dairy products to Britain, and in 1961, the share of New Zealand exports going to the United Kingdom was still at slightly over 51%, with approximately 15% more going to other European countries.[28] This system was irreparably damaged by Britain joining the European Economic Community in 1973. Britain's accession to the European Community forced New Zealand to not only find new markets, but also re-examine its national identity and place in the world.

Robert Muldoon, Prime Minister from 1975 to 1984, and his Third National government responded to the crises of the 1970s by attempting to preserve the New Zealand of the 1950s. His conservatism and antagonistic style helped create an atmosphere of conflict in New Zealand, most violently expressed during the 1981 Springbok Tour. Some innovations did take place, for example the Closer Economic Relations agreement with Australia, and in 1983 the term "dominion" was replaced with "realm" by letters patent.

Reform

In 1984, the Fourth Labour government was elected. Propelled into office amid a constitutional and economic crisis, the new government embarked on a policy of restructuring, known as Rogernomics. This involved floating the New Zealand dollar, cutting government spending, reducing most taxes and introducing a sales tax (GST), and removing almost all industry subsidies. Although many of these changes improved the economy, they also created widespread unemployment, which was made worse by the 1987 stock market crash.

The Fourth Labour Government also revolutionised New Zealand's foreign policy, making the country a nuclear-free zone and effectively leaving the ANZUS alliance. Immigration policy was liberalised, allowing an influx of immigrants from Asia. Previously most immigrants to New Zealand had been European and especially

British, apart from some migrants from other Pacific Islands such as Samoa. Other fourth Labour government innovations included greater recognition of the Treaty of Waitangi through the Waitangi Tribunal, Homosexual Law Reform, the Constitution Act 1986 and the New Zealand Bill of Rights.

Unhappy with the speed and extent of reforms, voters elected a National government in 1990, led by Jim Bolger. However the new government continued the economic reforms of the previous Labour government, in what was known as Ruthanasia. Unhappy with what seemed to be a pattern of governments failing to reflect the mood of the electorate, New Zealanders in 1992 and 1993 voted to change the electoral system to Mixed Member Proportional (MMP), a form of proportional representation. New Zealand's first MMP election was held in 1996. Following the election National was returned to power in coalition with the New Zealand First Party.

New Zealand today

The Fifth Labour government led by Helen Clark was elected in 1999. It maintained most of the previous governments' economic reforms — restricting government intervention in the economy much more so than previous governments — while putting more of an emphasis on social policy and outcomes. For example, employment law was modified to give more protection to workers, and the student loan system was changed to eliminate interest payments for New Zealand resident students and graduates. Helen Clark's Labour government remained in power for nine years before being replaced in 2008 by New Zealand's Fifth National government led by John Key.

New Zealand retains strong but informal links to Britain, with many young New Zealanders travelling to Britain for their "OE" (overseas experience) due to favourable working visa arrangements with Britain. Despite New Zealand's immigration liberalisation in the 1980s, Britons are still the largest group of migrants to New Zealand, due in part to recent immigration law changes which privilege fluent speakers of English. A few constitutional links to Britain remain — the New Zealand Sovereign is a British resident, for example. However, British imperial honours were discontinued in 1996, the Governor-General has taken a more active role in representing New Zealand overseas, and appeals from the Court of Appeal to the Judicial Committee of the Privy Council were replaced by a local Supreme Court of New Zealand in 2003. From time to time there is public debate about whether New Zealand should become a republic, and public sentiment is divided on the issue.

Foreign policy has been essentially independent since the mid 1980s. New Zealand contributed troops to the Afghanistan War, but did not contribute troops to the Iraq War although some medical and engineering units were sent.

For a developed country, New Zealand's economy is still very dependent on farming, although the old trinity of meat, dairy and wool has been supplemented by fruit, wine, timber and other products. Tourism is a major industry, and the country has been successful in attracting several major film productions, most notably the *Lord of the Rings* trilogy, directed by New Zealander Peter Jackson, which in turn bolstered New Zealand's tourism image.

Recent earthquakes

> *Main articles: Earthquakes in New Zealand, 2010 Canterbury earthquake, and 2011 Christchurch earthquake*

New Zealand's location at the southern end of the Pacific Rim of Fire has produced many earthquakes.[29] Attracting worldwide attention was one on 22 February 2011 that hit the second largest city Christchurch with 6.3 magnitude. This earthquake was an aftershock of a 7.1 magnitude earthquake the previous September. The 2010 earthquake caused severe damage to Christchurch and the Canterbury region, but there was no loss of life.

However, the 2011 earthquake's shallow depth and closer proximity to Christchurch caused severe damage to the city and the loss of over 170 lives.

Monarchy of New Zealand

From Wikipedia, the free encyclopedia

The **monarchy of New Zealand** – also referred to as *The Crown in Right of New Zealand*, *Her Majesty in Right of New Zealand*, or *The Queen in Right of New Zealand* – is the constitutional system of government in which a hereditary monarch is the sovereign and head of state of the Realm of New Zealand,[1][2] forming the core of the country's Westminster-style parliamentary democracy. The Crown is thus the foundation of the executive, legislative, and judicial branches of the New Zealand government.[3]

While Royal Assent and the royal sign-manual are required to enact laws, letters patent, and Orders in Council, the authority for these acts stems from the New Zealand populace,[4] and, within the conventional stipulations of constitutional monarchy, the sovereign's direct participation in any of these areas of governance is limited, with most related powers entrusted for exercise by the elected parliamentarians, the ministers of the Crown generally drawn from amongst them, and the judges and Justices of the Peace.

Queen of New Zealand

MONARCHY

Coat of arms of New Zealand

Incumbent:
Elizabeth II

Style:	Her Majesty
Heir apparent:	Charles, Prince of Wales
First monarch:	Edward VII
Formation:	26 September 1907

The New Zealand monarchy has its roots in the British crown, from which it has evolved to become a distinctly New Zealand institution, represented by unique symbols. The New Zealand monarch – since 6 February 1952, Elizabeth II – is today shared equally with fifteen other countries within the Commonwealth of Nations, all being independent and the monarchy of each legally distinct. For New Zealand, the monarch is officially titled *Queen of New Zealand*, and she, her consort, and other members of the New Zealand Royal Family undertake various public and private functions across New Zealand and on behalf of the country abroad. However, the Queen is the only member of the Royal Family with any constitutional role. While several powers are the sovereign's alone, because she lives predominantly in the United Kingdom, most of the royal constitutional and ceremonial duties in New Zealand and Niue are carried out by the Queen's viceroy, the Governor-General and the Queen's Representative in The Cook Islands.[5] As the territories of the Realm of New Zealand are not sovereign, they do not have a viceregal representation.

International and domestic aspects

Further information: Commonwealth realm > Relationship of the realms

New Zealand shares the same monarch with each of 15 monarchies in the 54-member Commonwealth of Nations, a grouping known informally as the Commonwealth realms. The emergence of this arrangement paralleled the evolution of New Zealand nationalism following the end of the First World War and culminated in the passage of the Statute of Westminster Adoption Act in 1947, since when the pan-national Crown has had both a shared and separate character,[6] and the sovereign's role as monarch of New Zealand has been distinct to his or her position as monarch of the United Kingdom.[1] The monarchy thus ceased to be an exclusively British institution, and in New Zealand became a New Zealand establishment, though it is still often misnomered as "British" in both legal and common language, for reasons historical, political, and of convenience; this conflicts with not only the government's recognition and promotion of a distinctly New Zealand Crown, but also the sovereign's distinct New Zealand title.

Effective with the Constitution Act 1986, no British or other realm government can advise the sovereign on any matters pertinent to New Zealand, meaning that on all matters of the New Zealand state, the monarch is advised solely by New Zealand Ministers of the Crown.[7] As the monarch lives predominantly outside of New Zealand, one of the most important of these state duties carried out on the advice of the Prime Minister of New Zealand is the appointment of the Governor-General, who performs most of the Queen's domestic duties in her absence.[8][9][10] All royal powers in New Zealand may be carried out by both the monarch and Governor-General, and, in New Zealand law, the offices of monarch and Governor-General are fully interchangeable, mention of one always simultaneously including the other.[11]

Cost

The sovereign similarly only draws from New Zealand coffers for support in the performance of her duties when

in New Zealand or acting as Queen of New Zealand abroad; New Zealanders do not pay any money to the Queen or any other member of the Royal Family, either towards personal income or to support royal residences outside of New Zealand. Normally, tax dollars pay only for the costs associated with the Governor-General and Queen's Representative as instruments of the Queen's authority, including travel, security, residences, offices, ceremonies, and the like. Supporters of the monarchy argue it costs New Zealand taxpayers only a small outlay for royal engagements and tours, and the expenses of the Governor-General's establishment. Monarchy New Zealand states "[t]his figure is about one dollar per person per year", about $4.3 million per annum.[12] An analysis by the Republican Movement of the 2010 Budget shows the office of Governor-General costs New Zealand taxpayers about $7.6 million in ongoing costs and $11 million for Government House upgrades, a total of $18.6 million.[13][14][15] These figures are disputed by Monarchy New Zealand, who claim the Republican Movement "arbitrarily inflated the cost of the Governor-General".[16]

Succession

Succession is by male-preference primogeniture governed by both the Act of Settlement 1701, and Bill of Rights 1689, legislation that limits the succession to the natural (i.e. non-adopted), legitimate descendants of Sophia, Electress of Hanover, and stipulates that the monarch cannot be a Roman Catholic, nor married to one, and must be in communion with the Church of England upon ascending the throne. Though, via adopting the Statute of Westminster and the Imperial Laws Application Act 1988, these constitutional documents as they apply to New Zealand now lie within the full control of the New Zealand parliament,[17] New Zealand also agreed not to change its rules of succession without the unanimous consent of the other realms, unless explicitly leaving the shared monarchy relationship; a situation that applies symmetrically in all the other realms, including the United Kingdom, and has been likened to a treaty amongst these countries.[18] Thus, New Zealand's line of succession remains identical to that of the United Kingdom. As such, the rules for succession are not fixed, but may be changed by a constitutional amendment; in December 2009, Prime Minister John Key expressed his support for proposed removal of male-preference primogeniture and anti-Catholic provisions in the succession laws.[19] The Constitution Act 1986 specifies that should a regent be installed in the United Kingdom, that individual will carry out the functions of the monarch of New Zealand.[20]

Charles, Prince of Wales, is the heir apparent to the New Zealand throne.

Upon a *demise of the Crown* (the death or abdication of a sovereign), the late sovereign's heir immediately and automatically succeeds, without any need for confirmation or further ceremony – hence arises the phrase "The King is dead. Long live the King!." It is customary, though, for the accession of the new monarch to be publicly proclaimed by the Governor-General on behalf of the Executive Council of New Zealand. Following an appropriate period of mourning, the monarch is also crowned in the United Kingdom in an ancient ritual, but one not necessary for a sovereign to reign.[n 1] Other than a transfer of all royal powers and functions to the new monarch from his or her predecessor, no other law or office is affected, as all references in legislation to previous monarchs, whether in the masculine (e.g. *His Majesty*) or feminine (e.g. *the Queen*), continue to mean the reigning sovereign of New Zealand.[21] After an individual ascends the throne, he or she typically continues to reign until death, being unable to unilaterally abdicate per the tenets of constitutional monarchy.[n 2]

Title

Further information: List of titles and honours of Queen Elizabeth II

One of the first post-Second World War examples of New Zealand's status as an independent monarchy was the alteration of the monarch's title by the Royal Titles Act 1953. For the first time, the official New Zealand title mentioned New Zealand separately from the United Kingdom and the other realms, to highlight the monarch's role specifically as Queen of New Zealand, as well as the shared aspect of the Crown throughout the realms; the title at that time was: *"Elizabeth II, by the Grace of God of the United Kingdom, New Zealand and Her Other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith"*. Since the passage of the Royal Titles Act 1974, the monarch's title in New Zealand has been *Elizabeth the Second, by the Grace of God Queen of New Zealand and Her Other Realms and Territories, Head of the Commonwealth, Defender of the Faith*.

Although the Queen's New Zealand title includes the phrase *Defender of the Faith*, neither the Queen nor the Governor-General has any religious role in New Zealand; there has never been an established church in the country. This is one of the key differences from the Queen's role in England, where she is Supreme Governor of the Church of England.

Representation of the state

As the living embodiment of the Crown, the sovereign is regarded as the personification, or legal personality, of the New Zealand state,[7] with the state therefore referred to as *Her Majesty The Queen in Right of New Zealand*,[n 3][22] or *The Crown*. As such, the monarch is the employer of all government staff (including the viceroys, judges, members of the New Zealand Defence Force, police officers, and parliamentarians), the guardian of foster children (*Crown wards*), as well as the owner of all state lands (*Crown land*), buildings and equipment (*Crown held property*), state owned companies (*Crown entities*),[23] and the copyright for all government publications (*Crown copyright*). This is all in his or her position as sovereign, and not as an individual; all such property is held by the Crown in perpetuity and cannot be sold by the sovereign without the proper advice and consent of his or her ministers.

As the embodiment of the state, the monarch tops the New Zealand order of precedence, and is also the locus of oaths of allegiance,[24] required of many employees of the Crown,[25] as well as by new citizens, as per the Oath of Citizenship laid out in the Citizenship Act. This is done in reciprocation to the sovereign's Coronation Oath, wherein he or she promises "to govern the Peoples of... New Zealand... according to their respective laws and customs."[26]

Constitutional role

New Zealand's constitution is made up of a variety of statutes and conventions that are either British or New Zealand in origin,[17] and together give New Zealand a parliamentary system of government wherein the role of the Queen is both legal and practical. The Crown is regarded as a corporation, with the sovereign, in the position of head of state,[2] as the centre of a construct in which the power of the whole is shared by multiple institutions of government acting under the sovereign's authority.[27] Though this power stems from the people, all New Zealanders live under the authority of the monarch.

The vast powers that belong to the Crown are collectively known as the Royal Prerogative,[10] the exercise of which does not require parliamentary approval, though it is not unlimited; for example, the monarch does not have the prerogative to impose and collect new taxes without the authorization of an Act of Parliament. The consent of the Crown must, however, be obtained before either of the houses of parliament may even debate a bill affecting the sovereign's prerogatives or interests, and no act of parliament binds the Queen or her rights unless the act states that it does.

Executive

The government of New Zealand is defined by the constitution as the Queen acting on the advice of her Executive Council.[28] One of the main duties of the Crown is to ensure that a democratically elected government is always in place, which means appointing a prime minister to thereafter head the Cabinet – a committee of the Executive Council charged with advising the Crown on the exercise of the Royal Prerogative,[29] and legally required to keep the Governor-General up to date on state affairs.[30][31] The Queen is informed by her viceroy of the swearing-in and resignation of prime ministers and other members of the ministry, remains fully briefed through regular communications from her New Zealand ministers, and holds audience with them whenever possible.[1]

In the construct of constitutional monarchy and responsible government, the ministerial advice tendered is typically binding, meaning the monarch *reigns* but does not *rule*. However, the Royal Prerogative belongs to the Crown and not to any of the ministers,[27] and the royal and viceroyal figures may unilaterally use these powers in exceptional constitutional crisis situations,[27][30][32] thereby allowing the monarch to make sure that the government conducts itself in compliance with the constitution. There are also a few duties which must be specifically performed by, or bills that require assent by, the Queen; these include applying the royal sign-manual and Seal of New Zealand to the appointment papers of governors-general, the confirmation of awards of New Zealand Royal Honours,[33] and the approval of any change in her New Zealand title.

The ministers of the Fifth Labour Government with then Governor-General Dame Silvia Cartwright, 20 October 2005.

Foreign affairs

The Royal Prerogative also extends to foreign affairs: the sovereign or the Governor-General negotiates and ratifies treaties, alliances, and international agreements, on the advice of the Cabinet. The Governor-General, on behalf of the Queen, also accredits New Zealand High Commissioners and ambassadors, and receives similar diplomats from foreign states. In 2005, the Letters of Credence and Recall were altered so as to run in the name of the incumbent Governor-General, instead of following the usual international process of the letters being from one head of state to another. In addition, the issuance of passports falls under the Royal Prerogative, and, as such, all New Zealand passports are issued in the monarch's name and remain her property.

Parliament

The sovereign is one of the two components of parliament,[32] but the monarch and viceroy do not participate in the legislative process save for the granting of Royal Assent, which is necessary for a bill to be enacted as law; either figure or a delegate may perform this task, and the viceroy has the option of deferring assent to the sovereign. The Crown is further responsible for summoning, proroguing, and dissolving the House of Representatives,[34] after which the Governor-General usually calls for a general election. The new parliamentary session is marked by either the monarch or the Governor-General reading the Speech from the Throne;[35] as the both are traditionally barred from the House of Representatives, this ceremony, as well as the bestowing of Royal Assent, takes place in the Legislative Council Chamber; the monarch has formally opened parliament on five occasions: January 1954, February 1963, March 1970, February 1986, and February 1990.[36] Despite the sovereign's exclusion, Members of Parliament must still express their loyalty to her and defer to her authority, as the Oath of Allegiance must be recited by all new parliamentarians before they may take their seat, and the official opposition is traditionally dubbed as *Her Majesty's Loyal Opposition*.

Courts

The sovereign is responsible for rendering justice for all her subjects, and is thus traditionally deemed the *fount of justice*. However, she does not personally rule in judicial cases; instead the judicial functions of the Royal Prerogative are performed in trust and in the Queen's name by Officers of Her Majesty's Court. The monarch is immune from criminal prosecution, the notion in common law being that the sovereign "can do no wrong"; the monarch cannot be prosecuted in her own courts for criminal offences. Civil lawsuits against the Crown in its public capacity (that is, lawsuits against the Queen-in-Council) are permitted; however, lawsuits against the monarch personally are not cognizable. The monarch, and by extension the Governor-General, also grants immunity from prosecution, exercises the *Royal Prerogative of Mercy*,[10] and may pardon offences against the Crown, either before, during, or after a trial.

As the judges and courts are the sovereign's judges and courts, and as all law in New Zealand derives from the Crown, the monarch stands to give legitimacy to courts of justice, and is the source of their judicial authority. The Arms of Her Majesty in Right of New Zealand is always displayed in New Zealand courtrooms.

The Crown and the New Zealand Defence Force

The Crown also sits at the pinnacle of the New Zealand Defence Force. The Governor-General is Commander-in-Chief and under the Defence Act 1990 is authorised to "raise and maintain armed forces",[38] consisting of the New Zealand Army, Royal New Zealand Navy, and Royal New Zealand Air Force. The sovereign's position as Head of the Armed Forces [39] is reflected in New Zealand's naval vessels bearing the prefix *Her Majesty's New Zealand Ship* (*His Majesty's New Zealand Ship* in the reign of a male monarch), and in the requirement that all members of the armed forces swear their allegiance to the sovereign and his or her heirs and successors.[40] The Governor-General commissions officers to command the forces;[32] Saluting of these individuals by soldiers is, besides a sign of personal respect, an indirect salute to the monarch and her authority.

King George VI speaks with a Royal New Zealand Air Force Flight Lieutenant at RAF Scampton, 27 May 1943.

Though the monarch and members of her family also act as Colonels-in-Chief of various regiments in the military, these posts are only ceremonial in nature, reflecting the Crown's relationship with the military through participation in military ceremonies both at home and abroad.[n 4] Various regiments have also received a *royal* prefix, such as the Corps of Royal New Zealand Engineers, the Royal New Zealand Infantry Regiment, and the Royal New Zealand Army Logistic Regiment.

> *Allegiance [by Defence Force personnel is to] the Sovereign, [however] loyalty [is] to the Government of the day... The Defence Force and the disposition of those Forces are at the decision... of Her Majesty's Ministers for the time being.*[37]
>
> State Services Commission, December 2001

One particular area of note is that the country's only currently ranked Admiral of the Fleet is Prince Philip, the Queen's consort. This title is held in conjunction with those of Field Marshal and Marshal of the Royal New Zealand Air Force.

The Crown and Māori

Māori interaction with the Crown dates back to 1832, when King William IV in his British Council appointed James Busby as Resident, to address concerns on the part of Māori in the Bay of Islands over expanding European settlements in that area. On 28 October 1835, Busby oversaw a *hui* (forum) held at Waitangi, at which

a flag was selected for New Zealand and a declaration of independence written by Busby was signed by 36 Māori chiefs; both were acknowledged the following year by the King in a letter from Lord Glenelg.[42]

As a result the declaration's ratification by the House of Commons in 1836, officials in the Colonial Office determined in 1839 that a treaty of cessation would need to be signed with Māori for the British Crown to acquire sovereignty over New Zealand.[43] The Treaty of Waitangi was signed in 1840 by representatives of the British Crown and over 500 Māori chiefs, and is considered the founding document of the nation.[44] The Treaty identifies the Crown's right to Kawanatanga or Governorship, leading one Maori academic to argue that Kawanatanga, or the New Zealand Government, is party to the Treaty.[45]

Since the treaty's implementation, a number of petitions have been made by Māori directly to the sovereign in London, whom they felt they had a special relationship, the first coming from northern chiefs in 1852. This and all subsequent appeals were directed back to the sovereign's New Zealand ministers for advice on how to proceed.[46] The results were not always favorable to Māori, who have communicated their discontent to the monarch or other royals; in response to a refusal by the Executive Council in 1981 to allow Mana Motuhake direct access to Queen Elizabeth II, Māori activist Dun Mihaka offered a traditional rebuke by baring his buttocks at Prince Charles and Princess Diana. In a later incident Mihaka attempted to crash into the Queen's motorcade; he was intercepted by Police before this happened.[47]

In the Māori language, the Queen is sometimes referred to as *Te kōtuku-rerenga-tahi*, meaning "the white heron of a single flight"; in Māori proverb, the rare white heron is a significant bird seen only once in a lifetime.[7] In 1953, for her Coronation, Queen Elizabeth II was given a kiwi feather *Korowai*, or cloak,[48] which she wears when attending a *pōwhiri*, or Māori welcoming ceremony, also speaking partly in Māori.[49]

Cook Islands, Niue, and the territories

Further information: Monarchy of the Cook Islands

The sovereign of New Zealand also serves as the monarch of the Cook Islands and Niue, territories in free association with New Zealand within the larger Realm of New Zealand.[50][51] The New Zealand monarchy, however, is unitary throughout all jurisdictions in the country, with the headship of state being a part of all equally. As such, the sovereignty of the Cook Islands and Niue is passed on not by the Governor-General or parliament of New Zealand, but through the overreaching Crown itself as a part of the executive, legislative, and judicial operations in all three areas. Though singular, linking the governments of New Zealand, Niue, and the Cook Islands, the Crown is thus "divided" into three legal jurisdictions.

The Queen's Representative serves as the viceroy of the Cook Islands and the Governor-General of New Zealand,[52] represented by the State Services Commissioner,[53] represents the Queen in Niue,[51][54] carrying out all the monarch's constitutional and ceremonial duties of state on her behalf. The Administrator of the territory of Tokelau is appointed by the Governor-General of New Zealand-in-Council, at the recommendation of the New Zealand Minister of Foreign Affairs,[*citation needed*] and the Governor-General of New Zealand serves *ex-officio* as Governor of the Ross Dependency; but, as the territories are not sovereign entities, the Administrator and Governor are representatives of the New Zealand government and not the sovereign personally.

Cultural role

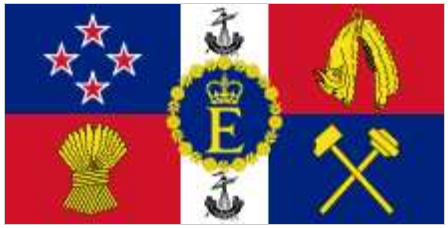
Royal presence and duties

Further information: List of Commonwealth visits made by Queen Elizabeth II

Members of the Royal Family have been present in New Zealand since the late 1800s, their reasons including participating in military manoeuvres, serving as viceroy, or undertaking official royal tours. Usually important milestones, anniversaries, or celebrations of New Zealand culture will warrant the presence of the monarch, while other royals will be asked to participate in lesser occasions. *Official duties* involve the sovereign representing the New Zealand state at home or abroad, or her relations as members of the Royal Family participating in government organized ceremonies either in New Zealand or elsewhere.[n 5] The advice of the New Zealand Cabinet is the impetus for royal participation in any New Zealand event. Such events have included centennials and bicentennials; Waitangi Day; the openings of Commonwealth and other games; anniversaries of Māori treaty signings; awards ceremonies; D-Day commemorations; anniversaries of the monarch's accession; and the like. Conversely, *unofficial duties* are performed by Royal Family members on behalf of New Zealand organizations of which they may be patrons, through their attendance at charity events, visiting with members of the New Zealand Defence Force as Colonel-in-Chief, or marking certain key anniversaries. The invitation and expenses associated with these undertakings are usually borne by the associated organization.

Since 1869, when Prince Alfred, one of Queen Victoria's sons arrived on New Zealand's shores, more than fifty tours of New Zealand by a member of the Royal Family have taken place, though only five of those occurred before 1953. After Alfred came The Duke and Duchess of Cornwall and York (later King George V and Queen Mary) in 1901; Prince Edward, Prince of Wales (later King Edward VIII), in 1920; The Duke and Duchess of York (later King George VI and Queen Elizabeth) in 1927; and Prince Henry, Duke of Gloucester, from 1934 to 1935. Queen Elizabeth II was the first reigning monarch of New Zealand to tour the country, becoming such when she arrived during her 1953-1954 global tour; she broadcast from Government House in Auckland her annual Royal Christmas Message.

Queen Elizabeth also toured New Zealand on a number of other occasions: between 6 and 18 February 1963, she attended celebrations at Waitangi and the Queen Elizabeth II Arts Council was founded as the nation's gift to the monarch; from 12 to 30 March 1970, the Queen, accompanied by Prince Charles and Princess Anne, participated in the James Cook bicentenary celebrations; between 30 January and 8 February 1974, and she attended and closed that year's Commonwealth Games in Christchurch and participated in New Zealand Day events at Waitangi. As part of a Commonwealth-wide tour for her Silver Jubilee, Elizabeth was in New Zealand from 22 February to 7 March 1977; she made a brief visit, between 12 and 20 October, following a Commonwealth Heads of Government Meeting (CHOGM) in Melbourne; marked the centennial of the New Zealand Police during a tour from 22 February to 2 March 1986; the Queen closed the Commonwealth Games in Auckland and, with her son, Prince Edward, took part in events marking the sesquicentennial of the Treaty of Waitangi between 1 and 16 February 1990; between 1 and 10 November 1995, she attended the CHOGM in Auckland and opened the newly refurbished parliament buildings; and, as part of her global tour for her Golden Jubilee, Elizabeth was in New Zealand from 22 to 27 February 2002.[57]



Some of the royal tours undertaken by more junior royals include the 1990 visit of Princess Anne to commemorate the 75th anniversary of the Gallipoli landings on Anzac Day, and when Prince William represented the Queen of New Zealand at VE and VJ Day commemorations in 2005, as part of an 11 day tour,[58] and opened the new Supreme Court of New Zealand building in early 2010.[59] Prince Edward spent two terms of the 1982 academic year as a house tutor and junior master at the Collegiate School, in Wanganui.[49]

Symbols

References to the monarchy are commonplace in public life in New Zealand. Her portrait is often found in government buildings, military installations, and schools. There are references to St Edward's Crown, on the New Zealand's Royal Coat of Arms, on various medals, and awards.

These latter cases reflect the monarch's place as the ceremonial head of the New Zealand honours system. As

such, only she can approve the creation of an honour, which she does as requested by the government of New Zealand. Although, the Governor-General administers most responsibilities relating to New Zealand honours on the Queen's behalf.

The Royal Standard of New Zealand, used solely by the Queen of New Zealand.

The use of the term 'Royal', as in the Royal New Zealand Navy and Royal New Zealand Air Force, and oaths taken by politicians, judges, members of the armed forces and new citizens are to the Queen. The Queen's portrait appears on some postage stamps, the obverse (front) of New Zealand coins, and all banknotes feature the portrait of the Queen as the watermark. However, only the $20 banknote bears her image as the main feature.

A statue of Queen Victoria in Dunedin.

In New Zealand, unlike in the United Kingdom, the Queen's Official Birthday is a public holiday and is celebrated in the first Monday in June. Republican Movement surveys conducted in 2009 and 2010 showed there had been no official civic celebrations or plans to celebrate the Queen's birthday on the day, apart from the Queen's Birthday Honours list.[60]

God Save the Queen remains one of the National Anthems, along with God Defend New Zealand but has been generally restricted to Official occasions where the Monarch or the Vice-Regal representative, the Governor General, are being either honoured or in attendance for a particular purpose.

History

Monarchy in New Zealand dates back to the first half of the nineteenth century.

After Captain Cook's exploration of New Zealand in the late eighteenth century, an increasing number of European settlers came to New Zealand. In 1833, with growing lawlessness amongst traders and settlers, the British government appointed James Busby as British Resident to protect British trading interests.

Despite Busby's presence, trouble increased. In 1840, the British Government sent Captain William Hobson to New Zealand as Lieutenant Governor, to acquire the sovereignty of New Zealand, by way of a treaty with the native Māori chiefs.

The Treaty of Waitangi was signed on 6 February 1840, at Waitangi in the Bay of Islands. Over five hundred Māori chiefs signed the treaty as it was taken around the country during the next eight months.

Following the Treaty of Waitangi in 1840, the islands of New Zealand became a British colony.

In 1907, New Zealand achieved the status of Dominion, which meant it was a country of the British Empire and later the Commonwealth of Nations, with autonomy in domestic and foreign affairs. The term fell into disuse after the Second World War.

In 1917, letters patent of George V set out the powers, duties and responsibilities of the Governor-General (as the Sovereign's representative) and the Executive Council.

In 1926, the Balfour Declaration at the Imperial Conference in London confirmed the status of New Zealand, along with that of Australia, the Irish Free State, Canada, South Africa and Newfoundland, as self-governing Dominions under the British Crown.

The Statute of Westminster in 1931, an act of the British Parliament, gave legal form to this declaration. It gave New Zealand and other Dominions the authority to make their own laws. New Zealand ratified the Statute in 1947, after the passing of the Statute of Westminster Adoption Act 1947

A New Zealand stamp bearing the images of Queen Elizabeth and King George VI flanking the shield of the monarch's royal arms for New Zealand, to commemorate the King's coronation on 12 May 1937.

The Royal Titles Act 1953 first introduced a New Zealand royal title for use by the Queen, and the Royal Titles Act 1974 altering the style borne by the Queen in New Zealand.

A personal flag for use by the Queen in New Zealand was adopted in 1962. It features the shield design of the New Zealand coat of arms in the form of an oblong or square. Superimposed in the centre is a dark blue roundel bearing an initial E surmounted by a Royal crown within a gold chaplet of roses.

> “I look forward to continuing to serve to the best of my ability in the years to come. It fills me with great pride to stand before you here today to express my lasting respect and deep affection for this country and for New Zealanders everywhere.”
>
> —Her Majesty The Queen, 25 February 2002

More recently, the Constitution Act 1986 has become the principal formal statement of New Zealand's constitution. This Act recognises that the Queen, the Sovereign in right of New Zealand, is the Head of State of New Zealand and that the Governor-General appointed by her is her representative. Each can, in general, exercise all the powers of the other. However the appointment of the governor-general is only done by the Queen, on the advice of the Prime Minister.

Debate

There is less agitation for ending the monarchy of New Zealand and creating a New Zealand republic than in neighbouring Australia, where Australian republicanism is stronger. Supporters of the monarchy claim that for New Zealand, "...monarchy summarises the inheritance of a thousand years of constitutional government and our links with a glorious past,"[61]

Neither National or Labour, the two major political parties currently in parliament have a stated policy of creating a republic, although Peter Dunne's United Future does and some Members of Parliament have publicly expressed their personal support for a republic. In contrast, some members have also expressed support for the monarchy. Former Deputy Prime Minister Michael Cullen declared that he supported the monarchy, stating in 2004 he was "a sort of token monarchist in the Cabinet these days."[62] However, in 2010 he repudiated that stance, taking the view that New Zealand should move towards a republic once the Queen's reign ends.[63] Presently, Prime Minister John Key has said he is "not convinced [a republic] will be a big issue in the short term,"[64] but does believe that a republic is "inevitable."[65] There are two special-interest groups representing both sides of the debate in New Zealand, and argue the issue in the media from time to time: the Monarchy New Zealand and the Republican Movement of Aotearoa New Zealand.

There are a number of legal issues to be addressed in order to abolish the monarchy,[66] though individuals on

both sides of the argument take a different view of the level of difficulty faced.[67] Much of the unsurety involves the reserve powers of the sovereign; the relationship between the various regions of the Realm of New Zealand presently sharing the same sovereign (the absence of these matters from republican arguments having been criticised as a "self-centredness of republican discussions in New Zealand");[51] and effects on the relationship between the Crown and Māori, specifically, the continued legal status of the Treaty of Waitangi and its claims and settlements.[68][69][70] Some academics expressed concern that governments could use republicanism to evade treaty responsibilities,[71] while others, such as Professor Noel Cox, Chairman-Emeritus of Monarchy New Zealand, have argued a republic would not absolve the government of its obligations under the treaty.[72]

The New Zealand public are generally in favour of the retention of the monarchy, with recent polls showing it to have between 50 and 70% support.[73] Polls indicate that many New Zealanders see the monarchy as being of little day-to-day relevance; a One News Colmar Brunton poll in 2002 found that 58% of the population believed the monarchy has little or no relevance to their lives.[74] National Business Review poll in 2004 found 57% of respondents believed New Zealand would become a republic "in the future".[75]

However, the institution still enjoys the support of New Zealanders, particularly those born before the Second World War.[76] With the approval of the current monarch, and the position of the Treaty of Waitangi under a republic remaining a concern to Māori and other New Zealanders alike, as well as the question of what constitutional form a republic might take unresolved, support for a republic remains no higher than one third to 40% of the population.[76] On 21 April 2008, the republican movement released a poll of New Zealanders showing 43% support the monarchy should Prince Charles become King of New Zealand, and 41% support a republic under the same scenario.[77] A poll by the New Zealand Herald in January 2010, before a visit by Prince William to the country found 33.3% wanted Prince Charles to be the next monarch, with 30.2% favouring Prince William. 29.4% of respondents preferred a republic in the event Queen Elizabeth died or abdicated.[78]

On 14 October 2009, a Bill put forward in parliament by Keith Locke to bring about a referendum on the monarchy was drawn from the ballot of members' Bills and introduced into the legislative chamber.[79] It had been presumed that this bill would have been binding in New Zealand only, having no effect in the Cook Islands or Niue.[51] On 21 April 2010 the Bill was defeated at its first reading 68 - 53, and did not continue through to Select Committee with the National Party, Act Party, four members of the Maori Party and Progressives opposed and the Labour, Green and United Future party voting in favour.

An October 2011 survey of 500 business professionals asked "What Is Your Level Of Support For New Zealand Becoming A Republic?". 27% said not at all, 24% said somewhat opposed, 23.1% were neutral, 14.8% said moderately in favour and 11.1% said strongly in favour.[80]

New Zealand organisations with Royal Patronage

See also: List of New Zealand organisations with royal patronage

To receive Royal Patronage, an organisation must prove to be long lasting, and to be of the highest standard in their field. These organisations such as the Royal New Zealand Returned and Services' Association, have received patronage from various monarchs and their families.

From Wikipedia, the free encyclopedia

New Zealand (Māori: *Aotearoa*) is an island country located in the southwestern Pacific Ocean. The country geographically comprises two main landmasses − that of the North and South Islands − as well as numerous smaller islands. New Zealand is situated some 1,500 kilometres (900 mi) east of Australia across the Tasman Sea and roughly 1,000 kilometres (600 mi) south of the Pacific island nations of New Caledonia, Fiji, and Tonga. Because of its remoteness, it was one of the last lands to be settled by humans.

During its long isolation, New Zealand developed a distinctive biodiversity of both animal and plant life. Most notable are the large number of unique bird species, many of which became extinct after the arrival of humans and introduced mammals. With a mild maritime climate, the land was mostly covered in forest. The country's varied topography and its sharp mountain peaks owe much to the tectonic uplift of land and volcanic eruptions caused by the Pacific and Indo-Australian Plates clashing beneath the earth's surface.

Polynesians settled New Zealand in 1250–1300 CE and developed a distinctive Māori culture, and Europeans first made contact in 1642 CE. The introduction of potatoes and muskets triggered upheaval among Māori early during the 19th century, which led to the inter-tribal Musket Wars. In 1840 the British and Māori signed a treaty making New Zealand a colony of the British Empire. Immigrant numbers increased sharply and conflicts escalated into the New Zealand Wars, which resulted in much Māori land being confiscated in the mid North Island. Economic depressions were followed by periods of political reform, with women gaining the vote during the 1890s, and a welfare state being established from the 1930s. After World War II, New Zealand joined Australia and the United States in the ANZUS security treaty, although the United States later, until 2010, suspended the treaty after New Zealand banned nuclear weapons. New Zealand is part of the intelligence sharing among the Anglosphere countries, the UKUSA Agreement. New Zealanders enjoyed one of the highest standards of living in the world in the 1950s, but the 1970s saw a deep recession, worsened by oil shocks and the United Kingdom's entry into the European Economic Community. The country underwent major economic changes during the 1980s, which transformed it from a protectionist to a liberalised free-trade economy. Markets for New Zealand's agricultural exports have diversified greatly since the 1970s, with once-dominant

exports of wool being overtaken by dairy products, meat, and recently wine.

The majority of New Zealand's population is of European descent; the indigenous Māori are the largest minority, followed by Asians and non-Māori Polynesians. Māori and New Zealand Sign Language are the official languages, with English predominant. Much of New Zealand's culture is derived from Māori and early British settlers. Early European art was dominated by landscapes and to a lesser extent portraits of Māori. A recent resurgence of Māori culture has seen their traditional arts of carving, weaving and tattooing become more mainstream. Many artists now combine Māori and Western techniques to create unique art forms. The country's culture has also been broadened by globalisation and increased immigration from the Pacific Islands and Asia. New Zealand's diverse landscape provides many opportunities for outdoor pursuits and has provided the backdrop for a number of big budget movies.

New Zealand is organised into 11 regional councils and 67 territorial authorities for local government purposes; these have less autonomy than the country's long defunct provinces did. Nationally, executive political power is exercised by the Cabinet, led by the Prime Minister. Queen Elizabeth II is the country's head of state and is represented by a Governor-General. The Queen's Realm of New Zealand also includes Tokelau (a dependent territory); the Cook Islands and Niue (self-governing but in free association); and the Ross Dependency, New Zealand's territorial claim in Antarctica. New Zealand is a member of the Asia-Pacific Economic Cooperation, Commonwealth of Nations, Organisation for Economic Co-operation and Development, Pacific Islands Forum, and the United Nations.

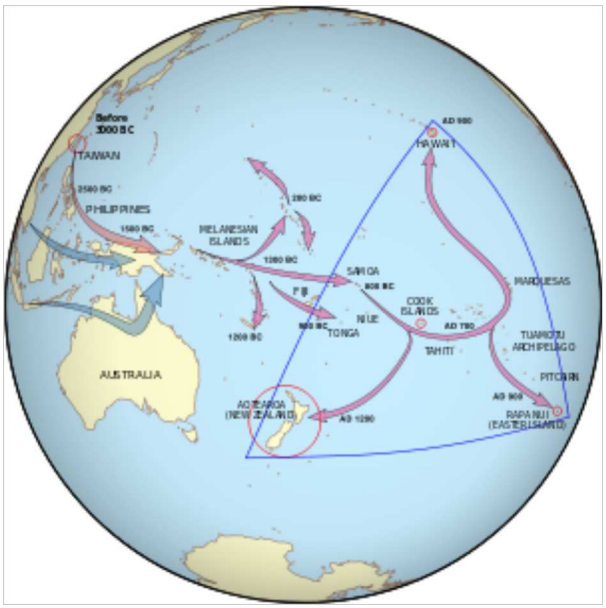
Detail from a 1657 map showing the western coastline of "Nova Zeelandia"



Aotearoa (often translated as "land of the long white cloud")[11] is the current Māori name for New Zealand, and is also used in New Zealand English. It is unknown whether Māori had a name for the whole country before the arrival of Europeans, with *Aotearoa* originally referring to just the North Island.[12] Abel Tasman sighted New Zealand in 1642 and called it *Staten Landt*, supposing it was connected to a landmass of the same name at the southern tip of South America.[13] In 1645 Dutch cartographers renamed the land *Nova Zeelandia* after the Dutch province of Zeeland.[14][15] British explorer James Cook subsequently anglicised the name to New Zealand.[n 8]

Māori had several traditional names for the two main islands, including *Te Ika-a-Māui* (the fish of Māui) for the North Island and *Te Wai Pounamu* (the waters of greenstone) or *Te Waka o Aoraki* (the canoe of Aoraki) for the South Island.[16] Early European maps labelled the islands North (North Island), Middle (South Island) and South (Stewart Island / Rakiura).[17] In 1830 maps began to use North and South to distinguish the two largest islands and by 1907 this was the accepted norm.[18] The New Zealand Geographic Board discovered in 2009 that the names of the North Island and South Island had never been formalised, but there are now plans to do so.[19] The board is also considering suitable Māori names,[20] with *Te Ika-a-Māui* and *Te Wai Pounamu* the most likely choices according to the chairman of the Māori Language Commission.[21]

History

Main article: History of New Zealand

New Zealand was one of the last major landmasses settled by humans. Radiocarbon dating, evidence of deforestation[23] and mitochondrial DNA variability within Māori populations[24] suggest New Zealand was first settled by Eastern Polynesians between 1250 and 1300,[16][25] concluding a long series of voyages through the southern Pacific islands.[26] Over the centuries that followed these settlers developed a distinct culture now known as Māori. The population was divided into *iwi* (tribes) and *hapū* (subtribes) which would cooperate, compete and sometimes fight with each other. At some point a group of Māori migrated to the Chatham Islands (which they named *Rēkohu*) where they developed their distinct Moriori culture.[27][28] The Moriori population was decimated between 1835 and 1862, largely because of Māori invasion and enslavement, although European diseases also contributed. In 1862 only 101 survived and the last known full-blooded Moriori died in 1933.[29]

The Māori people are most likely descended from people that emigrated from Taiwan to Melanesia and then travelled east through to the Society Islands. After a pause of 70–265 years a new wave of exploration led to the discovery and settlement of New Zealand.[22]

The first Europeans known to have reached New Zealand were Dutch explorer Abel Tasman and his crew in 1642.[30] In a hostile encounter, four crew members were killed and at least one Māori was hit by canister shot.[31] Europeans did not revisit New Zealand until 1769 when British explorer James Cook mapped almost the entire coastline.[30] Following Cook, New Zealand was visited by numerous European and North American whaling, sealing and trading ships. They traded food, metal tools, weapons and other goods for timber, food, artefacts, water, and on occasion sex.[32] The introduction of the potato and the musket transformed Māori agriculture and warfare. Potatoes provided a reliable food surplus, which enabled longer and more sustained military campaigns.[33] The resulting inter-tribal Musket Wars encompassed over 600 battles between 1801 and 1840, killing 30,000–40,000 Māori.[34] From the early 19th century, Christian missionaries began to settle New Zealand, eventually converting most of the Māori population.[35] The Māori population declined to around 40 percent of its pre-contact level during the 19th century; introduced diseases were the major factor.[36]

The British Government appointed James Busby as British Resident to New Zealand in 1832[37] and in 1835, following an announcement of impending French settlement by Charles de Thierry, the nebulous United Tribes of New Zealand sent a Declaration of the Independence to King William IV of the United Kingdom asking for protection.[37] Ongoing unrest and the dubious legal standing of the Declaration of Independence prompted the Colonial Office to send Captain William Hobson to claim sovereignty for the British Crown and negotiate a treaty with the Māori.[38] The Treaty of Waitangi was first signed in the Bay of Islands on 6 February 1840.[39] In response to the commercially run New Zealand Company's attempts to establish an independent settlement in Wellington[40] and French settlers "purchasing" land in Akaroa,[41] Hobson declared British sovereignty over all of New Zealand on 21 May 1840, even though copies of the Treaty were still circulating.[42] With the signing of the Treaty and declaration of sovereignty the number of immigrants, particularly from the United Kingdom, began to increase.[43]

New Zealand, originally part of the colony of New South Wales, became a separate Crown colony in 1841.[44] The colony gained a representative government in 1852 and the 1st New Zealand Parliament met in 1854.[45] In

The Waitangi sheet from the Treaty of Waitangi

1856 the colony effectively became self-governing, gaining responsibility over all domestic matters other than native policy. (Control over native policy was granted in the mid-1860s.)[45] Following concerns that the South Island might form a separate colony, premier Alfred Domett moved a resolution to transfer the capital from Auckland to a locality near the Cook Strait.[46] Wellington was chosen for its harbour and central location, with parliament officially sitting there for the first time in 1865. As immigrant numbers increased, conflicts over land led to the New Zealand Wars of the 1860s and 1870s, resulting in the loss and confiscation of much Māori land.[47] In 1893 the country became the first nation in the world to grant all women the right to vote[48] and in 1894 pioneered the adoption of compulsory arbitration between employers and unions.[49]

In 1907 New Zealand declared itself a Dominion within the British Empire and in 1947 the country adopted the Statute of Westminster, making New Zealand a Commonwealth realm.[45] New Zealand was involved in world affairs, fighting alongside the British Empire in the first and second World Wars[50] and suffering through the Great Depression.[51] The depression led to the election of the first Labour government and the establishment of a comprehensive welfare state and a protectionist economy.[52] New Zealand experienced increasing prosperity following World War II[53] and Māori began to leave their traditional rural life and move to the cities in search of work.[54] A Māori protest movement developed, which criticised Eurocentrism and worked for greater recognition of Māori culture and the Treaty of Waitangi.[55] In 1975, a Waitangi Tribunal was set up to investigate alleged breaches of the Treaty, and it was enabled to investigate historic grievances in 1985.[39] The government has negotiated settlements of these grievances with many iwi, although Māori claims to the foreshore and seabed have proved controversial in the 2000s.

Government

Main article: Government of New Zealand

John Key, Prime Minister of New Zealand since 2008

New Zealand is a constitutional monarchy with a parliamentary democracy,[56] although its constitution is not codified.[57] Queen Elizabeth II is the Queen of New Zealand and the head of state.[58] The Queen is represented by the Governor-General,[59] whom she appoints on the advice of the Prime Minister.[60] The Governor-General can exercise the Crown's prerogative powers (such as reviewing cases of injustice and making appointments of Cabinet ministers, ambassadors and other key public officials)[61] and in rare situations, the reserve powers (the power to dismiss a Prime Minister, dissolve Parliament or refuse the Royal Assent of a bill into law).[62] The powers of the Queen and the Governor-General are limited by constitutional constraints and they cannot normally be exercised without the advice of Cabinet.[62][63]

Elizabeth II

Sir Jerry Mateparae

The Queen of New Zealand and her representative, the Governor-General

The Parliament of New Zealand holds legislative power and consists of the Sovereign (represented by the Governor-General) and the House of Representatives.[63] It also included an upper house, the Legislative Council, until this was abolished in 1950.[63] The supremacy of the House over the Sovereign was established in England by the Bill of Rights 1689 and has been ratified as law in New Zealand.[63] The House of Representatives is democratically elected and a Government is formed from the party or coalition with the majority of seats.[63] If no majority is formed a minority government can be formed if support from other parties during confidence and supply votes is assured. The Governor-General appoints ministers under advice from the Prime Minister, who is by convention the Parliamentary leader of the governing party or coalition.[64] Cabinet, formed by ministers and led by the Prime Minister, is the highest policy-making body in government and responsible for deciding significant government actions.[65] By convention, members of cabinet are bound by collective responsibility to decisions made by cabinet.[66]

Judges and judicial officers are appointed non-politically and under strict rules regarding tenure to help maintain constitutional independence from the government.[57] This theoretically allows the judiciary to interpret the law based solely on the legislation enacted by Parliament without other influences on their decisions.[67] The Privy Council in London was the country's final court of appeal until 2004, when it was replaced with the newly established Supreme Court of New Zealand. The judiciary, headed by the Chief Justice,[68] includes the Court of Appeal, the High Court, and subordinate courts.[57]

Almost all parliamentary general elections between 1853 and 1996 were held under the first past the post voting system.[69] The elections since 1930 have been dominated by two political parties, National and Labour.[69] Since 1996, a form of proportional representation called Mixed Member Proportional (MMP) has been used.[57] Under the MMP system each person has two votes; one is for the seventy electoral seats (including seven reserved for Māori),[70] and the other is for a party. The remaining fifty seats are assigned so that representation in parliament reflects the party vote, although a party has to win one electoral seat or 5 percent of the total party vote before it is eligible for these seats.[71] Between March 2005 and August 2006 New Zealand became the only country in the world in which all the highest offices in the land (Head of State, Governor-General, Prime Minister, Speaker and Chief Justice) were occupied simultaneously by women.[72]

Foreign relations and the military

Main articles: Foreign relations of New Zealand and New Zealand Defence Force

Early colonial New Zealand allowed the British Government to determine external trade and be responsible for foreign policy.[73] The 1923 and 1926 Imperial Conferences decided that New Zealand should be allowed to negotiate their own political treaties, with the first successful commercial treaty being with Japan in 1928. Despite this independence New Zealand readily followed Britain in declaring war on Germany on 3 September

1939 with then Prime Minister Michael Savage proclaiming, "Where she goes, we go; where she stands, we stand."[74]

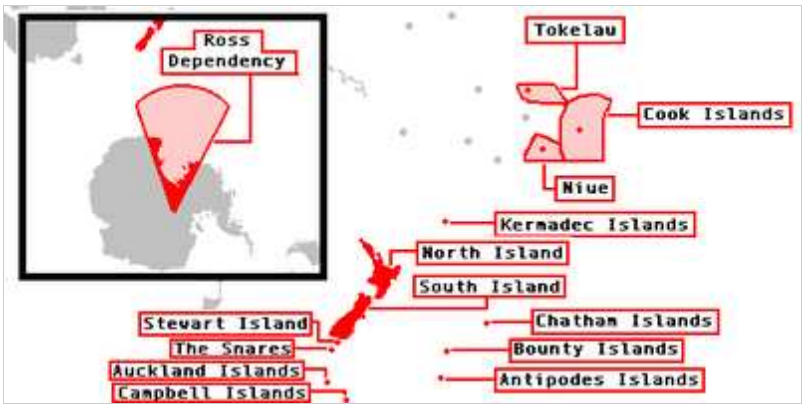
Māori Battalion haka in Egypt, 1941

In 1951 the United Kingdom became increasingly focused on its European interests,[75] while New Zealand joined Australia and the United States in the ANZUS security treaty.[76] The influence of the United States on New Zealand weakened following protests over the Vietnam War,[77] the refusal of the United States to admonish France after the sinking of the *Rainbow Warrior*,[78] disagreements over environmental and agricultural trade issues and New Zealand's nuclear-free policy.[79][80] Despite the USA's suspension of ANZUS obligations the treaty remained in effect between New Zealand and Australia, whose foreign policy has followed a similar historical trend.[81] Close political contact is maintained between the two countries, with free trade agreements and travel arrangements that allow citizens to visit, live and work in both countries without restrictions.[82] Currently over 500,000 New Zealanders live in Australia and 65,000 Australians live in New Zealand.[82]

New Zealand has a strong presence among the Pacific Island countries. A large proportion of New Zealand's aid goes to these countries and many Pacific people migrate to New Zealand for employment.[83] Permanent migration is regulated under the 1970 Samoan Quota Scheme and the 2002 Pacific Access Category, which allow up to 1,100 Samoan nationals and up to 750 other Pacific Islanders respectively to become permanent New Zealand residents each year. A seasonal workers scheme for temporary migration was introduced in 2007 and in 2009 about 8,000 Pacific Islanders were employed under it.[84] New Zealand is involved in the Pacific Islands Forum, Asia-Pacific Economic Cooperation and the Association of Southeast Asian Nations Regional Forum (including the East Asia Summit).[82] New Zealand is also a member of the United Nations,[85] the Commonwealth of Nations,[86] the Organisation for Economic Co-operation and Development[87] and the Five Powers Defence Arrangements.[88]

Infantry from the 2nd Battalion, Auckland Regiment in the Battle of the Somme, September 1916.

The New Zealand Defence Force has three branches: the Royal New Zealand Navy, the New Zealand Army and the Royal New Zealand Air Force.[89] New Zealand's national defence needs are modest because of the unlikelihood of direct attack,[90] although it does have a global presence. The country fought in both world wars, with notable campaigns in Gallipoli, Crete,[91] El Alamein[92] and Cassino.[93] The Gallipoli campaign played an important part in fostering New Zealand's national identity[94][95] and strengthened the ANZAC tradition it shares with Australia.[96] According to Mary Edmond-Paul, "World War I had left scars on New Zealand society, with nearly 18,500 in total dying as a result of the war, more than 41,000 wounded, and others affected emotionally, out of an overseas fighting force of about 103,000 and a population of just over a million."[97] New Zealand also played key parts in the naval Battle of the River Plate[98] and the Battle of Britain air campaign.[99][100] During World War II, the United States had more than 400,000 American military personnel stationed in New Zealand.[101]



In addition to Vietnam and the two world wars, New Zealand fought in the Korean War, the Second Boer

War,[102] the Malayan Emergency,[103] the Gulf War and the Afghanistan War. It has contributed forces to several regional and global peacekeeping missions, such as those in Cyprus, Somalia, Bosnia and Herzegovina, the Sinai, Angola, Cambodia, the Iran–Iraq border, Bougainville, East Timor, and the Solomon Islands.[104] New Zealand also sent a unit of army engineers to help rebuild Iraqi infrastructure for one year during the Iraq War.

Local government and external territories

Main articles: Local government in New Zealand and Realm of New Zealand

The early European settlers divided New Zealand into provinces, which had a degree of autonomy.[105] Because of financial pressures and the desire to consolidate railways, education, land sales and other policies, government was centralised and the provinces were abolished in 1876.[106] As a result, New Zealand now has no separately represented subnational entities. The provinces are remembered in regional public holidays[107] and sporting rivalries.[108]

Realm of New Zealand

Since 1876, various councils have administered local areas under legislation determined by the central government.[105][109] In 1989, the government reorganised local government into the current two-tier structure of regional councils and territorial authorities.[110] The 249 municipalities[110] that existed in 1975 have now been consolidated into 67 territorial authorities and 11 regional councils.[111] The regional councils' role is to regulate "the natural environment with particular emphasis on resource management",[110] while territorial authorities are responsible for sewage, water, local roads, building consents and other local matters.[112] Five of the territorial councils are unitary authorities and also act as regional councils.[113] The territorial authorities consist of 13 city councils, 53 district councils, and the Chatham Islands Council. While officially the Chatham Islands Council is not a unitary authority, it undertakes many functions of a regional council.[114]

The Realm of New Zealand is one of 16 realms within the commonwealth[115][116] and comprises New Zealand, Tokelau, the Ross Dependency, the Cook Islands and Niue.[116] The Cook Islands and Niue are self-governing states in free association with New Zealand.[117][118] The New Zealand Parliament cannot pass legislation for these countries, but with their consent can act on behalf of them in foreign affairs and defence. Tokelau is a non-self-governing territory that uses the New Zealand flag and anthem, but is administered by a council of three elders (one from each Tokelauan atoll).[119][120] The Ross Dependency is New Zealand's territorial claim in Antarctica, where it operates the Scott Base research facility.[121] New Zealand citizenship law treats all parts of the realm equally, so most people born in New Zealand, the Cook Islands, Niue, Tokelau and the Ross Dependency before 2006 are New Zealand citizens. Further conditions apply for those born from 2006 onwards.[122]

Environment

Main article: Environment of New Zealand

Geography

Main article: Geography of New Zealand

See also: Atlas of New Zealand at Wikimedia Commons

The snow-capped Southern Alps dominate the South Island, while the North Island's Northland Peninsula stretches towards the subtropics.

New Zealand is made up of two main islands and a number of smaller islands, located near the centre of the water hemisphere. The main North and South Islands are separated by the Cook Strait, 22 kilometres (14 mi) wide at its narrowest point.[123] Besides the North and South Islands, the five largest inhabited islands are Stewart Island, the Chatham Islands, Great Barrier Island (in the Hauraki Gulf),[124] d'Urville Island (in the Marlborough Sounds)[125] and Waiheke Island (about 22 km (14 mi) from central Auckland).[126] The country's islands lie between latitudes 29° and 53°S, and longitudes 165° and 176°E.

New Zealand is long (over 1,600 kilometres (990 mi) along its north-north-east axis) and narrow (a maximum width of 400 kilometres (250 mi)),[127] with approximately 15,134 km (9,404 mi) of coastline[128] and a total land area of 268,021 square kilometres (103,483 sq mi)[129] Because of its far-flung outlying islands and long coastline, the country has extensive marine resources. Its Exclusive Economic Zone, one of the largest in the world, covers more than 15 times its land area.[130]

The South Island is the largest land mass of New Zealand, and is divided along its length by the Southern Alps.[131] There are 18 peaks over 3,000 metres (9,800 ft), the highest of which is Aoraki/Mount Cook at 3,754 metres (12,316 ft).[132] Fiordland's steep mountains and deep fiords record the extensive ice age glaciation of this south-western corner of the South Island.[133] The North Island is less mountainous but is marked by volcanism.[134] The highly active Taupo volcanic zone has formed a large volcanic plateau, punctuated by the North Island's highest mountain, Mount Ruapehu (2,797 metres (9,177 ft)). The plateau also hosts the country's largest lake, Lake Taupo,[135] nestled in the caldera of one of the world's most active supervolcanoes.[136]

The country owes its varied topography, and perhaps even its emergence above the waves, to the dynamic boundary it straddles between the Pacific and Indo-Australian Plates.[137] New Zealand is part of Zealandia, a microcontinent nearly half the size of Australia that gradually submerged after breaking away from the Gondwanan supercontinent.[138] About 25 million years ago, a shift in plate tectonic movements began to contort and crumple the region. This is now most evident in the Southern Alps, formed by compression of the crust beside the Alpine Fault. Elsewhere the plate boundary involves the subduction of one plate under the other, producing the Puysegur Trench to the south, the Hikurangi Trench east of the North Island, and the Kermadec and Tonga Trenches[139] further north.[137]

Abel Tasman National Park in the South Island

Climate

Main article: Climate of New Zealand

New Zealand has a mild and temperate maritime climate with mean annual temperatures ranging from 10 °C (50 °F) in the south to 16 °C (61 °F) in the north.[140] Historical maxima and minima are 42.4 °C (108.3 °F) in Rangiora, Canterbury and −25.6 °C (−14.08 °F) in Ranfurly, Otago.[141] Conditions vary sharply across regions from extremely wet on the West Coast of the South Island to almost semi-arid in Central Otago and the Mackenzie Basin of inland Canterbury and subtropical in Northland.[142] Of the seven largest cities, Christchurch is the driest, receiving on average only 640 millimetres (25 in) of rain per year and Auckland the wettest, receiving almost twice that amount.[143] Auckland, Wellington and Christchurch all receive a yearly average in excess of 2,000 hours of sunshine. The southern and south-western parts of the South Island have a cooler and cloudier climate, with around 1,400–1,600 hours; the northern and north-eastern parts of the South Island are the sunniest areas of the country and receive approximately 2,400–2,500 hours.[144]

Biodiversity

Main article: Biodiversity of New Zealand

The endemic flightless kiwi is a national icon.

New Zealand's geographic isolation for 80 million years[145] and island biogeography is responsible for the country's unique species of flora and fauna. They have either evolved from Gondwanan wildlife or the few organisms that have managed to reach the shores flying, swimming or being carried across the sea.[146] About 82 percent of New Zealand's indigenous vascular plants[n 9] are endemic, covering 1,944 species across 65 genera and includes a single family.[147][149] The two main types of forest are those dominated by broadleaf trees with emergent podocarps, or by southern beech in cooler climates.[150] The remaining vegetation types consist of grasslands, the majority of which are tussock.[151]

Before the arrival of humans an estimated 80 percent of the land was covered in forest, with only high alpine, wet, infertile and volcanic areas without trees.[152] Massive deforestation occurred after humans arrived, with around half the forest cover lost to fire after Polynesian settlement.[153] Much of the remaining forest fell after European settlement, being logged or cleared to make room for pastoral farming, leaving forest occupying only 23 percent of the land.[154]

The forests were dominated by birds, and the lack of mammalian predators led to some like the kiwi, kakapo and takahē evolving flightlessness.[155] The arrival of humans, associated changes to habitat, and the introduction of rats, ferrets and other mammals led to the extinction of many bird species, including large birds like the moa and Haast's eagle.[156][157]

Other indigenous animals are represented by reptiles (tuataras, skinks and geckos),[158] frogs, spiders (katipo), insects (weta) and snails.[159][160] Some, such as the wrens and tuatara, are so unique that they have been called living fossils. Three species of bats (one since extinct) were the only sign of native land mammals in New Zealand until the 2006 discovery of bones from a unique, mouse-sized land mammal at least 16 million years old.[161][162] Marine mammals however are abundant, with almost half the world's cetaceans (whales, dolphins, and porpoises) and large numbers of fur seals reported in New Zealand waters.[163] Many seabirds breed in New Zealand, a third of them unique to the country.[164] More penguin species are found in New Zealand than in any

other country.[165]

Since human arrival almost half of the country's vertebrate species have become extinct, including at least fifty one birds, three frogs, three lizards, one freshwater fish, four plant species, and one bat.[156] Others are endangered or have had their range severely reduced.[156] However New Zealand conservationists have pioneered several methods to help threatened wildlife recover, including island sanctuaries, pest control, wildlife translocation, fostering, and ecological restoration of islands and other selected areas.[166][167][168][169]

Economy

Main article: Economy of New Zealand

See also: List of companies of New Zealand

New Zealand has a modern, prosperous and developed market economy with an estimated gross domestic product (GDP) at purchasing power parity (PPP) per capita of roughly US$28,250.[n 10] The currency is the New Zealand dollar, informally known as the "Kiwi dollar"; it also circulates in the Cook Islands (see Cook Islands dollar), Niue, Tokelau, and the Pitcairn Islands.[173] New Zealand was ranked 5th in the 2011 Human Development Index,[174] 4th in the 2011 Index of Economic Freedom published by The Heritage Foundation.[175]

Milford Sound, one of New Zealand's most famous tourist destinations[176]

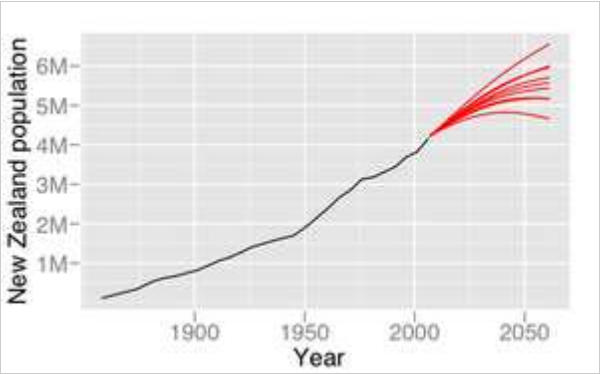
Historically, extractive industries have contributed strongly to New Zealand's economy, focussing at different times on sealing, whaling, flax, gold, kauri gum, and native timber.[177] With the development of refrigerated shipping in the 1880s meat and dairy products were exported to Britain, a trade which provided the basis for strong economic growth in New Zealand.[178] High demand for agricultural products from the United Kingdom and the United States helped New Zealanders achieve higher living standards than both Australia and Western Europe in the 1950s and 1960s.[179] In 1973 New Zealand's export market was reduced when the United Kingdom joined the European Community[180] and other compounding factors, such as the 1973 oil and 1979 energy crisis, led to a severe economic depression.[181] Living standards in New Zealand fell behind those of Australia and Western Europe, and by 1982 New Zealand had the lowest per-capita income of all the developed nations surveyed by the World Bank.[182] Since 1984, successive governments engaged in major macroeconomic restructuring (known first as Rogernomics and then Ruthanasia), rapidly transforming New Zealand from a highly protectionist economy to a liberalised free-trade economy.[183][184]

Unemployment peaked above 10 percent in 1991 and 1992,[185] following the 1987 share market crash, but eventually fell a record low of 3.4 percent in 2007 (ranking fifth from twenty-seven comparable OECD nations).[186] The global financial crisis that followed however had a major impact on New Zealand with the GDP shrinking for five consecutive quarters, the longest recession in over thirty years,[187][188] and unemployment rising back to 7% in late 2009.[189] The unemployment rate for youth was 17.4% in the June 2011 quarter.[190] New Zealand has experienced a series of "brain drains" since the 1970s[191] that still continue today.[192] Nearly one quarter of highly skilled workers live overseas, most in Australia and Britain, the most from any developed nation.[193] In recent years, however, a "brain gain" has brought in educated professionals from Europe and lesser developed countries.[194][195]

Trade

New Zealand is heavily dependent on international trade,[196] particularly in agricultural products.[197] Exports account for a high 24 percent of its output,[128] making New Zealand vulnerable to international commodity prices and global economic slowdowns. Its principal export industries are agriculture, horticulture, fishing, forestry and mining, which make up about half of the country's exports.[198] Its major export partners are Australia, United States, Japan, China, and the United Kingdom.[128] On 7 April 2008, New Zealand and China signed the New Zealand China Free Trade Agreement, the first such agreement China has signed with a developed country.[199][200] The service sector is the largest sector in the economy, followed by manufacturing and construction and then farming and raw material extraction.[128] Tourism plays a significant role in New Zealand's economy, contributing $15.0 billion to New Zealand's total GDP and supporting 9.6 percent of the total workforce in 2010.[201] International visitors to New Zealand increased by 3.1 percent in the year to October 2010[202] and are expected to increase at a rate of 2.5 percent annually up to 2015.[201]

Wool has historically been one of New Zealand's major exports.



Wool was New Zealand's major agricultural export during the late 19th century.[177] Even as late as the 1960s it made up over a third of all export revenues,[177] but since then its price has steadily dropped relative to other commodities[203] and wool is no longer profitable for many farmers.[204] In contrast dairy farming increased, with the number of dairy cows doubling between 1990 and 2007,[205] to become New Zealand's largest export earner.[206] In the year to June 2009, dairy products accounted for 21 percent ($9.1 billion) of total merchandise exports,[207] and the country's largest company, Fonterra, controls almost one-third of the international dairy trade.[208] Other agricultural exports in 2009 were meat 13.2 percent, wool 6.3 percent, fruit 3.5 percent and fishing 3.3 percent. New Zealand's wine industry has followed a similar trend to dairy, the number of vineyards doubling over the same period,[209] overtaking wool exports for the first time in 2007.[210][211]

Infrastructure

In 2008, oil, gas and coal generated approximately 69 percent of New Zealand's gross energy supply and 31% was generated from renewable energy, primarily hydroelectric power and geothermal power.[212] New Zealand's transport network includes 93,805 kilometres (58,288 mi) of roads, worth 23 billion dollars,[213] and 4,128 kilometres (2,565 mi) of railway lines.[214] Most major cities and towns are linked by bus services, although the private car is the predominant mode of transport.[215] The railways were privatised in 1993, then re-purchased by the government in 2004 and vested into a state owned enterprise.[216] Railways run the length of the country, although most lines now carry freight rather than passengers.[217] Most international visitors arrive via air[218] and New Zealand has seven international airports, although currently only the Auckland and Christchurch airports connect directly with countries other than Australia or Fiji.[219] The New Zealand Post Office had a monopoly over telecommunications until 1989 when Telecom New Zealand was formed, initially as a state-owned enterprise and then privatised in 1990.[220] Telecom still owns the majority of the telecommunications infrastructure, but competition from other providers has increased.[221]

Demography

Main article: Demographics of New Zealand

New Zealand's historical population (black) and projected growth (red)

The population of New Zealand is approximately 4.4 million.[222] New Zealand is a predominantly urban country, with 72 percent of the population living in 16 main urban areas and 53 percent living in the four largest cities of Auckland, Christchurch, Wellington, and Hamilton.[223] New Zealand cities generally rank highly on international livability measures. For instance, in 2010 Auckland was ranked the world's 4th most liveable city and Wellington the 12th by the Mercer Quality of Life Survey[224]

The life expectancy of a New Zealand child born in 2008 was 82.4 years for females, and 78.4 years for males.[225] Life expectancy at birth is forecast to increase from 80 years to 85 years in 2050 and infant mortality is expected to decline.[226] In 2050 the population is forecast to reach 5.3 million, the median age to rise from 36 years to 43 years and the percentage of people 60 years of age and older to rise from 18 percent to 29 percent.[226]

Ethnicity and immigration

Main articles: New Zealanders and Immigration to New Zealand

In the 2006 census, 67.6 percent identified ethnically as European and 14.6 percent as Māori.[227] Other major ethnic groups include Asian (9.2 percent) and Pacific peoples (6.9 percent), while 11.1 percent identified themselves simply as a "New Zealander" (or similar) and 1 percent identified with other ethnicities.[228][n 11] This contrasts with 1961, when the census reported that the population of New Zealand was 92 percent European and 7 percent Māori, with Asian and Pacific minorities sharing the remaining 1 percent.[230] While the demonym for a New Zealand citizen is New Zealander, the informal "Kiwi" is commonly used both internationally[231] and by locals.[232] The Māori loanword Pākehā usually refers to New Zealanders of European descent, although some reject this appellation,[233][234] and some Māori use it to refer to all non-Polynesian New Zealanders.[235]

The Māori were the first people to reach New Zealand, followed by the early European settlers. Following colonisation, immigrants were predominantly from Britain, Ireland and Australia because of restrictive policies similar to the white Australian policies.[236] There was also significant Dutch, Dalmatian,[237] Italian, and German immigration together with indirect European immigration through Australia, North America, South America and South Africa.[238] Following the Great Depression policies were relaxed and migrant diversity increased. In 2009–10, an annual target of 45,000–50,000 permanent residence approvals was set by the New Zealand Immigration Service—more than one new migrant for every 100 New Zealand residents.[239] Twenty-three percent of New Zealand's population were born overseas, most of whom live in the Auckland region.[240] While most have still come from the United Kingdom and Ireland (29 percent), immigration from East Asia (mostly mainland China, but with substantial numbers also from Korea, Taiwan, Japan, and Hong Kong) is rapidly increasing the number of people from those countries.[241] The number of fee-paying

New Zealand's fastest growing ethnic groups are Asian. Here, lion dancers

international students increased sharply in the late 1990s, with more than 20,000 studying in public tertiary institutions in 2002.[242]

perform at the Auckland Lantern Festival.

Language

English is the predominant language in New Zealand, spoken by 98 percent of the population.[3] New Zealand English is similar to Australian English and many speakers from the Northern Hemisphere are unable to tell the accents apart.[243]. The most prominent differences between the New Zealand English dialect and other English dialects are the shifts in the short front vowels: the short-"i" sound (as in "kit") has centralised towards the schwa sound (the "a" in "comma" and "about"); the short-"e" sound (as in "dress") has moved towards the short-"i" sound; and the short-"a" sound (as in "trap") has moved to the short-"e" sound.[244] Hence, the New Zealand pronunciation of words such as "bad", "dead", "fish" and "chips" sound like "bed", "did", "fush" and "chups" to non-New Zealanders.

After the Second World War, Māori were discouraged from speaking their own language (*te reo Māori*) in schools and workplaces and it existed as a community language only in a few remote areas.[245] It has recently undergone a process of revitalisation,[246][247] being declared one of New Zealand's official languages in 1987,[248] and is spoken by 4.1 percent of the population.[3] There are now Māori language immersion schools and two Māori Television channels, the only nationwide television channels to have the majority of their prime-time content delivered in Māori.[249] Many places have officially been given dual Maori and English names in recent years. Samoan is one of the most widely spoken languages in New Zealand (2.3 percent),[n 12] followed by French, Hindi, Yue and Northern Chinese.[3][250][n 13] New Zealand Sign Language is used by approximately 28,000 people and was made New Zealand's second official language in 2006.[251]

A Ratana church

Education and religion

Main articles: Education in New Zealand and Religion in New Zealand

Primary and secondary schooling is compulsory for children aged 6 to 16, with the majority attending from the age of 5.[252] There are 13 school years and attending public schools is free. New Zealand has an adult literacy rate of 99 percent,[128] and over half of the population aged 15 to 29 hold a tertiary qualification.[252][n 14] There are five types of government-owned tertiary institutions: universities, colleges of education, polytechnics, specialist colleges, and wānanga,[253] and also private training establishments.[254] In the adult population 14.2 percent have a bachelor's degree or higher, 30.4 percent have some form of secondary qualification as their highest qualification and 22.4 percent have no formal qualification.[255]

Christianity is the predominant religion in New Zealand. In the 2006 Census, 55.6 percent of the population identified themselves as Christians, while another 34.7 percent indicated that they had no religion (up from 29.6 percent in 2001) and around 4 percent affiliated with other religions.[256][n 15] The main Christian denominations are Anglicanism, Roman Catholicism, Presbyterianism and Methodism. There are also significant numbers of Christians who identify themselves with Pentecostal, Baptist, and Latter-day Saint churches and the New Zealand-based Ratana church has adherents among Māori. According to census figures, other significant minority religions include Hinduism, Buddhism, and Islam.[250][257]

Culture

Main article: Culture of New Zealand

Late twentieth-century house-post depicting the navigator Kupe fighting two sea creatures

Early Māori adapted the tropically based east Polynesian culture in line with the challenges associated with a larger and more diverse environment, eventually developing their own distinctive culture. Social organisation was largely communal with families (whanau), sub-tribes (hapu) and tribes (iwi) ruled by a chief (rangatira) whose position was subject to the community's approval.[259] The British and Irish immigrants brought aspects of their own culture to New Zealand and also influenced Māori culture,[260][261] particularly with the introduction of Christianity.[262] However, Māori still regard their allegiance to tribal groups as a vital part of their identity, and Māori kinship roles resemble those of other Polynesian peoples.[263] More recently American, Australian, Asian and other European cultures have exerted influence on New Zealand. Non-Māori Polynesian cultures are also apparent, with Pasifika, the world's largest Polynesian festival, now an annual event in Auckland.

Cook Islands dancers at Auckland's Pasifika festival

The largely rural life in early New Zealand led to the image of New Zealanders being rugged, industrious problem solvers.[264] Modesty was expected and enforced through the "tall poppy syndrome", where high achievers received harsh criticism.[265] At the time New Zealand was not known as an intellectual country.[266] From the early 20th century until the late 1960s Māori culture was suppressed by the attempted assimilation of Māori into British New Zealanders.[245] In the 1960s, as higher education became more available and cities expanded[267] urban culture began to dominate.[268] Even though the majority of the population now lives in cities, much of New Zealand's art, literature, film and humour has rural themes.

Art

Main article: New Zealand art

As part of the resurgence of Māori culture, the traditional crafts of carving and weaving are now more widely practised and Māori artists are increasing in number and influence.[269] Most Māori carvings feature human figures, generally with three fingers and either a natural-looking, detailed head or a grotesque head.[270] Surface patterns consisting of spirals, ridges, notches and fish scales decorate most carvings.[271] The pre-eminent Māori architecture consisted of carved meeting houses (wharenui) decorated with symbolic carvings and illustrations. These buildings were originally designed to be constantly rebuilt, changing and adapting to different whims or needs.[272]

Māori decorated the white wood of buildings, canoes and cenotaphs using red (a mixture of red ochre and shark fat) and black (made from soot) paint and painted pictures of birds, reptiles and other designs on cave walls.[273]

Māori tattoos (moko) consisting of coloured soot mixed with gum were cut into the flesh with a bone chisel.[274] Since European arrival paintings and photographs have been dominated by landscapes, originally not as works of art but as factual portrayals of New Zealand.[275] Portraits of Māori were also common, with early painters often portraying them as "noble savages", exotic beauties or friendly natives.[275] The country's isolation delayed the influence of European artistic trends allowing local artists to developed their own distinctive style of regionalism.[276] During the 1960s and 70s many artists combined traditional Māori and Western techniques, creating unique art forms.[277] New Zealand art and craft has gradually achieved an international audience, with exhibitions in the Venice Biennale in 2001 and the "Paradise Now" exhibition in New York in 2004.[269][278]

Māori cloaks are made of fine flax fibre and patterned with black, red and white triangles, diamonds and other geometric shapes.[279] Greenstone was fashioned into earrings and necklaces, with the most well-known design being the hei-tiki, a distorted human figure sitting cross-legged with its head tilted to the side.[280] Europeans brought English fashion etiquette to New Zealand, and until the 1950s most people dressed up for social occasions.[281] Standards have since relaxed and New Zealand fashion has received a reputation for being casual, practical and lacklustre.[282][283] However, the local fashion industry has grown significantly since 2000, doubling exports and increasing from a handful to about 50 established labels, with some labels gaining international recognition.[283]

Literature

Main article: Literature of New Zealand

Māori quickly adopted writing as a means of sharing ideas, and many of their oral stories and poems were converted to the written form.[284] Most early English literature was obtained from Britain and it was not until the 1950s when local publishing outlets increased that New Zealand literature started to become widely known.[285] Although still largely influenced by global trends (modernism) and events (the Great Depression), writers in the 1930s began to develop stories increasingly focused on their experiences in New Zealand. During this period literature changed from a journalistic activity to a more academic pursuit.[286] Participation in the world wars gave some New Zealand writers a new perspective on New Zealand culture and with the post-war expansion of universities local literature flourished.[287]

Entertainment

New Zealand music has been influenced by blues, jazz, country, rock and roll and hip hop, with many of these genres given a unique New Zealand interpretation.[288] Māori developed traditional chants and songs from their ancient South-East Asian origins, and after centuries of isolation created a unique "monotonous" and "doleful" sound.[289] Flutes and trumpets were used as musical instruments[290] or as signalling devices during war or special occasions.[291] Early settlers brought over their ethnic music, with brass bands and choral music being popular, and musicians began touring New Zealand in the 1860s.[292][293] Pipe bands became widespread during the early 20th century.[294] The New Zealand recording industry began to develop from 1940 onwards and many New Zealand musicians have obtained success in Britain and the USA.[288] Some artists release Māori language songs and the Māori tradition-based art of *kapa haka* (song and dance) has made a resurgence.[295] The New Zealand Music Awards are held annually by the Recording Industry Association of New Zealand (RIANZ); the

awards were first held in 1965 by Reckitt & Colman as the Loxene Golden Disc Awards.[296] The RIANZ also publishes the country's official weekly record charts.[297]

Radio first arrived in New Zealand in 1922 and television in 1960.[298] The number of New Zealand films significantly increased during the 1970s.[299] In 1978 the New Zealand Film Commission started assisting local film-makers and many films attained a world audience, some receiving international acknowledgement. Deregulation in the 1980s saw a sudden increase in the numbers of radio and television stations.[299] New Zealand television primarily broadcasts American and British programming, along with a large number of Australian and local shows. The country's diverse scenery and compact size, plus government incentives,[300] have encouraged some producers to film big budget movies in New Zealand.[301] The New Zealand media industry is dominated by a small number of companies, most of which are foreign-owned, although the state retains ownership of some television and radio stations. Between 2003 and 2008, Reporters Without Borders consistently ranked New Zealand's press freedom in the top twenty.[302]

Sports

Main article: Sport in New Zealand

Statue of mountaineer Sir Edmund Hillary gazing towards Aoraki / Mount Cook

Most of the major sporting codes played in New Zealand have English origins.[303] Golf, netball, tennis and cricket are the four top participatory sports, soccer is the most popular among young people and rugby union attracts the most spectators.[304] Victorious rugby tours to Australia and the United Kingdom in the late 1880s and the early 1900s played an early role in instilling a national identity,[305] although the sport's influence has since declined.[306] Horse racing was also a popular spectator sport and became part of the "Rugby, Racing and Beer" culture during the 1960s.[307] Māori participation in European sports was particularly evident in rugby and the country's team performs a haka (traditional Māori challenge) before international matches.[308]

New Zealand has competitive international teams in rugby union, netball, cricket, rugby league, and softball and has traditionally done well in triathlons, rowing, yachting and cycling. The country has performed well on a medals-to-population ratio at Olympic Games and Commonwealth Games.[304][309] New Zealand's national rugby union team is often regarded as the best in the world, and are the reigning World Cup holders. New Zealand are also the reigning rugby league world champions. New Zealand is known for its extreme sports, adventure tourism[310] and strong mountaineering tradition.[311] Other outdoor pursuits such as cycling, fishing, swimming, running, tramping, canoeing, hunting, snowsports and surfing are also popular.[312] The Polynesian sport of waka ama racing has increased in popularity and is now an international sport involving teams from all over the Pacific.[313]

Notes

1. ^ "God Save the Queen" is officially a national anthem but is generally used only on regal and vice-regal occasions.[1][2]
2. ^ Language percentages add to more than 100% because some people speak more than one language. They exclude unusable responses and those who spoke no language (e.g. too young to talk).[3]
3. ^ Ethnicity percentages add to more than 100% because some people identify with more than one ethnic group.[4]
4. ^ There is a multitude of dates that could be considered to mark independence (see Independence of New Zealand).
5. ^ The proportion of New Zealand's area (excluding estuaries) covered by rivers, lakes and ponds, based on figures from the New Zealand Land Cover Database,[5] is (357526 + 81936) / (26821559 – 92499–26033 – 19216) = 1.6%. If estuarine open water, mangroves, and herbaceous saline vegetation are included, the figure is 2.2%.
6. ^ The Chatham Islands have a separate time zone, 45 minutes ahead of the rest of New Zealand.
7. ^ The territories of Niue, the Cook Islands and Tokelau have their own cctlds, .nu, .ck and .tk respectively.
8. ^ Zeeland is spelt "Zealand" in English. New Zealand's name is not derived from the Danish island Zealand.
9. ^ New Zealand has approximately 4,000 indigenous species of lichens and other non-vascular plants,[147] and only 40 percent of these are endemic.[148]
10. ^ PPP GDP estimates from different organisations vary. The International Monetary Fund's estimate is US$27,420.[170] The CIA World Factbook estimate is $28,000.[171] The World Bank's estimate is US$29,352.[172]
11. ^ When completing the census people could select more than one ethnic group (for instance, 53 percent of Māori identified solely as Māori, while the remainder also identified with one or more other ethnicities).[229]
12. ^ Of the 85,428 people that replied they spoke Samoan in the 2006 Census, 57,828 lived in the Auckland region.[250]
13. ^ Languages listed here are those spoken by over 40,000 New Zealanders.
14. ^ Tertiary education in New Zealand is used to describe all aspects of post-school education and training. Its ranges from informal non-assessed community courses in schools through to undergraduate degrees and advanced, research-based postgraduate degrees.
15. ^ Another 6 percent objected to stating their religion. Statistics NZ do not report a total percentage for "Other" religions. Depending on how many people claimed both Christian and other religions, this could range from 3 to 5 percent. These percentages are based on the usually resident population, excluding another 7 percent of people who did not provide usable information.

Cook Islands

From Wikipedia, the free encyclopedia

The **Cook Islands** (/ˈkʊk ˈaɪləndz/; Cook Islands Māori: *Kūki 'Āirani*)[3] is a self-governing parliamentary democracy in the South Pacific Ocean in free association with New Zealand. The 15 small islands have a total land area of 240 square kilometres (92.7 sq mi), but the Cook Islands Exclusive Economic Zone (EEZ) covers 1,800,000 square kilometres (690,000 sq mi) of ocean.[4]

The main population centres are on the island of Rarotonga (14,153 in 2006), where there is an international airport. There is a much larger population of Cook Islanders in New Zealand, particularly the North Island. In the 2006 census, 58,008 self-identified as being of ethnic Cook Island Māori descent.[5]

With about 100,000 visitors travelling to the islands in the 2010-11 financial year,[6] tourism is the country's main industry, and the leading element of the economy, far ahead of offshore banking, pearls, and marine and fruit exports.

Defence and foreign affairs are the responsibility of New Zealand, in consultation with the Cook Islands. In recent times, the Cook Islands have adopted an increasingly independent foreign policy. Although Cook Islanders are citizens of New Zealand, they have the status of Cook Islands nationals, which is not given to other New Zealand citizens.

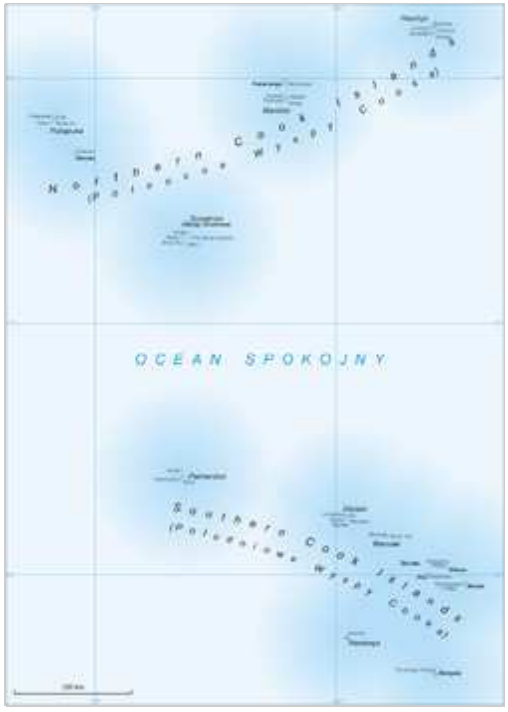
Geography

Main article: Geography of the Cook Islands

The Cook Islands are in the South Pacific Ocean, north-east of New Zealand, between French Polynesia and American Samoa. There are 15 major islands spread over 2.2 million km² of ocean, divided into two distinct groups: the Southern Cook Islands and the Northern Cook Islands of coral atolls.[7]



The islands were formed by volcanic activity; the northern group is older and consists of six atolls (sunken volcanoes topped by coral growth). The climate is moderate to tropical.

The 15 islands and two reefs are grouped as follows:

- **Southern Cook Islands:**
  - Nga-pu-Toru ("Three Roots", the eastern islands):
    - Atiu (Enua Manu or Island of Birds)
    - Ma'uke (Akatokamanava)
    - Mitiaro (Nukuroa)
    - Takutea
  - other islands:
    - Aitutaki (Araura Enua)
    - Mangaia (Auau Enua)
    - Rarotonga (Tumutevarovaro), with the capital, Avarua.
    - Palmerston Island (Pamati) sometimes grouped with the Northern Group.
    - Manuae
    - Winslow Reef (submerged)
- **Northern Cook Islands:**
  - Manihiki (Te Fuinga o Niva)
  - Nassau (Te Nuku o Ngalewu)
  - Penrhyn Island (Tongareva or Mangarongaro)
  - Pukapuka (Te Ulu o te Watu)
  - Rakahanga (Tapuahua)
  - Suwarrow also called Suvorov
  - Tema Reef (submerged)

Map of the Cook Islands.

Main article: History of the Cook Islands

The Cook Islands were first settled in the 6th century CE by Polynesian people who migrated from nearby Tahiti, to the southeast.[8]

Beach on Rarotonga.

Spanish ships visited the islands in the 16th century; the first written record of contact with the islands came with the sighting of Pukapuka by Spanish sailor Álvaro de Mendaña de Neira in 1595 who called it *San Bernardo* (Saint Bernard). Portuguese-Spaniard Pedro Fernández de Quirós, made the first recorded European landing in the islands when he set foot on Rakahanga in 1606, calling it *Gente Hermosa* (Beautiful People).[9]

British navigator Captain James Cook arrived in 1773 and 1777[10] and named the islands the *Hervey Islands*; the name "Cook Islands", in honour of Cook, appeared on a Russian naval chart published in the 1820s.[11]

In 1813, John Williams, a missionary on the *Endeavour* (not the same ship as Cook's), made the first recorded sighting of Rarotonga.[12] The first recorded landing on Rarotonga by Europeans was in 1814 by the Cumberland; trouble broke out between the sailors and the Islanders and many were killed on both sides.[13] The islands saw no more Europeans until missionaries arrived from England in 1821. Christianity quickly took hold in the culture and many islanders continue to be Christian believers today.

The Cook Islands became a British protectorate in 1888, due largely to community fears that France might occupy the territory as it had Tahiti. In 1901, the New Zealand Government decided to annex the country despite opposition from the country's traditional chiefs. As many of the islands were independent and ruled by local chiefs, the Cook Islands had no federal statutory law to decide the constitutional constraints regarding whether to agree to the country's annexation. When the British Nationality and New Zealand Citizenship Act 1948 came into effect on 1 January 1949, Cook Islanders who were British subjects gained New Zealand citizenship.[14] The country remained a New Zealand protectorate until 1965, when the New Zealand Government decided to offer self-governing status to its colony. In that year, Albert Henry of the Cook Islands Party was elected as the first Prime Minister. Henry led the country until he was accused of vote-rigging. He was succeeded in 1978 by Tom Davis of the Democratic Party. Today the Cook Islands are essentially independent in nearly all aspects, "self-governing in free association with New Zealand".[*citation needed*]

Politics and foreign relations

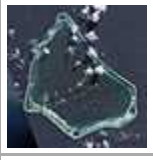
Main articles: Politics of the Cook Islands and Foreign relations of the Cook Islands

The Cook Islands is a representative democracy with a parliamentary system in an associated state relationship with New Zealand. Executive power is exercised by the government, with the Chief Minister as head of government. Legislative power is vested in both the government and the Parliament of the Cook Islands. There is a pluriform multi-party system. The Judiciary is independent of the executive and the legislature. The Head of State is the Queen of New Zealand, who is represented in the Cook Islands by the Queen's Representative.

The islands are self-governing in "free association" with New Zealand. New Zealand retains primary responsibility for external affairs, with consultation with the Cook Islands government. Cook Islands nationals are citizens of New Zealand and can avail of New Zealand government services, but the reverse is not true; New

Zealand citizens are not Cook Island nationals. Despite this, as of 2011, the Cook Islands had diplomatic relations in its own name with 34 other countries. The Cook Islands is not a United Nations full member, but does participate in WHO and UNESCO, and is an associate member of the Economic and Social Commission for Asia and the Pacific (UNESCAP).

On 11 June 1980, the United States signed a treaty with the Cook Islands specifying the maritime border between the Cook Islands and American Samoa and also relinquishing its claim to the islands of Penrhyn, Pukapuka, Manihiki, and Rakahanga.[15] In 1990 the Cook Islands signed a treaty with France which delimited the boundary between the Cook Islands and French Polynesia.[16]



The parliament building of the Cook Islands, formerly a hotel.

Administrative subdivisions

There are island councils on all of the inhabited outer islands (Outer Islands Local Government Act 1987 with amendments up to 2004, and Palmerston Island Local Government Act 1993) except Nassau, which is governed by Pukapuka (Suwarrow, with only one caretaker living on the island, also governed by Pukapuka, is not counted with the inhabited islands in this context). Each council is headed by a mayor.

The ten Outer Islands councils are

		Aitutaki (including uninhabited Manuae)
		Mangaia
		Atiu (including uninhabited Takutea)
		Ma'uke
		Mitiaro
		Manihiki
		Penrhyn

		Rakahanga
		Pukapuka (including Nassau and Suwarrow)
		Palmerston

The three *vaka* councils of Rarotonga established in 1997 (*Rarotonga Local Government Act 1997*), also headed by mayors,[17] were abolished in February 2008, despite much controversy.[18]

Districts of Rarotonga.

The three *Vaka* councils on Rarotonga were

Te au o tonga	(equivalent to Avarua, the capital of the Cook Islands)
Puaikura	Arorangi
Takitumu	Ngatangiia

On the lowest level, there are village committees. Nassau, which is governed by Pukapuka, has an island committee (Nassau Island Committee), which advises the Pukapuka Island Council on matters concerning its own island.

Economy

Main article: Economy of the Cook Islands

The economy is strongly affected by geography. It is isolated from foreign markets, and has inadequate infrastructure; it lacks major natural resources and suffers greatly from natural disasters. Agriculture provides the economic base and manufacturing is limited. The economy is supported by foreign aid, largely from New Zealand. The Peoples' Republic of China has also contributed foreign aid which has resulted, among other projects, in the Police Headquarters building. The Cook Islands is expanding its tourism, banking, mining and fishing sectors, with varying success.

Culture

Language

The languages of the Cook Islands include English, Cook Islands Māori, or "Rarotongan," and Pukapukan. Dialects of Cook Islands Maori include Penrhyn; Rakahanga-Manihiki; the Ngaputoru dialect of Atiu, Mitiaro, and Mauke; the Aitutaki dialect; and the Mangaian dialect. Cook Islands Maori and its dialectic variants are closely related to both Tahitian and to New Zealand Māori. Pukapukan is considered closely related to the Samoan language. English and Cook Islands Maori are official languages of the Cook Islands.

Music

Main article: Music of the Cook Islands

Music in the Cook Islands is varied, with Christian songs being quite popular, but traditional dancing and songs in Polynesian languages remain popular.

Float parade during the annual Maeva Nui celebrations.

26 December	Boxing Day

Art

Carving

Woodcarving is a common art form in the Cook Islands. The proximity of islands in the southern group helped produce a homogeneous style of carving but which had special developments in each island. Rarotonga is known for its fisherman's gods and staff-gods, Atiu for its wooden seats, Mitiaro, Ma'uke and Atiu for mace and slab gods and Mangaia for its ceremonial adzes. Most of the original wood carvings were either spirited away by early European collectors or were burned in large numbers by missionary zealots. Today, carving is no longer the major art form with the same spiritual and cultural emphasis given to it by the Maori in New Zealand. However, there are continual efforts to interest young people in their heritage and some good work is being turned out under the guidance of older carvers. Atiu, in particular, has a strong tradition of crafts both in carving and local fibre arts such as tapa. Mangaia is the source of many fine adzes carved in a distinctive, idiosyncratic style with the so-called double-k

design. Mangaia also produces food pounders carved from the heavy calcite found in its extensive limestone caves.

This wood carved figure escaped emasculation, despite its missionary collectors. Only one other comparable example is known, British Museum.

Weaving

The outer islands produce traditional weaving of mats, basketware and hats. Particularly fine examples of rito hats are worn by women to church. They are made from the uncurled immature fibre of the coconut palm and are of very high quality. The Polynesian equivalent of Panama hats, they are highly valued and are keenly sought by Polynesian visitors from Tahiti. Often, they are decorated with hatbands made of minuscule pupu shells which are painted and stitched on by hand. Although pupu are found on other islands the collection and use of them in decorative work has become a speciality of Mangaia. The weaving of rito is a speciality of the northern island of Penrhyn.

Tivaevae

A major art form in the Cook Islands is tivaevae. This is, in essence, the art of handmade Island scenery patchwork quilts. Introduced by the wives of missionaries in the 19th century, the craft grew into a communal activity and is probably one of the main reasons for its popularity.

Contemporary Art

The Cook Islands has produced internationally recognised contemporary artists, especially in the main island of Rarotonga. Artists include painter (and photographer) Mahiriki Tangaroa, sculptors Eruera (Ted) Nia (originally a film maker) and master carver Mike Tavioni, painter (and Polynesian tattoo enthusiast) Upoko'ina Ian George, Aitutakian-born painter Tim Manavaroa Buchanan, Loretta Reynolds, Judith Kunzlé, Joan Rolls Gragg, Kay George (who is also known for her fabric designs), Apii Rongo, and multi-media, installation and community-project artist Ani O'Neil, all of whom currently live on the main island of Rarotonga. Atiuan-based Andrea Eimke is an artist who works in the medium of tapa and other textiles, and also co-authored the book 'Tivaivai - The Social Fabric of the Cook Islands' with British academic Susanne Kuechler. Many of these artists have studied at university art schools in New Zealand and continue to enjoy close links with the New Zealand art scene.

New Zealand-based Cook Islander artists include Michel Tuffrey, print-maker David Teata, Richard Shortland Cooper, Sylvia Marsters, and Jim Vivieaere.

On Rarotonga, the main commercial galleries are Beachcomber Contemporary Art (Taputapuatea, Avarua) run by Ben Bergman, and The Art Gallery ('Arorangi). The Cook Islands National Museum also exhibits art.

Wildlife

- The national flower of the Cook Islands is the *Tiare māori* or *Tiale māoli* (Penrhyn, Nassau, Pukapuka).[19]
- The Cook Islands are infested with *Kiore toka* (Ship rat).[20] and Polynesian rat[21] The infestation has devastated the bird population on the islands.[22]
- In April 2007, 27 Kuhl's Lorikeet were re-introduced to Atiu from Rimatara. Fossil and oral traditions indicate that the species was formerly on at least five islands of the southern group. Excessive exploitation for its red feathers is the most likely reason for the species's extinction in the Cook Islands.[23]

Sport

Main article: Sport in the Cook Islands

See also: Netball in the Cook Islands

Rugby league is the most popular sport in the Cook Islands.[24] Association football (soccer), Cricket and rugby union are also popular.[*citation needed*]

History of the Cook Islands

From Wikipedia, the free encyclopedia

The **Cook Islands** are named after Captain James Cook, who visited the islands in 1773 and 1777.[1] The Cook Islands became a British protectorate in 1888.

By 1900, administrative control was transferred to New Zealand; in 1965 residents chose self-government in free association with New Zealand.

The Cook Islands contain 15 islands in the group spread over a vast area in the South Pacific. The majority of islands are low coral atolls in the Northern Group, with Rarotonga, a volcanic island in the Southern Group, as the main administration and government centre. The main Cook Islands language is Rarotongan Māori. There are some variations in dialect in the 'outer' islands.

Pa te Pou Ariki, Chief of the Takitumu tribe, Rarotonga (c. 1837)

History

The Cook Islands were first settled around 600 AD by Polynesian people who migrated from nearby Tahiti, to the southeast. Over-population on many of the tiny islands of Polynesia led to these oceanic migrations. Tradition has it that this was the reason for the expedition of Ru, from Tupua'i in French Polynesia, who landed on Aitutaki and Tangiia, also from French Polynesia, who are believed to have arrived on Rarotonga around 800 AD. Some evidence for this is that the old road of Toi, the *Ara Metua*, which runs round most of Rarotonga, is believed to be at least 1200 years old. This 29 km long, paved road is a considerable achievement of ancient engineering, unsurpassed elsewhere in Polynesia.[2] The islands of Manihiki and Rakahanga trace their origins to Toa (an outcast from Rarotonga) and Tupaeru (a woman of high-ranking in the Puaikura tribe of Rarotonga) in some Similarities, the rest of the northern islands were probably settled by expeditions from Samoa and Tonga.[3]

Spanish ships visited the islands in the 16th century; the first written record of contact with the Islands came with the sighting of Pukapuka by Spanish sailor Álvaro de Mendaña in 1595 who called it *San Bernardo* (Saint Bernard). Portuguese-Spaniard Pedro Fernández de Quirós, made the first recorded European landing in the islands when he set foot on Rakahanga in 1606, calling it *Gente Hermosa* (Beautiful People).[4]

British navigator Captain James Cook arrived in 1773 and 1777; Cook named the islands the 'Hervey Islands' to honour a British Lord of the Admiralty; Half a century later the Baltic German Admiral Adam Johann von Krusenstern published the *Atlas de l'Ocean Pacifique*, in which he renamed the islands the Cook Islands to

honour Cook. Captain Cook navigated and mapped much of the group. Surprisingly, Cook never sighted the largest island, Rarotonga, and the only island that he personally set foot on was tiny, uninhabited Palmerston Atoll.[5]

In 1813, John Williams, a missionary on the Endeavour (not the same ship as Cook's), made the first official sighting of the island Rarotonga. [1] (http://www.chr.org.au/fpbooks/tendecades/TEN%20DECADES%20Chapter%203.doc) The first recorded landing by Europeans was in 1814 by the Cumberland; trouble broke out between the sailors and the Islanders and many were killed on both sides.

The islands saw no more Europeans until missionaries arrived from England in 1821. Christianity quickly took hold in the culture and retains that grip today.

Brutal Peruvian slave traders, known as blackbirders, took a terrible toll on the islands of the Northern Group in 1862 and 1863. At first the traders may have genuinely operated as labour recruiters, but they quickly turned to subterfuge and outright kidnapping to round up their human cargo. The Cook Islands was not the only island group visited by the traders, but Penrhyn Atoll was their first port of call and it has been estimated that three-quarters of the population was taken to Callao, Peru.[6] Rakahanga and Pukapuka also suffered tremendous losses.[7]

The Kingdom of Rarotonga was established in 1858 and in 1888 it became a British protectorate by the request of Queen Makea Takau, mainly to thwart French expansionism. Then later were transferred to New Zealand in 1901. They remained a New Zealand protectorate until 1965, at which point they became a self-governing territory in free association with New Zealand. The first Prime Minister Sir Albert Henry led the county until 1978 when he was accused of vote-rigging.

Today, the Cook Islands are essentially independent (self-governing in free association with New Zealand), but are still officially placed under New Zealand sovereignty. New Zealand is tasked with overseeing the country's foreign relations and defence. The Cook Islands are one of four New Zealand dependencies, along with Tokelau, Niue and the Ross Dependency.

After achieving autonomy in 1965, the Cook Islands elected Albert Henry of the Cook Islands Party as their first Prime Minister. He was succeeded in 1978 by Tom Davis of the Democratic Party.

On 11 June 1980, the United States signed a treaty with the Cook Islands specifying the maritime border between the Cook Islands and American Samoa and also relinquishing its claim to the islands of Penrhyn, Pukapuka, Manihiki, and Rakahanga.[8] In 1990 the Cook Islands signed a treaty with France which delimited the maritime boundary between the Cook Islands and French Polynesia.

On June 13, 2008, a small majority of members of the House of Ariki attempted a coup, claiming to dissolve the elected government and to take control of the country's leadership. "Basically we are dissolving the leadership, the prime minister and the deputy prime minister and the ministers," chief Makea Vakatini Joseph Ariki explained. The *Cook Islands Herald* suggested that the *ariki* were attempting thereby to regain some of their traditional prestige or *mana*.[9][10] Prime Minister Jim Marurai described the take-over move as "ill-founded and nonsensical".[11] By June 23, the situation appeared to have normalised, with members of the House of Ariki accepting to return to their regular duties.[12]

The emigration of skilled workers to New Zealand and government deficits are continuing problems.

Timeline

1595 — Spaniard Álvaro de Mendaña de Neira is the first European to sight the islands.

1606 — Portuguese-Spaniard Pedro Fernández de Quirós made the first recorded European landing in the islands when he set foot on Rakahanga.

1773 — Captain James Cook explores the islands and names them the Hervey Islands. Fifty years later they are renamed in his honour by Russian Admiral Adam Johann von Krusenstern.

1813 — English missionary John Williams made the first official sighting of Rarotonga.

1821 — English and Tahitian missionaries land in Aitutaki, become the first non-Polynesian settlers.

1823 — English missionary John Williams lands in Rarotonga, converting Makea Pori Ariki to Christianity.

1858 — The Cook Islands become united as a state, the Kingdom of Rarotonga.

1862 — Peruvian slave traders took a terrible toll on the islands of Penrhyn, Rakahanga and Pukapuka in 1862 and 1863.

1888 — Cook Islands are proclaimed a British protectorate and a single federal parliament is established.

1901 — The Cook Islands are annexed to New Zealand.

1924 — The All Blacks *Invincibles* stop in Rarotonga on their way to the United Kingdom and play a friendly match against a scratch Rarotongan team.

1946 — Legislative Council is established. For the first time since 1912, the territory has direct representation.

1965 — The Cook Islands become a self-governing territory in free association with New Zealand. Albert Henry, leader of the Cook Islands Party, is elected as the territory's first prime minister.

1974 — Albert Henry is knighted by Queen Elizabeth II

1979 — Sir Albert Henry is found guilty of electoral fraud and stripped of his premiership and his knighthood. Tom Davis becomes Premier.

1980 — Cook Islands – United States Maritime Boundary Treaty establishes the Cook Islands – American Samoa boundary

1981 — Constitution is amended. Parliament grows from 22 to 24 seats and the parliamentary term is extended from four to five years. Tom Davis is knighted.

1984 — The country's first coalition government, between Sir Thomas and Geoffrey Henry, is signed in the lead up to hosting regional Mini Games in 1985. Shifting coalitions saw ten years of political instability. At one stage, all but two MPs were in government.

1985 — Rarotonga Treaty is opened for signing in the Cook Islands, creating a nuclear free zone in the South Pacific.

1986 — In January 1986, following the rift between New Zealand and the USA in respect of the ANZUS security arrangements Prime Minister Tom Davis declared the Cook Islands a neutral country, because he considered that New Zealand (which has control over the islands' defence and foreign policy) was no longer in a position to defend the islands. The proclamation of neutrality meant that the Cook Islands would not enter into a military relationship with any foreign power, and, in particular, would prohibit visits by US warships. Visits by US naval vessels were allowed to resume by Henry's Government.

1990 — Cook Islands – France Maritime Delimitation Agreement establishes the Cook Islands – French Polynesia boundary

1991 — The Cook Islands signed a treaty of friendship and co-operation with France, covering economic development, trade and surveillance of the islands' EEZ. The establishment of closer relations with France was widely regarded as an expression of the Cook Islands' Government's dissatisfaction with existing arrangements with New Zealand which was no longer in a position to defend the Cook Islands.

1995 — The French Government resumed its Programme of nuclear-weapons testing at Mururoa Atoll in September 1995 upsetting the Cook Islands. New Prime Minister Geoffrey Henry was fiercely critical of the decision and dispatched a vaka (traditional voyaging canoe) with a crew of Cook Islands' traditional warriors to protest near the test site. The tests were concluded in January 1996 and a moratorium was placed on future testing by the French government.

1997 — Full diplomatic relations established with China.

1997 — In November, Cyclone Martin in Manihiki kills at least six people; 80% of buildings are damaged and the black pearl industry suffered severe losses.

1999 — A second era of political instability begins, starting with five different coalitions in less than nine months, and at least as many since then.

2000 — Full diplomatic relations concluded with France.

2002 — Prime Minister Terepai Maoate is ousted from government following second vote of no-confidence in his leadership.

2004 — Prime Minister Robert Woonton visits China; Chinese Premier Wen Jiabao grants $16 million in development aid.

2006 — Parliamentary elections held. The Democratic Party keeps majority of seats in parliament, but is unable to command a majority for confidence, forcing a coalition with breakaway MPs who left, then rejoined the "Demos."

Niue

Coordinates: 19°03′S 169°55′W

From Wikipedia, the free encyclopedia

Niue (/ˈnjuːeɪ/ ***NEW-ay***; *Niuean*: **Niuē**), is an island country in the South Pacific Ocean. It is commonly known as the "Rock of Polynesia", and inhabitants of the island call it "the Rock" for short. Niue is 2,400 kilometres (1,500 mi) northeast of New Zealand in a triangle between Tonga to the southwest, the Samoas to the northwest, and the Cook Islands to the southeast. The land area is 260 square kilometres (100 sq mi) with about 1,400 people who are predominantly Polynesian.

Though self-governing, Niue is in free association with New Zealand, and lacks full sovereignty. All Niueans are New Zealand citizens and Queen Elizabeth II is Niue's head of state in her capacity as Queen of New Zealand. Most diplomatic relations are conducted by New Zealand on Niue's behalf. 90-95% of Niuean people live in New Zealand,[3] along with about 70% of the speakers of the Niuean language. [*citation needed*]

In 2003, Niue became the world's first "WiFi nation", in which free wireless Internet access is provided throughout the country by The Internet Users Society-Niue.[4]

History

Main article: History of Niue

Niue was settled by Polynesians from Samoa around 900 AD.[5] Further settlers (or invaders) arrived from Tonga in the 16th century.[5]

Until the beginning of the 18th century, there appears to have been no national government or national leader. Before then, chiefs and heads of families exercised authority over segments of the population. Around 1700 the concept and practice of kingship appear to have been introduced through contact with Samoa or Tonga. From then a succession of *patu-iki* (kings) ruled the island, the first of whom was Puni-mata. Tui-toga, who reigned from 1875 to 1887, was the first Christian king.[6]

The first European to sight Niue was Captain James Cook in 1774. Cook made three attempts to land on the island but was refused permission to do so by the Polynesian inhabitants. He named the island "Savage Island" because, legend has it, the natives that "greeted" him were painted in what appeared to Cook and his crew to be blood. However, the substance on their teeth was that of the hulahula, a native red banana.[7]

For the next couple of centuries the island was known as Savage Island, until its original name **Niu ē**, which translates as "behold the coconut",[8] regained use.

The next notable European visitors were from the London Missionary Society who arrived in 1846 on the "Messenger of Peace". After many years of trying to land a European missionary on Niue, a Niuean named Nukai Peniamina was taken to Samoa and trained as a Pastor at the Malua Theological College.[*citation needed*] Peniamina returned as a missionary with the help of Toimata Fakafitifonua. He was finally allowed to land in Uluvehi Mutalau after a number of attempts in other villages had failed. The Chiefs of Mutalau village allowed Peniamina to land and assigned over 60 warriors to protect him day and night at the fort in Fupiu.

Christianity was first taught to the Mutalau people before it was spread to all the villages on Niue; originally other major villages opposed the introduction of Christianity and had sought to kill Peniamina. The people from the village of Hakupu, although the last village to receive Christianity, came and asked for a "word of god"; hence their village was renamed "Ha Kupu Atua" meaning "any word of god", or "Hakupu" for short.

Coral chasm in Niue

In 1887, King Fata-a-iki, who reigned from 1887 to 1896, offered to cede sovereignty to the British Empire, fearing the consequences of annexation by a less benevolent colonial power. The offer was not accepted until 1900.

Niue was a British protectorate for a time, but the UK's direct involvement ended in 1901 when New Zealand annexed the island. Self-government was granted by the New Zealand parliament with the 1974 constitution, following a referendum in Niue in 1974 whereby Niueans were given three options: independence, self-government or continuation as a New Zealand territory. The majority selected self-government and Niue's written constitution[9] was promulgated as supreme law. Robert Rex, ethnically part European, part native, was appointed the country's first premier, a position he held until his death 18 years later. Rex became the first Niuean to receive a knighthood, in 1984.

In January 2004, Niue was hit by Cyclone Heta, which killed two people and caused extensive damage to the entire island, including wiping out most of the south of the capital, Alofi.

Politics

Main article: Politics of Niue

The Niue Constitution Act vests executive authority in Her Majesty the Queen in Right of New Zealand and the Governor-General of New Zealand. The Constitution specifies that in everyday practice sovereignty is exercised by the Niue Cabinet of Ministers, comprising the premier and three other ministers. The premier and ministers are members of the Niue Legislative Assembly, the nation's parliament.

The assembly consists of 20 democratically elected members, 14 of whom are elected by the electors of each village constituency, six by all registered voters in all constituencies. Electors must be New Zealand citizens, resident for at least three months, and candidates must be electors and resident for 12 months.[*citation needed*] Anyone born in Niue must register on the electoral roll.

The Speaker is elected by the assembly and is the first official to be elected in the first sitting of the Legislative Assembly following an election. The new Speaker calls for nominations for premier; the candidate with the most votes from the 20 members is elected. The Premier selects three other members to form the Cabinet of Ministers, the executive arm of government. The other two organs of government, following the Westminster model, are the Legislative Assembly and the Judiciary. General elections take place every three years, most recently on 7 May 2011.

The judiciary is independent of the executive and the legislature. Niue has a High Court, a Court of Appeal, and enjoys appeals to the Judicial Committee of the Privy Council, in London.[10]

Geography

Main article: Geography of Niue

See also: List of villages in Niue

Niue is a 269 km² raised coral atoll in the southern Pacific Ocean, east of Tonga. The geographic coordinates are 19°03′48″S 169°52′11″W.[11] There are three geographically outlying coral reefs within the Exclusive Economic Zone that do not have any land area:

1. Beveridge Reef, at 20°00′S, 167°48′W, 240 km southeast, submerged atoll drying during low tide, 9.5 km

North-South, 7.5 km East-West, total area 56 km², no land area, lagoon 11 metres deep
2. Antiope Reef, at 18°15′S, 168°24′W, 180 km southeast, is a circular plateau approximately 400 metres in diameter, with a least depth of 9.5 metres
3. Haran Reef (Harans Reef), at 21°33′S, 168°55′W, reported to break furiously, 294 km southeast

Besides these, Albert Meyer Reef, (20°53′S, 172°19′W, almost 5 km long and wide, least depth 3 metres, 326 km southwest) is not officially claimed by Niue, and the existence of Haymet Rocks, (26°S, 160°W, 1273 km ESE) is in doubt.

Map of Niue

Niue is one of the world's largest coral islands. The terrain consists of steep limestone cliffs along the coast with a central plateau rising to about 60 metres above sea level. A coral reef surrounds the island, with the only major break in the reef being in the central western coast, close to the capital, Alofi. A notable feature is the number of limestone caves found close to the coast.

Niue coastline

The island is roughly oval in shape (with a diameter of about 18 kilometres), with two large bays indenting the western coast, Alofi Bay in the centre and Avatele Bay in the south. Between these is the promontory of Halagigie Point. A small peninsula, TePā Point (Blowhole Point), is close to the settlement of Avatele in the southwest. Most of the population resides close to the west coast, around the capital, and in the northwest.

Some of the soils are geochemically very unusual. They are extremely highly weathered tropical soils, with high levels of iron and aluminium oxides (oxisol) and mercury, and they contain surprisingly high levels of natural radioactivity. There is almost no uranium, but the radionucleides Th-230 and Pa-231 head the decay chains. This is the same distribution of elements as found naturally on very deep seabeds, but the geochemical evidence suggests that the origin is extreme weathering of coral and brief sea submergence 120,000 years ago. Endothermal upwelling, by which mild natural volcanic heat draws deep seawater up through the porous coral, may also contribute.[12]

No adverse health effects from the radioactivity or other trace elements have been demonstrated and calculations show that level of radioactivity would probably be much too low to be detected in the population. These unusual soils are very rich in phosphate, but it is not accessible to plants, being in the very insoluble form of iron phosphate, or crandallite. It is thought that rather similar radioactive soils may exist on Lifou and Mare near New Caledonia, and Rennell in the Solomon Islands, but no other locations are known.

The time difference between Niue and mainland New Zealand is 23 hours during the Southern Hemisphere winter and 24 hours when the mainland uses Daylight Saving Time.

Climate

The island has a tropical climate, with most rainfall occurring between November and April.

Defense and foreign affairs

Main article: Foreign relations of Niue

Niue has been self-governing in free association with New Zealand since 3 September 1974 when the people endorsed the Constitution in a plebiscite.[14] Niue is fully responsible for its internal affairs. Niue's position concerning its external relations is less clear cut. Section 6 of the Niue Constitution Act provides that: *"Nothing in this Act or in the Constitution shall affect the responsibilities of Her Majesty the Queen in right of New Zealand for the external affairs and defence of Niue."* Section 8 elaborates but still leaves the position unclear, providing *"Effect shall be given to the provisions of sections 6 and 7* [concerning external affairs and defence and economic and administrative assistance respectively] *of this Act, and to any other aspect of the relationship between New Zealand and Niue which may from time to time call for positive co-operation between New Zealand and Niue after consultation between the Prime Minister of New Zealand and the Premier of Niue, and in accordance with the policies of their respective Governments; and, if it appears desirable that any provision be made in the law of Niue to carry out these policies, that provision may be made in the manner prescribed in the Constitution, but not otherwise."*[15] The island has a representative mission in Wellington, New Zealand. Niue is also a member of the Pacific Islands Forum and a number of regional and international agencies. It is not a member of the United Nations, but is a state party to the United Nations Convention on the Law of the Sea, the United Nations Framework Convention on Climate Change, the Ottawa Treaty and the Treaty of Rarotonga. The country is a member state of UNESCO since 26 October 1993.[16]

Niue purported to establish diplomatic relations with the People's Republic of China on December 12, 2007.[17] However, in light of its Constitution it is uncertain whether Niue had the capacity to enter diplomatic relations with any country. Traditionally, Niue's foreign relations and defence have been regarded as the responsibility of New Zealand, which has full diplomatic relations with China. Furthermore the Joint Communique signed by Niue and China is different in its treatment of the Taiwan question from that agreed by New Zealand and China. New Zealand "acknowledged" China's position on Taiwan but has never expressly agreed with it, but Niue *"recognizes that there is only one China in the world, the Government of the People's Republic of China is the sole legal government representing the whole of China and Taiwan is an inalienable part of the territory of China."*[17] Critics have asked whether Niueans can continue to benefit from free association with New Zealand and yet disregard New Zealand's advice and establish an independent foreign policy.[18]

The people of Niue have fought as part of the New Zealand army. In World War I, Niue sent about 200 soldiers

as part of the Maori Battalion under New Zealand forces.[19]

Economy

Main article: Economy of Niue

Alofi, the capital of Niue.

Niue's economy is small, with a GDP of NZ$17 million in 2003,[20] or US$10 million at purchasing power parity.[21] Most economic activity revolves around the government, as the government was traditionally in charge of organising and managing the affairs of the new country since 1974. However, since the economy has reached a stage where state regulation may now give way to the private sector, there is an ongoing effort to develop the private sector. Following Cyclone Heta, the government made a major commitment towards rehabilitating and developing the private sector.[*citation needed*]

The government allocated $1 million for the private sector, which was spent on helping businesses devastated by the cyclone, and on the construction of the Fonuakula Industrial Park. This industrial park is now completed and some businesses are already operating from it. The Fonuakula Industrial Park is managed by the Niue Business Centre, a quasi-governmental organisation providing advisory services to businesses.

Most Niuean families grow their own food crops for subsistence and some are sold at the Niue Makete in Alofi, some exported to their families in New Zealand.[*citation needed*] The Niuean taro is known in Samoa as "talo Niue" and in international markets as pink taro. Niue also exports taro to the New Zealand market. The Niue taro is a natural variety and is very resistant to pests.[*citation needed*]

The Niue Government and the Reef Group from New Zealand started two joint ventures in 2003 and 2004 involving the development of the fisheries and noni (*Morinda citrifolia*, a small tree with edible fruit). The Niue Fish Processors, Ltd is a joint venture company processing fresh fish, mainly tuna (yellow fin, big eye and albacore), for export to the overseas markets. NFP operates out of their state-of-the-art fish plant in Amanau Alofi South, completed and opened in October 2004.[*citation needed*]

In August 2005, an Australian mining company, Yamarna Goldfields, suggested that Niue might have the world's largest deposit of uranium. By early September these hopes were seen as overoptimistic,[22] and in late October the company cancelled its plans to mine, announcing that exploration drilling had identified nothing of commercial value.[23] The Australian Securities and Investments Commission filed charges in January 2007 against two directors of the company, now called Mining Projects Group Ltd, alleging that their conduct was deceptive and they engaged in insider trading.[24] This case was settled out of court in July 2008, both sides withdrawing their claims.[25] There is an Australian company that had been issued a mineral prospecting license in the early 1970s which is still very active in doing research and collecting data on potential mineral deposits on Niue.[*citation needed*]

Remittances from Niuean expatriates were a major source of foreign exchange in the 1970s and early 1980s. The continuous migration of Niueans to New Zealand has shifted most members of nuclear and extended families to New Zealand, removing the need to send remittances back home. In the late 1990s, PFTAC conducted studies on the Niue balance of payments,[26] which confirmed that Niueans are receiving little remittances but are sending more monies overseas, mainly for paying for imported goods and for the education of Niuean students sent to

study in New Zealand.[*citation needed*]

Foreign aid, principally from New Zealand, has been the island's principal source of income.[27] Although most Niuean foreign aid comes from New Zealand the island nation is currently losing $250,000 NZ a year (i.e. reduce in New Zealand funding) meaning the country will come to rely upon its own economy more in times to come.

Government expenses consistently exceed revenue to a substantial degree, with aid from New Zealand subsidizing public service payrolls. The government also generates some revenue, mainly from income tax, import tax and the lease of phone lines. The government briefly flirted with the creation of "offshore banking", but, under pressure from the US Treasury, agreed to end its support for schemes designed to minimize tax in countries like New Zealand. Niue now provides an automated Companies Registration, which is administered by the New Zealand Ministry of Economic Development. The Niue Legislative Assembly passed the Niue Consumption Tax Act in the first week of February 2009, and the 12.5% tax on good and services is expected to come into effect on 1 April 2009. Income tax has been lowered, and import tax may be reset to zero except for "sin" items like tobacco, alcohol and soft drinks. Tax on secondary income has been lowered from 35% to 10%, with the stated goal of fostering increased labour productivity.[28]

In 1997, the Internet Assigned Numbers Authority (IANA), under contract with the US Department of Commerce, assigned the Internet Users Society-Niue (IUS-N), a private charity, as manager of the .nu top-level domain on the Internet. IUS-N's charitable purpose was — and continues to be — to use revenue from registering .nu domain names to fund low-cost or free Internet services for the people of Niue. In a letter to ICANN in 2007, IUS-N's independent auditors reported IUS-N had invested US$3 million for Internet services in Niue between 1999 and 2005 from .nu domain name registration revenue during that period. In 1999, IUS-N and the Government of Niue signed an agreement whereby the Government recognized that IUS-N managed the .nu ccTLD under IANA's authority and IUS-N committed to provide free Internet services to government departments as well as to Niue's private citizens. A newly elected Government later disputed that agreement and attempted to assert a claim on the domain name, including a requirement for IUS-N to make direct payments of compensation to the Government.[29] In 2005, a Government-appointed Commission of Inquiry into the dispute released its report, which found no merit in the government's claims; the government subsequently dismissed the claims in 2007.[30] Starting in 2003, IUS-N began installing WiFi connections throughout the capital village of Alofi and in several nearby villages and schools, and has been expanding WiFi coverage into the outer villages since then, making Niue the first WiFi Nation.[31] To assure security for Government departments, IUS-N provides the government with a secure DSL connection to IUS-N's satellite Internet link, at no cost.

In 2003, the Government made a commitment to develop and expand vanilla production with the support of NZAID. Vanilla has grown wild in Niue for a long time. Despite the setback caused by the devastation of Cyclone Heta in early 2004, there was ongoing work on vanilla production. The expansion plan started with the employment of the unemployed or underemployed labour force to help clear land, plant supporting trees and plant vanilla vines. The approach to accessing land includes planning to have each household plant a small plot of around half to 1-acre (4,000 m^2) to be cleared and planted with vanilla vines. There are a lot of planting materials for supporting trees to meet demand for the expansion of vanilla plantations, however there is a severe shortage of vanilla vines for planting stock. There is of course the existing vanilla vines, but cutting them for planting stock will reduce or stop the vanilla from producing beans. At the moment, the focus is in the areas of harvesting and marketing.[*citation needed*]

Niue's economy suffered from the devastating tropical Cyclone Heta on 4 January 2004. The Niue Integrated Strategic Plan (NISP) is the national development plan, setting national priorities for development. Cyclone Heta took away about two years from the implementation of the NISP, while national efforts concentrate on the recovery efforts. In 2008, Niue had yet to fully recover from the devastation of Cyclone Heta.

In the area of trade, Niue is currently in the process of negotiating with other Pacific countries free trade agreements, PICTA Trade in Services (PICTA TIS), Economic Partnership Agreements with the European Union, and PACER Plus with Australia and New Zealand. The Office of the Chief Trade Adviser (OCTA) has already been set up to assist Niue and other Pacific countries in the negotiation of the PACER Plus.

Niue uses the New Zealand dollar.

Agriculture

Agriculture is very important to the lifestyle of Niueans and the economy, and around 204 square kilometres of Niue's total land area are available for agriculture.[32] Subsistence agriculture is very much part of Niue's agriculture, where nearly all the households have plantations of taro.[33] Taro is a staple food, and the pink taro now dominant in the taro markets in New Zealand and Australia, is an intellectual property of Niue. This is one of the natural taro varieties on Niue, and has a strong resistance to pests.

Tapioca or cassava, yams and kumaras also grow very well,[34] as do different varieties of bananas. Copra, passionfruit and limes dominated exports in the 1970s, but in 2008 vanilla, noni and taro are Niue's main export crops.

Coconut crab is also part of the food chain; it lives in the forest and coastal areas.[35]

The last agricultural census was in 1989.[36]

Tourism

Tourism has been identified as one of the three priority economic sectors (the other two are fisheries and agriculture) for economic development in Niue. In 2006, estimated visitor expenditure reached $1.6 million making tourism a major export industry for Niue. Niue will continue to receive direct support from the Government and overseas donor agencies. Air New Zealand is the sole airline serving Niue, flying to Niue once a week. It took over after Polynesian Airlines stopped flying in November 2005. There is currently a tourism development strategy to increase the number of rooms available to overseas tourists at a sustainable level. Niue is also trying to attract foreign investors to invest in the tourism industry of Niue by offering import and company tax concessions as incentives.

Media

Niue does not have much media, due to its small size and population. It has two broadcast media outlets, Television Niue and Radio Sunshine, managed and operated by the Broadcasting Corporation of Niue, and one printed newspaper, the *Niue Star*.[37] The internet also provides opportunity for other news services like http://talanet.okakoa.com.

Information technology

The first computers were Apple machines brought in by the University of the South Pacific Extension Centre around the early 1980s. The Treasury Department first computerised their general ledger in 1986 using NEC personal computers which are IBM PC XT compatible.[*citation needed*] The Census of Households and Population in 1986 was the first to be processed using a personal computer with the assistance of David Marshall, FAO Adviser on Agricultural Statistics, advising UNFPA Demographer Dr Lawrence Lewis and Niue Government

Statistician Bill Vakaafi Motufoou to switch from using manual tabulation cards. In 1987 Statistics Niue got its new personal computer NEC PC AT use for processing the 1986 census data; Niue's personnel were sent on training in Japan and New Zealand to use the new computer. Niue's first Computer Policy was developed and adopted in 1988.[*citation needed*]

In 2003, Niue became the first territory to offer free wireless internet to all its inhabitants.[38] In August 2008 it has been reported that 100 percent of primary and high school students have what is known as the OLPC XO-1, a specialised laptop by the One Laptop per Child project designed for children in the developing world.[39] Niue was also a location of tests for the OpenBTS project, which aims to deliver low-cost GSM base stations built with open source software.[40] In July 2011, Niue Telecom launched pre-paid mobile services (Voice/EDGE - 2.5G) as Rokcell Mobile based on the commercial GSM product of vendor Lemko. Three BTS sites will cover the Island nation. International roaming is not currently available. Once the fibre cable is completed around the island (FTTC), Internet/ADSL services are planned to be rolled out towards the end of 2011.

Culture

See also: Music of Niue

Liku, the eastern-most village of Niue, is the home of prominent international artist Mark Cross (http://www.markcross.nu) and his wife, the master weaver, Ahitautama. Two kilometers south of Liku is the Hikulagi Sculpture Park, an ongoing environmental art project, supported by Reef Shipping (http://www.reefship.co.nz/) , The Pacific Development and Conservation Trust (http://www.dia.govt.nz/diawebsite.nsf/wpg_URL/Services-Trust-&-Fellowship-Grants-The-Pacific-Development-and-Conservation-Trust?OpenDocument) and several other organisations.

Niuean dancers at the Pasifika Festival.

Niue is the birthplace of New Zealand artist and writer John Pule. Author of *The Shark That Ate the Sun*, he also paints, tapa cloth inspired designs on canvas.[41] In 2005, he co-wrote *Hiapo: Past and Present in Niuean Barkcloth*, a study of a traditional Niuean artform, with Australian writer and anthropologist Nicholas Thomas.[42]

Taoga Niue is a newly established Government Department responsible for the preservation of the culture, tradition and heritage of Niue. Recognising its importance, the Government has added Taoga Niue as the sixth pillar of the Niue Integrated Strategic Plan (NISP).

Religion

Seventy-five percent of the population of Niue belong to the *Ekalesia Nieue* (a national Congregationalist body). About 15% are Latter-day Saints and 7% are Catholics.[43] About 1.5% of the population are Baha'i,[44] a relatively large proportion and ranking 19th worldwide on the list provided by Adherents.com. Two percent of the population are Jehovah's Witnesses, the second-highest proportion in the world (after St. Helena).[45]

Renewable energy

The European Union is helping Niue convert to using renewable energy. In July 2009 a solar panel system was installed, injecting about 50 kW into the Niue national power grid. This is nominal 6% of the average 833 kW electricity production. The solar panels are installed at Niue High School (20 kW), Niue Power Corporation office (1.7 kW)[46] and the Niue Foou Hospital (30 kW). The EU-funded grid-connected PV systems are supplied under the REP-5 programme and were installed recently by the Niue Power Corporation on the roofs of the high school and the power station office and on ground-mounted support structures in front of the hospital. They will be monitored and maintained by the NPC.[47]

Sport

See also: Rugby union in Niue

The Niue sevens team performing a takalo.

Despite Niue being a small country, a number of different sports are popular. Rugby union is the most popular sport in Niue, played by both men and women; Niue were the 2008 FORU Oceania Cup champions.[48] Netball is played only by women. There is a nine-hole golf course at Fonuakula. There is a lawn bowling green under construction. Association Football is a popular sport in Niue, as evidenced by the Niue Soccer Tournament. Rugby league is a very popular team sport played in Niue.

History of Niue

From Wikipedia, the free encyclopedia

Niue was first settled by Polynesian sailors from Tonga around 900 AD.[1] Further settlers arrived from Samoa around 1440 AD.

Early history

Until the beginning of the 18th century, there appears to have been no national government or national leader in Niue. Before that time, chiefs and heads of family exercised authority over segments of the population. Around 1700, the concept and practice of kingship appears to have been introduced through contact with Samoa or Tonga. From then on, a succession of *putu-iki* (kings) ruled the island, the first of whom was Puni-mata. Tui-toga, who reigned from 1875 to 1887, was the first Christian king of Niue.[2] (*See*: List of Niuean monarchs)

Captain Cook

Captain James Cook was the first European to sight the island, but he was unable to land there due to fierce opposition by the local population. The *1911 Encyclopædia Britannica* claimed this was due to native fear of foreign disease.[3] In response, Cook named Niue the *Savage Island*.

Christian missionaries

Christian missionaries from the London Missionary Society converted most of the population circa 1846. In 1887, King Fataaiki wrote to Queen Victoria of the United Kingdom, requesting that Niue be placed under British protection, but his request was turned down. In 1900, in response to renewed requests, the island became a British protectorate, and the following year it was annexed by New Zealand. Niue's remoteness, as well as cultural and linguistic differences between its Polynesian inhabitants and those of the Cook Islands, caused it to be separately administered.

World War I

150 Niuean men, 4% of the island's population, served as soldiers in the New Zealand armed forces during World War I.[4][5]

Autonomy

Niue gained its autonomy in 1974 in free association with New Zealand, which handles the island's military and foreign affairs. Niue had been offered autonomy in 1965 (along with the Cook Islands, which accepted), but had asked for its autonomy to be deferred another decade.

Recent history

In January 2004, Niue was struck by a devastating cyclone (Cyclone Heta) which left 200 of the islands' 1600 inhabitants homeless. As a number of local residents chose afterwards not to rebuild, New Zealand's Foreign Affairs Minister Phil Goff speculated that Niue's status as a self-governing nation in free association with New Zealand might come into question if too many residents departed the island to maintain basic services. Soon afterwards, Niue Premier Young Vivian categorically rejected the possibility of altering the existing relationship with New Zealand.

The population of the island continues to drop (from a peak of 5,200 in 1966 to 2,100 in 2000), with substantial emigration to New Zealand.

Tokelau

Coordinates: 09°10′S 171°50′W

From Wikipedia, the free encyclopedia

Tokelau (/ˈtoʊkəlaʊ/) is a territory of New Zealand in the South Pacific Ocean that consists of three tropical coral atolls with a combined land area of 10 km^2 and a population of approximately 1,400. The atolls lie north of the Samoan Islands, east of Tuvalu, south of the Phoenix Islands, southwest of the more distant Line Islands (both island groups belonging to Kiribati) and northwest of the Cook Islands.

The United Nations General Assembly designated Tokelau a Non-Self-Governing Territory.[2] Until 1976 the official name was *Tokelau Islands*. Tokelau is sometimes referred to by the older, colonial name of *The Union Islands*.

Etymology and consequences of name usage

The name *Tokelau* is a Polynesian word meaning "North Wind". The islands were named the *Union Islands* and *Union*

Group by European explorers at an unknown time. *Tokelau Islands* was adopted as the name in 1946, and was contracted to *Tokelau* on 9 December 1976.

The change from *Tokelau Islands* to *Tokelau* marked a slight shift in emphasis, with consequences in regional diplomacy, in that the term *Tokelau Islands* clearly and substantially referred to a geographical expression, that is, a range of islands, whatever else it may connote. It is not necessarily controversial to refer by name to a range of islands, even though they may come under two or more political jurisdictions. *Tokelau*, on the other hand, can be taken to refer more immediately to some concept of nationhood, arguably infusing increased meaning to the draft 2006 independence constitution of Tokelau (which somewhat controversially claims Tokelauan inhabited *Olohega* (or Swains Island), currently part of American Samoa, as part of its national territory).[*citation needed*]

1. Final count for 2011 Tokelau Census of Population and Dwellings (http://stats.govt.nz/browse_for_stats/people_and_communities/pacific_peoples/2011-tokelau-census-landing-page/final-count-2011-tokelau-census.aspx) , Statistics New Zealand. The Census population figure of 1,411 includes 268 usual residents of Tokelau who were absent on census night.

Geography

Tokelau includes three atolls in the South Pacific Ocean between longitudes 171° and 173° W and between latitudes 8° and 10° S, about midway between Hawaii and New Zealand. They lie about 500 km (311 mi) north of Samoa. The atolls are Atafu, Nukunonu, both in a group of islands once called the Duke of Clarence Group, and Fakaofo, once Bowditch Island. Their combined land area is 10.8 km². There are no ports or harbours. Tokelau lies in the Pacific typhoon belt. A fourth island that is culturally, historically, and geographically, but not politically, part of the Tokelau chain is Swains Island (Olohega), under United States control since about 1900 and administered as part of American Samoa since 1925.

Map of all Tokelau Islands. Swains Island is shown to the south.

Swains Island was claimed by the United States pursuant to the Guano Islands Act, as were the other three islands of Tokelau, which claims were ceded to Tokelau by treaty in 1979. In the draft constitution of Tokelau subject to the Tokelauan self-determination referendum in 2006, Olohega is claimed as part of Tokelau, a claim surrendered in the same 1979 treaty which established a boundary between American Samoa and Tokelau.

Tokelau's claim to Swains is generally comparable to the Marshall Islands' claim to US-administered Wake Island, but the re-emergence of this somewhat dormant issue has been an unintended result of the United Nations' recent efforts to promote decolonization in Tokelau. Tokelauans have proved somewhat reluctant to push their national identity in the political realm: recent decolonization moves have mainly been driven from outside for ideological reasons. But at the same time, Tokelauans are reluctant to disown their common cultural identity with Swains Islanders who speak

their language.

Geographic locations of Tokelau's atolls

Atoll	Coordinates
Atafu	8°33′6″S 172°30′3″W
Nukunonu	9°10′6″S 171°48′35″W
Fakaofo	9°21′55″S 171°12′54″W

Environment

See also: List of birds of Tokelau and List of mammals of Tokelau

Tokelau is located in the Western Polynesian tropical moist forests ecoregion. Most of the original vegetation has been replaced by coconut plantations some of which have been abandoned and became scrubby forests. The atolls of Tokelau provide habitat for 38 indigenous plant species, over 150 insect species and 10 land crab species. One of the greatest threats to biodiversity is posed by introduced mammalian predators such as the Polynesian Rat.[3]

In 2011 Tokelau declared its entire exclusive economic zone of 319,031 km² a shark sanctuary.[4]

History

Archaeological evidence indicates that the atolls of Tokelau — Atafu, Nukunonu, and Fakaofo — were settled about 1,000 years ago and may have been a "nexus" into Eastern Polynesia.[5] Inhabitants followed Polynesian mythology with the local god Tui Tokelau; and developed forms of music (see Music of Tokelau) and art. The three atolls functioned largely independently while maintaining social and linguistic cohesion. Tokelauan society was governed by chiefly clans, and there were occasional inter-atoll skirmishes and wars as well as inter-marriage. Fakaofo, the "chiefly island",[6] held some dominance over Atafu and Nukunonu after the dispersal of Atafu. Life on the atolls was subsistence-based, with reliance on fish and coconut.[7]

Western discovery and contact

Commodore John Byron discovered Atafu on 24 June 1765 and named it "Duke of York's Island". Parties onshore reported that there were no signs of current or previous inhabitants.[8][9] Captain Edward Edwards, in knowledge of Byron's discovery, visited Atafu on 6 June 1791[*citation needed*] in search of the *Bounty* mutineers. There were no permanent inhabitants, but houses contained canoes and fishing gear, suggesting the island was used as a temporary residence by fishing parties.[9] On 12 June 1791, Edwards sailed southward and discovered Nukunonu, naming it "Duke of Clarence's Island".[10] A landing party could not make contact with the people but saw "*morai*s", burying places, and canoes with "stages in their middle" sailing across the lagoons.[9]

On 29 October 1825 August R. Strong of the U.S.N Dolphin wrote of his crew's arrival at the atoll Nukunonu, "Upon examination, we found they had removed all the women and children from the settlement, which was quite small, and put them in canoes lying off a rock in the lagoon. They would frequently come near the shore, but when we approached they would pull off with great noise and precipitation." (The Journal of the South Pacific, 110 (3), pp. 296).

On 14 February 1835 Captain Smith of the United States whaler *General Jackson* records discovering Fakaofo, calling it "D'Wolf's Island".[11][12] On 25 January 1841, the United States Exploring Expedition visited Atafu and discovered a small population living on the island. The residents appeared to be temporary, evidenced by the lack of a chief and the possession of double canoes (used for inter-island travel). They desired to barter, and possessed blue beads and a plane-iron, indicating previous interaction with foreigners. The expedition reached Nukunonu on 28 January 1841 but did not record any information about inhabitants. On 29 January 1841, the expedition discovered Fakaofo and named it "Bowditch".[13] The islanders were found to be similar in appearance and nature to those in Atafu.[14]

Fakaofo islanders, drawn in 1841 by the United States Exploring Expedition.

Missionaries preached Christianity in Tokelau from 1845 to the 1860s. French Catholic missionaries on Wallis Island (also known as 'Uvea) and missionaries of the Protestant London Missionary Society in Samoa used native teachers to convert the Tokelauans. Atafu was converted to Protestantism by the London Missionary Society, Nukunonu was converted to Catholicism and Fakaofo was converted to both denominations.[15]

Peruvian slave traders arrived in 1863 and took nearly all (253) of the able-bodied men to work as labourers. The men died of dysentery and smallpox, and very few returned to Tokelau. With this loss, the system of governance became based on the "Taupulega", or "Councils of Elders", where individual families on each atoll were represented.[7][12] During this time, Polynesian immigrants and American, Scottish, French, Portuguese and German beachcombers settled, marrying local women and repopulating the atolls.[12]

21st Century

Until December 2011, Tokelau was almost a day behind New Zealand, being 10 hours behind Coordinated Universal Time (UTC). [16][17] At midnight 29 December 2011 Tokelau shifted to UTC+14:00 in response to Samoa's decision to do the same. This brought Tokelau closer to New Zealand time (and in the process omitted 30 December).[18]

Government

In 1877 the islands were included under the protection of the United Kingdom by an Order in Council which claimed jurisdiction over all unclaimed Pacific Islands. Commander C. F. Oldham on *HMS Egeria* landed at each of the three atolls in June 1889[19] and officially raised the Union Flag, declaring the group a British protectorate. In 1920, Tokelauans became recognised as British subjects.[20]

The British government annexed Tokelau to the colony of the Gilbert and Ellice Islands and transferred Tokelau to New Zealand administration in 1926, abolishing the islands' chiefdoms. By the Tokelau Act of 1948, sovereignty over Tokelau was transferred to New Zealand. Defence is also the responsibility of New Zealand. When the British Nationality and New Zealand Citizenship Act 1948 came into effect on 1 January 1949, Tokelauans who were British subjects gained New Zealand citizenship - a status which they still hold today.[20]

At the moment, Tokelauans are drafting a constitution and developing institutions and patterns of self-government as Tokelau moves towards free association with New Zealand, similar to Niue and the Cook Islands.[*citation needed*]

Villages are entitled to enact their own laws regulating their daily lives and New Zealand law only applies where it has been extended by specific enactment. Serious crime is rare and there are no prisons - offenders are publicly rebuked, fined or made to work.[21]

Politics

Main article: Politics of Tokelau

The head of state is Elizabeth II, the Queen in right of New Zealand, who also reigns over the United Kingdom and the other Commonwealth realms. The Queen is represented in the territory by acting Administrator Jonathan Kings. The current head of government is Foua Toloa, who presides over the Council for the Ongoing Governance of Tokelau, which functions as a cabinet. The Council consists of the *Faipule* (leader) and *Pulenuku* (village mayor) of each of the three atolls.[22] The monarch is hereditary, the administrator appointed by the Minister of Foreign Affairs and Trade in New Zealand, and the office of head of government rotates between the three Faipule for a one-year term.[22]

The Tokelau Amendment Act of 1996 confers legislative power on the General Fono, a unicameral body. The number of seats each atoll receives in the Fono is determined by population — at present, Fakaofo and Atafu each have seven and Nukunonu has six.[22] *Faipule* and *Pukenuku* (atoll leaders and village mayors) also sit in the Fono.[22]

On 11 November 2004, Tokelau and New Zealand took steps to formulate a treaty that would turn Tokelau from a non-self-governing territory to a self-governing state in free association with New Zealand. Besides the treaty, a UN-sponsored referendum on self-determination took place, with the three islands voting on successive days starting 13 February 2006. (Tokelauans based in Apia, Samoa, voted on 11 February.)[23] Out of 581 votes cast, 349 were for Free Association, being short of the two-thirds majority required for the measure to pass.[24] The referendum was profiled (somewhat light-heartedly) in the 1 May 2006 issue of *The New Yorker* magazine.[25] A repeat referendum took place on 20–24 October 2007, again narrowly failing to approve self-government. This time the vote was short by just 16 votes or 3%.[26]

In May 2008, the United Nations' Secretary General Ban Ki-moon urged colonial powers "to complete the decolonization process in every one of the remaining 16 Non-Self-Governing Territories", including Tokelau.[27] This led the *New Zealand Herald* to comment that the United Nations was "apparently frustrated by two failed attempts to get Tokelau to vote for independence".[28] In April 2008, speaking as leader of the National Party, future New Zealand Prime Minister John Key stated that New Zealand had "imposed two referenda on the people of the Tokelau Islands", and questioned "the accepted wisdom that small states should undergo a de-colonisation process".[29]

Economy

According to the US Central Intelligence Agency's list of countries by GDP (PPP) Tokelau has the smallest economy of any country in the world. Tokelau has an annual purchasing power of about US$1,000 (€674) per capita. The government is almost entirely dependent on subsidies from New Zealand. It has annual revenues of less than US$500,000 (€336,995) against expenditures of some US$2.8 million (€1.9 million). The deficit is made up by aid from New Zealand.

Tokelau annually exports around US$100,000 (€67,000) of stamps, copra and woven and carved handicrafts and

imports over US$300,000 (€202,000) of foodstuffs, building materials, and fuel to, and from, New Zealand. New Zealand also pays directly for the cost of medical and education services. Local industries include small-scale enterprises for copra production, wood work, plaited craft goods, stamps, coins, and fishing. Agriculture and livestock produces coconuts, copra, breadfruit, papayas, bananas, figs, pigs, poultry and few goats. Many Tokelauans live in New Zealand and support their families in Tokelau through remittances.

Nukunonu Lagoon in Tokelau.

Tokelau has plans to only use renewable energy. If this is achieved it will be the only nation to have achieved this goal.[30] It is expected that by mid 2012 Tokelau's electricity supply will be 93% generated by photovoltaics, with the remainder generated from coconut oil.[31]

Internet domain names

Main article: .tk

Tokelau has increased its GDP by more than 10% through registrations of domain names under its top-level domain, .tk.[32] Registrations can be either free, in which case the user owns only usage rights and not the domain itself, or paid, which grants full rights. Free domains are pointed to Tokelau name servers and the only services available are HTTP traffic being redirected via HTML frames to a specified address, and the redirection of up to 250 email addresses to an external address (not at a .tk domain). As of January 2009, free domains have no requirements for third party advertisements but have a minimum traffic limit of 25 unique visitors in any 90 day period. If this limit is not reached, the domain is suspended and the owner has either 10 days to convert the domain to a paid domain or have the domain deregistered.[*citation needed*]

In September 2003 Fakaofo became the first part of Tokelau with a high-speed Internet connection. Foundation Tokelau financed the project. Tokelau gives most domain names under its authority away to anyone for free to gain publicity for the territory. This has allowed the nation to gain enhanced telecommunications technologies, such as more computers and Internet access for Tokelauan residents.[*citation needed*]

Demographics

According to the 2011 Tokelau Census, Tokelau has a de jure usually resident population of 1,411 people. The census shows a 3.8% decrease in the de jure usually resident population between 2006 and 2011.[33]

The atoll of Fakaofo, southernmost of the Tokelau Islands.

The nationals of Tokelau are called Tokelauans, and the major ethnic group is Polynesian. The country has no minorities. The major religion is the Congregational Christian Church and the main language is Tokelauan, but English is also spoken.

Tokelau has fewer than 1,500 Polynesian inhabitants in three villages who speak Tokelauan and English. Their isolation and lack of resources greatly limits economic development and confines agriculture to the subsistence level. The very limited natural resources and overcrowding are contributing to emigration to New Zealand and Samoa, resulting in a population

decline of about 0.9% per year.[*citation needed*] Depletion of tuna has made fishing for food more difficult.

On the island of Atafu almost all inhabitants are members of the Congregational Christian Church of Samoa. On Nukunonu almost all are Roman Catholic. On Fakaofo both denominations are present with the Congregational Christian Church predominant. The total proportions are: Congregational Christian Church 62%, Roman Catholic 34%, other 5%.[34]

While slightly more females than males live on Atafu and Fakaofo, males make up 57% of Nukunonu residents.[35] Only 9% of Tokelauans aged 40 or more have never been married.[36] One quarter of the population were born overseas; almost all the rest live on the same atoll they were born on.[37] Most households own 5 or more pigs.[38]

Despite its low income, Tokelau has a life expectancy of 69 years, comparable with parts of Europe.[39]

Sport

See also: Rugby union in Tokelau and Rugby league in Tokelau

Due to its small size, Tokelau is unaffiliated to most international sports organisations, and rarely takes part in international events. The only significant international competition the country takes part in is the Pacific Games. Tokelau won its first ever gold medals at the 2007 Pacific Games in Apia, winning a total of five medals (three gold, a silver and a bronze), all in lawn bowls, and finishing twelfth (out of twenty-two) on the overall medal table. This included two gold medals for Violina Linda Pedro (in the women's pairs and the women's singles), making her Tokelau's most successful individual athlete to date.[40]

In October 2010, table tennis became "the first sport in Tokelau to be granted membership at a Continental or World level", when the Tokelau Table Tennis Association was formally established and became the 23rd member of the Oceania Table Tennis Federation.[41]

Tokelau was due to take part, for the first time, in the 2010 Commonwealth Games, in Delhi,[42] but, for unknown reasons, ultimately did not do so.[43]

Tokelau does have a National Sports Federation, and the most important sports event within the country is arguably the Tokelau Games, which are held yearly. When they are held, "all of Tokelau virtually stands still", as "[i]n excess of 50% of the population take part and all work and school stops at the time". The 2010 Games included competitions in rugby sevens, netball and kilikiti, alongside "a cultural evening [...] where each atoll showcases their traditional songs and dances".[41]

Netball is thought to have been introduced to Tokelau by the British, but became more popular when New Zealand's government took over the territory. The sport is often played during inter-island sport competitions, alongside other sports like rugby league and volleyball.[44]

Healthcare and education

Main article: Healthcare in Tokelau

Each atoll has a school and hospital. The health services have a Director of Health based in Apia and a Chief Clinical Advisor who moves from atoll to atoll as required to assist the doctors attached to each hospital. In 2007

there was not always a doctor on each island and locums were appointed to fill the gaps. Upcoming Tokelaun medical graduates should alleviate this shortage in the coming years.

Many Tokelauan youth travel to New Zealand to further their education and the ship is full around Christmas time with students returning home and then heading off for another year of study.

Communications and transportation

Tokelau has a radio telephone service between the islands and to Samoa. In 1997, a government-regulated telephone service (TeleTok) with three satellite earth stations was established. Each atoll has a radio-broadcast station that broadcasts shipping and weather reports and every household has a radio or access to one.

A barge leaves the landing ramp in Nukunono to collect cargo and passengers from the MV *Tokelau*

Tokelau is served by the MV *Tokelau*, owned by the country, with the trip from Apia in Samoa taking a little over a day. Ships load and unload cargo by motoring up to the down-wind (leeward) side of the islet where the people live and maintaining station, by intermittent use of engines, close to the reef edge so that a landing barge can be motored out to transfer cargo to or from the shore. On returning to shore, the barge negotiates a narrow channel through the reef to the beach. Usually this landing is subject to ocean swell and beaching requires considerable skill and, often, coral abrasions to bodies.

When bad weather prevents the barge making the trip, the ship stands off to wait suitable weather or goes off to one of the other atolls to attempt to load or unload its passengers or cargo, or both.

There is no airport in Tokelau, so boats are the only means of travel and transport.

Cyclone Percy

Cyclone Percy struck and severely damaged Tokelau in late February and early March 2005. Forecasters underestimated the cyclone's strength and the length of time it would be in vicinity to Tokelau. It coincided with a spring tide which put most of the area of the two villages on Fakaofo and Nukunonu under a metre of seawater. The cyclone also caused major erosion on several islets of all three atolls, damaging roads and bridges and disrupting electric power and telecommunications systems. The cyclone did significant and widespread damage to food crops including bananas, coconuts and pandanus. It did not seriously injure anyone but villagers lost significant amounts of property. The geographic future of Tokelau depends on the height of the ocean. No significant land is more than two metres above high water of ordinary tides. This means Tokelau is particularly vulnerable to any possible sea level rises.

Ross Dependency

Coordinates: 75°00′S 175°00′W

From Wikipedia, the free encyclopedia

The **Ross Dependency** is a region of Antarctica defined by a sector originating at the South Pole, passing along longitudes 160° east to 150° west, and terminating at latitude 60° south. New Zealand's claim to the region was formalized in 1923, when the Governor-General of New Zealand was appointed as the Governor of the Ross Dependency by an Imperial Order in Council made in London, United Kingdom. Since the Antarctic Treaty came into force in 1961, Article 1 of which states "The treaty does not recognize, dispute, nor establish territorial sovereignty claims; no new claims shall be asserted while the treaty is in force", most countries do not recognise territorial claims in Antarctica.

The Dependency takes its name from Sir James Clark Ross, who discovered the Ross Sea, and includes part of Victoria Land, and most of the Ross Ice Shelf. Ross Island, Balleny Islands and the small Scott Island also form part of the Dependency, as does the ice-covered Roosevelt Island.

Habitation

The scientific bases of Scott Base (New Zealand) and McMurdo Station (USA) are the only permanently occupied human habitations in the area, though Amundsen–Scott South Pole Station is partially within the territory and dependent on logistics operations based in New Zealand. The Dependency has a snow runway at Williams Field, and depending on conditions and time of year, two Ice Runways. This guarantees accessibility by wheeled and ski equipped aircraft year round.

Italy conducts scientific research each summer at their Zucchelli Station in Terra Nova Bay, and from 1969 to 1995 New Zealand operated a summer-only base called Vanda

Jurisdiction

Following his discovery of Victoria Land in 1841, James Clark Ross took possession of this territory, along with the surrounding sea, on behalf of Britain. On 30 July 1923, the British government passed an Order in Council under the British Settlements Act 1887, which defined the current borders of the Ross Dependency as follows,

> "From and after the publication of this Order in the Government Gazette of the Dominion of New Zealand that part of His Majesty's Dominions in the Antarctic Seas, which comprises all the islands and territories between the 160th degree of East Longitude and the 150th degree of West Longitude which are situated south of the 60th degree of South Latitude shall be named the Ross Dependency."

The Order in Council then went on to appoint the Governor-General and Commander-in Chief of New Zealand as the Governor of the territory.[1] This Order in Council was published in the *New Zealand Gazette* on 16 August 1923, and on 14 November 1923, the Governor-General issued regulations extending New Zealand law to the Ross Dependency.

After the Order in Council was read in the New Zealand House of Representatives by the Rt. Hon. William Ferguson Massey, a clarification was made by the Attorney-General Hon. Sir Francis Bell in the legislative council. Sir Francis stated that,

> "The boundaries of New Zealand are not extended to include the Ross sea and adjacent lands. His Majesty's delegation to the Governor-General of New Zealand did not confer upon the government or parliament of New Zealand the same powers as were vested by the Constitution Act in respect of the Dominion itself. It might be assumed that in the administration of the Ross Dependency that he would invite advice from his New Zealand ministers and it was certain that details would be entrusted to the New Zealand government. But his excellency was required in all matters of legislation and regulation for the Ross Territory to comply with instructions from the colonial secretary. There was no reason to believe that the Colonial Office would give such instructions without prior consultation with the Government of the Dominion, but the part which the New Zealand Government had agreed to take in enabling His Majesty to exercise jurisdiction in and over the Ross Territory must be taken on behalf of the Empire as a whole and not specially in the interests of New Zealand."

At an Imperial conference in 1930,[2] it was agreed that the Governors-General of the Dominions would be appointed by the King on the advice of the Dominion in question. And following the passing of the Statute of Westminster in 1931 (which was adopted in full by New Zealand in 1947), the government of the United Kingdom relinquished all control over the government of New Zealand. This however had no bearing on the obligations of the Governor-General of New Zealand in his capacity as Governor of the Ross Dependency on the appointment of Her Majesty's Government in the United Kingdom. Then in the year 1959, the Antarctic Treaty was signed by twelve nations which included both the United Kingdom and New Zealand.

The actual amount of land mass claimed is not large; most of the area defined as being in the Ross Dependency is either in the Ross Sea or the Antarctic Ocean. It is the second-smallest of the claims which were made prior to the implementation of the Antarctic Treaty System and the suspension of all territorial claims to Antarctica proper. Officers of the Government of the Ross Dependency are annually appointed to run the Dependency. The New Zealand Geographic Board has named many features within the Dependency.

In the summer of 1985, when the British non-governmental exploratory vessel *Southern Quest* sank in the Ross Sea, United States Coast Guard helicopters rescued the crew, who were taken to McMurdo Station. The expedition was criticised by scientists in the Antarctic because the rescue and return of the crew disrupted their work.[3]

In 2006, the New Zealand police reported that jurisdictional issues prevented them issuing warrants for potential American witnesses who were reluctant to testify during the Christchurch Coroner's investigation into the poisoning death of Rodney Marks at the South Pole base.[4][5]

Postage stamps

Further information: Postage stamps and postal history of the Ross Dependency

Flag

Currently, only the New Zealand national flag serves in an official capacity in the Ross Dependency. The only other 'official' flag seen in photographs was the New Zealand Post flag to denote Scott Base's post office.

Papua New Guinea

From Wikipedia, the free encyclopedia

Papua New Guinea (**PNG**; Tok Pisin: *Papua Niugini*), officially the **Independent State of Papua New Guinea**, is a country in Oceania, occupying the eastern half of the island of New Guinea and numerous offshore islands (the western portion of the island is a part of the Indonesian provinces of Papua and West Papua). It is located in the southwestern Pacific Ocean, in a region defined since the early 19th century as Melanesia. The capital is Port Moresby.

Papua New Guinea is one of the most culturally diverse countries on Earth, with over 850 indigenous languages and at least as many traditional societies,[*citation needed*] out of a population of just under seven million. It is also one of the most rural, as only 18% of its people live in urban centres.[6] The country is one of the world's least explored, culturally and geographically, and many undiscovered species of plants and animals are thought to exist in the interior of Papua New Guinea.[7]

The majority of the population live in traditional societies and practise subsistence-based agriculture. These societies and clans have some explicit acknowledgement within the nation's constitutional framework. The PNG Constitution (Preamble 5(4)) expresses the wish for "traditional villages and communities to remain as viable units of Papua New Guinean society",[8] and for active steps to be taken in their preservation.

After being ruled by three external powers since 1884, Papua New Guinea gained its independence from Australia in 1975. It remains a Commonwealth realm of Her Majesty Elizabeth II, Queen of Papua New Guinea. Many people live in extreme poverty, with about one third of the population living on less than US$1.25 per day.[9]

History

Main article: History of Papua New Guinea

Human remains have been found which have been dated to about 50,000 BC although this is an estimate. These ancient inhabitants probably migrated from Southeast Asia, from people whose ancestors had originated in Africa 50,000 to 70,000 years ago. New Guinea was one of the first landmasses after Africa and Eurasia to be populated by modern humans, with the first migration at approximately the same time as that of Australia.

Kerepunu villagers, British New Guinea, 1885

Agriculture was independently developed in the New Guinea highlands around 7000 BC, making it one of the few areas in the world where people independently domesticated plants. A major migration of Austronesian speaking peoples came to coastal regions roughly 500 BC. This has been correlated with the introduction of pottery, pigs, and certain fishing techniques. More recently, in the 18th century, the sweet potato was taken to New Guinea, having been introduced to the Moluccas from South America by Portuguese traders, representing the locally dominant colonial power.[10] The far higher crop yields from sweet potato gardens radically transformed traditional agriculture; sweet potato largely supplanted the previous staple, taro, and gave rise to a significant increase in population in the highlands.

Although headhunting and cannibalism have been practically eradicated, in the past they occurred in many parts of the country as part of ritual practices.[11][12] For example, in 1901, on Goaribari Island in the Gulf of Papua, a missionary, Harry Dauncey, found 10,000 skulls in the island's Long Houses.[13] According to the writer Marianna Torgovnick, "The most fully documented instances of cannibalism as a social institution come from New Guinea, where head-hunting and ritual cannibalism survived, in certain isolated areas, into the fifties,

sixties, and seventies, and still leave traces within certain social groups."[14]

Little was known in the West about the island until the nineteenth century, although Portuguese and Spanish explorers, such as Dom Jorge de Meneses and Yñigo Ortiz de Retez, respectively, had encountered it as early as the sixteenth century. Traders from Southeast Asia had visited New Guinea as long as 5,000 years ago collecting bird of paradise plumes.[15] The country's dual name results from its complex administrative history before independence. The word *papua* is derived from *pepuah*, a Malay word describing the curly, coiled, Melanesian hair, and "New Guinea" (*Nueva Guinea*) was the name coined by the Spanish explorer Yñigo Ortiz de Retez. In 1545 he noted the resemblance of the people to those he had earlier seen along the Guinea coast of Africa. The northern half of the country was ruled as a colony for some decades by Germany, beginning in 1884, as German New Guinea.

Australian forces attack Japanese positions during the Battle of Buna–Gona. January 7, 1943.

During World War I, the territory was occupied by Australia, which had begun administering British New Guinea, the southern part, re-named Papua in 1904. After World War I, Australia was given a mandate to administer the former German New Guinea by the League of Nations. Papua, by contrast, was deemed to be an External Territory of the Australian Commonwealth, though as a matter of law it remained a British possession. This was significant for the country's post-independence legal system. The difference in legal status meant that Papua and New Guinea had entirely separate administrations, both controlled by Australia.

The New Guinea campaign (1942–1945) was one of the major military campaigns of World War II. Approximately 216,000 Japanese, Australian and U.S. soldiers, sailors and airmen died during the New Guinea Campaign.[16] The two territories were combined into the Territory of Papua and New Guinea after World War II, which later was simply referred to as "Papua New Guinea".

However, certain statutes[17] continued to have application only in one of the two territories. This territorial difference of law was complicated further by the adjustment of the former boundary among contiguous provinces with respect to road access and language groups. Some of such statutes apply on one side only of a boundary which no longer exists.[*citation needed*]

The administration of Papua became open to United Nations oversight; a peaceful independence from Australia occurred on September 16, 1975, and close ties remain (Australia continues as the largest bilateral aid donor to Papua New Guinea). Papua New Guinea was admitted to membership in the United Nations on 10 October 1975.[18]

A secessionist revolt in 1975–76 on Bougainville Island resulted in an eleventh-hour modification of the draft Constitution of Papua New Guinea to allow for Bougainville and the other eighteen districts to have quasi-federal status as provinces. A renewed uprising started in 1988 and claimed 20,000 lives until it was resolved in 1997. Following the revolt, the autonomous Bougainville elected Joseph Kabui as president. He was succeeded by his deputy John Tabinaman, who continued to be re-elected as leader until the election of December 2008, which James Tanis won.

Anti-Chinese rioting, involving tens of thousands of people, broke out in May 2009. The initial spark was a fight between Chinese and Papua New Guinean workers at a nickel factory under construction by a Chinese company. Native resentment against the numerous small businesses being run by Chinese led to the rioting.[19][20]

Politics

Main article: Politics of Papua New Guinea

Because it is a Commonwealth realm, Papua New Guinea's head of state is Queen Elizabeth II. It had been expected by the constitutional convention, which prepared the draft constitution, and by Australia, the outgoing metropolitan power, that Papua New Guinea would choose not to retain its link with the Commonwealth realms monarchy. The founders, however, considered that imperial honours had a cachet that the newly independent state would not be able to confer with a purely indigenous honours system – the Monarchy was thus maintained.[21] The Queen is represented by the Governor-General of Papua New Guinea, currently Michael Ogio. Papua New Guinea and the Solomon Islands are unusual among Commonwealth realms in that Governors-General are selected by the legislature rather than by the executive branch.

Actual executive power lies with the Prime Minister, who heads the cabinet. The current Prime Minister is Peter O'Neill. The unicameral National Parliament has 109 seats, of which 20 are occupied by the governors of the 19 provinces and the National Capital District (NCD). Candidates for members of parliament are voted upon when the prime minister asks the Governor-General to call a national election, a maximum of five years after the previous national election.

In the early years of independence, the instability of the party system led to frequent votes of no confidence in Parliament with resulting falls of the government of the day and the need for national elections, in accordance with the conventions of parliamentary democracy. In recent years, successive governments have passed legislation preventing such votes sooner than 18 months after a national election. This has arguably resulted in greater stability, though perhaps at a cost of reducing the accountability of the executive branch of government.

Elections in PNG attract large numbers of candidates. After independence in 1975, members were elected by the first past the post system, with winners frequently gaining less than 15% of the vote. Electoral reforms in 2001 introduced the Limited Preferential Vote system (LPV), a version of the Alternative Vote. The 2007 general election was the first to be conducted using LPV.

In foreign policy, Papua New Guinea was accorded Observer status within ASEAN in 1976 followed later by Special Observer status in 1981.

Since mid-2011, there has been an ongoing dispute between parliament and Peter O'Neill and the judiciary, governor-general and Sir Michael Somare. The crisis involved the status of the prime minister and who is the legitimate head of government between O'Neill and Somare.

Law

Main article: Law of Papua New Guinea

The unicameral Parliament enacts legislation in the same manner as in other jurisdictions that have "cabinet," "responsible government," or "parliamentary democracy": it is introduced by the executive government to the legislature, debated and, if passed, becomes law when it receives royal assent by the Governor-General. Most legislation is actually regulation implemented by the bureaucracy under enabling legislation previously passed by Parliament.

All ordinary statutes enacted by Parliament must be consistent with the Constitution. The courts have jurisdiction to rule on the constitutionality of statutes, both in disputes before them and on a reference where there is no dispute but only an abstract question of law. Unusual among developing countries, the judicial branch

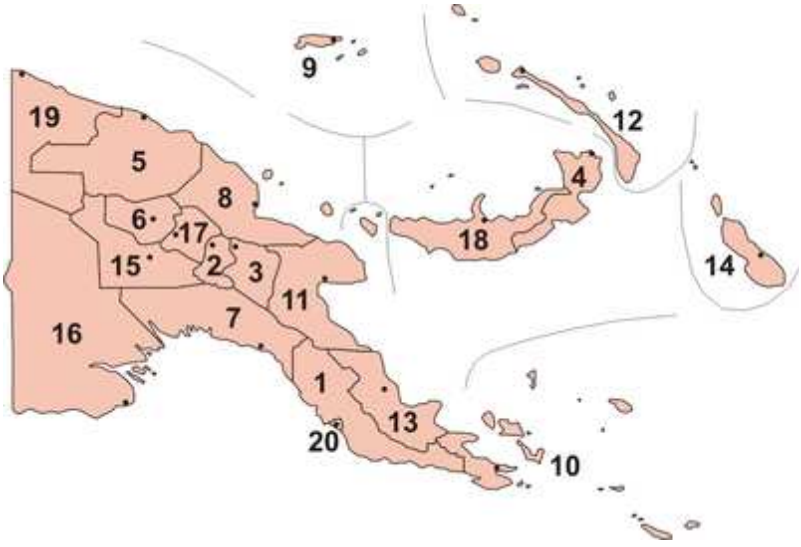
of government in Papua New Guinea has remained remarkably independent, and successive executive governments have continued to respect its authority.

The Parliament building of Papua New Guinea in Port Moresby

The "underlying law" – that is, the common law of Papua New Guinea – consists of principles and rules of common law and equity in England[22] common law as it stood on September 16, 1975 (the date of Independence), and thereafter the decisions of PNG's own courts. The courts are directed by the Constitution and, latterly, the *Underlying Law Act*, to take note of the "custom" of traditional communities, with a view to determining which customs are common to the whole country and may be declared also to be part of the underlying law. In practice, this has proved extremely difficult and has been largely neglected. Statutes are largely adapted from overseas jurisdictions, primarily Australia and England. Advocacy in the courts follows the adversarial pattern of other common law countries.

This national court system used in towns and cities is supported by a village court system in the more remote areas. The law underpinning the village courts is 'customary law' and these courts are discussed further on the Law of Papua New Guinea page.

Administrative divisions



Main articles: Regions of Papua New Guinea, Provinces of Papua New Guinea, and Districts and LLGs of Papua New Guinea

Papua New Guinea is divided into four regions, which are not the primary administrative divisions but are quite significant in many aspects of government, commercial, sporting and other activities.

The nation has 20 province-level divisions: eighteen provinces, the Autonomous Region of Bougainville and the National Capital District. Each province is divided into one or more districts, which in turn are divided into one or more Local Level Government areas.

Provinces[23] are the primary administrative divisions of the country. Provincial governments are branches of the national government – Papua New Guinea is not a federation of provinces. The province-level divisions are as follows:

1. Central
2. Chimbu (Simbu)
3. Eastern Highlands
4. East New Britain
5. East Sepik
6. Enga
7. Gulf
8. Madang
9. Manus
10. Milne Bay
11. Morobe
12. New Ireland
13. Northern (Oro Province)
14. Bougainville (autonomous region)
15. Southern Highlands
16. Western Province (Fly)
17. Western Highlands
18. West New Britain
19. West Sepik (Sandaun)
20. National Capital

District

Parliament has approved the creation of two additional provinces by 2012: Hela Province, which will consist of part of the current Southern Highlands Province, and Jiwaka Province, which will be formed by dividing Western Highlands Province.[24]

Geography

Main article: Geography of Papua New Guinea

At 462,840 km^2 (178,704 sq mi), Papua New Guinea is the world's fifty-fourth largest country. Including all its islands, it lies between latitudes 0° and 12°S, and longitudes 140° and 160°E.

Map of Papua New Guinea

The country's geography is diverse and, in places, extremely rugged. A spine of mountains, the New Guinea Highlands, runs the length of the island of New Guinea, forming a populous highlands region mostly covered with tropical rainforest. Dense rainforests can be found in the lowland and coastal areas as well as very large wetland areas surrounding the Sepik and Fly rivers. This terrain has made it difficult for the country to develop transportation infrastructure. In some areas, airplanes are the only mode of transport. The highest peak is Mount Wilhelm at 4,509 metres (14,793 ft). Papua New Guinea is surrounded by coral reefs which are under close watch, in the interests of preservation.

The country is situated on the Pacific Ring of Fire, at the point of collision of several tectonic plates. There are a number of active volcanoes, and eruptions are frequent. Earthquakes are relatively common, sometimes accompanied by tsunamis.

The mainland of the country is the eastern half of New Guinea island, where the largest towns are also located, including the capital Port Moresby and Lae; other major islands within Papua New Guinea include New Ireland, New Britain, Manus and Bougainville.

Papua New Guinea is one of the few regions close to the equator that experiences snowfall, which occurs in the most elevated parts of the mainland.

Ecology

See also: Conservation in Papua New Guinea

Papua New Guinea is part of the Australasia ecozone, which also includes Australia, New Zealand, eastern Indonesia, and several Pacific island groups, including the Solomon Islands and Vanuatu.

Geologically, the island of New Guinea is a northern extension of the Indo-Australian tectonic plate, forming part

of a single landmass Australia-New Guinea (also called *Sahul* or *Meganesia*). It is connected to the Australian segment by a shallow continental shelf across the Torres Strait, which in former ages had lain exposed as a land bridge, particularly during ice ages when sea levels were lower than at present.

Mount Tavurvur in Papua New Guinea.

Consequently, many species of birds and mammals found on New Guinea have close genetic links with corresponding species found in Australia. One notable feature in common for the two landmasses is the existence of several species of marsupial mammals, including some kangaroos and possums, which are not found elsewhere.

Many of the other islands within PNG territory, including New Britain, New Ireland, Bougainville, the Admiralty Islands, the Trobriand Islands, and the Louisiade Archipelago, were never linked to New Guinea by land bridges. As a consequence, they have their own flora and fauna; in particular, they lack many of the land mammals and flightless birds that are common to New Guinea and Australia.

Australia and New Guinea are portions of the ancient supercontinent of Gondwana, which started to break into smaller continents in the Cretaceous era, 65-130 million years ago. Australia finally broke free from Antarctica about 45 million years ago. All the Australasian lands are home to the Antarctic flora, descended from the flora of southern Gondwana, including the coniferous podocarps and *Araucaria* pines, and the broadleafed southern beech (*Nothofagus*). These plant families are still present in Papua New Guinea.

As the Indo-Australian Plate (which includes landmasses of India, Australia, and the Indian Ocean floor in between) drifts north, it collides with the Eurasian Plate. The collision of the two plates pushed up the Himalayas, the Indonesian islands, and New Guinea's Central Range. The Central Range is much younger and higher than the mountains of Australia, so high that it is home to rare equatorial glaciers. New Guinea is part of the humid tropics, and many Indomalayan rainforest plants spread across the narrow straits from Asia, mixing together with the old Australian and Antarctic floras.

PNG includes a number of terrestrial ecoregions:

- Admiralty Islands lowland rain forests – forested islands to the north of the mainland, home to a distinct flora.
- Central Range montane rain forests
- Huon Peninsula montane rain forests
- Louisiade Archipelago rain forests
- New Britain-New Ireland lowland rain forests
- New Britain-New Ireland montane rain forests
- New Guinea mangroves
- Northern New Guinea lowland rain and freshwater swamp forests
- Northern New Guinea montane rain forests
- Solomon Islands rain forests (includes Bougainville Island and Buka)
- Southeastern Papuan rain forests
- Southern New Guinea freshwater swamp forests
- Southern New Guinea lowland rain forests
- Trobriand Islands rain forests
- Trans Fly savanna and grasslands

The green jungle of Papua New Guinea bears a sharp contrast to the nearby desert of Australia.

- Central Range sub-alpine grasslands

At current rates of deforestation, more than half of the country's forests could be lost or seriously degraded by 2021, according to a new satellite study of the region.[25] Nearly one quarter of Papua New Guinea's rainforests were damaged or destroyed between 1972 and 2002.[26]

Economy

Main article: Economy of Papua New Guinea

Port Moresby

Papua New Guinea is richly endowed with natural resources, but access has been hampered by rugged terrain, the high cost of developing infrastructure, serious law and order problems, and the system of land title which makes identifying the owners of land for the purpose of negotiating appropriate agreements problematic. Agriculture provides a livelihood for 85% of the population. Mineral deposits, including oil, copper, and gold, account for 72% of export earnings. The country also has a notable coffee industry and other crops include cocoa, oil palm and tea.

Former Prime Minister Sir Mekere Morauta tried to restore integrity to state institutions, stabilize the kina, restore stability to the national budget, privatize public enterprises where appropriate, and ensure ongoing peace on Bougainville following the 1997 agreement which ended Bougainville's secessionist unrest. The Morauta government had considerable success in attracting international support, specifically gaining the backing of the IMF and the World Bank in securing development assistance loans. Significant challenges face the current Prime Minister Sir Michael Somare, including gaining further investor confidence, continuing efforts to privatize government assets, and maintaining the support of members of Parliament.

In March 2006 the United Nations Development Programme Policy called for Papua New Guinea's designation of developing country to be downgraded to least-developed country because of protracted economic and social stagnation.[27] However, an evaluation by the International Monetary Fund in late 2008 found that "a combination of prudent fiscal and monetary policies, and high global prices for mineral commodity exports, have underpinned Papua New Guinea's recent buoyant economic growth and macroeconomic stability. Real GDP growth, at over 6% in 2007, was broad-based and is expected to continue to be strong in 2008."[28]

Land tenure

The PNG legislature has enacted various laws in which a type of tenure called "customary land title" is recognised, meaning that the traditional lands of the indigenous peoples have some legal basis to inalienable tenure. This customary land notionally covers most of the usable land in the country (some 97% of total land area);[29] alienated land is either held privately under State Lease or is government land. Freehold Title (also known as fee simple) can only be held by Papua New Guinea citizens.[30]

Only some 3% of the land of Papua New Guinea is in private hands; it is privately held under 99 year state lease, or it is held by the state. There is virtually no freehold title; the few existing freeholds are automatically converted to state lease when they are transferred between vendor and purchaser. Unalienated land is owned under customary title by traditional landowners. The precise nature of the seisin varies from one culture to another. Many writers portray land as in the communal ownership of traditional clans; however, closer studies usually show that the smallest portions of land whose ownership cannot be further divided are held by the

individual heads of extended families and their descendants, or their descendants alone if they have recently died.[*citation needed*]

This is a matter of vital importance because a problem of economic development is identifying the membership of customary landowning groups and the owners. Disputes between mining and forestry companies and landowner groups often devolve on the issue of whether the companies entered into contractual relations for the use of land with the true owners. Customary property – usually land – cannot be devised by will; it can only be inherited according to the custom of the deceased's people.[*citation needed*]

Demographics

Main article: Demographics of Papua New Guinea

Huli Wigman from the Southern Highlands

Papua New Guinea is one of the most heterogeneous nations in the world. There are hundreds of ethnic groups indigenous to Papua New Guinea, the majority being from the group known as Papuans, whose ancestors arrived in the New Guinea region tens of thousands of years ago. Many remote Papuan tribes still have only marginal contact with the outside world.

The others are Austronesians, their ancestors having arrived in the region less than four thousand years ago. There are also numerous people from other parts of the world now resident, including Chinese,[31] Europeans, Australians, Filipinos, Polynesians and Micronesians. At the brink of Papuan independence in 1975, there were 40,000 expatriates (mostly Australian and Chinese) in Papua New Guinea.[32]

Papua New Guinea has more languages than any other country, with over 820 indigenous languages, representing twelve percent of the world's total, but most have fewer than 1,000 speakers. The most widely-spoken indigenous language is Enga with about 200,000 speakers, followed by Melpa and Huli.[33] Indigenous languages are classified into two large groups: Austronesian languages and non-Austronesian (or Papuan languages). There are three official languages for Papua New Guinea. English is an official language and is the language of government and the education system, but it is not widely spoken.

The primary lingua franca of the country is Tok Pisin (commonly known in English as New Guinea Pidgin or Melanesian Pidgin), in which much of the debate in Parliament is conducted, many information campaigns and advertisements are presented, and until recently a national newspaper, *Wantok*, was published. The only area where Tok Pisin is not prevalent is the southern region of Papua, where people often use the third official language, Hiri Motu.

Although it lies in the Papua region, Port Moresby has a highly diverse population which primarily uses Tok Pisin, and to a lesser extent English, with Motu spoken as the indigenous language in outlying villages. With an average of only 7,000 speakers per language, Papua New Guinea has a greater density of languages than any other nation on earth except Vanuatu.[*citation needed*]

Health

Public expenditure was at 7.3% of all government expenditure in 2006,[34] whereas private expenditure was at 0.6 % of the GDP.[*citation needed*] There were five physicians per 100,000 people in the early 2000s.[35] Malaria is the leading cause of illness and death in New Guinea. In 2003, the most recently reported year, 70,226 cases of laboratory confirmed malaria were reported, along with 537 deaths. A total of 1,729,697 cases were probable.[36]

Papua New Guinea has the highest incidence of HIV and AIDS in the Pacific region and is the fourth country in the Asia Pacific region to fit the criteria for a generalised HIV/AIDS epidemic.[37] Lack of HIV/AIDS awareness is a major problem, especially in rural areas.

In June 2011, the United Nations Population Fund released a report on *The State of the World's Midwifery*. It contained new data on the midwifery workforce and policies relating to newborn and maternal mortality for 58 countries. The 2010 maternal mortality rate per 100,000 births for Papua New Guinea is 250. This is compared with 311.9 in 2008 and 476.3 in 1990. The under 5 mortality rate, per 1,000 births is 69 and the neonatal mortality as a percentage of under 5's mortality is 37. The aim of this report is to highlight ways in which the Millennium Development Goals can be achieved, particularly Goal 4 – Reduce child mortality and Goal 5 – Improve maternal health. In Papua New Guinea the number of midwives per 1,000 live births is 1 and 1 in 94 shows us the lifetime risk of death for pregnant women.[38]

Religion

Main article: Religion in Papua New Guinea

The courts and government practice uphold the constitutional right to freedom of speech, thought, and belief, and no legislation to curb those rights has been adopted. The 2000 census found that 96% of citizens identified themselves as members of a Christian church; however, many citizens combine their Christian faith with some pre-Christian traditional indigenous religious practices.[39] The census percentages were as follows:

- Catholic Church (27.0%)
- Evangelical Lutheran Church of Papua New Guinea (19.5%)
- United Church (11.5%)
- Seventh-day Adventist Church (10.0%)
- Pentecostal (8.6%)
- Evangelical Alliance (5.2%)
- Anglican Church of Papua New Guinea (3.2%)
- Baptist (0.5%)
- Church of Christ (0.4%)
- Bahá'í Faith (0.3%)
- Jehovah's Witnesses (0.3%)
- Salvation Army (0.2%)
- Other Christian (8.0%)

There are also approximately 4,000 Muslims in the country. Non-traditional Christian churches and non-Christian religious groups are active throughout the country. The Papua New Guinea Council of Churches has stated that both Muslim and Confucian missionaries are active, and foreign missionary activity in general is high.

Traditional religions, such as that of the Korowai, were often animist. Some also tended to have elements of ancestor worship, though generalisation is suspect given the extreme heterogeneity of Melanesian societies. Prevalent among traditional tribes is the belief in *masalai*, or evil spirits, which are blamed for "poisoning" people, causing calamity and death, and the practice of puripuri (sorcery).[40][41][42]

Culture

Main articles: Culture of Papua New Guinea and Music of Papua New Guinea

It is estimated that more than a thousand different cultural groups exist in Papua New Guinea. Because of this diversity, many different styles of cultural expression have emerged; each group has created its own expressive forms in art, dance, weaponry, costumes, singing, music, architecture and much more. Most of these different cultural groups have their own language. People typically live in villages that rely on subsistence farming. In some areas people hunt and collect wild plants (such as yam roots) to supplement their diets. Those who become skilled at hunting, farming and fishing earn a great deal of respect.

This rattle is made of leaves, seeds and coconut shell. The rattle is tied around a dancer's ankle and makes a sound when the dancer moves.

On the Sepik river, there is a tradition of wood carving, often in the form of plants or animals, representing ancestor spirits.

Sea shells are no longer the currency of Papua New Guinea, as they were in some regions – sea shells were abolished as currency in 1933. However, this heritage is still present in local customs; in some cultures, to get a bride, a groom must bring a certain number of golden-edged clam shells[43] as a bride price. In other regions, the bride price is paid in lengths of shell money, pigs, cassowaries or cash. Elsewhere, it is brides who traditionally pay a dowry.

Resident of Bago-Bago, an island in the southeast of Papua New Guinea

This bilum bag is from Goroka, in the Eastern Highlands Province of Papua New Guinea.

People of the highlands engage in colourful local rituals that are called "sing sings". They paint themselves and dress up with feathers, pearls and animal skins to represent birds, trees or mountain spirits. Sometimes an important event, such as a legendary battle, is enacted at such a musical festival.

Sport

Main article: Sport in Papua New Guinea

See also: Rugby league in Papua New Guinea

Sport is an important part of Papua New Guinean culture and rugby league is by far the most popular sport.[44] In a nation where communities are far apart and many people live at a minimal subsistence level, rugby league has been described as a replacement for tribal warfare as a way of explaining the local enthusiasm for the game

(a matter of life and death). Many Papua New Guineans have become instant celebrities by representing their country or playing in an overseas professional league. Even Australian rugby league players who have played in the annual (Australian) State of Origin clash, which is celebrated feverishly every year in PNG, are among the most well known people throughout the nation.

State of Origin is a highlight of the year for most Papua New Guineans, although the support is so passionate that many people have died over the years in violent clashes supporting their team.[45] The Papua New Guinea national rugby league team usually plays against the Australian Prime Minister's XIII (a selection of NRL players) each year, normally in Port Moresby.

Other major sports which have a part in the Papua New Guinea sporting landscape are Aussie rules, soccer (football), rugby union and, in eastern Papua, cricket. Its football team ranked worst on FIFA ranking of all countries.[46]

20th century wooden Abelam ancestor figure (nggwalndu).

Education

A large proportion of the population is illiterate.[34] Particularly women are affected.[34] Much of the education in the country is provided by church institutions.[47] This includes 500 schools of the Evangelical Lutheran Church of Papua New Guinea.[48] Papua New Guinea has six universities apart from other major tertiary institutions. The two founding universities are the University of Papua New Guinea based in the National Capital District,[49] and the Papua New Guinea University of Technology based outside of Lae, in Morobe Province.

The four other universities which were once colleges, were established recently after gaining government recognition. These are the University of Goroka in the Eastern Highlands province, Divine Word University (run by the Catholic Church's Divine Word Missionaries) in Madang Province, Vudal University in East New Britain Province and Pacific Adventist University (run by the Seventh Day Adventist Church) in the National Capital District.

Transport

Main article: Transport in Papua New Guinea

Transport in Papua New Guinea is heavily limited by the country's mountainous terrain. Port Moresby is not linked by road to any of the other major towns, and many remote villages can only be reached by light aircraft or on foot. As a result, air travel is the single most important form of transport for human and high value freight. In addition to two international airfields, Papua New Guinea has 578 airstrips, most of which are unpaved.[50] Assets are not maintained to good operating standards and poor transport remains a major impediment to the development of ties of national unity.

History of Papua New Guinea

From Wikipedia, the free encyclopedia

The **prehistory of Papua New Guinea** can be traced back to about 60,000 years ago when people first migrated towards the Australian continent. The written history began when European navigators first sighted New Guinea in the early part of the 16th century.

Archaeology

Archeological evidence indicates that humans arrived on New Guinea perhaps 60,000 years ago, although this is under debate.[1][2] They came probably by sea from Southeast Asia during an Ice Age period when the sea was lower and distances between islands shorter. Although the first arrivals were hunters and gatherers, early evidence shows that people managed the forest environment to provide food. There also are indications of neolithic gardening having been practiced at Kuk at the same time that agriculture was developing in Mesopotamia and Egypt. Today's staples—sweet potatoes and pigs—were later arrivals, but shellfish and fish have long been mainstays of coastal dwellers' diets. Recent archaeological research suggests that 50,000 years ago, people may have occupied sites in the highlands at altitudes of up to 2000 metres, rather than being restricted to warmer coastal areas.[3]

European discovery

When Europeans first arrived, inhabitants of New Guinea and nearby islands – while still relying on bone, wood, and stone tools – had a productive agricultural system. They traded along the coast, mainly in pottery, shell ornaments and foodstuffs, and in the interior, where forest products were exchanged for shells and other sea products.

The first Europeans to sight New Guinea were probably the Portuguese and Spanish navigators sailing in the South Pacific in the early part of the 16th century. In 1526–27, the Portuguese explorer Jorge de Menezes accidentally came upon the principal island and is credited with naming it **Papua**, a Malay word for the frizzled quality of Melanesian hair. The term **New Guinea** was applied to the island in 1545 by a Spaniard, Yñigo Ortiz

de Retez, because of a resemblance between the islands' inhabitants and those found on the African Guinea coast.

Although European navigators visited the islands and explored their coastlines thereafter, little was known of the inhabitants by Europeans until the 1870s, when Russian anthropologist Nicholai Miklukho-Maklai made a number of expeditions to New Guinea, spending several years living among native tribes, and described their way of life in a comprehensive treatise.

Territory of Papua

Main article: Territory of Papua

British flag raised by Queensland 1883

In 1883, the Colony of Queensland purported to annex the southern half of eastern New Guinea. On 6 November 1884, a British protectorate was proclaimed over the southern coast of New Guinea and its adjacent islands. The protectorate, called **British New Guinea**, was annexed outright on 4 September 1888. The possession was placed under the authority of the Commonwealth of Australia in 1902. Following the passage of the Papua Act, 1905, British New Guinea became the **Territory of Papua**, and formal Australian administration began in 1906, although Papua remained *de jure* a British possession until the independence of Papua New Guinea in 1975. Papua was administered under the *Papua Act* until it was invaded by the Empire of Japan in 1941, and civil administration suspended. During the Pacific War, Papua was governed by an Australian military administration from Port Moresby, where General Douglas MacArthur occasionally made his headquarters.

Flag under German control of New Guinea.

German New Guinea

Main article: German New Guinea

With Europe's growing desire for coconut oil, Godeffroy's of Hamburg, the largest trading firm in the Pacific, began trading for copra in the New Guinea Islands. In 1884, the German Empire formally took possession of the northeast quarter of the island and put its administration in the hands of a chartered trading company formed for the purpose, the *German New Guinea Company*. In the charter granted to this company by the German Imperial Government in May 1885, it was given the power to exercise sovereign rights over the territory and other "unoccupied" lands in the name of the government, and the ability to "negotiate" directly with the native inhabitants. Relationships with foreign powers were retained as the preserve of the German government. The *Neu Guinea Kompanie* paid for the local governmental institutions directly, in return for the concessions which had been awarded to it.

In 1899, the German imperial government assumed direct control of the territory, thereafter known as **German New Guinea**. In 1914, Australian troops occupied German New Guinea, and it remained under Australian military control through World War I until 1921.

Territory of New Guinea

Main article: Territory of New Guinea

The Commonwealth of Australia assumed a mandate from the League of Nations for governing the former German territory of New Guinea in 1920. It was administered under this mandate until the Japanese invasion in December 1941 brought about the suspension of Australian civil administration. Much of the Territory of New Guinea, including the islands of Bougainville and New Britain, was occupied by Japanese forces before being recaptured by Australian and American forces during the final months of the war (see New Guinea campaign).

Exploration of Mandated Territory of New Guinea

Akmana Expedition 1929–1930

'The exploration of Papua–New Guinea has been a continuing process. Even today [April 1971] new groups of people occasionally are still contacted. Not until recent years has New Guinea's exploration been planned; much of it has been the work of miners, labour recruiters, missionaries, adventurers, with different objects in mind. Many of these people have been doers, not recorders of facts, with the result that our knowledge of the territory's exploration has not kept pace with the exploration itself.'[4]

An exception is the record of the Akmana Gold Prospecting Company's Field Party which carried out two expeditions from September to December 1929 and from mid February to the end of June 1930.[5] They journeyed on the "Banyandah", a cruiser of 38 feet (12 m) from Madang up the coast to the mouth of the Sepik River, travelling along that river to Marienberg and Moim, then along the Karosameri River to the Karrawaddi River and on to the Arrabundio River and Yemas, after which it was necessary to transport their stores and equipment by pinnace, canoe and ultimately on foot to their Mountain Base on the upper Arrabundio River.

During their first expedition the Akmana Field Party prospected the tributaries of the Arrabundio and then trekked across a spur of the Central Mountain Range to sample the Upper Karrawaddi River. Retracing their steps to the Arrabundio they then headed out across another spur of the Central Mountain Range to the Junction of the Yuat River with the Jimmi and Baiyer Rivers, again without finding gold in sufficient quantity. Returning to Madang at the end of December 1929, several of the party went back to Sydney to obtain instructions from the Akmana Gold Prospecting Company.

In mid February 1930 the second expedition quickly returned to their Mountain Base and on across the mountains to the junction of the Yuat with the Baiyer and Jimmi Rivers. They prospected south along the Baiyer River to its junction with the Maramuni and Tarua Rivers, where they established a palisaded forward camp naming the place 'Akmana Junction.' From this base they prospected along the Maramuni River and its tributaries, again without success. Finally they prospected the Tarua River south past the tributary which flows to Waipai, once more without success and on the advice of mining engineer Seale, it was decided there was nothing to justify further exploration. They had not progressed to any country on the southern watershed through which the early explorers and prospectors travelled to the Hagan Range and Wabag. The party returned to Madang, sailing for Sydney on 3 July 1930.

After leading the first expedition, Sam Freeman did not return and Reg Beazley became party leader of the second expedition, with Pontey Seale mining engineer, Bill MacGregor and Beazley prospectors and recruiters, and Ernie Shepherd in charge of transport and supplies, prospecting when opportunity arose. They had all served overseas during World War I with the AIF on the western front, in Egypt and the Levant and had previously been to New Guinea. In 1926 Freeman was near Marienberg with Ormildah drilling for oil; Shepherd was with Dr. Wade and R.J. Winters on their geological survey of a oil lease of 10,000 square miles (26,000 km^2) in the Bogia and Nubio to Ramu region and up the Sepik River to Kubka 60 miles (97 km) above Ambunto. Beazley

was drilling test sites for oil with Matahower in the lower Sepik and he and McGregor recruited labour on the Sepik and explored grass country to Wee Wak. Beazley also prospected the Arrabundio for gold and on his promising report to Freeman, Akmana Gold Prospecting Coy was floated in 1928.

The Akmana Gold Prospecting Field Party made contact with many peoples they called: grass country people, head hunters, pygmies, wig–men, Kanakas, Poomani. These contacts were often with the help of Drybow/Dribu, a leader and spokesman of the wig–men, a most intelligent man of goodwill, with a quiet authority that brought forth friendly cooperation. 'We made a peaceful entry into this new country, establishing a reputation for fair trade and decent behaviour ... but gold was our interest and we had traced the rivers and tributaries as far as practicable where conditions and results justified the effort and found nothing worthwhile. In the many years since, there have been quite a few reports of prospecting parties in the area. But nothing of note has been reported: So we did not leave much behind, it seems.'[6]

'Members of the Akmana party donated wigs they had brought back to various museums. Two of them went to The Australian Museum, Sydney (from Beazley and Shepherd). Current records at the Australian Museum show that Beazley's wig, described as "a cap composed of human hair from the headwaters of the U–at River, Central Mountains, Mandated Territory of NG", was lodged on 31 January 1930, presumably on his quick visit to Sydney after the first expedition. Shepherd presented another wig to Father Kirschbaum, who wanted to send it to Germany. The wigs at The Australian Museum were later confused with some brought out of the Highlands 10 years afterwards by Jim Taylor during his Hagen–Sepik patrol, and wrongly attributed to him when put on display. Seale presented two wigs to the National Museum Canberra in 1930.'[7]

World War Two

Main article: New Guinea Campaign

Australian troops at Milne Bay, Papua.The Australian garrison was the first to inflict defeat on the Imperial Japanese Army during World War II at the Battle of Milne Bay of Aug–Sep 1942.

Shortly after the start of the Pacific War, the island of New Guinea was invaded by the Japanese. Most of West Papua, at that time known as Dutch New Guinea, was occupied, as were large parts of the Territory of New Guinea (the former German New Guinea, which was also under Australian rule after World War I), but Papua was protected to a large extent by its southern location and the near-impassable Owen Stanley Ranges to the north.

The New Guinea campaign opened with the battles for New Britain and New Ireland in the Territory of New Guinea in 1942. Rabaul, the capital of the Territory was overwhelmed on 22–23 January and was established as a major Japanese base from whence they landed on mainland New Guinea and advanced towards Port Moresby and Australia.[8] Having had their initial effort to capture Port Moresby by a seaborne invasion disrupted by the U.S. Navy in the Battle of the Coral Sea, the Japanese attempted a landward invasion from the north via the Kokoda Trail. From July 1942, a few Australian reserve battalions, many of them very young and untrained, fought a stubborn rearguard action against a Japanese advance along the Kokoda Track, towards Port Moresby, over the rugged Owen Stanley Ranges.[9] Local Papuans, called Fuzzy Wuzzy Angels by the Australians, assisted and escorted injured Australian troops down the Kokoda trail. The militia, worn out and severely depleted by casualties, were relieved in late August by regular troops from the Second Australian Imperial Force, returning from action in the Mediterranean theater.

The Japanese were driven back. The bitter Battle of Buna-Gona followed in which Australian and United States

forces attacked the main Japanese beachheads in New Guinea, at Buna, Sanananda and Gona. Facing tropical disease, difficult terrain and well constructed Japanese defences, the allies only secured victory with heavy casualties.[10]

In early September 1942 Japanese marines attacked a strategic Royal Australian Air Force base at Milne Bay, near the eastern tip of Papua. They were beaten back by the Australian Army, and the Battle of Milne Bay is remembered as the first outright defeat on Japanese land forces during World War II.[11] The offensives in Papua and New Guinea of 1943–44 were the single largest series of connected operations ever mounted by the Australian armed forces.[12] The Supreme Commander of operations was the United States General Douglas Macarthur, with Australian General Thomas Blamey taking a direct role in planning and operations being essentially directed by staff at New Guinea Force headquarters in Port Moresby.[13] Bitter fighting continued in New Guinea between the largely Australian force and the Japanese 18th Army based in New Guinea until the Japanese surrender in 1945.

An Australian soldier, Private George "Dick" Whittington, is aided by Papuan orderly Raphael Oimbari, near Buna on 25 December 1942.

The New Guinea campaign was a major campaign of the Pacific War. In all, some 200,000 Japanese soldiers, sailors and airmen died during the campaign against approximately 7,000 Australian and 7,000 American service personnel.[14]

The Territory of Papua and New Guinea

Following the surrender of the Japanese in 1945, civil administration of Papua as well as New Guinea was restored, and under the Papua New Guinea Provisional Administration Act, (1945–46), Papua and New Guinea were combined in an administrative union.

The Papua and New Guinea Act 1949 formally approved the placing of New Guinea under the international trusteeship system and confirmed the administrative union under the title of **The Territory of Papua and New Guinea**. The act provided for a Legislative Council (established in 1951), a judicial organization, a public service, and a system of local government. A House of Assembly replaced the Legislative Council in 1963, and the first House of Assembly opened on 8 June 1964. In 1972, the name of the territory was changed to **Papua New Guinea**. Australia's change of policy towards Papua New Guinea largely commenced with the invitation from the Australian Government to the World Bank to send a mission to the Territory to advise on measures to be taken towards its economic development and political preparation. The mission's report, The Economic Development of the Territory of Papua New Guinea, published in 1964, set out the framework upon which much of later economic policy, up to and beyond independence, proceeded.

Independence

Elections in 1972 resulted in the formation of a ministry headed by Chief Minister Michael Somare, who pledged to lead the country to self-government and then to independence. Papua New Guinea became self-governing on 1 December 1973 and achieved independence on 16 September 1975. The 1977 national elections confirmed Michael Somare as Prime Minister at the head of a coalition led by the Pangu Party. However, his government lost a vote of confidence in 1980 and was replaced by a new cabinet headed by Sir Julius Chan as prime minister. The 1982 elections increased Pangu's plurality, and parliament again chose Somare as prime minister. In

November 1985, the Somare government lost another vote of no confidence, and the parliamentary majority elected Paias Wingti, at the head of a five-party coalition, as prime minister. A coalition, headed by Wingti, was victorious in very close elections in July 1987. In July 1988, a no-confidence vote toppled Wingti and brought to power Rabbie Namaliu, who a few weeks earlier had replaced Somare as leader of the Pangu Party.

Such reversals of fortune and a revolving-door succession of prime ministers continue to characterize Papua New Guinea's national politics. A plethora of political parties, coalition governments, shifting party loyalties and motions of no confidence in the leadership all lend an air of instability to political proceedings.

Under legislation intended to enhance stability, new governments remain immune from no-confidence votes for the first 18 months of their incumbency.

A nine-year secessionist revolt on the island of Bougainville claimed some 20,000 lives. The rebellion began in early 1989, active hostilities ended with a truce in October 1997 and a permanent ceasefire was signed in April 1998. A peace agreement between the Government and ex-combatants was signed in August 2001. A regional peace-monitoring force and a UN observer mission monitors the government and provincial leaders who have established an interim administration and are working toward complete surrender of weapons, the election of a provincial government and an eventual referendum on independence.

Although close relations have been maintained since peaceful independence and Australia remains the largest bilateral aid donor to Papua New Guinea, relations with Australia have recently shown signs of strain. While on a state visit in March 2005, Prime Minister Somare was asked to submit to a security check and remove his shoes upon arriving at the airport in Brisbane. Despite demands from the PNG government that Australia apologize, the latter refused. Additionally, problems have arisen with regard to Australia's latest aid package for the country. Valued at A$760 million, the program was to tackle crime and corruption in PNG by sending 200 Australian police to Port Moresby and installing 40 Australian officials within the national bureaucracy. However, after the first detachment of police arrived, Papua New Guinea's high court ruled that the arrangement was unconstitutional, and the police returned home. A new arrangement, by which only 30 officers will serve as a training force for the local force has been described by the Australian foreign minister as "second-best".[15]

Monarchy of Papua New Guinea

From Wikipedia, the free encyclopedia

The **monarchy of Papua New Guinea** (the **Papua New Guinean Monarchy**) is a system of government in which a hereditary monarch is the sovereign of Papua New Guinea. The present monarch of Papua New Guinea is Queen Elizabeth II. Papua New Guinea share the Sovereign with a number of Commonwealth realms.[1] The monarch is constitutionally represented by the Governor-General of Papua New Guinea, whose roles and powers are laid out by the *Constitution of the Independent State of Papua New Guinea*.

International and domestic role

One of the most complicated features of the Papua New Guinean Monarchy is that it is a shared monarchy.

54 states are members of the Commonwealth of Nations. Sixteen of these countries are specifically Commonwealth realms who recognise, individually, the same person as their Monarch and Head of State;Papua New Guinea is one of these.[2] Despite sharing the same person as their respective national monarch, each of the Commonwealth realms — including Papua New Guinea — is sovereign and independent of the others.

Development of shared monarchy

The *Balfour Declaration* of 1926 provided the dominions the right to be considered equal to Britain, rather than subordinate; an agreement that had the result of a shared Crown that operates independently in each realm rather than a unitary British Crown under which all the dominions were secondary. The Monarchy thus ceased to be an exclusively British institution, although it has often been called "British" since this time (in both legal and common language) for reasons historical, legal, and of convenience. The *Royal and Parliamentary Titles Act, 1927* was the first indication of this shift in law, further elaborated in the *Statute of Westminster, 1931*.

Papua New Guinea has a common monarchy with Britain and the other Commonwealth realms.

On all matters of the Papua New Guinean State, the Monarch is advised solely by Papua New Guinean ministers.

Title

In Papua New Guinea, the Queen's official title is: *Elizabeth the Second, Queen of Papua New Guinea and of Her other Realms and Territories, Head of the Commonwealth*, as stated by section 85 of the *Constitution of the Independent State of Papua New Guinea*..

This style communicates Papua New Guinea's status as an independent monarchy, highlighting the Monarch's role specifically as Queen of Papua New Guinea, as well as the shared aspect of the Crown throughout the realms. Typically, the Sovereign is styled "Queen of Papua New Guinea," and is addressed as such when in Papua New Guinea, or performing duties on behalf of Papua New Guinea abroad.

Constitutional role

The role and powers of the monarch are set out in the Constitution. The Preamble to the Constitution states ‘that all power belongs to the people—acting through their duly elected representatives’. Nevertheless , according to section 82 of the Constitution, ‘1) Her Majesty the Queen— (a) having been requested by the people of Papua New Guinea, through their Constituent Assembly, to become the Queen and Head of State of Papua New Guinea; and (b) having graciously consented so to become, is the Queen and Head of State of Papua New Guinea.' She is referred to in the Constitution as ‘Head of State’.

All powers of state are constitutionally derived from the people, (Preamble) through the Constituent Assembly (sec.82). These powers are entrusted to the Head of State, who is represented by the Governor General of Papua New Guinea — appointed by the Monarch upon the nomination of the National Parliament of Papua New Guinea the Monarch is informed of the Prime Minister's decision before the Governor General gives Royal Assent.

Duties

Most of the Queen's domestic duties are performed by the Governor General. The Governor-General represents the Queen on ceremonial occasions such as the opening of Parliament, the presentation of honours and military parades. Under the Constitution, he is given authority to act in some matters, for example in appointing and disciplining officers of the civil service, in proroguing Parliament. As in the other Commonwealth realms, however, the Monarch's role, and thereby the viceroy's role, is almost entirely symbolic and cultural, acting as a symbol of the legal authority under which all governments operate, and the powers that are constitutionally hers are exercised almost wholly upon the advice of the Cabinet, made up of Ministers of the Crown. It has been said since the death of Queen Anne in 1714, the last monarch to head the British cabinet, that the monarch "reigns" but does not "rule". In exceptional circumstances, however, the Monarch or vice-regal can act against such advice based upon his or her reserve powers.

There are also a few duties which must be specifically performed by, or bills that require assent by the Queen. These include: signing the appointment papers of Governors General, the confirmation of awards of honours, and approving any change in her title.

It is also possible that if the Governor General decided to go against the Prime Minister's or the government's advice, the Prime Minister could appeal directly to the Monarch, or even recommend that the Monarch dismiss the Governor General.

Succession

The Constitution provides that the Queen's heirs shall succeed her as Head of State. Succession to the throne is

Charles, Prince of Wales, the current heir to the throne of Papua New Guinea

by male primogeniture, and governed by the provisions of the Act of Settlement, as well as the English Bill of Rights.

This legislation lays out the rules that the Monarch cannot be a Roman Catholic, nor married to one, and must be in communion with the Church of England upon ascending the throne. As Papua New Guinea's laws governing succession are currently identical to those of the United Kingdom see Succession to the British Throne for more information.

The heir apparent is Elizabeth II's eldest son, Charles, Prince of Wales.

Legal role

All laws in Papua New Guinea are enacted with the sovereign's, or the vice-regal's signature. The granting of a signature to a bill is known as Royal Assent; it and proclamation are required for all acts of Parliament, usually granted or withheld by the Governor General. The Vice-Regals may reserve a bill for the Monarch's pleasure, that is to say, allow the Monarch to make a personal decision on the bill. The Monarch has the power to disallow a bill (within a time limit specified by the constitution).

The Sovereign is deemed the "fount of justice," and is responsible for rendering justice for all subjects. The Sovereign does not personally rule in judicial cases; instead, judicial functions are performed in his or her name. The common law holds that the Sovereign "can do no wrong"; the monarch cannot be prosecuted in his or her own courts for criminal offences. Civil lawsuits against the Crown in its public capacity (that is, lawsuits against the government) are permitted; however, lawsuits against the Monarch personally are not cognizable. The Sovereign, and by extension the Governor General, also exercises the "prerogative of mercy," and may pardon offences against the Crown. Pardons may be awarded before, during, or after a trial.

In Papua New Guinea the legal personality of the State is referred to as "Her Majesty the Queen in Right of Papua New Guinea." For example, if a lawsuit is filed against the government, the respondent is formally described as Her Majesty the Queen in Right of Papua New Guinea. The monarch as an individual takes no more role in such an affair than in any other business of government.

Saint Kitts and Nevis

From Wikipedia, the free encyclopedia

The **Federation of Saint Kitts and Nevis** (/seɪnt ˌkɪts ænd ˈniːvɪs/; also known as the **Federation of Saint Christopher and Nevis**),[2] located in the Leeward Islands, is a federal two-island nation in the West Indies. It is the smallest sovereign state in the Americas, in both area and population.

The capital city and headquarters of government for the federated state is Basseterre on the larger island of Saint Kitts. The smaller state of Nevis lies about 2 miles (3 km) southeast of Saint Kitts, across a shallow channel called "The Narrows".

Historically, the British dependency of Anguilla was also a part of this union, which was then known collectively as Saint Christopher-Nevis-Anguilla. Saint Kitts and Nevis are geographically part of the Leeward Islands. To the north-northwest lie the islands of Sint Eustatius, Saba, Saint Barthélemy, Saint-Martin/Sint Maarten and Anguilla. To the east and northeast are Antigua and Barbuda, and to the southeast is the small uninhabited island of Redonda, and the island of Montserrat, which currently has an active volcano (see Soufrière Hills).

Saint Kitts and Nevis were among the first islands in the Caribbean to be settled by Europeans. Saint Kitts was home to the first English and French colonies in the Caribbean, and thus has also been titled "The Mother Colony of the West Indies".

Etymology

Saint Kitts was named "Liamuiga" by the Kalinago Indians who inhabited the island. This name, roughly translated, in English means "fertile land," a testimony to the island's rich volcanic soil and high productivity .

Nevis's pre-Columbian name was "Oualie," which translates to "land of beautiful waters," presumably referring to the island's many freshwater springs and hot volcanic springs.

Christopher Columbus, upon sighting what we now call Nevis in 1498, gave that island the name *San Martin* (Saint Martin). However, the confusion of numerous, poorly charted small islands in the Leeward Island chain, meant that the name ended up being accidentally transferred to another island, the one which we now know as the French/Dutch island Saint-Martin/Sint Maarten.

The current name "Nevis" is derived from a Spanish name *Nuestra Señora de las Nieves* (The original name was the archaic Spanish *"Noestra Siñora delas Neves"*), by a process of abbreviation and anglicization. This Spanish name means Our Lady of the Snows. It is not known who chose this name for the island, but it is a reference to the story of a fourth-century Catholic miracle: a snowfall on the Esquiline Hill in Rome. Presumably the white clouds which usually wreathe the top of Nevis Peak reminded someone of the story of a miraculous snowfall in a hot climate. The island of Nevis, upon first British settlement was referred to as "Dulcina," a name meaning "sweet one." Its original Spanish name, "Nuestra Señora de las Nieves," was eventually kept however, though it was soon shortened to "Nevis."

There is some disagreement over the name which Columbus gave to St. Kitts. For many years it was thought that he named the island *San Cristobal*, after his patron saint Saint Christopher, the saint of travelling. However, new studies suggest that Columbus named the island *Sant Yago* (Saint James). The name "San Cristobal" was apparently given by Columbus to the island now known as Saba, 20 miles northwest. It seems that "San Cristobal" came to be applied to the island of St. Kitts only as the result of a mapping error. No matter the origin of the name, the island was well documented as "San Cristobal" by the 17th century. The first English colonists kept the English translation of this name, and dubbed it "St. Christopher's Island." In the 17th century Kit, or Kitt, was a common nickname for the name Christopher, and so the island was often informally referred to as "Saint Kitt's island," which was further shortened to "Saint Kitts."

Today, the Constitution refers to the nation as both "Saint Kitts and Nevis" and "Saint Christopher and Nevis," but the former is the one most commonly used.

History

Main article: History of Saint Kitts and Nevis

Battle of Saint Kitts, 1782, as described by an observer in a French engraving titled "Attaque de Brimstomhill".

Five thousand years prior to European arrival, the island was settled by Native Americans. The latest arrivals, the Kalinago peoples, arrived approximately three centuries before the Europeans. The islands were made known to the Europeans by a Spanish expedition under Columbus in 1493. In 1538, French Huguenots established a settlement on St. Kitts but the settlement was destroyed by the Spanish soon afterwards and the survivors were deported. In 1623, an English settlement was established, which was soon followed by French settlements, the island being divided by agreement. Dissimilar to many other islands, the local Kalinago people on the island allowed Europeans to colonise Saint Kitts. In 1626, the Anglo-French settlers massacred the Kalinago.

The island of Nevis was colonised in 1628 by English settlers from Saint Kitts. From there, Saint Kitts became the premier base for English and French expansion, as the islands of Antigua, Montserrat, Anguilla and Tortola for the English, and Martinique, the Guadeloupe archipelago and St. Barts for the French were colonised from it.

A Spanish expedition, sent to enforce Spanish claims, occupied both islands and deported the English and French settlers back to their respective countries in 1629. However, they soon returned and re-established their colonies. During the late 17th and early 18th century, the two nations battled for control over the island until it was ceded to the British in 1713.

Although small in size, and separated by only 2 miles (3 km) of water, the two islands were viewed and governed as different states until the late 19th century, when they were forcibly unified along with the island of Anguilla by the British. To this day relations are strained, with Nevis accusing Saint Kitts of neglecting its needs.

Saint Kitts and Nevis, along with Anguilla, became an associated state with full internal autonomy in 1967. Anguillians rebelled, and their island was allowed to separate from the others in 1971. St. Kitts and Nevis achieved independence in 1983. It is the newest sovereign nation in the Americas. In August 1998, a vote in Nevis on a referendum to separate from St. Kitts fell short of the two-thirds majority needed.[3] In late September 1998, Hurricane Georges caused approximately $458,000,000 in damages and property and limited GDP growth for the year and beyond. Georges was the worst hurricane to hit the region in the century.

Politics

Main article: Politics of Saint Kitts and Nevis

The country is an independent Commonwealth realm with Queen Elizabeth II as its head of state, represented in St. Kitts and Nevis by a Governor-General, who acts on the advice of the Prime Minister and the Cabinet. The prime minister is the leader of the majority party of the House, and the cabinet conducts affairs of state.

St. Kitts and Nevis has a unicameral legislature, known as the National Assembly. It is composed of fourteen members: eleven elected Representatives (three from the island of Nevis) and three Senators who are appointed by the Governor-General. Two of the senators are appointed on the advice of the Prime Minister, and one on the advice of the leader of the opposition. Unlike in other countries, senators do not constitute a separate Senate or

upper house of parliament, but sit in the National Assembly, alongside representatives. All members serve five-year terms. The Prime Minister and the Cabinet are responsible to the Parliament.

Saint Kitts and Nevis is a full and participating member of the Caribbean Community (CARICOM) and the Organisation of Eastern Caribbean States (OECS).

Administration

Main article: Parishes of Saint Kitts and Nevis

The federation of Saint Kitts and Nevis is divided into fourteen parishes: nine divisions on Saint Kitts and five on Nevis.

Parishes of Saint Kitts and Nevis.

Geography

Main article: Geography of Saint Kitts and Nevis

See also: List of cities in Saint Kitts and Nevis and List of volcanoes in Saint Kitts and Nevis

The country has two main islands, Saint Kitts and Nevis. The highest peak, at 1,156 metres, is Mount Liamuiga.

The islands are of volcanic origin, with large central peaks covered in tropical rainforest; the steeper slopes leading to these peaks are mostly uninhabited. The majority of the population on both islands lives closer to the sea where the terrain flattens out. There are numerous rivers descending from the mountains of both islands, which provide fresh water to the local population. St. Kitts also has one small lake.

Map of Saint Kitts and Nevis

Economy

Main article: Economy of Saint Kitts and Nevis

Saint Kitts and Nevis is a twin-island federation whose economy is characterised by its dominant tourism, agriculture and light manufacturing industries. Sugar was the primary export from the 1640s on, but rising production costs, low world market prices, and the government's efforts to reduce dependence on it have led to a growing diversification of the agricultural sector. In 2005, the government decided to close down the state-owned sugar company, which had experienced losses and was a significant contributor to the fiscal deficit. Former sugar plantations still dominate the St. Kitts landscape, however many of the cane fields are being burned to make room for land development, especially on the northern side of the island, in the parishes of Saint John Capisterre and Christchurch. The agricultural, tourism, export-oriented manufacturing, and offshore-banking sectors are being developed and are now taking larger roles in the country's economy. The growth of the tourism sector has become the main foreign exchange earner for Saint Kitts and Nevis. The country has also developed a successful apparel

assembly industry and one of the largest electronics assembly industries in the Caribbean.

St. Kitts is dependent on tourism to drive its economy. Tourism to the island has been expanding since 1978. In 2009 there were 587,479 arrivals to Saint Kitts compared to 379,473 in 2007. This growth represents an increase of just under 40% in a 2 year period. As tourism grows the demand for vacation property increases in conjunction.

St Kitts & Nevis also acquires foreign direct investment from their *citizenship by investment program*, outlined in their Citizenship Act of 1984. Interested parties can acquire Citizenship if they pass the government's background checks and make an investment into an approved real estate development.

Education

See also: List of schools in Saint Kitts and Nevis

There are eight publicly administered high/secondary level schools in St Kitts-Nevis, and several private secondary schools.

Public high/secondary schools

- Cayon High School (CHS)
- Basseterre High School (BHS)
- Washington Archibald High School (WAHS)
- Verchilds High School (VHS)
- Charles E. Mills Secondary School (CEMS)
- Charlestown Secondary School (CSS)
- Gingerland Secondary School (GSS)
- Saddlers Secondary School (SSS)

Private high/secondary schools

- St Theresa's Convent School and St. Joseph's School, which merged in 2010 to form the Immaculate Conception Catholic School (ICCS) – Kindergarten to Grade 11 (or 5th form) – the traditional Caribbean final secondary school grade.
- Lyn Jeffers Secondary School
- Lyn Jeffers Primary School
- Saint Christopher Preparatory school
- Montessori Academy

Demographics

Main article: Demographics of Saint Kitts and Nevis

African descent 75.1%, Afro-European 12.3%, mulatto 5.3%, East Indian and Afro-East Indian 5%, Other 3.3%, South Asian ethnic groups 3%[4]

As of July 2000, there were 42,696 inhabitants; their average life expectancy was 72.4 years. Emigration has historically been very high, and high levels of such in the country has resulted in a continuous decrease in the nation's population by about 25% since its peak of about 51,100 in 1960.[*citation needed*]

Emigration from St. Kitts & Nevis to the United States:[5]

- 1986–1990: 3,513
- 1991–1995: 2,730
- 1996–2000: 2,101
- 2001–2005: 1,756
- 2006–2010: 1,817

Emigration from St. Kitts & Nevis to the United Kingdom:[6]

- The 2001 Census showed 7,091 Saint Kitts and Nevis born people in the UK, with almost 20,000 of direct descent.

Culture

Main article: Culture of St. Kitts and Nevis

See also: Music of Saint Kitts and Nevis, J'ouvert, and Saint Kitts Creole

The Mongoose Play, a popular production of folk theatre and music

Saint Kitts and Nevis is known for a number of musical celebrations including Carnival (18 December to 3 January on Saint Kitts). The last week in June features the St Kitts Music Festival, while the week-long Culturama on Nevis lasts from the end of July into early August.[7]

Additional festivals on the island of Saint Kitts include Inner City Fest, in February in Molineaux; Green Valley Festival, usually around Whit Monday in village of Cayon; Easterama, around Easter in village of Sandy Point; Fest-Tab, in July or August in the village of Tabernacle; and La festival de Capisterre, around Independence Day in Saint Kitts and Nevis (19 September), in the Capisterre region. These celebrations typically feature parades, street dances and salsa, jazz, soca, calypso and steelpan music.

The 1985 film *Missing in Action 2: The Beginning* was filmed in Saint Kitts.[8]

Sports

See also: Cricket in the West Indies and Rugby union in Saint Kitts and Nevis

Cricket is common in Saint Kitts and Nevis. Top players are contributed to the West Indies cricket team. Runako Morton , was from Nevis. Saint Kitts and Nevis is the smallest nation on Earth to ever host a World Cup event[*citation needed*]; it was one of the host venues of the 2007 Cricket World Cup.

The St. Kitts and Nevis national football team, also known as the "Sugar Boyz", has experienced some international success in recent years, progressing to the semifinal round of qualification for the 2006 FIFA World Cup in the CONCACAF region. Led by Glence Glasgow they defeated U.S. Virgin Islands and Barbados before they were outmatched by Mexico, Saint Vincent and the Grenadines, and Trinidad and Tobago.

The St. Kitts and Nevis Billiard Federation – SKNBF, is the governing body for cue sports across the two islands. The SKNBF is a member of the Caribbean Billiards Union – CBU, with the SKNBF President Ste Williams holding the post of CBU Vice President.

Kim Collins is the country's foremost track and field athlete. He has won gold medals in the 100 metres at both the World Championships in Athletics and Commonwealth Games, and at the 2000 Sydney Olympics he was the country's first athlete to reach an Olympic final. He and three other athletes represented St. Kitts and Nevis at the 2008 Summer Olympics in Beijing. The four by one hundred metre relay team won a bronze medal in the 2011 world championships.

American writer and former figure skater and triathlete Kathryn Bertine was granted dual citizenship in an attempt to make the 2008 Summer Olympics representing St. Kitts and Nevis in women's cycling. Her story was chronicled online at ESPN.com as a part of its E-Ticket feature entitled "So You Wanna Be An Olympian?" She ultimately failed to earn the necessary points for Olympic qualification.[9]

St. Kitts and Nevis had two athletes ride in the time trial at the 2010 UCI Road World Championships. Athletes included Reginald Douglas and James Weekes.[10]

History of Saint Kitts and Nevis

From Wikipedia, the free encyclopedia

Saint Kitts and Nevis has one of the longest written histories in the Caribbean, both islands being amongst Europe's first colonies in the archipelago. Despite being only 2 miles apart and quite diminutive in size, Saint Kitts and Nevis were widely recognized as being separate entities with separate identities, until they were forcefully unified in the late 19th century

Pre-Columbian Period (2900 B.C. to 1493 A.D.)

The first settlers to arrive to the islands, almost 3,000 years B.C., were a pre-agricultural, pre-ceramic people, who migrated down the archipelago from Florida. These hunter-gatherers for years were mistakenly thought to be the Ciboney, an Amerindian race from Cuba. However, archaeological evidence has proven that they were in actuality a group which has been labelled simply "Archaic people". In a few hundred years, these Archaic people disappeared.

Around 1000 B.C., the ceramic-using and agriculturalist Saladoid people came to the islands, migrating up the archipelago from the banks of the Orinoco River in Venezuela. These people were then replaced in 800 A.D. by the Igneri people, members of the Arawak tribe. They were a peace-loving pro-religious people who migrated up the same path from the Orinoco. They heavily settled it, climaxing to an estimated population of 5,000.

Around 1300 A.D., the Kalinago, or Carib people arrived on the islands. The war-like Kalinago people quickly dispersed the Igneri, and forced them northwards to the Greater Antilles. They named Saint Kitts *Liamuiga* meaning "fertile island", and Nevis *Oualie* meaning "land of beautiful waters". The islands of Liamuiga and Oualie marked the furthest the Kalinago ever reached northwards, in terms of permanent residence, and probably would have succeeded in occupying the entire archipelago had the Europeans not come. Both islands, were major bases used by the Kalinago from the South to raid the Eastern Taino peoples of the Virgin Islands and Puerto Rico, and were critically important for the Kalinago trade routes to the North.

The First Europeans (1493 to 1623)

The first Europeans to see and name the islands were the Spanish under Christopher Columbus. He named Saint Kitts *Sant Jago* (Saint James). However, misinterpretations of maps by subsequent Spanish explorers led Saint Kitts to be named *San Cristobal* (Saint Christopher), a name originally applied to Saba 20 miles north. Nevis was

named "Nuestra Señora de las **Nieves**", or "Our Lady of the Snows", because the wreath of white clouds that usually covers the top of its volcanic peak reminded the Spaniards of the ancient Catholic miracle Our Lady of the Snows.

The first non-Spanish settlement attempt in the Caribbean occurred on Saint Kitts, when French Huguenot [1][2][3] refugees from the fishing town of Dieppe established a town on a harbour on the island's north coast, which they also named Dieppe, in 1538. However, only months after the founding, the settlement was raided by the Spanish and all the inhabitants were deported. The remains of one of the buildings is now the basement for the Main house in the Golden Lemon Hotel.

The next European encounter occurred in 1607 when Captain John Smith stopped at Nevis for five days before founding the colony of Virginia. Captain Smith documented the many hot springs in Nevis, whose waters had remarkable curative abilities against skin ailments and bad health.

Saint Kitts, 1623 to 1700

In the early 17th century, an English captain, Thomas Warner, set sail with a crew to found a colony on the Guiana coast. His colony proved a failure as his crew was ravaged by disease, unfamiliar weather conditions, and Carib raids. A friend of Warner's then suggested that he should instead try to colonise one of the islands in the Lesser Antilles because of their favourable conditions. In 1623 Warner abandoned his Guiana post and set sail North through the archipelago. After checking each island, Warner decided that Saint Kitts would prove to be the best-suited site for an English colony, because of its strategic central position ideal for expansion, friendly native population, fertile soil, abundant fresh water, and large salt deposits. He and his family landed on the island and made peace with the local Kalinago peoples, whose leader was Ouboutou Tegremante. Warner then left his family behind and returned to England to gather more men to officially establish a colony. In 1624, he returned and established the colony of Saint Christopher, the first English colony in the Caribbean. They established a port town at Old Road, downhill from Tegremante's capital village.

European propagandist illustration of the Kalingo people. Engraving in British cartographer John Hamilton Moore's 1778 book *Voyages and Travels* labeled "Natives of the Caribee, feasting on human flesh".

In 1625, a French captain, Pierre Belain d'Esnambuc, arrived on the island. He had left France hoping to establish an island colony after hearing about the success of the English on Saint Kitts, but his fleet was destroyed in a clash with the Spanish Armada, leaving him with only his flagship. Warner took pity on the French settlers and allowed them to settle on the island as well, thus making Saint Kitts the site of the first permanent French colony in the Caribbean as well. French settlers lodged themselves in the ruins of the town of Dieppe, which they rebuilt. Warner also willingly accepted the French in an attempt to out-populate the local Kalinago, of whom he was growing suspicious.

Warner's suspicions proved to be accurate. As the European population on Saint Kitts continued to increase, Tegremante grew suspicious of the foreigners. In 1626, after a secret meeting with Kalinago heads from neighbouring Waitikubuli (Dominica) and Oualie, it was decided that in a secret raid they would ambush the

European settlements. The secret plan was revealed to the Europeans however, by an Igneri woman named Barbe. Barbe had only recently been brought to St. Kitts as a slave-wife after a raid on an Arawak island. She despised the Kalinago and had fallen in love with Warner, and thus told him of the planned ambush. The Europeans acted by attacking the Kalinago first. At a site now called Bloody Point, which housed the island's main Kalinago settlement, over 2,000 Kalinago men were massacred, many of whom were from Waitikubuli, who had come overnight planning to attack the Europeans the day after. The many dead bodies were dumped in a river, on the site which housed the Kalinago place of worship. For weeks, blood flowed down the river like water, giving it its nickname, Bloody River. The remaining Kalinago Indians were deported to Waitikubuli.

After the Kalinago Genocide of 1626, the island was formally partitioned between the English and French, with the French gaining the ends, Capisterre in the North and Basseterre in the south, and the English gaining the centre. Both powers then proceeded to colonise neighbouring islands from their base. The English settled Nevis (1628), Antigua (1632), Montserrat (1632) and later Anguilla (1650) and Tortola (1672). The French colonised Martinique (1635), the Guadeloupe archipelago (1635), St. Martin (1648), and St. Barths (1648) and Saint Croix (1650).

Saint Kitts suffered heavily from a Spanish raid in 1629, from which all of the island's inhabitants fled as the Spaniards pillaged. They returned shortly after, however, and developed a series of fortifications along the Caribbean coast.

The island soon became a centre of production of tobacco. The planters grew prosperous. However when the colony of Virginia began to dominate world tobacco production and profits started declining, the island switched to producing sugar cane, starting in 1640. To provide the large amounts of labour needed for the industry, African slaves were imported in large numbers. The slaves had very harsh living conditions, and thousands perished working the fields.

Phillippe de Longvilliers de Poincy became governor of the French portion of the island in 1638 Owing greater allegiance to the Knights of St John, he soon refused to accept the authority of the King of France. He died on the island in 1660.

During the Second Anglo-Dutch War, the relationship between the French and English settlers soured, as their home countries warred. Warfare soon broke out on the island itself. The overwhelming French troops attacked the English settlements and gained control of the whole island from 1665-1667. The Treaty of Breda restored the English portion of the island to its owners.

In 1671, English Saint Kitts was joined with Nevis, Antigua and Montserrat to form the Leeward Caribee Island Government, headquartered in Antigua. The island still enjoyed full autonomy, however.

In 1689, during the War of the Grand Alliance, France re-occupied the entire island, and decimated the English farms. An English retaliation by General Codrington defeated the French forces and deported them to Martinique. The Treaty of Rijswijk in 1697 restored pre-war conditions. The war devastated St. Kitts's economy.

Nevis, 1628 to 1700

The history of Nevis was less tumultuous. The island was colonised by Anthony Hilton and 80 settlers from Saint Kitts in 1628. The island quickly grew very profitable from tobacco trading, and was able to secure prime investment from Britain. It was able to evade much of the conflict and devastation that nearby Saint Kitts suffered, and its riches were so great it was nicknamed "Queen of the Caribees." In 1629 during the Anglo-Spanish war of 1625, the Spanish occupied both islands and deported the English and French inhabitants back to their countries. However, the island was returned to England by the Treaty of Madrid in 1630. In 1640, Nevis,

like St. Kitts switched over to sugar cane production and its wealth continued to grow. By 1660, it was officially the most profitable colony in the English crown per capita. Its gross profits were great as well, as they surpassed that of all 13 American colonies combined, up until the 19th century, despite being thousands of times smaller. Nevis' riches however, made it a target for pirates and other European nations.

In 1690, a massive earthquake and tsunami destroyed the city of Jamestown, then the capital of Nevis. So much damage was done to it that the city was completely abandoned. It is reputed that the whole city sank into the sea, but since then, the land has moved over at least 100 yards to the west. That means that anything left of Jamestown would now be underground. The capital was moved south to the town of Charlestown, and the island's successful sugar trade quickly bounced back.

Saint Kitts and Nevis, 1700 to 1883

Saint Kitts was to face even greater devastation with the turn of the century. The French made one more major attack on English troops in 1705 during the War of the Spanish Succession, as the over 8,000 French troops on the island easily defeated the 1,000 English posts. The French held St. Kitts for 8 years, until the Treaty of Utrecht was signed (1713). The treaty ceded the entire island of St. Kitts to the British. Upon receiving full control in 1713, the British soon moved the island's capital to the town of Basseterre in 1727, and St. Kitts quickly took off as a leader in sugar production in the Caribbean.

Battle of Saint Kitts, 1782, as described by an observer in a French engraving titled "Attaque de Brimstomhill".

Whilst conditions on St. Kitts improved, Nevis was seeing a decline. The years of monocrop cultivation, as well as heavy amounts of soil erosion due to the high slope grade on the island, caused its sugar production to continuously decrease. A heavy French raid in 1706 further complicated the situation, and damaged the island's agriculture extensively. It proved to never fully recover.

To make up for sugar losses in Nevis, the island opened its first hotel in 1778. The first such establishment in the Western Hemisphere, the Bath Hotel was constructed over the site of one of the island's famous hot springs. The island thus became the first place in the Americas to officially practice tourism. Nevis's popularity as a destination grew, and it continued to be in the favour of the British elite.

By 1776, Saint Kitts had become the richest British colony in the Caribbean, per capita. It retained this status until the late 19th century, despite a myriad of attacks by the French throughout the 18th century, including the battle of St. Kitts in 1782. The consolidation of British rule was recognized finally under the Treaty of Versailles in 1783. In 1806, the Leeward Islands Caribee government was split into two groups, with Antigua, Barbuda, Redonda and Montserrat in one group, and St. Kitts, Nevis, Anguilla and the British Virgin Islands in the other. The islands in the new grouping however, were able to keep their great degrees of autonomy. The grouping then split entirely in 1816.

Slavery was abolished in the British Empire in 1834. Profits from sugar began sinking even further, and this was made even worse with new countries, namely Brazil, Cuba and India beginning to dominate the market. Nevis' economy, as well as that of most Caribbean islands, suffered extensively from this. St. Kitts escaped the plight of its neighbours because of its good soils, and massive projects undertaken to reduce soil erosion.

In 1833, the Leeward Islands were reunited as a single administrative entity, and was renamed the **Federal Colony of the Leeward Islands** in 1871. In 1883, St. Kitts, Nevis and Anguilla were linked under one

"presidency," based in St. Kitts. Both Nevis and Anguilla disliked the union, as they had previously had their separate presidencies. An uneasy relationship followed.

Alexander Hamilton, the first United States Secretary of the Treasury, was born in Nevis; he spent his childhood there and on St. Croix, then belonging to Denmark, and now one of the United States Virgin Islands.

Saint Kitts and Nevis 1883 to present

Sugar production continued to dominate the lives of the islanders. The dominance by estate owners of the island's only and extremely limited natural resource, the land, and the single-minded application of that resource to one industry precluded the development of a stable peasant class. Instead, the system produced a large class of wage labourers generally resentful of foreign influence. The nature of the sugar industry itself—the production of a nonstaple and essentially nonnutritive commodity for a widely fluctuating world market—only served to deepen this hostility and to motivate Kittitian labourers to seek greater control over their working lives and their political situation. The collapse of sugar prices brought on by the Great Depression precipitated the birth of the organized labour movement in St. Kitts and Nevis. The Workers League, organized by Thomas Manchester of Sandy Point in 1932, tapped the popular frustration that fueled the labor riots of 1935-36. Rechristened the St. Kitts and Nevis Trades and Labour Union in 1940 and under the new leadership of Robert Llewellyn Bradshaw, the union established a political arm, the St. Kitts and Nevis Labour Party, which put Bradshaw in the Legislative Council in 1946. The Labour Party would go on to dominate political life in the twin-island state for more than thirty years.

The islands remained in the Leeward Islands Federation until they joined the failed West Indies Federation from 1958 to 1962, in which Saint Christopher-Nevis-Anguilla was a separate state. Robert Bradshaw was the Minister of Finance for the short-lived country.

In 1967, the islands became an Associated State of Britain.

In the same year Anguilla had a major secession movement supported by St. Kitts political opposition party, The People's Action Movement (PAM). Both forces, working together, invaded the island from an Anguillian base in an attempted coup d'état. Anguilla was able to successfully break away from the union in 1971.

During Bradshaw's long tenure, his government slowly moved into a statist approach to economic development. All sugar lands were bought by the government, as well as the central sugar factory. Opposition to Bradshaw's rule began to build, especially by the families and supporters of former estate owners, who founded the People's Action Movement party in 1964, after frustration over a failed demonstration against a raise in electricity rates. Opposition was especially great in Nevis, who felt that their island was being neglected and unfairly deprived of revenue, investment and services by its larger neighbour. Bradshaw mainly ignored Nevis' complaints, but Nevisian disenchantment with the Labour Party proved a key factor in the party's eventual fall from power.

In 1978 the labour party's longtime leader, Robert Bradshaw, died of Prostate cancer. He was succeeded by his former deputy, Paul Southwell, but Southwell himself passed a few months later, in 1979. The party then fell into a crisis of leadership. The position of premier was then handed over to Lee Moore, who, despite being recognized regionally as a legal scholar, seemed unable to lead (he once told a PAM heckler, on Church Street in front of Government Headquarters [House of Parliament] that he will "root like a pig in mud" in the House of Parliament).

Taking advantage of the labour party's confusion, the PAM party was very successful in the 1980 elections, winning 3 seats on St. Kitts, compared to the labour party's 4. The Nevis Reformation Party, under the leadership of Simeon Daniel, won 2 of the 3 seats on Nevis. PAM and NRP then formed a coalition government, naming

Kennedy Simmonds, a medical doctor and one of the founders of the PAM, premier (Simmonds had won Bradshaw's former seat in a 1979 by-election). The change in government reduced the demand for Nevis' secession. In 1983, the federation was granted independence from Britain, with a constitution that granted Nevis a large degree of autonomy as well as the guaranteed right of secession. To take advantage of this landmark, early elections were called in 1984, in which the NRP captured all 3 seats on Nevis, and the PAM party capturing 6 seats on St. Kitts, compared to the labour party's 2, despite overall the labour party winning the nationwide popular vote. The new coalition government now had a strong 9 to 2 mandate in parliament.

Economic improvement for St. Kitts followed, with the PAM party shifting focus from the sugar industry to tourism. However, much of the island's poorest people, mainly the sugar workers, were neglected. Opposition to PAM began to build from this, as well as on accusations of corruption. In the 1993 elections, both PAM and labour took 4 seats each, whilst on Nevis, a new party, the Concerned Citizens Movement, took 2 seats, beating the NRP's 1. The stalemate on St. Kitts proved unresolvable when the CCM in Nevis refused to form a coalition with PAM. Rioting soon followed on the islands, which was finally resolved in a special set of elections held in 1995, in which the labour party overwhelmingly defeated the PAM party, winning 7 seats compared to PAM's 1. Dr. Denzil Douglas became the new prime minister of the federation, and retains the post to this day.

On September 21, 1998, Hurricane Georges severely damaged the islands leaving nearly $500 millions damages and property. Georges was the worst hurricane to hit the regional in the last century.

In 2005, St. Kitts saw the closure of its sugar industry, after 365 years in the monoculture. This was stated as due to the industry's huge losses, as well as market threats by the E.U., who plan to cut sugar prices by large amounts in the near future

Monarchy of Saint Kitts and Nevis

From Wikipedia, the free encyclopedia

The **monarchy of Saint Kitts and Nevis** (the **Kittitian and Nevisian monarchy**) is a system of government in which a hereditary monarch is the sovereign of Saint Kitts and Nevis. The present monarch of Saint Kitts and Nevis is Queen Elizabeth II.[2] Saint Kitts and Nevis share the Sovereign with a number of Commonwealth realms.[2][1] The Queen's constitutional roles are mostly delegated to the Governor-General of Saint Kitts and Nevis. Royal succession is governed by the English Act of Settlement of 1701, which is part of constitutional law. [3] [4]

Queen of Saint Kitts and Nevis

MONARCHY

International and domestic role

One of the most complicated features of the Saint Kitts and Nevis Monarchy is that it is a shared monarchy.

54 states are members of the Commonwealth of Nations. Sixteen of these countries are specifically Commonwealth realms who recognise, individually, the same person as their Monarch and Head of State;Saint Kitts and Nevis is one of these.[5] Despite sharing the same person as their respective national monarch, each of the Commonwealth realms — including Saint Kitts and Nevis — is sovereign and independent of the others.

Development of shared monarchy

The *Balfour Declaration* of 1926 provided the dominions the right to be considered equal to Britain, rather than subordinate; an agreement that had the result of, in theory, a shared Crown that operates independently in each realm rather than a unitary British Crown under which all the dominions were secondary. The Monarchy thus ceased to be an exclusively British institution, although it has often been called "British" since this time (in both legal and common language) for reasons historical, legal, and of convenience. The *Royal and Parliamentary Titles Act, 1927* was the first indication of this shift in law, further elaborated in the *Statute of Westminster, 1931*.

Under the *Statute of Westminster*, Saint Kitts and Nevis has a common monarchy with Britain and the other Commonwealth realms, and though laws governing the line of succession to the Saint Kitts and Nevis throne lie within the control of the Saint Kitts and Nevis Parliament, Saint Kitts and Nevis cannot change the rules of succession without the unanimous consent of the other realms, unless explicitly leaving the shared monarchy relationship by means of a constitutional amendment. This situation applies symmetrically in all the other realms, including the UK.

On all matters of the Saint Kitts and Nevis State, the Monarch is advised solely by Saint Kitts and Nevis ministers.

Title

In Saint Kitts and Nevis, the Queen's official title is: *Elizabeth the Second, by the Grace of God, Queen of Saint Christopher and Nevis and of Her other Realms and Territories, Head of the Commonwealth.*

This style communicates Saint Kitts and Nevis's status as an independent monarchy, highlighting the Monarch's role specifically as Queen of Saint Kitts and Nevis, as well as the shared aspect of the Crown throughout the realms. Typically, the Sovereign is styled "Queen of Saint Kitts and Nevis," and is addressed as such when in Saint Kitts and Nevis, or performing duties on behalf of Saint Kitts and Nevis abroad.

Constitutional role

The Saint Kitts and Nevis constitution is made up of a variety of statutes and conventions that are either British or Saint Kitts and Nevis in origin, which gives Saint Kitts and Nevis a similar parliamentary system of government as the other Commonwealth realms.

All powers of state are constitutionally reposed in the Monarch, who is represented by the Governor General of Saint Kitts and Nevis — appointed by the Monarch upon the advice of the Prime Minister of Saint Kitts and Nevis the Monarch is informed of the Prime Minister's decision before the Governor General gives Royal Assent.

Duties

Most of the Queen's domestic duties are performed by the Governor General. The Governor-General represents the Queen on ceremonial occasions such as the opening of Parliament, the presentation of honours and military parades. Under the Constitution, he is given authority to act in some matters, for example in appointing and disciplining officers of the civil service, in proroguing Parliament. As in the other Commonwealth realms, however, the Monarch's role, and thereby the vice-regent's role, is almost entirely symbolic and cultural, acting as a symbol of the legal authority under which all governments operate, and the powers that are constitutionally hers are exercised almost wholly upon the advice of the Cabinet, made up of Ministers of the Crown. It has been said since the death of Queen Anne in 1714, the last monarch to head the British cabinet, that the monarch "reigns" but does not "rule". In exceptional circumstances, however, the Monarch or vice-regal can act against such advice based upon his or her reserve powers.

There are also a few duties which must be specifically performed by, or bills that require assent by the Queen. These include: signing the appointment papers of Governors General, the confirmation of awards of honours, and approving any change in her title.

It is also possible that if the Governor General decided to go against the Prime Minister's or the government's advice, the Prime Minister could appeal directly to the Monarch, or even recommend that the Monarch dismiss

the Governor General.

Succession

Charles, Prince of Wales, the current heir to the throne of Saint Kitts and Nevis

Succession to the throne is by male-preference primogeniture, and governed by the provisions of the Act of Settlement, as well as the English Bill of Rights. These documents, though originally passed by the Parliament of England, are now part of the Saint Kitts and Nevis constitutional law, under control of the Saint Kitts and Nevis parliament only.

This legislation lays out the rules that the Monarch cannot be a Roman Catholic, nor married to one, and must be in communion with the Church of England upon ascending the throne. As Saint Kitts and Nevis's laws governing succession are currently identical to those of the United Kingdom (by the *Statute of Westminster*) see Succession to the British Throne for more information.

The heir apparent is Elizabeth II's eldest son, Charles, who has no official title outside of the UK, but is accorded his UK title, Prince of Wales, as a courtesy title.

Legal role

All laws in Saint Kitts and Nevis are enacted with the sovereign's, or the vice-regal's signature. The granting of a signature to a bill is known as Royal Assent; it and proclamation are required for all acts of Parliament, usually granted or withheld by the Governor General. The Vice-Regals may reserve a bill for the Monarch's pleasure, that is to say, allow the Monarch to make a personal decision on the bill. The Monarch has the power to disallow a bill (within a time limit specified by the constitution).

The Sovereign is deemed the "fount of justice," and is responsible for rendering justice for all subjects. The Sovereign does not personally rule in judicial cases; instead, judicial functions are performed in his or her name. The common law holds that the Sovereign "can do no wrong"; the monarch cannot be prosecuted in his or her own courts for criminal offences. Civil lawsuits against the Crown in its public capacity (that is, lawsuits against the government) are permitted; however, lawsuits against the Monarch personally are not cognizable. The Sovereign, and by extension the Governor General, also exercises the "prerogative of mercy," and may pardon offences against the Crown. Pardons may be awarded before, during, or after a trial.

In Saint Kitts and Nevis the legal personality of the State is referred to as "Her Majesty the Queen in Right of Saint Kitts and Nevis." For example, if a lawsuit is filed against the government, the respondent is formally described as Her Majesty the Queen in Right of Saint Kitts and Nevis. The monarch as an individual takes no more role in such an affair than in any other business of government.

Saint Lucia

From Wikipedia, the free encyclopedia

Saint Lucia /seɪnt ˈluːʃə/ (French: *Sainte-Lucie*) is an island country in the eastern Caribbean Sea on the boundary with the Atlantic Ocean.[4] Part of the Lesser Antilles, it is located north/northeast of the island of Saint Vincent, northwest of Barbados and south of Martinique. It covers a land area of 617 km^2 (238.23 sq mi) and has a population of 174,000 (2010). Its capital is Castries. The island nation has been the home of two Nobel laureates, Arthur Lewis and Derek Walcott. It is the nation with the second most such honorees per capita after the Faroe Islands.

One of the Windward Islands, it was named after Saint Lucy of Syracuse by the French, the first European colonizers. They signed a treaty with the native Carib peoples in 1660. England took control of the island from 1663 to 1667; in ensuing years, it was at war with France 14 times and rule of the island changed frequently (Seven times French and British each). In 1814, the British took definitive control of the island. Because it switched so often between British and French control, Saint Lucia was also known as the "Helen of the West Indies".

Saint Lucia has a legal system based on British common law. The judiciary is independent and conducts generally fair public trials. The financial sector has weathered the global financial crisis, but the recession has hurt tourism.

Representative government came about in 1924 (with universal suffrage from 1953). From 1958 to 1962 the island was a member of the Federation of the West Indies. Finally, on February 22, 1979, Saint Lucia became an independent state of the Commonwealth of Nations.[4] The island nation celebrates this every year with a public holiday. It is also a member of la Francophonie.[5]

History

Main article: History of Saint Lucia

Europeans first landed on the island in either 1492 or 1502 during Spain's early exploration of the Caribbean.

In 1643 a French expedition under the direction of Jacques du Parquet the Governor of Martinique established a permanent settlement on the island under the Govenor De Rousselan, who signed a treaty with the local Caribs in 1660. Like the English and Dutch, the French began to develop the island for the cultivation of sugar cane on extensive plantations. After the Seven Years' War between Great Britain and the France-Spanish coalition was brought to an end by the treaty of Paris (10 February 1763) in which the signatories agreed to an exchange of colonial territories. When the British acquired the island trying to use the Caribs as labourers, they imported enslaved Africans as workers. Many of the Caribs died because of lack of immunity to Eurasian diseases, such as smallpox and measles, and as a result of being overworked and maltreated by the Europeans.

Caribbean conditions were hard, and many slaves died as well. The British continued to import slaves until they abolished the trade. By that time, people of ethnic African and Carib descent greatly outnumbered those of ethnic European background.

Thereafter Saint Lucia was much contested by the two European powers until the British secured it in 1814. It was part of the British Windward Islands colony.

It joined the West Indies Federation (1958–62) when the colony was dissolved. In 1967, Saint Lucia became one of the six members of the West Indies Associated States, with internal self-government. In 1979 it gained full independence under Sir John Compton. Compton, of the conservative United Workers party (UWP), was again prime minister from 1982 to 1996, when he was succeeded by Vaughn Lewis.

Kenny Anthony of the Labour Party was prime minister from 1997 to 2006, when the UWP, again led by Compton, won control of parliament. In May 2007, after Compton suffered a series of ministrokes, Finance and External Affairs Minister Stephenson King became acting prime minister. He became prime minister after Compton died in September 2007.

Politics

See also: Foreign relations of Saint Lucia

Saint Lucia is a Commonwealth realm; Queen Elizabeth II is the Head of State of Saint Lucia, represented on the island by a Governor-General. Executive power, however, is in the hands of the Prime Minister and his cabinet.[4] The prime minister is normally the head of the party commanding the support of the majority of the members of the House of Assembly, which has 17 seats.[6] The other chamber of Parliament, the Senate, has 11 appointed members. Saint Lucia is a two-party parliamentary democracy. Five political parties participated in the November 28, 2011 General Election. Dr Kenny Davis Anthony of the St Lucia Labour Party won eleven of the seventeen seats. Saint Lucia is a full and participating member of the Caribbean Community (CARICOM), Organisation of Eastern Caribbean States (OECS) and La Francophonie.

Quarters

Main article: Quarters of Saint Lucia

Saint Lucia has 11 quarters, or parishes of the island, under the French colonial government which was continued by the British: No. 1 Anse-la-Raye Quarter 31.0 km², No. 2 Castries Quarter 79.5 km², No. 3 Choiseul Quarter 31.3 km², No. 4 and 6 Gros Islet Quarter 101.5 km², No. 5 Dennery Quarter 69.7 km², No. 7 Laborie Quarter 37.8 km², No. 9 Micoud Quarter 77.7 km², No. 10 Soufrière Quarter 50.5 km², No. 11 Vieux Fort Quarter 43.8 km², No. ??? between 1 and 10 Canaries Quarter 15.9 km², No. ??? between 1 and 5 Forest Reserve Area Quarter 78.3 km²

Saint Lucia has 17 electoral segments for the 17 seats in the House of Assembly (each with title "Parliamentary Representative"):[6]

Quarters of Saint Lucia

Geography

Main article: Geography of Saint Lucia

The volcanic island of Saint Lucia is more mountainous than many other Caribbean islands, with the highest point being Mount Gimie, at 950 metres (3,120 ft) above sea level. Two other mountains, the Pitons, form the island's most famous landmark. They are located between Soufrière and Choiseul on the western side of the island. Saint Lucia is also one of the few islands in the world that boasts a drive-in volcano.

The capital city of Saint Lucia is Castries (Population 9,400), where 5.4 % of the population lives. Major towns include Gros Islet, Soufrière and Vieux Fort. The local climate is tropical, moderated by northeast trade winds,

View of Soufrière

with a dry season from December 1 to May 31, and a wet season from June 1 to November 30.

Economy

Main article: Economy of Saint Lucia

An educated workforce and improvements in roads, communications, water supply, sewerage, and port facilities have attracted foreign investment in tourism and in petroleum storage and transshipment. However, with the U.S., Canada, and Europe in recession, tourism declined by double digits in early 2009. The recent change in the European Union import preference regime and the increased competition from Latin American bananas have made economic diversification increasingly important in Saint Lucia. The island nation has been able to attract foreign business and investment, especially in its offshore banking and tourism industries, which is the island's main source of revenue. The manufacturing sector is the most diverse in the Eastern Caribbean area, and the government is trying to revitalize the banana industry. Despite negative growth in 2011, economic fundamentals remain solid, and GDP growth should recover in the future.

Saint Lucia

Inflation has been relatively low, averaging 5.5 percent between 2006 and 2008. Saint Lucia's currency is the Eastern Caribbean Dollar (EC$), a regional currency shared among members of the Eastern Caribbean Currency Union (ECU). The Eastern Caribbean Central Bank (ECCL) issues the EC$, manages monetary policy, and regulates and supervises commercial banking activities in member countries. In 2003, the government began a comprehensive restructuring of the economy, including elimination of price controls and privatization of the state banana company.[7]

Demographics

Main article: Demographics of Saint Lucia

Castries is the capital city of Saint Lucia

The population of 174,000(in 2010) is evenly divided between urban and rural areas, although the capital, Castries, contains more than one-third of the population. Saint Lucia's population is predominantly of African and mixed African-European descent, with a small Indo-Caribbean minority (3%). Members of other or

unspecified ethnicity groups, account for about 2% of the population.

The official language is English;[1][2] however Saint Lucian Creole French (Kwéyòl), which is a French-based Creole colloquially referred to as "Patwah" (Patois), is spoken by 95% of the population.[*citation needed*] This Antillean Creole is used in literature and music, and is gaining official acknowledgement.[8] It is derived chiefly from French and West African languages, with some vocabulary from Carib and other sources. Saint Lucia is a member of *La Francophonie*.[9]

Saint Lucia boasts the highest ratio of Nobel laureates produced with respect to the total population of any sovereign country in the world. Two winners have come from Saint Lucia: Sir Arthur Lewis won the Nobel Prize in Economics in 1979, and Derek Walcott received the Nobel Prize in Literature in 1992. Both were born on the same day in 1915 and 1930, respectively: January 23.

About 70% of the population is Roman Catholic, influenced from the days of French Catholic rule and evangelization. Most of the rest belong to other Christian denominations, including Seventh-day Adventisms (7%), Pentecostalism (6%), Anglicanism (2%), Evangelical Christianity (2%), and the Baptist faith; in addition, about 2% of the population adheres to the Rastafari movement.[10]

Despite a high emigration rate, the population is growing rapidly, about 1.2% per year. Migration from Saint Lucia is primarily to Anglophone countries, with the United Kingdom having almost 10,000 Saint Lucian-born citizens, and over 30,000 of Saint Lucian heritage. The second most popular destination for Saint Lucian expatriates is the United States, where combined (foreign and national born Saint Lucians) almost 14,000 reside. Canada is home to a few thousand Saint Lucians. Most other countries in the world have fewer than 50 citizens of Saint Lucian origin (the exceptions being Spain and France with 124 and 117 Saint Lucian expats respectively).[11]

Health

Public expenditure on health was at 3.3 % of the GDP in 2004, whereas private expenditure was at 1.8 %.[12] Health expenditure was at US$ 302 (PPP) per capita in 2004.[12] Infant mortality was at 12 per 100,000 births in 2005.[12] There is one public hospital and one private hospital in St Lucia. There was a second, but it was burnt down in a fire in the early hours of September 9, 2009.[13]

Culture

Main article: Culture of Saint Lucia

See also: Derek Walcott and Music of Saint Lucia

The culture of Saint Lucia has been influenced by African, East Indian, French and English heritage. One of the secondary languages is an Creole, a form of French patois.[1][2]

Saint Lucia Jazz Festival in Castries

Festivals

Saint Lucian cultural festivals include *La Rose* and *La Marguerite*, the first's representing the Rosicrucian order, and the second's representing Freemasonry.[14] This can be seen on a mural painted by Dunstan St

Omer, depicting the holy trinity of Osiris, Horus and Isis.

The biggest festival of the year is the Saint Lucian Jazz Festival. Held in early May at multiple venues throughout the island, it draws visitors and musicians from around the world.

Traditionally in common with other Caribbean countries, Saint Lucia held a carnival before Lent. In 1999, the government moved Carnival to mid-July to avoid competing with the much larger Trinidad and Tobago carnival. It wanted to attract more overseas visitors.

In May 2009, Saint Lucians commemorated the 150th Anniversary of West Indian Heritage on the island.

Music and dance

A popular folk dance is the *Quadrille*.

Together with Caribbean music genres such as Calypso, Soca, Dancehall, Reggae, Compas, Zouk and Salsa, Saint Lucia has a strong indigenous folk music tradition. Each May since 1991, Saint Lucia has hosted an internationally renowned Jazz Festival.

The dancing in Saint Lucia comes from the Caribbean and is quite active.

There Is a very rich culture in Saint Lucia descendance from our Fore fathers.

Cricket is a popular sport in the country.Seen here is the Beausejour Cricket Stadium which hosts international cricket matches for the West Indies

Education

The Education Act provides for free and compulsory education in Saint Lucia from the ages of 5 to 15.[12][15] Public spending on education was at 5.8 % among the 2002–2005 GDP.[12] Saint Lucia has one university; University of the West Indies Open Campus,[16] and a few medical schools – International American University − College of Medicine, Destiny University School of Medicine and Health Sciences, and the oldest of which is Spartan Health Sciences University. The leading secondary school for boys is St Mary's College which taught both Sir Arthur Lewis and Derek Walcott and for girls St. Joseph's Convent, alma mater of Dame Pearlette Louisy, their Governor General.

Tourism

Main article: Tourism in Saint Lucia

Tourism is vital to Saint Lucia's economy. Its economic importance is expected to continue to increase as the market for bananas becomes more competitive. Tourism tends to be more substantial during the dry season (January to April). Saint Lucia tends to be popular due to its tropical weather and scenery and its numerous beaches and resorts.

Other tourist attractions include a drive-in volcano, Sulphur Springs (in Soufrière), the Botanical Gardens, the Majestic twin Peaks "The Pitons", A world heritage site, the rain forests, and Pigeon Island National Park, which is home to Fort Rodney, an old British military base.

The majority of tourists visit Saint Lucia as part of a cruise. Most of their time tends to be spent in Castries, although Soufriere, Marigot Bay and Gros Islet are popular locations to visit.

History of Saint Lucia

From Wikipedia, the free encyclopedia

Saint Lucia's first known inhabitants were Arawaks, believed to have come from northern South America around 200-400 CE. Numerous archaeological sites on the island have produced specimens of the Arawaks' well-developed pottery. There is evidence to suggest that these first inhibitors called the island **Iouanalao**, which meant 'Land of the Iguanas', due to the island's high number of iguanas.

Caribs gradually replaced Arawaks during the period from 800 to 1000 CE[*citation needed*] They called the island *Hewanarau*, and later *Hewanorra*. This is the origin of the name of the Hewanorra International Airport in Vieux Fort. The Caribs had a complex society, with hereditary kings and shamans. Their war canoes could hold more than 100 men and were fast enough to catch a sailing ship. They were later feared by the invading Europeans for their ferocity in battle.

European invasion

Europeans first landed on the island in either 1492 or 1502 during Spain's early exploration of the Caribbean. The Dutch, English, and French all tried to establish trading outposts on St. Lucia in the 17th century but faced opposition from Caribs whose land they were occupying.

Early European Contacts

The French pirate Francois El Clerc (also known as *Jambe de Bois*, due to his wooden leg) frequented Saint Lucia in the 1550s. It was not until years later, around 1600, that the first European camp was started by the Dutch, at what is now Vieux Fort. In 1605, an English vessel called the *Olive Branch* was blown off-course on its way to Guyana, and the 67 colonists started a settlement on Saint Lucia. After five weeks, only 19 survived, due to disease and conflict with the Caribs, so they fled the island. The French officially claimed the island in 1635 but it was the English who started the next European settlement in 1639, which was wiped out by the Caribs

French Colony

In 1643 a French expedition under the direction of Jacques du Parquet the Governor of Martinique established a

permanent settlement on the island under the Govenor De Rousselan who took a Carib wife and remained in post until his death in 1654.

In 1664, Thomas Warner (son of the governor of St Kitts) claimed Saint Lucia for England. He brought 1,000 men to defend it from the French, but after two years, only 89 survived, mostly due to disease. In 1666 the French administration returned and resumed control of the island. For years after this, the island was officially traded back and forth between the English and the French in various treaties, as a bargaining chip in negotiations although the French settlements remained and the island was a de facto French Colony well into the eighteenth century.

18th century

Political control from 1674-1814[1]

Date	Country
1674	French crown colony
1723	Neutral territory (agreed by Britain and France)
1743	French colony (Sainte Lucie)
1748	Neutral territory (de jure agreed by Britain and France)
1756	French colony (Sainte Lucie)

1763	Restored to France
1778	British occupation
1783	Restored to France
1796	British occupation
1802	Restored to France
1803	British occupation
1814	British possession confirmed

The English, with their headquarters in Barbados, and the French, centered on Martinique, found St Lucia attractive after the sugar industry developed. The French assumed ownership again of Saint Lucia by the Treaty of Paris in 1763 and introduced the sugar cane industry in 1765. Colonists who came over were mostly indentured white servants serving a small percentage of wealthy merchants or nobles.

The Battle of the Saints, in which Admiral Rodney, who sailed out of his port in St. Lucia, defeated the French Admiral De Grasse, took place between the French and British navies during the American War of Independence on 12 April 1782. The British victory ensure their naval dominance of the Caribbean henceforth.

A 1758 map of Saint Lucia

Near the end of the century, the French Revolution occurred. A revolutionary tribunal was sent to Saint Lucia, headed by captain La Crosse. However, prior to this, the slaves had simply walked off their jobs in 1790-1 to work for themselves. Bringing the ideas of the revolution to Saint Lucia, La Crosse set up a guillotine used to execute Royalists. In 1794, the French governor of the island declared that all slaves were free.

December 15, 1778. The 12 French ships of Estaing (left) attacking seven English ships of Admiral Barrington (right). The English fleet was not destroyed because d'Estaing prefers to land its troops on the island.

A short time later, the British invaded in response to the concerns of the wealthy plantation owners. After years

of fighting, they restored slavery. Castries was burned in 1796 as part of that battle between the British and the slaves and French republicans.

19th century

Britain eventually triumphed in 1803, and acquired Saint Lucia permanently in 1814. The British abolished the African slave trade in 1807, three years after former slaves in Haiti had gained their independence as the first black republic in the Caribbean. It was not until 1834 that they abolished the institution of slavery. Even after abolition, all former slaves had to serve a four-year "apprenticeship" which forced them to work for free for their former masters for at least three-quarters of the work week. They achieved full freedom in 1838.

Also in 1838, Saint Lucia was incorporated into the British Windward Islands administration, headquartered in Barbados. This lasted until 1885, when the capital was moved to Grenada.

20th century to 21st century

Increasing self-government has marked St Lucia's 20th century history. A 1924 constitution gave the island its first form of representative government, with a minority of elected members in the previously all-nominated legislative council. Universal adult suffrage was introduced in 1951, and elected members became a majority of the council. Ministerial government was introduced in 1956, and in 1958 St. Lucia joined the short-lived West Indies Federation, a semi-autonomous dependency of the United Kingdom. When the federation collapsed in 1962, following Jamaica's withdrawal, a smaller federation was briefly attempted. After the second failure, the United Kingdom and the six windward and leeward islands—Grenada, St. Vincent, Dominica, Antigua, St. Kitts and Nevis and Anguilla, and St. Lucia—developed a novel form of cooperation called associated statehood.

As an associated state of the United Kingdom from 1967 to 1979, St. Lucia had full responsibility for internal self-government but left its external affairs and defense responsibilities to the United Kingdom. This interim arrangement ended on February 22, 1979, when St. Lucia achieved full independence. St. Lucia continues to recognize Queen Elizabeth II as titular head of state and is an active member of the Commonwealth of Nations. The island continues to cooperate with its neighbors through the Caribbean community and common market (CARICOM), the East Caribbean Common Market (ECCM), and the Organisation of Eastern Caribbean States (OECS).

Monarchy of Saint Lucia

From Wikipedia, the free encyclopedia

The **monarchy of Saint Lucia** (the **Saint Lucian monarchy**) is a system of government in which a hereditary, constitutional monarch is the sovereign of Saint Lucia. The present monarch of Saint Lucia is Queen Elizabeth II. Saint Lucia share the Sovereign with a number of Commonwealth realms. The Queen's constitutional roles are mostly delegated to the Governor-General of Saint Lucia.

Royal succession is governed by the English Act of Settlement of 1701, which is part of constitutional law.

The present queen Elizabeth II has reigned over the separate Saint Lucian monarchy since 22 February 1979. She along with her husband and other members of the Royal Family undertake various official, ceremonial and representational duties.

International and domestic role

Fifty-four states are members of the Commonwealth of Nations. Sixteen of these countries are specifically Commonwealth realms who recognise, individually, the same person as their Monarch and Head of State;Saint Lucia is one of these. Despite sharing the same person as their respective national monarch, each of the Commonwealth realms — including Saint Lucia — is sovereign and independent of the others.

As a constitutional monarch Queen Elizabeth II entirely on the advice of her Saint Lucian ministers. The monarch is briefed by regular communication for her Saint Lucian government. Most of the Queen's daily constitutional roles are mostly delegated to the Governor-General of Saint Lucia.[1]

[2] The governor general is appointed entirely upon the advice of her Saint Lucian government. The monarch maintains direct contact with the governor general. The present Governor-General is Her Excellency Dame Pearlette Louisy GCMG.[3]

Development of the monarchy

Control of St Lucia was disputed between the British and French from 1659 until 1814 when it was ceded to the British.[4]

The *Balfour Declaration* of 1926 provided the dominions the right to be considered equal to Britain, rather than subordinate; an agreement that had the result of, in theory, a shared Crown that operates independently in each realm rather than a unitary British Crown under which all the dominions were secondary. The Monarchy thus ceased to be an exclusively British institution, although it has often been called "British" since this time (in both legal and common language) for reasons historical, legal, and of convenience. The *Royal and Parliamentary Titles Act, 1927* was the first indication of this shift in law, further elaborated in the *Statute of Westminster, 1931*.

Under the *Statute of Westminster*, Saint Lucia has a common monarchy with Britain and the other Commonwealth realms, and though laws governing the line of succession to the Saint Lucian throne lie within the control of the Saint Lucian Parliament, Saint Lucia cannot change the rules of succession without the unanimous consent of the other realms, unless explicitly leaving the shared monarchy relationship by means of a constitutional amendment. This situation applies symmetrically in all the other realms, including the UK.

The island became self-governing in 1967 and achieved independence in 1979.[5]

Title

In Saint Lucia, the Queen's official title is: *Elizabeth the Second, by the Grace of God, Queen of Saint Lucia and of Her other Realms and Territories, Head of the Commonwealth*.[6]

This style communicates Saint Lucia's status as an independent monarchy, highlighting the Monarch's role specifically as Queen of Saint Lucia, as well as the shared aspect of the Crown throughout the realms. Typically, the Sovereign is styled "Queen of Saint Lucia," and is addressed as such when in Saint Lucia, or performing duties on behalf of Saint Lucia abroad.

Duties

Most of the Queen's domestic duties are performed by the Governor General. The Governor-General represents the Queen on ceremonial occasions such as the opening of Parliament, the presentation of honours and military parades. Under the Constitution, he is given authority to act in some matters, for example in appointing and disciplining officers of the civil service, in proroguing Parliament. As in the other Commonwealth realms, however, the Monarch's role, and thereby the vice-regent's role, is almost entirely symbolic and cultural, acting as a symbol of the legal authority under which all governments operate, and the powers that are constitutionally hers are exercised almost wholly upon the advice of the Cabinet, made up of Ministers of the Crown. It has been said since the death of Queen Anne in 1714, the last monarch to head the British cabinet, that the monarch "reigns" but does not "rule". In exceptional circumstances, however, the Monarch or vice-regal can act against such advice based upon his or her reserve powers.

There are also a few duties which must be specifically performed by, or bills that require assent by the Queen. These include: signing the appointment papers of Governors General, the confirmation of awards of honours, and

approving any change in her title.

It is also possible that if the Governor General decided to go against the Prime Minister's or the government's advice, the Prime Minister could appeal directly to the Monarch, or even recommend that the Monarch dismiss the Governor General.

Succession

Succession to the throne is by male-preference primogeniture, and governed by the provisions of the Act of Settlement, as well as the English Bill of Rights. These documents, though originally passed by the Parliament of England, are now part of the Saint Lucian constitutional law, under control of the Saint Lucian parliament only.

This legislation lays out the rules that the Monarch cannot be a Roman Catholic, nor married to one, and must be in communion with the Church of England upon ascending the throne. As Saint Lucia's laws governing succession are currently identical to those of the United Kingdom (by the *Statute of Westminster*) see Succession to the British Throne for more information.

The heir apparent is Elizabeth II's eldest son, Charles, who has no official title outside of the UK, but is accorded his UK title, Prince of Wales, as a courtesy title.

Legal role

All laws in Saint Lucia are enacted with the sovereign's, or the vice-regal's signature. The granting of a signature to a bill is known as Royal Assent; it and proclamation are required for all acts of Parliament, usually granted or withheld by the Governor General. The Vice-Regals may reserve a bill for the Monarch's pleasure, that is to say, allow the Monarch to make a personal decision on the bill. The Monarch has the power to disallow a bill (within a time limit specified by the constitution).

The Sovereign is deemed the "fount of justice," and is responsible for rendering justice for all subjects. The Sovereign does not personally rule in judicial cases; instead, judicial functions are performed in his or her name. The common law holds that the Sovereign "can do no wrong"; the monarch cannot be prosecuted in his or her own courts for criminal offences. Civil lawsuits against the Crown in its public capacity (that is, lawsuits against the government) are permitted; however, lawsuits against the Monarch personally are not cognizable. The Sovereign, and by extension the Governor General, also exercises the "prerogative of mercy," and may pardon offences against the Crown. Pardons may be awarded before, during, or after a trial.

In Saint Lucia the legal personality of the State is referred to as "Her Majesty the Queen in Right of Saint Lucia." For example, if a lawsuit is filed against the government, the respondent is formally described as Her Majesty the Queen in Right of Saint Lucia. The monarch as an individual takes no more role in such an affair than in any other business of government.

Royal presence

Elizabeth II first visited Saint Lucia as part of her Caribbean tour of 1966. During her visit she opened the new Winban Research Centre. The Queen and the Duke of Edinburgh travelled on HMY Britannia. They were treated to traditional Saint Lucian Dances and a firework display. In 1985 The Queen and Duke returned to Saint Lucia: The Queen laid the foundation stone for the new Red Cross headquarters and visited residential homes for the elderly and schools.

Other members have also visited Saint Lucia: In 1979 Princess Alexandra, The Honourable Lady Ogilvy

represented the royal family during the official independence celebrations. The Prince of Wales visited in 1989 to commemorate the tenth anniversary of these celebrations.[7]

Saint Vincent and the Grenadines

From Wikipedia, the free encyclopedia

Saint Vincent and the Grenadines (/seɪnt ˈvɪnsənt æn ðə ɡrɛnəˈdiːnz/) is an island country in the Lesser Antilles chain, namely in the southern portion of the Windward Islands, which lie at the southern end of the eastern border of the Caribbean Sea where the latter meets the Atlantic Ocean.

Its 389-square-kilometre (150 sq mi) territory consists of the main island of Saint Vincent and the northern two-thirds of the Grenadines, which are a chain of smaller islands stretching south from Saint Vincent Island to Grenada.

To the north of Saint Vincent lies Saint Lucia, to the east Barbados. Saint Vincent and the Grenadines is densely populated (over 300 inhabitants/km^2) with its 120,000 people.

Its capital is Kingstown, also its main port. The country has a French and British colonial history and is now part of the Organisation of Eastern Caribbean States, CARICOM, the Commonwealth of Nations and the Bolivarian Alliance for the Americas.

Grenadines

The island now known as Saint Vincent was originally named *Hairouna (http://en.wiktionary.org/wiki/hairouna)* ("The Land of the Blessed") by the native Caribs. The Caribs aggressively prevented European settlement on Saint Vincent until 1719. Prior to this, formerly enslaved Africans, who had either been shipwrecked or who had escaped from Barbados, Saint Lucia and Grenada and sought refuge in mainland Saint Vincent, intermarried with the Caribs and became known as Garifuna or *Black Caribs*.

Beginning in 1719, French settlers from Martinique gained control of the island and began cultivating coffee, tobacco, indigo, cotton, and sugar on plantations. These plantations were worked by enslaved Africans. In 1763, France ceded control of Saint Vincent to Britain. However, France re-invaded the island in 1779. The French regained control after landing at Calliaqua, near Fort Duvernette. The British then finally regained Saint Vincent under the Treaties of Versailles (1783). These treaties were ancillary treaties to the Treaty of Paris (1783), through which Great Britain officially recognised the end of the American Revolution.

Between 1783 and 1796, there was conflict between the British and the Black Caribs, who were led by defiant Paramount Chief Joseph Chatoyer. In 1796 British General Sir Ralph Abercromby put an end to the open conflict by crushing a revolt which had been fomented by the French radical Victor Hugues. More than 5,000 Black Caribs were eventually deported to Roatán, an island off the coast of Honduras.

Slavery was abolished in Saint Vincent 1834. An apprenticeship period followed which ended in 1838. After its end, labour shortages on the plantations resulted, and this was initially addressed by the immigration of indentured servants. In the late 1840s many Portuguese immigrants arrived from Madeira and between 1861 and 1888 shiploads of East Indian labourers arrived. Conditions remained harsh for both former slaves and immigrant agricultural workers, as depressed world sugar prices kept the economy stagnant until the turn of the century.

From 1763 until its independence in 1979, Saint Vincent and the Grenadines passed through various stages of colonial status under the British. A representative assembly was authorised in 1776, Crown Colony government was installed in 1877, a legislative council was created in 1925, and universal adult suffrage was granted in 1951.

During the period of its control of Saint Vincent and the Grenadines, the British made several unsuccessful attempts to affiliate the island with other Windward Islands. This would have simplified Britain's control over the region through a unified administration. In the 1960s, several regional islands under British control, including Saint Vincent, also made an independent attempt to unify. The unification was to be called the West Indies Federation and was driven by a desire to gain freedom from British rule. The attempt collapsed in 1962.

Saint Vincent was granted "associate statehood" status by Britain on October 27, 1969. This gave Saint Vincent complete control over its internal affairs but was short of full independence. On October 27, 1979, following a referendum under Milton Cato, Saint Vincent and the Grenadines became the last of the Windward Islands to gain independence. Independence came on the 10th anniversary of Saint Vincent's associate statehood status.

Natural disasters have featured in the country's history. In 1902, La Soufrière volcano erupted, killing 2,000 people. Much farmland was damaged, and the economy deteriorated. In April 1979, La Soufrière erupted again. Although no one was killed, thousands were evacuated, and again there was extensive agricultural damage. In 1980 and 1987, hurricanes compromised many banana and coconut plantations. Hurricane seasons were also very active in 1998 and 1999, with Hurricane Lenny in 1999 causing extensive damage to the west coast of the island.

On November 25, 2009, voters were asked to approve a new constitution in a referendum. The new constitution proposed to make the country a republic and replacing Queen Elizabeth II as head of state with a non-executive President. A two-thirds majority was required, but it was defeated by 29,019 votes (55.64 per cent) to 22,493 (43.13 per cent).[2]

Politics

Main article: Politics of Saint Vincent and the Grenadines

Saint Vincent and the Grenadines is a parliamentary democracy and constitutional monarchy with Queen Elizabeth II as head of state, bearing the title Queen of Saint Vincent and the Grenadines. The Queen does not reside in the islands and is represented in the country by the Governor General of Saint Vincent and the Grenadines, currently Sir Frederick Ballantyne.

The office of Governor General has mostly ceremonial functions including the opening of the islands' House of Assembly and the appointment of various government officials. Control of the government rests with the elected Prime Minister and his or her cabinet. The current Prime Minister is Ralph Gonsalves. Parliamentary opposition made of the largest minority stakeholder in general elections, headed by the leader of the opposition. The current opposition leader is Arnhim Eustace.

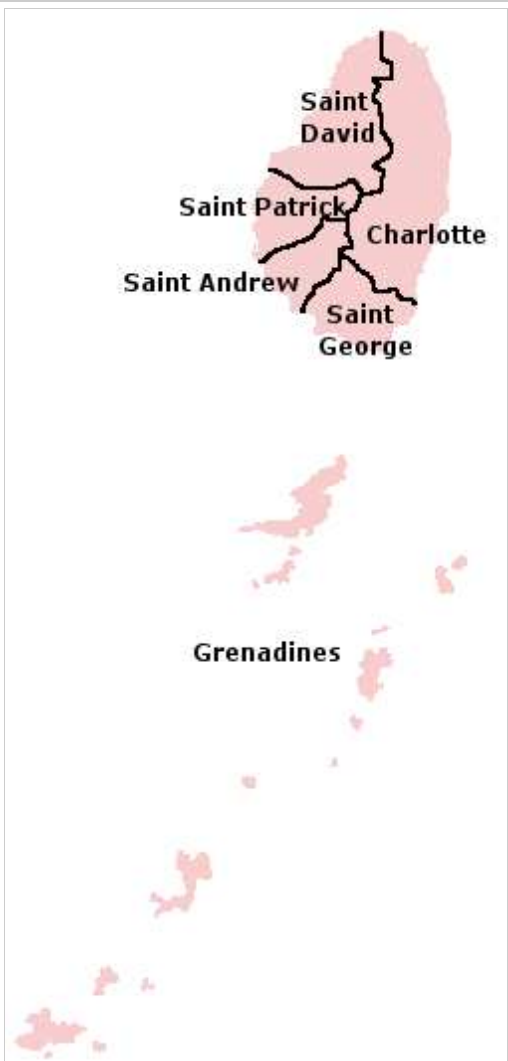
The country has no formal armed forces, although the Royal Saint Vincent and the Grenadines Police Force includes a Special Service Unit as well as a militia that has a supporting role on the island.

Geography

Main article: Geography of Saint Vincent and the Grenadines

Kingstown

Saint Vincent and the Grenadines lies to the west of Barbados south of Saint Lucia and north of Grenada in the Windward Islands of the Lesser Antilles, an island arc of the Caribbean Sea. The islands of Saint Vincent and the Grenadines include the main island of Saint Vincent (344 km^2/133 sq mi) and the northern two-thirds of the Grenadines (45 km^2/17 sq mi), which are a chain of small islands stretching south from Saint Vincent to Grenada.



The island of Saint Vincent is volcanic and includes little level ground. The leeward side of the island is very rocky and steep, while the windward side has more sandy beaches and bays.[*citation needed*] The country's highest peak is La Soufrière volcano at 1,234 m (4,049 ft).

Administrative divisions

Main article: Parishes of Saint Vincent and the Grenadines

Administratively, Saint Vincent and the Grenadines is divided into six parishes. Five parishes are on Saint Vincent, while the sixth is made up of the Grenadine islands. Kingstown is located in the Parish of Saint George and is the capital city and central administrative centre of the country.

Parish	Area (km²)	Population (2000)	Capital	Density(km²)
Charlotte Parish	149	38,000	Georgetown	255.03/km²
Grenadines Parish	43	9,200	Port Elizabeth	213.95/km²
Saint Andrew Parish	29	6,700	Layou	231.03/km²
Saint David Parish	80	6,700	Chateaubelair	83.75/km²
Saint George Parish	52	52,400	Kingstown	1007.69/km²
Saint Patrick Parish	37	5,800	Barrouallie	156.76/km²

Economy

Main article: Economy of Saint Vincent and the Grenadines

Mustique in the Grenadines.

Agriculture, dominated by banana production, is the most important sector of this lower-middle-income economy. The services sector, based mostly on a growing tourist industry, is also important. The government has been relatively unsuccessful at introducing new industries, and the unemployment rate remains high at 19.8% in the 1991 census[3] to 15% in 2001.[4] The continuing dependence on a single crop represents the biggest obstacle to the islands' development as tropical storms wiped out substantial portions of crops in many years.

The tourism sector has considerable potential for development. The recent filming of the Pirates of the Caribbean movies on the island has helped to expose the country to more potential visitors and investors. Recent growth has been stimulated by strong activity in the construction sector and an improvement in tourism.[5]

An international airport is currently under construction. There is a small manufacturing sector and a small offshore financial sector whose particularly restrictive secrecy laws have caused some international concern. [*citation needed*] In addition, the natives of Bequia are permitted to hunt up to four Humpback Whales per year under IWC subsistence quotas.

Demographics

Main article: Demographics of Saint Vincent and the Grenadines

The population as established in July 2009 was 104,574. The ethnic composition was 66% African descent, 20% of mixed descent, 6% East Indian, 4% Caucasian (mainly Portuguese), 2% Carib Amerindian and 2% others according to the CIA Handbook *de dato* October 9, 2008. Most Vincentians are the descendants of African people brought to the island to work on plantations. There are other ethnic groups such as Portuguese (from Madeira) and East Indians, both brought in to work on the plantations after the abolishing of slavery by the British, and Syrians[*citation needed*] living on the island. There is also a growing Chinese population.[*citation needed*]

Port Elizabeth, Bequia.

Languages

Main article: Vincentian Creole

While the official language is English, most Vincentians speak a creole language known as Vincentian Creole.[6][7] Standard English is the language used in education, government and other formal domains, while Vincentian Creole, commonly referred to as 'dialect', is used in informal situations such at home and among friends. The various ethnic groups may also still use their native languages such as Bhojpuri.[*citation needed*]

Sport

See also: Cricket in the West Indies

Saint Vincent and the Grenadines has its own soccer league, the NLA Premier League, and also a national (association) football team. A notable Vincentian footballer is Ezra Hendrickson, former national team captain who played at several Major League Soccer clubs in the United States and is now an assistant coach with the Seattle Sounders FC.[8]

Saint Vincent and the Grenadines also has its own national rugby union team which is ranked 73rd in the world.

Music

Main article: Music of Saint Vincent and the Grenadines

Music popular in Saint Vincent and the Grenadine includes big drum, calypso, soca, steelpan and reggae. String band music, quadrille and bele music and traditional storytelling are also popular.

The national anthem of Saint Vincent and the Grenadines is "Saint Vincent Land so Beautiful", adopted upon independence in 1979.

Communications

In 2010, Saint Vincent and the Grenadines had 21,700 telephone land lines. Its land telephone system is fully automatic and covers the entire island and all of the inhabited Grenadine islands.[4] In 2002, there were 10,000 mobile phones.[9] By 2010, this number had increased to 131,800.[4] Mobile phone service is available in most areas of Saint Vincent as well as the Grenadines.

The country has only ten FM radio stations. It has one television broadcast station ZBG-TV (SVGTV)[10] and one cable television provider.

The country has two ISPs, Digicel and LIME, that provide cellular telephone and internet service.[11]

History of Saint Vincent and the Grenadines

From Wikipedia, the free encyclopedia

Kingstown, St. Vincent, 1890s

Before the arrival of Europeans and Africans in the 16th century, various Amerindian groups passed through or settled on St. Vincent and the Grenadines, including the Ciboney, Arawak, and Carib peoples. These groups likely originated in the Orinoco Valley of South America and migrated north through Trinidad and the Lesser Antilles. By the time Christopher Columbus passed near St. Vincent on his fourth voyage in 1502, the Caribs occupied the island after displacing the Arawaks a few centuries earlier.

Columbus and the Spanish conquistadors largely ignored St. Vincent and the smaller Grenadine islands nearby, but focused instead on the pursuit of gold and silver in Central and South America. They did embark on slaving expeditions in and around St. Vincent following royal sanction in 1511, driving the Carib inhabitants to the rugged interior, but the Spanish made no attempt to settle the island.[1] Carib Indians aggressively prevented European settlement on St. Vincent until the 18th century. African slaves, whether shipwrecked or escaped from St. Lucia or Grenada and seeking refuge in St. Vincent, intermarried with the Caribs and became known as "black Caribs". Now those of mixed African-Carib ancestry are known as *Garifuna*.

While the English were the first to lay claim to St. Vincent in 1627, the French would be the first European settlers on the island when they established their first colony at Barrouallie on the Leeward side of St. Vincent in 1719.[2] The French settlers cultivated coffee, tobacco, indigo, corn, and sugar on plantations worked by African slaves. St. Vincent was ceded to Britain by the Treaty of Paris (1763), restored to French rule in 1779 and regained by the British under the Treaty of Versailles (1783).

Conflict between the British and the black Caribs continued until 1796, when General Abercrombie crushed a revolt fomented by the French radical Victor Hugues. The British deported more than 5,000 black Caribs to Roatán, an island off the coast of Honduras.

From 1763 until independence, St. Vincent passed through various stages of colonial status under the British. A representative assembly was authorized in 1776. Decades after the success of the Haitian Revolution, the British abolished slavery in 1834. The resulting labour shortages on the plantations attracted Portuguese immigrants in the 1840s and East Indians in the 1860s as laborers. Conditions remained harsh for both former slaves and immigrant agricultural workers, as depressed world sugar prices kept the economy stagnant until the turn of the century.

A Crown Colony government was installed in 1877, a Legislative Council created in 1925, and universal adult suffrage granted in 1951.

During this period, the British made several unsuccessful attempts to affiliate St. Vincent with other Windward Islands in order to govern the region through a unified administration. The most notable was the West Indies Federation, which collapsed in 1962.

St. Vincent was granted associate statehood status on October 27, 1969, giving it complete control over its internal affairs. Following a referendum in 1979, St. Vincent and the Grenadines became the last of the Windward Islands to gain independence. It celebrates independence on 27 October 1979.

Natural disasters have plagued the country throughout the 20th century. In 1902, Soufrière volcano erupted, killing 2,000 people. Much farmland was damaged, and the economy deteriorated. In April 1979, La Soufriere erupted again. Although no one was killed, thousands had to be evacuated, and there was extensive agricultural damage. The island also suffers from hurricanes. On September 11, 1898, six hours of a terrible hurricane devastated Barrouallie, which was almost completely destroyed. More recently, in 1980 and 1987, hurricanes devastated banana and coconut plantations; 1998 and 1999 also saw very active Hurricane seasons, with hurricane Lenny in 1999 causing extensive damage to the west coast of the island.

Monarchy of Saint Vincent and the Grenadines

From Wikipedia, the free encyclopedia

The **monarchy of Saint Vincent and the Grenadines** is the constitutional system of government in which a hereditary monarch is the sovereign and head of state of Saint Vincent and the Grenadines,[2] forming the core of the country's Westminster-style parliamentary democracy. The Crown is thus is the foundation of the executive, legislative, and judicial branches of the Vincentian government. While Royal Assent and the royal sign-manual are required to enact laws, letters patent, and orders in council, the authority for these acts stems from the Vincentian populace, and, within the conventional stipulations of constitutional monarchy, the sovereign's direct participation in any of these areas of governance is limited,[2] with most related powers entrusted for exercise by the elected and appointed parliamentarians, the ministers of the Crown generally drawn from amongst them, and the judges and Justices of the Peace.[3][4]

Queen of Saint Vincent and the Grenadines

MONARCHY

Coat of arms of Saint Vincent and the Grenadines

Incumbent:
Elizabeth II

Style:	Her Majesty
Heir apparent:	Charles, Prince of Wales
First monarch:	Elizabeth II
Formation:	27 October 1979[1]

The Vincentian monarchy has its roots in the French and British crowns, from which it has evolved over numerous centuries to become a distinctly Vincentian institution represented by unique symbols.[2][4] The Vincentian monarch – since 27 October 1979, Elizabeth II – is today shared equally with fifteen other countries within the Commonwealth of Nations, all being independent and the monarchy of each legally distinct. For Saint Vincent and the Grenadines, the monarch is officially titled *Queen of Vincent and the Grenadines*, and she, her consort, and other members of the Royal Family undertake various public and private functions across the country. However, the Queen is the only member of the Royal Family with any constitutional role. While several powers are the sovereign's alone, because she lives predominantly in the United Kingdom, most of the royal constitutional and ceremonial duties in Saint Vincent and the Grenadines are carried out by the Queen's representative, the Governor-General.[4][5]

International and domestic aspects

Further information: Commonwealth realm > Relationship of the realms

Saint Vincent and the Grenadines shares the same monarch with each of 15 monarchies in the 54-member Commonwealth of Nations, a grouping known informally as the Commonwealth realms. Upon its independence from the United Kingdom, Saint Vincent and the Grenadines entered into this arrangement that had earlier emerged following the passage of the Statute of Westminster in 1931, since when the pan-national Crown has had both a shared and separate character,[6] and the sovereign's role as monarch of Saint Vincent and the Grenadines has been distinct to his or her position as monarch of the United Kingdom.[2] The monarchy thus ceased to be an exclusively British institution, though it is still often misnomered as "British" in both legal and common language, for reasons historical, political, and of convenience; this conflicts with not only the Royal Household's recognition and promotion of a distinctly Vincentian Crown,[2] but also the sovereign's distinct Vincentian title, *Elizabeth the Second, by the Grace of God, Queen of Saint Vincent and the Grenadines and of Her other Realms and Territories, Head of the Commonwealth, Defender of the Faith*.

Effective with the Constitution of Saint Vincent and the Grenadines, no British or other realm government can advise the sovereign on any matters pertinent to Saint Vincent and the Grenadines, meaning that on all matters of the Vincentian state, the monarch is advised solely by Vincentian Ministers of the Crown.[2] As the monarch lives predominantly outside of Saint Vincent and the Grenadines, one of the most important of these state duties carried out on the advice of the Vincentian Prime Minister is the appointment of the viceroy, who is titled as *Governor-General*, and performs most of the Queen's domestic duties in her absence.

Succession

Succession is by male-preference primogeniture governed by both the Act of Settlement, 1701, and Bill of Rights, 1689, legislation that limits the succession to the natural (i.e. non-adopted), legitimate descendants of Sophia, Electress of Hanover, and stipulates that the monarch cannot be a Roman Catholic, nor married to one, and must be in communion with the Church of England upon ascending the throne. Though, via adopting the Statute of Westminster, these constitutional laws as they apply to Saint Vincent and the Grenadines now lie within the full control of the Vincentian parliament, Saint Vincent and the Grenadines also agreed not to change its rules of succession without the unanimous consent of the other realms, unless explicitly leaving the shared monarchy relationship; a situation that applies symmetrically in all the other realms, including the United Kingdom, and has been likened to a treaty amongst these countries.[7] Thus, Saint Vincent and the Grenadines' line of succession remains identical to that of the United Kingdom; however, the rules for succession are not fixed, but may be changed within Saint Vincent and the Grenadines by a constitutional amendment by the Vincentian parliament.

Upon a *demise of the Crown* (the death or abdication of a sovereign), the late sovereign's heir immediately and automatically succeeds, without any need for confirmation or further ceremony – hence arises the phrase "The King is dead. Long live the King!." Following an appropriate period of mourning, the monarch is also crowned in

Charles, Prince of Wales, is the heir apparent to the Vincentian throne.

the United Kingdom in an ancient ritual, but one not necessary for a sovereign to reign.[n 1] After an individual ascends the throne, he or she typically continues to reign until death, being unable to unilaterally abdicate per the tenets of constitutional monarchy.

Personification of the state

As the living embodiment of the Crown, the sovereign is regarded as the personification, or legal personality, of the Vincentian state,[n 2] with the state therefore referred to as *Her Majesty in right of Her Government in Saint Vincent and the Grenadines*,[9] *The Queen (Saint Vincent and the Grenadines)*, or simply *The Queen*.[10] As such, the monarch is the owner of all state property – for instance, prisons in Saint Vincent and the Grenadines are called *Her Majesty's Prisons*[11] – though, this is all in his or her position as sovereign, and not as an individual; all such property is held by the Crown in perpetuity and cannot be sold by the sovereign without the proper advice and consent of his or her ministers.

Constitutional role

Saint Vincent and the Grenadines' constitution is made up of a variety of statutes and conventions that are either British or Vincentian in origin, and together give Saint Vincent and the Grenadines a parliamentary system of government wherein the role of the Queen is both legal and practical. The Crown is regarded as a corporation, with the sovereign, vested as she is with all powers of state,[12] as the centre of a construct in which the power of the whole is shared by multiple institutions of government acting under the sovereign's authority.[13] Though her authority stems from the people, all Vincentians live under the authority of the monarch. The vast powers that belong to the Crown are collectively known as the Royal Prerogative, the exercise of which does not require parliamentary approval, though it is not unlimited; for example, the monarch does not have the prerogative to impose and collect new taxes without the authorization of an Act of Parliament. Also, per convention, the sovereign reigns according to Vincentian law; this is illustrated in the sovereign's Coronation Oath, wherein he or she promises to govern her peoples "according to their respective laws and customs."[14]

The Crown also sits at the pinnacle of the Royal Saint Vincent Police Force. All new recruits into the force must swear allegiance to the monarch as the embodiment of the state and its authority, the oath including the words: "I, [name], do swear that I will well and truly serve Our Sovereign Lady the Queen as a member of the Police Force in Saint Vincent and the Grenadines without favour or affection, malice or ill will; and that I will cause Her Majesty's Peace to be preserved..."[15]

Executive

The government of Saint Vincent and the Grenadines is the Queen's government,[9] and is defined by the constitution as the Queen acting on the advice of her Cabinet[16] – a committee charged with advising the Crown on the exercise of the Royal Prerogative. One of the main duties of the Crown is to appoint a prime minister to thereafter head this group;[17] the Queen is informed by her viceroy of the swearing-in and resignation of prime ministers and other members of the ministry, remains fully briefed through regular communications from her Vincentian ministers, and holds audience with them whenever possible.[4]

In the construct of constitutional monarchy and responsible government, the ministerial advice tendered is typically binding, meaning the monarch *reigns* but does not *rule*; this has been the case in Saint Vincent and the

Grenadines since the Treaty of Paris ended the reign of the territory's last absolute monarch, King Louis XV. It is important to note, however, that the Royal Prerogative belongs to the Crown and not to any of the ministers,[13] and the royal and viceroyal figures may unilaterally use these powers in exceptional constitutional crisis situations.[13] There are also a few duties which must be specifically performed by, or bills that require assent by, the Queen; these include applying the royal sign-manual and Great Seal to the appointment papers of governors general, the creation of Vincentian honours, and the approval of any change in her Vincentian title.

Ralph Gonsalves, the Queen's chief minister in Saint Vincent and the Grenadines.

Parliament

The sovereign is one of the two components of parliament,[18] and all laws are the monarch's laws, as illustrated in the enacting formula for Vincentian acts of parliament, which reads: "BE IT ENACTED by the Queen's Most Excellent Majesty by and with the advice and consent of the House of Assembly of Saint Vincent and the Grenadines and by the authority of the same as follows."[19] The monarch and viceroy do not, however, participate in the legislative process, save for the granting of Royal Assent, which is necessary for a bill to be enacted as law.[20]

Courts

The sovereign is responsible for rendering justice for all her subjects, and is thus traditionally deemed the *fount of justice*. However, she does not personally rule in judicial cases; instead the judicial functions of the Royal Prerogative are performed in trust and in the Queen's name by Officers of Her Majesty's Court. Extending from this is the notion in common law that the sovereign "can do no wrong"; the monarch cannot be prosecuted in her own courts for criminal offences. Civil lawsuits against the Crown in its public capacity (that is, lawsuits against the Queen-in-Council) are permitted; however, lawsuits against the monarch personally are not cognizable. The monarch, and by extension the Governor General, also grants immunity from prosecution, exercises the *Royal Prerogative of Mercy*, and may pardon offences against the Crown, either before, during, or after a trial.

As the judges and courts are the sovereign's judges and courts, and as all law in Saint Vincent and the Grenadines derives from the Crown, the monarch stands to give legitimacy to courts of justice, and is the source of their judicial authority. An image of the Queen and/or the Arms of Her Majesty in Right of Saint Vincent and the Grenadines is always displayed in Vincentian federal courtrooms.

Cultural role

Further information: List of Commonwealth visits made by Queen Elizabeth II

Members of the Royal Family undertake official royal tours. Usually important milestones, anniversaries, or celebrations of Vincentian culture will warrant the presence of the monarch – such as when Queen Elizabeth II and her husband, Prince Philip, Duke of Edinburgh, toured the country to mark its anniversary of independence[21] – while other royals will be asked to participate in lesser occasions. Apart from Saint Vincent and the Grenadines, the Queen and other members of the Royal Family regularly perform public duties in the other fifteen nations of the Commonwealth in which the Queen is head of state.

Debate

There had been little debate on the monarchy of Saint Vincent and the Grenadines before Prime Minister Ralph Gonsalves initiated in 2002, the year of Queen Elizabeth's Golden Jubilee, a republican movement against what he deemed to be "the remnants of colonialism," eventuating in a constitutional referendum in 2009, just days before the Queen was in the Caribbean for a Commonwealth Heads of Government Meeting. Despite heavy campaigning by the Ministers of the Crown, the referendum was defeated with only 43.13% of voters supporting the idea, well short of the required two-thirds threshold.[22]

Solomon Islands

From Wikipedia, the free encyclopedia

Solomon Islands (/ˈsɒləmən ˈaɪləndz/ (listen)[3]) is a sovereign state in Oceania, east of Papua New Guinea, consisting of nearly one thousand islands. It covers a land mass of 28,400 square kilometres (11,000 sq mi). The capital, Honiara, is located on the island of Guadalcanal. The nation of the Solomon Islands is a member of the Commonwealth of Nations.

The Solomon Islands are believed to have been inhabited by Melanesian people for many thousands of years. Spanish navigator Álvaro de Mendaña was the first European to arrive in Solomon islands in 1568 and named them *Islas Salomón*. The United Kingdom established a protectorate over the Solomon Islands in 1893. In the Second World War there was fierce fighting between the Americans and the Japanese in the Solomon Islands campaign of 1942–45, including the Battle of Guadalcanal.

Self-government was achieved in 1976 and independence two years later. The Solomon Islands is a constitutional monarchy with the Queen of the Solomon Islands, at present Elizabeth II, as the head of state. Gordon Lilo Darcy is the eleventh and current Prime Minister of the Solomon Islands.

History

Main article: History of Solomon Islands

Solomon Island warriors with spears in ornamented war canoe in 1895

It is believed that Papuan-speaking settlers began to arrive around 30,000 BC. Austronesian speakers arrived c. 4000 BC also bringing cultural elements such as the outrigger canoe. It is between 1200 and 800 BC that the ancestors of the Polynesians, the Lapita people, arrived from the Bismarck Archipelago with their characteristic ceramics.[10]

The first European to visit the islands was the Spanish navigator Álvaro de Mendaña de Neira, coming from Peru in 1568. The people of Solomon Islands were notorious for headhunting and cannibalism before the arrival of the Europeans.[11]

Missionaries began visiting the Solomons in the mid-19th century. They made little progress at first, because "blackbirding" (the often brutal recruitment or kidnapping of labourers for the sugar plantations in Queensland and Fiji) led to a series of reprisals and massacres. The evils of the labour trade prompted the United Kingdom to declare a protectorate over the southern Solomons in June 1893.[*citation needed*]

In 1898 and 1899, more outlying islands were added to the protectorate; in 1900 the remainder of the archipelago, an area previously under German jurisdiction, was transferred to British administration apart from the islands of Buka and Bougainville, which remained under German administration as part of German New Guinea. Traditional trade and social intercourse between the western Solomon Islands of Mono and Alu (the Shortlands) and the traditional societies in the south of Bougainville, however, continued without hindrance.

Under the protectorate, missionaries settled in the Solomons, converting most of the population to Christianity. In the early 20th century, several British and Australian firms began large-scale coconut planting. Economic growth was slow, however, and the islanders benefited little.

In 1908, the islands were visited by Jack London, who was cruising the Pacific Ocean on his boat, the Snark.

Second World War

Main articles: Solomon Islands campaign and Battle of Guadalcanal

With the outbreak of the Second World War, most planters and traders were evacuated to Australia, and most cultivation ceased. Some of the most intense fighting of the war occurred in the Solomons. The most significant of the Allied Forces' operations against the Japanese Imperial Forces was launched on August 7, 1942, with simultaneous naval bombardments and amphibious landings on the Florida Islands at Tulagi[12] and Red Beach on Guadalcanal.

US marines rest in the field during the Guadalcanal Campaign in 1942.

The Battle of Guadalcanal became an important and bloody campaign fought in the Pacific War as the Allies began to repulse Japanese expansion. Of strategic importance during the war were the coastwatchers operating in remote locations, often on Japanese held islands, providing early warning and intelligence of Japanese naval, army and aircraft movements during the campaign.[13]

Sergeant-Major Jacob Vouza was a notable coastwatcher who after capture refused to divulge Allied information in spite of interrogation and torture by Japanese Imperial forces. He was awarded a Silver Star Medal by the Americans, which is the United States' third-highest decoration for valor in combat. Islanders Biuku Gasa and Eroni Kumana would be noted by National Geographic for being the first to find the shipwrecked John F. Kennedy and his crew of the PT-109. They suggested using a coconut to write a rescue message for delivery by dugout canoe, which was later kept on his desk when he became the president of the United States.

The Solomon Islands was one of the major staging areas of the South Pacific and was home to the famous VMF-214 "Black Sheep" Squadron commanded by Major Greg "Pappy" Boyington. **The Slot** was a name for New Georgia Sound, when it was used by the Tokyo Express to supply the Japanese garrison on Guadalcanal. Of more than 36,000 Japanese on Guadalcanal, about 26,000 were killed or missing, 9,000 died of disease, and 1,000 were captured.[14]

The aircraft carrier USS *Enterprise* (CV-6) under aerial attack during the Battle of the Eastern Solomons.

Independence

Local councils were established in the 1950s as the islands stabilised from the aftermath of the Second World War. A new constitution was established in 1970 and elections were held, although the constitution was contested and a new one was created in 1974. In 1973 the first oil price shock occurred, and the increased cost of running a colony became apparent to British administrators.

Following the independence of neighbouring Papua New Guinea from Australia in 1975, the Solomon Islands gained self government in 1976. Independence was granted on 7 July 1978. The first Prime Minister was Sir Peter Kenilorea, and the Solomon Islands retained the Monarchy.

Civil War

Commonly referred to as *the tensions* or *the ethnic tension*, the initial civil unrest was mainly characterised by fighting between the Isatabu Freedom Movement (also known as the Guadalcanal Revolutionary Army) and the Malaita Eagle Force (as well as the Marau Eagle Force). (Although much of the conflict was between Guales and Malaitans, Kabutaulaka (2001) (http://rspas.anu.edu.au/papers/melanesia/working_papers/tarcisiusworkingpaper.htm) and Dinnen (2002) argue that the 'ethnic conflict' label is an oversimplification.

In late 1998, militants on the island of Guadalcanal commenced and had a campaign of intimidation and violence towards Malaitan settlers. During the next year, thousands of Malaitans fled back to Malaita or to the capital, Honiara

(which, although situated on Guadalcanal, is predominantly populated by Malaitans and Solomon Islanders from other provinces). In 1999, the Malaita Eagle Force (MEF) was established in response.

The reformist government of Bartholomew Ulufa'alu struggled to respond to the complexities of this evolving conflict. In late 1999, the government declared a four month state of emergency. There were also a number of attempts at reconciliation ceremonies but to no avail. He also requested assistance from Australia and New Zealand in 1999 but this was rejected.

In June 2000, Ulufa'alu was kidnapped by militia members of the MEF who felt that although he was a Malaitan, he was not doing enough to protect their interests. Ulufa'alu subsequently resigned in exchange for his release. Manasseh Sogavare, who had earlier been Finance Minister in Ulufa'alu's government but had subsequently joined the opposition, was elected as Prime Minister by 23–21 over Rev. Leslie Boseto. However Sogavare's election was immediately shrouded in controversy because six MPs (thought to be supporters of Boseto) were unable to attend parliament for the crucial vote (Moore 2004, n.5 on p. 174).

In October 2000, the Townsville Peace Agreement,[15] was signed by the Malaita Eagle Force, elements of the IFM and the Solomon Islands Government. This was closely followed by the Marau Peace agreement in February 2001, signed by the Marau Eagle Force, the Isatabu Freedom Movement, the Guadalcanal Provincial Government and the Solomon Islands Government. However, a key Guale militant leader, Harold Keke, refused to sign the Agreement, causing a split with the Guale groups. Subsequently, Guale signatories to the Agreement led by Andrew Te'e joined with the Malaitan-dominated police to form the 'Joint Operations Force'. During the next two years the conflict moved to the Weathercoast of Guadalcanal as the Joint Operations unsuccessfully attempted to capture Keke and his group.

New elections in December 2001 brought Sir Allan Kemakeza into the Prime Minister's chair with the support of his People's Alliance Party and also the Association of Independent Members. Law and order deteriorated as the nature of the conflict shifted: there was continuing violence on the Weathercoast while militants in Honiara increasingly turned their attention to crime and extortion. The Department of Finance would often be surrounded by armed men when funding was due to arrive. In December 2002, Finance Minister Laurie Chan resigned after being forced at gunpoint to sign a cheque made out to some of the militants. Conflict also broke out in Western Province between locals and Malaitan settlers. Renegade members of the Bougainville Revolutionary Army (BRA) were invited in as a protection force but ended up causing as much trouble as they prevented.

The prevailing atmosphere of lawlessness, widespread extortion and ineffective police prompted a formal request by the Solomon Islands Government for outside help. With the country bankrupt and the capital in chaos, the request was unanimously supported in Parliament.

In July 2003, Australian and Pacific Island police and troops arrived in the Solomon Islands under the auspices of the Australian-led Regional Assistance Mission to Solomon Islands (RAMSI). A sizable international security contingent of 2,200 police and troops, led by Australia and New Zealand, and with representatives from about 20 other Pacific nations began arriving the next month under Operation Helpem Fren. Since this time some commentators have considered the country a failed state.[16] However, other academics argue that rather than being a 'failed state', it is an unformed state: a state that never consolidated after decades since independence.[17]

In April 2006, allegations that the newly elected Prime Minister Snyder Rini had used bribes from Chinese businessmen to buy the votes of members of Parliament led to mass rioting in the capital Honiara. A deep underlying resentment against the minority Chinese business community led to much of Chinatown in the city being destroyed. Tensions had also been increased by the belief that large sums of money were being exported to China. China sent chartered aircraft to evacuate hundreds of Chinese who fled to avoid the riots. Evacuation of Australian and British citizens was on a much smaller scale. Further Australian, New Zealand and Fijian police and troops were dispatched to try to quell the unrest. Rini eventually resigned before facing a motion of no-confidence in Parliament, and Parliament elected Manasseh Sogavare as Prime Minister.

2007 earthquake and tsunami

Main article: 2007 Solomon Islands earthquake and tsunami

On 2 April 2007, the Solomon Islands were struck by a major earthquake followed by a large tsunami. Initial reports indicated that the tsunami, which mainly affected the small island of Gizo, was several metres high (perhaps as high as 10 metres (33 ft) according to some reports, 5 metres (16 1/3 ft) according to the Foreign Office). The tsunami was triggered by an 8.1 magnitude earthquake, with a hypocenter 349 kilometres (217 miles) northwest of the island's capital, Honiara, at Lat −8.453 Long 156.957 and at a depth of 10 kilometres (6.2 miles).[18]

According to the United States Geologic Survey the earthquake struck at 20:39:56 UTC on Sunday, 1 April 2007. Since the initial event and up until 22:00:00 UTC on Wednesday, 4 April 2007, more than 44 aftershocks of a magnitude of 5.0 or greater were recorded in the region.

The death toll from the resulting tsunami was at least 52 people, and the tsunami destroyed more than 900 homes and has left thousands of people homeless.[19]

Land thrust from the quake has extended out from the shoreline of one island, Ranongga, by up to 70 metres (230 ft) according to local residents.[20] This has left many once pristine coral reefs exposed on the newly formed beaches.

Politics

Main article: Politics of the Solomon Islands

The Solomon Islands is a constitutional monarchy and has a parliamentary system of government. Queen Elizabeth II is the Monarch of the Solomon Islands and the head of state; she is represented by the Governor-General who is chosen by the Parliament for a five-year term. There is a unicameral parliament of 50 members, elected for four-year terms. However, Parliament may be dissolved by majority vote of its members before the completion of its term.

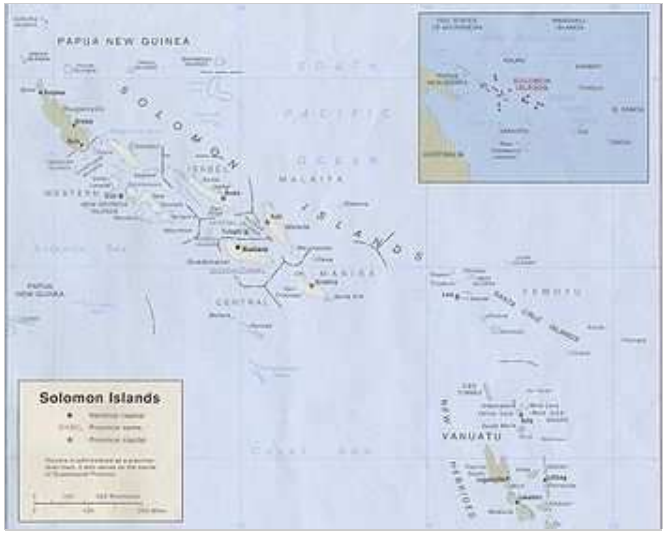
The National Parliament building was a gift from the United States.

Parliamentary representation is based on single-member constituencies. Suffrage is universal for citizens over age 21.[21] The head of government is the Prime Minister, who is elected by Parliament and chooses the other members of the cabinet. Each ministry is headed by a cabinet member, who is assisted by a permanent secretary, a career public servant, who directs the staff of the ministry.

Solomon Islands governments are characterized by weak political parties (see List of political parties in Solomon Islands) and highly unstable parliamentary coalitions. They are subject to frequent votes of no confidence, and government leadership changes frequently as a result. Cabinet changes are common.

Land ownership is reserved for Solomon Islanders. The law provides that resident expatriates, such as the Chinese and Kiribati, may obtain citizenship through naturalization. Land generally is still held on a family or village basis and may be handed down from mother or father according to local custom. The islanders are reluctant to provide land for nontraditional economic undertakings, and this has resulted in continual disputes over land ownership.

No military forces are maintained by the Solomon Islands, although a police force of nearly 500 includes a border protection unit. The police also are responsible for fire service, disaster relief, and maritime surveillance. The police force is headed by a commissioner, appointed by the governor-general and responsible to the prime minister. On 27 December 2006, the Solomon Islands Government said it had taken steps to prevent the country's Australian police chief from returning to the Pacific nation. On 12 January 2007, Australia replaced its top diplomat expelled from the Solomon Islands for political interference in a conciliatory move aimed at easing a four-month dispute between the two countries.



On 13 December 2007, Prime Minister Manasseh Sogavare was toppled by a vote of no confidence in Parliament,[22] following the defection of five Ministers to the Opposition. It was the first time a Prime Minister lost office in this way in the Solomon Islands. On 20 December, Parliament elected the Opposition's candidate (and former Minister for Education) Derek Sikua as Prime Minister, with 32 votes to 15.[23][24]

Provinces

Main article: Provinces of the Solomon Islands

For local government, the country is divided into 10 administrative areas, of which nine are provinces administered by elected provincial assemblies, and the 10th is the town of Honiara, administered by the Honiara Town Council.

1. Central
2. Choiseul

Foreign relations

Main article: Foreign relations of the Solomon Islands

Solomon Islands is a member of the United Nations, Commonwealth, South Pacific Commission, South Pacific Forum, International Monetary Fund, and the European Union/African, Caribbean, and Pacific (ACP) countries (EEC/ACP) (Lomé Convention).

The political stage of the Solomon Islands is further influenced by its diplomatic importance to the Republic of China and the People's Republic of China. The Solomon Islands gives diplomatic recognition to the ROC, recognizing it as the sole-legitimate government of all of China, giving Taiwan vital votes in the United Nations. Lucrative investments, political funding and preferential loans from both the ROC and PRC are increasingly manipulating the political landscape of the Solomon Islands.

Relations with Papua New Guinea, which had become strained because of an influx of refugees from the Bougainville rebellion and attacks on the northern islands of the Solomon Islands by elements pursuing Bougainvillean rebels, have been repaired. A peace accord on Bougainville confirmed in 1998 has removed the armed threat, and the two nations regularized border operations in a 2004 agreement.

Military

Although the locally recruited British Solomon Islands Protectorate Defence Force was part of Allied forces taking part in fighting in the Solomons during the Second World War, the country has not had any regular military forces since independence. The various paramilitary elements of the Royal Solomon Islands Police Force (RSIPF) were disbanded in 2003 following the intervention of the Regional Assistance Mission to Solomon Islands (RAMSI), and the RSIPF was

disarmed. RAMSI has a small military detachment headed by an Australian commander with responsibilities for assisting the police element of RAMSI in internal and external security. The RSIPF still operates two Pacific class patrol boats (RSIPV *Auki* and RSIPV *Lata*), which constitute the de facto navy of the Solomon Islands.

In the long-term it is anticipated that the RSIPF will resume the defense role. The police force is headed by a commissioner, appointed by the governor general and responsible to the Minister of Police, National Security & Correctional Services.

The police budget of the Solomon Islands has been strained due to a four-year civil war. Following Cyclone Zoe's strike on the islands of Tikopia and Anuta in December 2002, Australia had to provide the Solomon Islands government with 200,000 Solomon dollars ($50,000 Australian) for fuel and supplies for the patrol boat *Lata* to sail with relief supplies. (Part of the work of RAMSI includes assisting the Solomon Islands Government to stabilise its budget.)

Geography

Main article: Geography of the Solomon Islands

The Solomon Islands from the air.

The Solomon Islands is an island nation that lies east of Papua New Guinea and consists of many islands: Choiseul, the Shortland Islands; the New Georgia Islands; Santa Isabel; the Russell Islands; Nggela (the Florida Islands); Malaita; Guadalcanal; Sikaiana; Maramasike; Ulawa; Uki; Makira (San Cristobal); Santa Ana; Rennell and Bellona; the Santa Cruz Islands and three remote, tiny outliers, Tikopia, Anuta, and Fatutaka.

The country's islands lie between latitudes 5° and 13°S, and longitudes 155° and 169°E. The distance between the westernmost and easternmost islands is about 1,500 kilometres (930 mi). The Santa Cruz Islands (of which Tikopia is part), are situated north of Vanuatu and are especially isolated at more than 200 kilometres (120 mi) from the other islands. Bougainville is geographically part of the Solomon Islands, but politically Papua New Guinea.

The islands' ocean-equatorial climate is extremely humid throughout the year, with a mean temperature of 27 °C (80 °F) and few extremes of temperature or weather. June through August is the cooler period. Though seasons are not pronounced, the northwesterly winds of November through April bring more frequent rainfall and occasional squalls or cyclones. The annual rainfall is about 3050 mm (120 in).

The Solomon Islands archipelago is part of two distinct terrestrial ecoregions. Most of the islands are part of the Solomon Islands rain forests ecoregion, which also includes the islands of Bougainville and Buka, which are part of Papua New Guinea, these forests have come under pressure from forestry activities. The Santa Cruz Islands are part of the Vanuatu rain forests ecoregion, together with the neighboring archipelago of Vanuatu. Soil quality ranges from extremely rich volcanic (there are volcanoes with varying degrees of activity on some of the larger islands) to relatively infertile limestone. More than 230 varieties of orchids and other tropical flowers brighten the landscape.

The islands contain several active and dormant volcanoes. The Tinakula and Kavachi volcanoes are the most active.

Economy

Main article: Economy of the Solomon Islands

Its per capita GDP of $600 ranks Solomon Islands as a lesser developed nation, and more than 75% of its labour force is engaged in subsistence and fishing. Most manufactured goods and petroleum products must be imported. Until 1998,

when world prices for tropical timber fell steeply, timber was Solomon Islands' main export product, and, in recent years, Solomon Islands forests were dangerously overexploited. Other important cash crops and exports include copra and palm oil. In 1998 Ross Mining of Australia began producing gold at Gold Ridge on Guadalcanal. Minerals exploration in other areas continued. However in the wake of the ethnic violence in June 2000, exports of palm oil and gold ceased while exports of timber fell. The islands are rich in undeveloped mineral resources such as lead, zinc, nickel, and gold.

Solomon Islands' fisheries also offer prospects for export and domestic economic expansion. However, a Japanese joint venture, Solomon Taiyo Ltd., which operated the only fish cannery in the country, closed in mid-2000 as a result of the ethnic disturbances. Though the plant has reopened under local management, the export of tuna has not resumed. Negotiations are underway that may lead to the eventual reopening of the Gold Ridge mine and the major oil-palm plantation.

Tourism, particularly diving, is an important service industry for Solomon Islands. Growth in that industry is hampered, however, by lack of infrastructure and transportation limitations.

The Solomon Islands Government was insolvent by 2002. Since the RAMSI intervention in 2003, the government has recast its budget. It has consolidated and renegotiated its domestic debt and with Australian backing, is now seeking to renegotiate its foreign obligations. Principal aid donors are Australia, New Zealand, the European Union, Japan, and the Republic of China.

Recently, the Solomons courts have re-approved the export of live dolphins for profit, most recently to Dubai, United Arab Emirates. This practice was originally stopped by the government in 2004 after international uproar over a shipment of 28 live dolphins to Mexico. The move has resulted in criticism from both Australia and New Zealand as well as several conservation organisations.

Energy

A team of renewable energy developers working for the Pacific Islands Applied Geoscience Commission (SOPAC) and funded by the Renewable Energy and Energy Efficiency Partnership (REEEP), have hatched a scheme that enables these communities to access renewable energy, such as solar, without raising substantial sums of ready cash. They also use water and wind power. If the islanders were not able to pay for solar lanterns with cash, reasoned the project developers, they can pay with crops.[25]

Demographics

Main article: Demographics of the Solomon Islands

As of 2006, the majority 552,438 people on the Solomon Islands are ethnically Melanesian (94.5%). Polynesian (3%) and Micronesian (1.2%) are the two other significant groups.[26] There are a few thousand ethnic Chinese.[27]

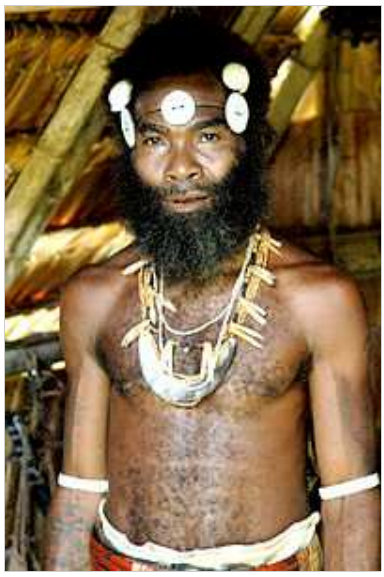
The number of local languages listed for Solomon Islands is 74, of which 70 are living languages and 4 are extinct, according to *«Ethnologue, Languages of the World»*.[28] On the central islands, Melanesian languages (predominantly of the Southeast Solomonic group) are spoken. On the outliers, Rennell and Bellona to the south, Tikopia, Anuta and Fatutaka to the far east, Sikaiana to the north east, and Luaniua to the north (Ontong Java Atoll, also known as Lord Howe Atoll), Polynesian languages are spoken. Immigrant populations of Gilbertese (i-Kiribati) and Tuvaluans speak Micronesian languages. While English is the official language, only 1–2% of the population speak English; the lingua franca is Solomons Pijin.

Health

Female life expectancy at birth was at 66.7 years and male life expectancy at birth at 64.9 in 2007.[29] 1990–1995

fertility rate was at 5.5 births per woman.[29] Government expenditure on health per capita was at US$ 99 (PPP).[29] Healthy life expectancy at birth is at 60 years.[29]

Religion



Main article: Religion in the Solomon Islands

The religion of Solomon Islands is about 97% Christian with following denominations: the Anglican Church of Melanesia 32.8%, Roman Catholic 19%, South Seas Evangelical Church 17%, Seventh-day Adventist 11.2%, United Church 10.3%, Christian Fellowship Church 2.4%, other Christian 4.4%. The remaining 2.9% practice indigenous religious beliefs.[30] According to the most recent reports, Islam in the Solomon Islands is made up of approximately 350 Muslims,[31] including members of the Ahmadiyya Muslim Community.[32]

Culture

Main article: Culture of the Solomon Islands

In the traditional culture of the Solomon Islands, age-old customs are handed down from one generation to the next, allegedly from the ancestral spirits themselves, to form the cultural values of the Solomon Islands.

A Malaitan Chief.

Radio is the most influential type of media in the Solomons Islands due to language differences, illiteracy,[33] and the difficulty of receiving television signals in some parts of the country. The Solomon Islands Broadcasting Corporation (SIBC) operates public radio services, including the national stations *Radio Happy Isles* and *Wantok FM*, and the provincial stations *Radio Happy Lagoon* and, formerly, *Radio Temotu*. There is one commercial station, PAOA FM, that broadcasts in the Solomons.

There is one daily newspaper *Solomon Star (www.solomonstarnews.com)* and one daily online news website *Solomon Times Online (www.solomontimes.com (http://www.solomontimes.com))*, 2 weekly papers *Solomons Voice* and *Solomon Times*, and 2 monthly papers *Agrikalsa Nius* and the *Citizen's Press*. There are no TV services based in the Solomon Islands, although satellite TV stations can be received. There is free-to-air access to ABC Asia Pacific (from Australia's ABC) and BBC World News.

Solomon Islands writers include the novelists Rexford Orotaloa and John Saunana and the poet Jully Makini.

Sport

See also: Rugby union in the Solomon Islands

Solomon Islands national teams in football and related sports (futsal and beach soccer) have proved among the most successful in Oceania.

The Solomon Islands national football team became the first team to beat New Zealand into qualifying for a play-off spot against Australia for qualification to the World Cup 2006. They were defeated 7–0 in Australia and 2–1 at home.

On 14 June 2008, the Solomon Islands national futsal team, the Kurukuru, won the Oceania Futsal Championship in Fiji

to qualify them for the 2008 FIFA Futsal World Cup, which was held in Brazil from 30 September to 19 October 2008. Solomon Islands is the futsal defending champions in the Oceania region. In 2008 and 2009 the Kurukuru won the Oceania Futsal Championship in Fiji. In 2009 they defeated the host nation Fiji, 8–0, to claim the title. The Kurukuru currently hold the world record for the fastest ever goal scored in an official futsal match. It was set by Kurukuru captain Elliot Ragomo, who scored against New Caledonia three seconds into the game in July 2009.[34] They also, however, hold the less enviable record for the worst defeat in the history of the Futsal World Cup, when in 2008 they were beaten by Russia with two goals to thirty-one.[35]

The Solomon Islands' beach soccer team, the Bilikiki Boys, are statistically the most successful team in Oceania. They have won all three regional championships to date, thereby qualifying on each occasion for the FIFA Beach Soccer World Cup. The Bilikiki Boys are ranked fourteenth in the world as of 2010, higher than any other team from Oceania.[36]

In January 2011, the Bilikiki Boys played the Kurukuru in a friendly beach soccer match. The Bilikiki won 4–1. Previously, the two teams had met for a friendly futsal match, which the Kurukuru had won 5–3.[37][38]

The Solomon Islands national rugby union team has been playing internationals since 1969. It took part in the Oceania qualifying tournament for the 2003 and 2007 Rugby World Cups, but failed to qualify on each occasion.

Education

Education in the Solomon Islands is not compulsory and only 60 per cent of school-age children have access to primary education.[39][40]

From 1990 to 1994, the gross primary school enrolment rose from 84.5 percent to 96.6 percent.[39] Primary school attendance rates were unavailable for the Solomon Islands as of 2001.[39] While enrolment rates indicate a level of commitment to education, they do not always reflect children's participation in school.[39] Efforts and plans made by the Department of Education and Human Resource Development to expand educational facilities and increase enrolment have been hindered by a lack of government funding, misguided teacher training programs, poor coordination of programs, and a failure of the government to pay teachers.[39] The percentage of the government's budget allocated to education was 9.7 percent in 1998, down from 13.2 percent in 1990.[39]

Male educational attainment tends to be higher than female educational attainment.[40] The University of the South Pacific has a Campus in Solomon Islands while the University of Papua New Guinea has also established a foothold in the country at Guadalcanal.[41]

The Solomon Islands in Oceania.

Original Natives

The human **history of the Solomon Islands** begins with the first Papuans settlement at least 30,000 years ago from New Guinea. They represented the furthest expansion of humans into the Pacific until the expansion of Austronesian-language speakers through the area around 4000 BC, bringing new agricultural and maritime technology. Most of the languages spoken today in the Solomon Islands derive from this era, but some thirty languages of the pre-Austronesian settlers survive *(see East Papuan languages)*.

Two warriors in battle dress (1895)

There are preserved numerous pre-European cultural monuments in Solomon Islands, notably Bao megalithic shrine complex (13th century AD), Nusa Roviana fortress and shrines (14th - 19th century), Vonavona Skull island - all in Western province. Nusa Roviana fortress, shrines and surrounding villages served as a hub of regional trade networks in 17th - 19th centuries. Skull shrines of Nusa Roviana are sites of legends. Better known is Tiola shrine - site of legendary stone dog which turned towards the direction where enemy of Roviana was coming from.[1] This complex of archaeological monuments characterises fast development of local Roviana culture, through trade and head hunting expeditions turning into regional power in 17th - 18th

Improve this page

centuries.[2]

European exploration

Ships of the Spanish explorer Álvaro de Mendaña de Neira first sighted Santa Isabel island on 6 February 1568. Finding signs of alluvial gold on Guadalcanal, Mendaña believed he had found the source of King Solomon's wealth, and consequently named the islands "The Islands of Solomon". In 1595 and 1605 Spain again sent several expeditions to find the islands and establish a colony, however these were unsuccessful. In 1767 Captain Philip Carteret rediscovered the Santa Cruz Islands and Malaita. Later, Dutch, French and British navigators visited the islands; their reception was often hostile.

Colonization

Sikaiana, then known as the Stewart Islands, was annexed to the Hawaiian Kingdom in 1856.

Missionary activity then started at the mid 19th century and European colonial ambitions led to the establishment of a German Protectorate over the Northern Solomons, following an Anglo-German Treaty of 1886. A British Solomon Islands Protectorate over the southern islands was proclaimed in June 1893. German interests were transferred to the United Kingdom under the Samoa Tripartite Convention of 1899, in exchange for recognition of the German claim to Western Samoa.

World War II

Main articles: Solomon Islands campaign and Guadalcanal Campaign

Japanese forces occupied the Solomon Islands in January 1942. The counter-attack was led by the United States; the 1st Division of the US Marine Corps landed on Guadalcanal and Tulagi in August 1942. Some of the bitterest fighting of World War II took place on the islands for almost three years.

American B-17 bombers over Gizo.

Tulagi, the seat of the British administration on the island of Nggela Sule in Central Province was destroyed in the heavy fighting following landings by the US Marines. Then the tough battle for Guadalcanal, which was centred on the capture of the airfield, Henderson field, led to the development of the adjacent town of Honiara as the United States logistics centre.

Biuku Gasa and Eroni Kumana

Islanders Biuku Gasa (deceased 2005) and Eroni Kumana (Gizo) were Allies scouts during the war. They became famous when they were noted by National Geographic for being the first men to find the shipwrecked John F. Kennedy and his crew of the PT-109 using a traditional dugout canoe. They suggested the idea of using a coconut which was later kept on the desk of the president to write a rescue message for delivery. Their names had not been credited in most movie and historical accounts, and they were turned back before they could visit President Kennedy's inauguration, though the Australian coastwatcher would also meet the president. They were visited by a member of the Kennedy family in 2002, where they still lived in traditional huts without electricity.

War consequences

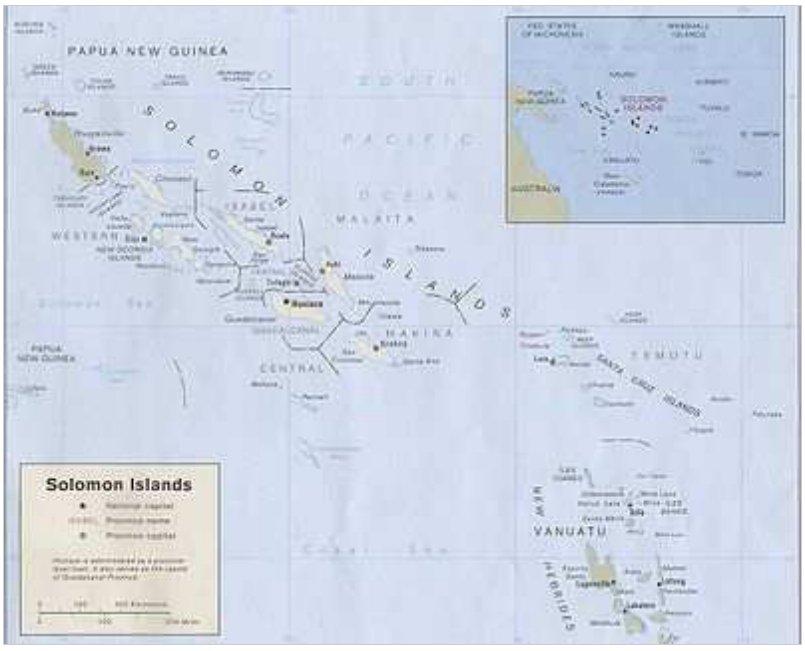
The impact of the war on islanders was profound. The destruction caused by the fighting and the longer-term consequences of the introduction of modern materials, machinery and western cultural artefacts, transformed traditional isolated island ways of life. The reconstruction was slow in the absence of war reparations and with the destruction of the pre-war plantations, formerly the mainstay of the economy. Significantly, Solomon Islanders experience as labourers with the Allies led some to a new appreciation of the importance of economic organisation and trade as the basis for material advancement. Some of these ideas were put into practice in the early post-war political movement "Maasina Ruru" - often corrupted to "Marching Rule".[17]

Towards independence

Stability was restored during the 1950s, as the British colonial administration built a network of official local councils. On this platform Solomon Islanders with experience on the local councils started participation in central government, initially through the bureaucracy and then, from 1960, through the newly established Legislative and Executive Councils. Positions on both Councils were initially appointed by the High Commissioner of the British Protectorate but progressively more of the positions were directly elected or appointed by electoral colleges formed by the local councils. The first national election was held in 1964 for the seat of Honiara, and by 1967 the first general election was held for all but one of the 15 representative seats on the Legislative Council (the one exception was the seat for the Eastern Outer Islands, which was again appointed by electoral college).

Elections were held again in 1970 and a new constitution was introduced. The 1970 constitution replaced the Legislative and Executive Councils with a single Governing Council. It also established a 'committee system of government' where all members of the Council sat on one or more of five committees. The aim of this system was to reduce divisions between elected representatives and the colonial bureaucracy, provide opportunities for training new representatives in managing the responsibilities of government. It was also claimed that this system was more consistent with the Melanesian style of government, however this was quickly undermined by opposition to the 1970 constitution and the committee system by elected members of the council. As a result, a new constitution was introduced in 1974 which established a standard Westminster form of government and gave the Islanders both Chief Ministerial and Cabinet responsibilities. Solomon Mamaloni became the country's first Chief Minister in July 1974.

Independence



Even as late as 1970, the British Protectorate did not envisage independence for Solomon Islands in the foreseeable future but shortly thereafter, the financial costs of supporting the Protectorate became more trying, as the world economy was hit by the first oil price shock of 1973. The imminent independence of Papua New Guinea (in 1975) was also thought to have influenced the Protectorate's administrators, however, outside of a very small educated elite in Honiara, there was little in the way of an indigenous independence movement in Solomons. Nonetheless, self-government was achieved in January 1976 and after July 1976, Sir Peter Kenilorea became the Chief Minister who would lead the country to independence. This was achieved on 7 July 1978 and Kenilorea automatically became the country's first Prime Minister.

Civil war

In early 1999 long-simmering tensions between the local Gwale people on Guadalcanal and more recent migrants from the neighbouring island of Malaita erupted into violence. The ‘Guadalcanal Revolutionary Army’, later called Isatabu Freedom Movement (IFM), began terrorising Malaitans in the rural areas of

Improve this page

them leave their homes. About 20,000 Malaitans fled to the capital and others returned to their home island; Gwale residents of Honiara fled. The city became a Malaitan enclave.

The Solomon Islands, circa 1989 (click to enlarge).

Meanwhile, the Malaita Eagle Force (MEF) was formed to uphold Malaitan interests. The Government appealed to the Commonwealth Secretary General for assistance. The Honiara Peace Accord was agreed on 28 June 1999. Despite this apparent success the underlying problems remained unresolved. The accord soon broke down and fighting broke out again in June 2000.

Malaitans took over some armouries at their home island and Honiara and helped by that, on 5 June 2000 the MEF seized the parliament by force. Through their spokesman Andrew Nori, they claimed that the government of the then Prime Minister, Bartholomew Ulufa'alu, had failed to secure compensation for loss of Malaitan life and property. Ulufa'alu was forced to step down.

On 30 June 2000 Parliament elected by a narrow margin a new Prime Minister, Manasseh Sogavare. He established a Coalition for National Unity, Reconciliation and Peace, which released a program of action focused on resolving the ethnic conflict, restoring the economy and distributing the benefits of development more equally. However, Sogavare's government was deeply corrupt and its actions led to the downward economic spiral and the deterioration of law and order.

The conflict was foremost about access to land and other resources and was centered around Honiara. Since the beginning of the civil war it is estimated that 100 have been killed. About 30,000 refugees, mainly Malaitans, had to leave their homes, and economic activity on Guadalcanal was severely disrupted.

Continuing civil unrest led to an almost complete breakdown in normal activity: civil servants remained unpaid for months at a time, and cabinet meetings had to be held in secret to prevent local warlords from interfering. The security forces were unable to reassert control, largely because many police and security personnel are associated with one or another of the rival gangs.

In July 2003 the Governor General of Solomon Islands issued an official request for international help, which was subsequently endorsed by a unanimous vote of the parliament. Technically, only the Governor General's request for troops was necessary. However, the government then passed legislation to provide the international force with greater powers and resolve some legal ambiguities.

On 6 July 2003, in response to a proposal to send 300 police and 2,000 troops from Australia, New Zealand, Fiji and Papua New Guinea to Guadalcanal, warlord Harold Keke announced a ceasefire by faxing a signed copy of the announcement to the Solomons Prime Minister, Allan Kemakeza. Keke ostensibly leads the Guadalcanal Liberation Front, but has been described as marauding bandit based on the isolated southwestern coast (Weather Coast) of Guadalcanal. Despite this ceasefire, on 11 July 2003 the Solomon Islands Broadcasting Corporation broadcast unconfirmed reports that supporters of Harold Keke razed two villages.

In mid-July 2003, the Solomons parliament voted unanimously in favour of the proposed i

Improve this page

international force began gathering at a training facility in Townsville. In August 2003, an international peacekeeping force, known as the Regional Assistance Mission to Solomon Islands (RAMSI) and Operation Helpem Fren, entered the islands. Australia committed the largest number of security personnel, but with substantial numbers also from other South Pacific Forum countries such as New Zealand, Fiji, and Papua New Guinea (PNG). It acts as an interim police force and is responsible for restoring law and order in the country because the Royal Solomon Islands Police force failed to do so for a variety of reasons. Peacekeeping forces have been successful in improving the country's overall security conditions, including brokering the surrender of a notorious warlord Harold Keke in August 2003.

In 2009, the government is scheduled to set up a Truth and Reconciliation Commission, with the assistance of South African Archbishop Desmond Tutu, to "address people's traumatic experiences during the five year ethnic conflict on Guadalcanal".[3][4]

The government continues to face serious problems, including an uncertain economic outlook, deforestation, and malaria control. At one point, prior to the deployment of RAMSI forces, the country was facing a serious financial crisis. While economic conditions are improving, the situation remains unstable.

Cyclones

In 1992, Cyclone Tia struck the island of Tikopia, wiping out most housing and food crops. In 1997, the Government asked for help from the USA and Japan to clean up more than 50 sunken World War II shipwrecks polluting coral reefs and killing marine life.

In December 2002, Severe Tropical Cyclone Zoe struck the island of Tikopia and Anuta, cutting off contact with the 3,000 inhabitants. Due to funding problems, the Solomon Islands government could not send relief until the Australian government provided funding.

Monarchy of the Solomon Islands

From Wikipedia, the free encyclopedia

The **monarchy of the Solomon Islands** is a system of government in which a hereditary monarch is the sovereign of the Solomon Islands. The present monarch of the Solomon Islands is Queen Elizabeth II. The Solomon Islands share the Sovereign with a number of Commonwealth realms. The Queen's constitutional roles have been almost entirely delegated to the Governor-General of the Solomon Islands. Royal succession is governed by the English Act of Settlement of 1701, which is part of constitutional law.

The country has been working on a new constitution for several years now, and a constitutional convention was expected to finish their work in October 2008.[1] The draft from 2004 declared the Solomon Islands a republic, and it is expected that this change will be part of the final new constitution.[2]

International and domestic role

One of the most complicated features of the Solomon Island monarchy is that it is a shared monarchy.

54 states are members of the Commonwealth of Nations. Sixteen of these countries are specifically Commonwealth realms who recognise, individually, the same person as their Monarch and Head of State; the Solomon Islands is one of these. Despite sharing the same person as their respective national monarch, each of the Commonwealth realms — including the Solomon Islands — is sovereign and independent of the others.

Development of shared monarchy

The *Balfour Declaration* of 1926 provided the dominions the right to be considered equal to Britain, rather than subordinate; an agreement that had the result of, in theory, a shared Crown that operates independently in each

realm rather than a unitary British Crown under which all the dominions were secondary. The Monarchy thus ceased to be an exclusively British institution, although it has often been called "British" since this time (in both legal and common language) for reasons historical, legal, and of convenience. The *Royal and Parliamentary Titles Act, 1927* was the first indication of this shift in law, further elaborated in the *Statute of Westminster, 1931*.

Under the *Statute of Westminster*, the Solomon Islands have a common monarchy with Britain and the other Commonwealth realms, and though laws governing the line of succession to the Solomon Island throne lie within the control of the Solomon Island Parliament, Solomon Island cannot change the rules of succession without the unanimous consent of the other realms, unless explicitly leaving the shared monarchy relationship by means of a constitutional amendment. This situation applies symmetrically in all the other realms, including the UK.

On all matters of the Solomon Island State, the Monarch is advised solely by Solomon Island ministers.

Title

In the Solomon Islands, the Queen's official title is: *Elizabeth the Second, by the Grace of God, Queen of the Solomon Islands and of Her other Realms and Territories, Head of the Commonwealth*.

This style communicates the Solomon Islands's status as an independent monarchy, highlighting the Monarch's role specifically as Queen of the Solomon Islands, as well as the shared aspect of the Crown throughout the realms. Typically, the Sovereign is styled "Queen of the Solomon Islands," and is addressed as such when in the Solomon Islands, or performing duties on behalf of the Solomon Islands abroad.

Constitutional role

The Solomon Islands constitution is made up of a variety of statutes and conventions that are either British or Solomon Islands in origin, which gives the Solomon Islands a similar parliamentary system of government as the other Commonwealth realms.

All powers of state are constitutionally reposed in the Monarch, who is represented by the Governor-General of the Solomon Islands — appointed by the Monarch upon the advice of the National Parliament of the Solomon Islands. The Monarch is informed of the Prime Minister's decision before the Governor General gives Royal Assent.

Duties

Most of the Queen's domestic duties are performed by the Governor General. The Governor-General represents the Queen on ceremonial occasions such as the opening of Parliament, the presentation of honours and military parades. Under the Constitution, he is given authority to act in some matters, for example in appointing and disciplining officers of the civil service, in proroguing Parliament. As in the other Commonwealth realms, however, the Monarch's role, and thereby the vice-regent's role, is almost entirely symbolic and cultural, acting as a symbol of the legal authority under which all governments operate, and the powers that are constitutionally hers are exercised almost wholly upon the advice of the Cabinet, made up of Ministers of the Crown. It has been said since the death of Queen Anne in 1714, the last monarch to head the British cabinet, that the monarch "reigns" but does not "rule". In exceptional circumstances, however, the Monarch or vice-regal can act against such advice based upon his or her reserve powers.

There are also a few duties which must be specifically performed by, or bills that require assent by the Queen. These include: signing the appointment papers of Governors General, the confirmation of awards of honours, and approving any change in her title.

It is also possible that if the Governor General decided to go against the Prime Minister's or the government's advice, the Prime Minister could appeal directly to the Monarch, or even recommend that the Monarch dismiss the Governor General.

Succession

Succession to the throne is by male-preference primogeniture, and governed by the provisions of the Act of Settlement, as well as the English Bill of Rights. These documents, though originally passed by the Parliament of England, are now part of the Solomon Islands constitutional law, under control of the Solomon Islands parliament only.

This legislation lays out the rules that the Monarch cannot be a Roman Catholic, nor married to one, and must be in communion with the Church of England upon ascending the throne. As Solomon Islands's laws governing succession are currently identical to those of the United Kingdom (by the *Statute of Westminster*) see Succession to the British Throne for more information.

The heir apparent is Elizabeth II's eldest son, Charles, who has no official title outside of the UK, but is accorded his UK title, Prince of Wales, as a courtesy title.

Legal role

All laws in the Solomon Islands are enacted with the sovereign's, or the vice-regal's signature. The granting of a signature to a bill is known as Royal Assent; it and proclamation are required for all acts of Parliament, usually granted or withheld by the Governor General. The Vice-Regals may reserve a bill for the Monarch's pleasure, that is to say, allow the Monarch to make a personal decision on the bill. The Monarch has the power to disallow a bill (within a time limit specified by the constitution).

The Sovereign is deemed the "fount of justice," and is responsible for rendering justice for all subjects. The Sovereign does not personally rule in judicial cases; instead, judicial functions are performed in his or her name. The common law holds that the Sovereign "can do no wrong"; the monarch cannot be prosecuted in his or her own courts for criminal offences. Civil lawsuits against the Crown in its public capacity (that is, lawsuits against the government) are permitted; however, lawsuits against the Monarch personally are not cognizable. The Sovereign, and by extension the Governor General, also exercises the "prerogative of mercy," and may pardon offences against the Crown. Pardons may be awarded before, during, or after a trial.

In the Solomon Islands the legal personality of the State is referred to as "Her Majesty the Queen in Right of the Solomon Islands." For example, if a lawsuit is filed against the government, the respondent is formally described as Her Majesty the Queen in Right of Solomon Islands. The monarch as an individual takes no more role in such an affair than in any other business of government.

Tuvalu

From Wikipedia, the free encyclopedia

Tuvalu (/tuːˈvɑːluː/ (listen) *too-vah-loo* or /ˈtuːvəluː/ *too-və-loo*), formerly known as the **Ellice Islands**,[2] is a Polynesian island nation located in the Pacific Ocean, midway between Hawaii and Australia. It comprises four reef islands and five true atolls spread out from 6° to 10° south.[3] Its nearest neighbours are Kiribati, Nauru, Samoa and Fiji. Its population of 10,544 makes it the third-least populous sovereign state in the world, with only Vatican City and Nauru having fewer inhabitants. In terms of physical land size, at just 26 square kilometres (10 sq mi) Tuvalu is the fourth smallest country in the world, larger only than the Vatican City at 0.44 km^2 (0.17 sq mi), Monaco at 1.98 km^2 (0.76 sq mi) and Nauru at 21 km^2 (8.1 sq mi).

The first inhabitants of Tuvalu were Polynesian people. In 1568 Spanish navigator Álvaro de Mendaña sailed through the islands and is understood to have sighted Nui during his expedition in search of Terra Australis. In 1819 the island of Funafuti was named Ellice's Island; the name Ellice was applied to all nine islands after the work of English hydrographer Alexander George Findlay (1812–1876).[4] The islands came under Britain's sphere of influence in the late 19th century, when the Ellice Islands were declared a British protectorate by Captain Gibson, R. N. of HMS *Curaçao* between 9th and 16 October 1892. The Ellice Islands were administered as British protectorate by a Resident Commissioner from 1892 to 1916 as part of the British Western Pacific Territories (BWPT), and later as part of the Gilbert and Ellice Islands colony from 1916 to 1974.

In 1974, the Ellice Islanders voted for separate British dependency status. As a consequence Tuvalu separated from the Gilbert Islands which became Kiribati. Tuvalu became fully independent within the Commonwealth on October 1, 1978. On September 5, 2000, Tuvalu became the 189th member of the United Nations.

History

Main article: History of Tuvalu

Tuvaluan man in traditional costume drawn by Alfred Agate in 1841 during the United States Exploring Expedition.

The first inhabitants of Tuvalu were Polynesians so that the origins of the people of Tuvalu is addressed in the theories regarding the spread of humans out of Southeast Asia, from Taiwan, via Melanesia and across the Pacific islands to create Polynesia. During pre-European-contact times there was frequent canoe voyaging between the nearer islands including Tonga and Samoa.[5] Eight of the nine islands of Tuvalu were inhabited; thus the name, Tuvalu, means "eight standing together" in Tuvaluan. Possible evidence of fire in the Caves of Nanumanga may indicate human occupation for thousands of years.

The stories as to the ancestors of the Tuvaluans vary from island to island. On Funafuti and Vaitupu the founding ancestor is described as being from Samoa;[6] [7] whereas on Nanumea the founding ancestor is described as being from Tonga.[6]

Tuvalu was first sighted by Europeans in 1568 with the voyage of Álvaro de Mendaña de Neira from Spain who is understood to have sighted the island of Nui, which he named *Isla de Jesus* (Island of Jesus) but was unable to land. Keith S. Chambers and Doug Munro (1980) identify Niutao as the island that Francisco Antonio Mourelle named on May 5,

1781 thus solving what Europeans had called *The Mystery of Gran Cocal*.[8][9] Mourelle's map and journal named the island *El Gran Cocal* ('The Great Coconut Plantation'); however, the latitude and longitude was uncertain.[9]

The next European to visit was Arent Schuyler de Peyster, of York, captain of the armed brigantine or privateer *Rebecca*, sailing under British colours,[10] which passed through the southern Tuvalu waters in May 1819; de Peyster sighted Nukufetau and Funafuti, which he named Ellice's Island after an English Politician, Edward Ellice, the Member of Parliament for Coventry and the owner of the Rebecca's cargo.[9] In 1820 the Russian explorer Mikhail Lazarev visited Nukufetau as commander of the *Mirny*.[9] Following 1819 whalers were roving the Pacific though visiting Tuvalu only infrequently because of the difficulties of landing ships on the atolls. No settlements were established by the whalers.[9]

Peruvian slave raiders ("blackbirders") seeking workers to mine the guano deposits on the Chincha Islands in Peru, combed the Pacific between 1862 and 1865, including the southern islands of Tuvalu.[11] The Rev. A. W. Murray,[12] the earliest European missionary in Tuvalu, reported that in 1863 about 180 people[13] were taken from Funafuti and about 200 were taken from Nukulaelae[14] as there were fewer than 100 of the 300 recorded in 1861 as living on Nukulaelae.[15][16]

Christianity first came to Tuvalu in 1861 when Elekana, a deacon of a Congregational church in Manihiki, Cook Islands became caught in a storm and drifted for 8 weeks before landing at Nukulaelae.[9] Elekana began proselytizing Christianity. He was trained in a London Missionary Society school in Samoa before beginning his work in establishing the Church of Tuvalu.[9] In 1865 the Rev. A. W. Murray of the London Missionary Society – a Protestant congregationalist missionary society – arrived as the first European missionary where he too proselytized among the inhabitants of Tuvalu. By 1878 the Church of Tuvalu was well established with preachers on each island.[9]

Trading firms and traders

A man from the Nukufetau atoll, drawn by Alfred Agate 1841.

Trading companies became active in Tuvalu in the mid-nineteenth century; the trading companies engaged palagi traders who lived on the islands. Some islands would have competing traders while dryer islands might only have a single trader.[17] In 1892, Captain Davis of the HMS *Royalist*, reported on trading activities and traders on each of the islands visited.[18] Captain Davis identified the following traders in the Ellice Group: Edmund Duffy (Nanumea); Jack Buckland (Niutao); Harry Nitz (Vaitupu); John (also known as Jack) O'Brien (Funafuti); Alfred Restieaux and Fenisot (Nukufetau); and Martin Kleis (Nui).[19] During this time, the greatest number of palagi traders lived on the atolls, acting as agents for the trading companies.[17]

In the later 1890s and into first decade of the 20th century, structural changes occurred in the operation of the Pacific trading companies; trading companies moved from a practice of having traders resident on each island to instead becoming a business operation where the supercargo (the cargo manager of a trading ship) would deal directly with the islanders when a ship visited an island. From 1900, the numbers of palagi traders in Tuvalu declined with the last of the palagi traders being Fred Whibley on Niutao and Alfred Restieaux on Nukufetau. By 1909 there were no more resident palagi traders representing the trading companies,[20] although both Fred Whibley and Alfred Restieaux[21] remained in the islands until their deaths.

Scientific expeditions and travellers

The United States Exploring Expedition under Charles Wilkes visited Funafuti, Nukufetau and Vaitupu in 1841.[22] During this expedition, on Tuvalu, Alfred Thomas Agate, engraver and illustrator, recorded the dress and tattoo patterns of the men of Nukufetau.[23]

Woman on Funafuti, Harry Clifford Fassett (1900)

In 1890, Robert Louis Stevenson, his wife Fanny Vandegrift Stevenson and her son Lloyd Osbourne sailed on the *Janet Nicoll*, a trading steamer owned by Henderson and Macfarlane of Auckland, New Zealand, which operated between Sydney, Auckland and into the central Pacific.[24] The *Janet Nicoll* visited Tuvalu;[25] while Fanny records that they made landfall at Funafuti and Niutao, Jane Resture suggests that it was more likely Nukufetau.[26] An account of this voyage was written by Fanny Vandegrift Stevenson and published under the title *The Cruise of the Janet Nichol*,[27] together with photographs taken by Robert Louis Stevenson and Lloyd Osbourne.

In 1894, Count Rudolph Festetics de Tolna, his wife Eila (née Haggin)[28] and her daughter Blanche Haggin visited Funafuti aboard the yacht *Le Tolna*.[29] *Le Tolna* spent several days at Funafuti with the Count photographing men and woman on Funafuti.[30]

The boreholes on Funafuti, at the site now called *David's Drill*, are the result of drilling conducted by the Royal Society of London for the purpose of investigating the formation of coral reefs to determine whether traces of shallow water organisms could be found at depth in the coral of Pacific atolls. This investigation followed the work on the structure and distribution of coral reefs conducted by Charles Darwin in the Pacific. Drilling occurred in 1896, 1897 and 1911. Professor Edgeworth David of the University of Sydney lead the expeditions in 1896 & 1897.[31] Photographers on these trips recorded people, communities and scenes at Funafuti.[32]

Harry Clifford Fassett, captain's clerk and photographer, recorded people, communities and scenes at Funafuti during a visit of *USFC Albatross* when the U.S. Fish Commission was investigating the formation of coral reefs on Pacific atolls in 1900.[33]

Politics

Main article: Politics of Tuvalu

Tuvalu is a Parliamentary Democracy and Commonwealth realm with Queen Elizabeth II serving as the country's head of state and bearing the title Queen of Tuvalu. Since the Queen does not reside in the islands, she is represented in Tuvalu by a Governor General appointed by the Queen upon the advice of the country's elected Prime Minister. The local unicameral Parliament, or *Fale I Fono*, has 15 members and is elected every four years. Its members select a Prime Minister who is the head of government. The Cabinet is appointed by the Governor General on the advice of the Prime Minister.

In addition, each island has its own high-chief, or ulu-aliki, and several sub-chiefs (alikis) and elders. The elders form together an island council of elders or te sina o fenua (literally:"grey-hairs of the land"). In the past, another caste, one of the priests (tofuga), was also amongst the decision-makers. The sina o fenua, aliki and ulu-aliki exercise informal authority at the local level. Ulu-aliki are always chosen based on ancestry. Their powers are

now shared with the pule o kaupule (elected village presidents; one on each atoll).[34] There are no formal political parties and election campaigns are largely based on personal/family ties and reputations.

The highest court in Tuvalu is the High Court; there are eight Island Courts with limited jurisdiction. Rulings from the High Court can be appealed to the Court of Appeal of Tuvalu.[35] From the Court of Appeal there is a right of appeal to Her Majesty in Council, i.e., the Privy Council in London.

Defence and law enforcement

Tuvalu has no regular military forces, and spends no money on the military. Its police force includes a Maritime Surveillance Unit for search and rescue missions and surveillance operations. The police have a Pacific-class patrol boat (HMTSS *Te Mataili*) provided by Australia under the Pacific Patrol Boat Program for use in maritime surveillance and fishery patrol.[36] HMTSS stands for *His/Her Majesty's Tuvaluan State Ship* or *His/Her Majesty's Tuvalu Surveillance Ship*.

Districts

Main article: Islands of Tuvalu

Tuvalu's small population is distributed across nine islands, five of which are atolls. The smallest island, Niulakita, was uninhabited until it was settled by people from Niutao in 1949.

Local government districts consisting of more than one islet:

- Funafuti
- Nanumea
- Nui
- Nukufetau
- Nukulaelae
- Vaitupu

Local government districts consisting of only one island:

- Nanumanga
- Niulakita
- Niutao

Map of Tuvalu.

Foreign relations

Main article: Foreign relations of Tuvalu

Tuvalu participates in the work of Secretariat of the Pacific Community, or SPC (sometimes Pacific Community) and is a member of the Pacific Islands Forum, the Commonwealth of Nations and the United Nations. Tuvalu has maintained a mission at the United Nations in New York City since 2000. Tuvalu is a member of the World Bank and the Asian Development Bank.

Tuvalu maintains close relations with Fiji, New Zealand, Australia, Japan, South Korea, the United Kingdom and the European Union. It has diplomatic relations with the Republic of China (Taiwan); the ROC maintains the only resident embassy in Tuvalu and has a large assistance programme in the islands.

A major international priority for Tuvalu in the UN, at the 2002 Earth Summit in Johannesburg, South Africa and in other international fora, is promoting concern about global warming and the possible sea level rising. Tuvalu advocates ratification and implementation of the Kyoto Protocol. In December 2009 the islands stalled talks on climate change at the United Nations Climate Change Conference in Copenhagen, fearing some other developing countries were not committing fully to binding deals on a reduction in carbon emissions. Their chief negotiator stated, "Tuvalu is one of the most vulnerable countries in the world to climate change and our future rests on the outcome of this meeting."[37] Tuvalu participates in the operations of the Pacific Islands Applied Geoscience Commission (SOPAC) and the Secretariat of the Pacific Regional Environment Program (SPREC).[38]

Tuvalu is party to a treaty of friendship with the United States, signed soon after independence and ratified by the U.S. Senate in 1983, under which the United States renounced prior territorial claims to four Tuvaluan islands (Funafuti, Nukefetau, Nukulaelae and Niulakita) under the Guano Islands Act of 1856.[39]

Tuvalu participates in the operations of the Pacific Island Forum Fisheries Agency.[40] The Tuvaluan government, the US government, and the governments of other Pacific islands, are parties to the South Pacific Tuna Treaty (SPTT), entered into force in 1988. The current SPTT agreement expires on June 14, 2013.[41] Tuvalu is also a member of the Parties to the Nauru Agreement which addresses the management of tuna purse-seine fishing in the tropical western Pacific.[42]

Geography and environment

Main article: Geography of Tuvalu

A beach at Funafuti atoll.

Tuvalu consists of three reef islands and six true atolls. Its small, scattered group of atolls have poor soil and a total land area of only about 26 square kilometres (less than 10 sq. mi) making it the fourth smallest country in the world. The islets that form the atolls are very low lying. Nanumanga, Niutao, Niulakita are reef islands and the six true atolls are Funafuti, Nanumea, Nui, Nukufetau, Nukulaelae and Vaitupu. Funafuti is the largest atoll of the nine low reef islands and atolls that form the Tuvalu volcanic island chain. It comprises numerous islets around a central lagoon that is approximately 25.1 kilometres (15.6 miles) (N–S) by 18.4 kilometres (11.4 miles) (W-E), centred on 179°7’E and 8°30’S. On the atolls, an annular reef rim surrounds the lagoon with several natural reef channels.[43]

The eastern shoreline of Funafuti Lagoon was modified during World War II when the airfield (what is now Funafuti International Airport) was constructed. Several piers were also constructed, beach areas were filled and deep water access channels were excavated. These alterations to the reef and shoreline resulted in changes to wave patterns with less sand accumulating to form the beaches as compared to former times and the shoreline now exposed to wave action. Several attempts to stabilize the shoreline have not achieved the desired effect.[44] The reefs at Funafuti have suffered damage, with 80 per cent of the coral becoming bleached as a consequence

of the increase in ocean temperatures and acidification from increased levels of carbon dioxide.[45] A reef restoration project has investigated reef restoration techniques;[46] and researchers from Japan have investigated rebuilding the coral reefs through the introduction of foraminifer.[47]

The highest elevation is 4.6 metres (15 ft) above sea level on Niulakita,[48] which gives Tuvalu the second-lowest maximum elevation of any country (after the Maldives). However, the highest elevations are typically in narrow storm dunes on the ocean side of the islands which are prone to over topping in tropical cyclones, as occurred with Tropical Cyclone Bebe.[49][50]

Because of the low elevation, the islands that make up this nation are threatened by current and future sea level rise.[51] Additionally, Tuvalu is annually affected by king tide events which peak towards the end of the austral summer, and raise the sea level higher than a normal high tide.[52] As a result of historical sea level rise, the king tide events lead to flooding of low lying areas, which is compounded when sea levels are further raised by La Niña effects or local storms and waves. In the future, sea level rise may threaten to submerge the nation entirely as it is estimated that a sea level rise of 20–40 centimetres (8–16 inches) in the next 100 years could make Tuvalu uninhabitable.[53][54]

A wharf and beach at Funafuti atoll

Tuvalu experiences westerly gales and heavy rain from October to March – the period that is known as *Tau-o-lalo*; with tropical temperatures moderated by easterly winds from April to November. Drinking water is mainly obtained from rainwater collected on roofs and stored in tanks. These systems are often poorly maintained, resulting in a lack of water.[55] Aid programmes of Australia and the European Union have been directed to improving the storage capacity on Funafuti and in the outer islands.[56]

The rising population has resulted in an increased demand on fish stocks, which are under stress;[45] although the creation of the Funafuti Conservation Area has provided a fishing exclusion area to help sustain the fish population across the Funafuti lagoon. Population pressure on the resources of Funafuti and inadequate sanitation systems have resulted in pollution.[51][57] The Waste Operations and Services Act of 2009 provides the legal framework for waste management and pollution control projects funded by the European Union directed at organic waste composting in eco-sanitation systems.[58] Plastic waste is also a problem as much imported food and other commodities are supplied in plastic containers or packaging.

When the World War II airfield at Funafuti was constructed, the coral base of the atoll was used as fill to create the runway. The resulting borrow pits impacted the water aquifer. At these pits, the sea water can be seen bubbling up through the porous coral rock to form pools with each high tide.[59][60][61]

Tourism

See also: Funafuti Conservation Area and Public holidays in Tuvalu

The main island of Funafuti is the focus of travelers since the only airport in Tuvalu is the Funafuti International Airport and the island has hotel facilities.[62] Ecotourism is a motivation of travelers to Tuvalu. The Funafuti

Conservation Area consists of 33 square kilometers of ocean, reef, lagoon, channel and six uninhabited islets.[63]

The outer atolls can be visited on the two passenger-cargo ships, *Nivaga II* and *Manu Folau*, which provide round trip visits to the outer islands every three or four weeks.[64] There are no tourist accommodations on the outer atolls.

Economy

Main article: Economy of Tuvalu

From 1996 to 2002, Tuvalu was one of the best performing Pacific Island economies and achieved an average real gross domestic product (GDP) growth rate of 5.6 per cent per annum. Since 2002 economic growth has slowed with GDP of 1.5% in 2008. Tuvalu was exposed to rapid rises in world prices of fuel and food in 2008 with the level of inflation peaking at 13.4%.[65] The International Monetary Fund 2010 Report on Tuvalu estimates that Tuvalu experienced zero growth in its 2010 GDP, after the economy contracted by about 2% in 2009.[66]

Public sector workers make up about two thirds of those formaly employed. Approximately 15% of adult males work as seamen on foreign flagged merchant ships. Tuvaluans are otherwise involved in traditional subsistence agriculture and fishing.

Tuvalu generates income from the Tuvalu Trust Fund, the commercialisation of the '.tv' top layer domain, fishing licences, the sale of stamps and coins, remittances from Tuvaluans living in Australia and New Zealand, and remittances from Tuvaluan sailors employed on overseas ships.[67][68]

In 1998, Tuvalu began deriving revenue from the use of its area code for "900" lines and from the commercialisation of its ".tv" Internet domain name, which is now managed by Verisign.[69]

The Tuvalu Trust Fund was established in 1987 by the United Kingdom, Australia and New Zealand.[67] The value of the Tuvalu Trust Fund is approximately $100 million.[65][66][70]

Australia and New Zealand continue to contribute capital to the Tuvalu Trust Fund and provide other forms of development assistance.[67][68] The US government is also a major revenue source for Tuvalu, with 1999 payments from the South Pacific Tuna Treaty (SPTT) at about $9 million, which is expected to rise annually. The SPTT entered into force in 1988 with the current SPTT agreement which expires June 14, 2013.[41] Financial support to Tuvalu is also provided by Japan, South Korea and the European Union.[71]

The United Nations designates Tuvalu as a 'Least Developed Country' because of its limited potential for economic development, absence of exploitable resources and its small size and vulnerability to external economic and environmental shocks.[72]

Due to the country's remoteness, tourism does not provide much income; a thousand tourists are estimated to visit Tuvalu annually.[73]

Demographics

Main article: Demographics of Tuvalu

The country's population has more than doubled since 1980 with a growth rate of 0.702%. The population at the 2002 census was 9,561,[74] and is estimated to reach 10,544 in July 2010.[1] The population of Tuvalu is primarily ofPolynesian ethnicity with approximately 4% of the population being Micronesian.[1] The net migration rate is estimated at −7.02 migrant(s)/1,000 population (2011 est.)[1]

The primary destinations for migration are New Zealand and Australia. New Zealand has an annual quota of 75 Tuvaluans granted work permits under the *Pacific Access Category*, as announced in 2001.[75] The applicants register for the Pacific Access Category (PAC) ballots; the primary criteria is that the principal applicant must have a job offer from a New Zealand employer.[76] Tuvaluans also have access to seasonal employment in the horticulture and viticulture industries in New Zealand under the *Recognised Seasonal Employer* (RSE) Work Policy introduced in 2007 allowing for employment of up to 5,000 workers from Tuvalu and other Pacific islands.[77] Australia and Tuvalu are discussing extending access to the *Pacific Seasonal Worker Pilot Scheme* to Tuvaluans.[78]

Life expectancy is 62.7 years for males and 66.9 years for females (2011 est.)[1]

The Tuvaluan language is spoken by virtually everyone while a language very similar to Gilbertese is spoken on Nui. English is also an official language but is not spoken in daily use. Parliament and official functions are conducted in Tuvaluan.

The introduction of Christianity ended the worship of ancestral spirits and other deities, along with the power of the *vaka-atua* (the priests of the old religions). Laumua Kofe describes the objects of worship as varying from island to island, although ancestor worship is described by Rev. D.J. Whitmee in 1870 as being common practice.[79] About 97% of Tuvaluans are members of the Church of Tuvalu, a Protestant Christian church. Tuvaluans continue to respect their ancestors within the context of a strong Christian faith.

Other religions practised on the island include Seventh-day Adventist (1.4%), Bahá'í (1%).[1] and the Ahmadiyya Muslim Community (400 members, 0.4%).[80]

A Tuvaluan dancer at Auckland's Pasifika Festival

Culture

Dance and music

See also: Music of Tuvalu

The contemporary style of Tuvaluan music consists of a number of dances, most popularly including *fatele*. The traditional styles of *fakanau* and *fakaseasea*[81] were used to celebrate leaders and other prominent individuals. The Tuvaluan style can be described "as a musical microcosm of Polynesia, where contemporary and older styles co-exist".[81]

Heritage

The traditional community system still survives to a large extent on Tuvalu. Each family has its own task, or

salanga, to perform for the community, such as fishing, house building or defence. The skills of a family are passed on from parents to children.

Most islands have their own *fusi*, community owned shops similar to convenience stores, where canned foods and bags of rice can be purchased. Goods are cheaper and fusis give better prices for their own produce.[34]

Another important building is the *falekaupule*, the traditional island meeting hall,[82] where important matters are discussed and which is also used for wedding celebrations and community activities such as a *fatele* involving music, singing and dancing.[34] *Falekaupule* is also used as the name of the council of elders – the traditional decision making body on each island. Under the Falekaupule Act, *Falekaupule* means "traditional assembly in each island...composed in accordance with the Aganu of each island". *Aganu* means traditional customs and culture.[82]

Canoe carving on Nanumea

Cuisine

The traditional foods eaten in Tuvalu are pulaka, bananas, breadfruit, coconut, seafood (coconut crab, turtle and fish), seabirds (*taketake* or Black Noddy and *akiaki* or White Tern) and pork.[34]

Grown in large pits of composted soil below the water table, Pulaka is the main source for carbohydrates. Seafood provides protein. Bananas and breadfruit are supplemental crops. Coconut is used for its juice, to make other beverages and to improve the taste of some dishes. Pork is eaten mostly at *fateles* (or parties with dancing to celebrate certain events).[34]

Flying fish are caught using a boat, a butterfly net and a spotlight to attract them, for both a source of food and as an exciting activity.[34]

See also: Aquaculture in Tuvalu

Language

Main article: Tuvaluan language

The Tuvaluan language of the Ellicean group is distantly related to all other Polynesian languages such as Hawaiian, Māori, Tahitian, Samoan and Tongan. It is most closely related to the languages spoken on the Polynesian outliers in Micronesia and Northern and Central Melanesia. Tuvaluan has borrowed considerably from Samoan, the language of Christian missionaries in the late 19th and early 20th centuries. There are about 13,000 Tuvaluan speakers worldwide.[83][84] Tuvaluan radio services are operated by the Tuvalu Media Corporation.

Sport and leisure

A traditional sport played in Tuvalu is *kilikiti*, which is similar to cricket.[85] A popular sport specific to Tuvalu is ano, which is played with 2 round balls of 12 cm diameter.[34]

Common sports such as football, volleyball and rugby union are also played in the country as recreational activities. Tuvalu has sports organisations for badminton, basketball, tennis, table tennis, volleyball and weightlifting. A major sporting event is the "Independence Day Sports Festival" held annually on October 1.

Tuvalu has a national football team, which trains at the Vaiaku Stadium in Funafuti. The Tuvalu national football team competes in the Pacific Games and South Pacific Games. The Tuvalu Football Association is an associate member of the Oceania Football Confederation (OFC) and is seeking membership in FIFA.[86]

Tuvalu first participated in the South Pacific Games in 1978 and in the Commonwealth Games in 1998, when a weightlifter attended the games held at Kuala Lumpur, Malaysia.[87] Two table tennis players attended the 2002 Commonwealth Games in Manchester, England;[87] Tuvalu entered competitors in shooting, table tennis and weightlifting at the 2006 Commonwealth Games in Melbourne, Australia; and three athletes participated in the 2010 Commonwealth Games in Delhi, India, entering the discus, shot put and weightlifting events.[87]

The Tuvalu Amateur Sport Association was recognised as the Tuvalu National Olympic Committee in July 2007. Tuvalu entered the Olympic Games for the first time at the 2008 Summer Games in Beijing, China, with a weightlifter and two athletes in the men's and women's 100 meter sprints.

At the 2011 Pacific Games held in New Caledonia, Tuvaluan weightlifters won two silver medals and one bronze medal.[88]

Transport

Manu Folau off Vaitupu Harbour

Transport services in Tuvalu are limited. There are about eight kilometres of roads.[1] The streets of Funafuti were paved and lit in mid-2002 but other roads are unpaved. Tuvalu is among a few countries that do not have railroads.

Funafuti is the only port but there is a deep-water berth in the harbour at Nukufetau. The merchant marine fleet consists of two passenger/cargo ships *Nivaga II* and *Manu Folau*. These ships carry cargo and passengers between the main atolls and travel between Suva, Fiji[89] and Funafuti[64] 3 to 4 times a year. The *Nivaga II* and *Manu Folau* provide round trip visits to the outer islands every three or four weeks. The *Manu Folau* is a 50-meter vessel that was a gift from Japan to the people of Tuvalu.

The single airport is Funafuti International Airport. It is a tarred strip. Air Pacific, the owner of Fiji Airlines (trading as Pacific Sun) operates services between Suva (originating from Nadi) and Funafuti with a 40-seat plane, twice a week.

Education

Education in Tuvalu is free and compulsory between the ages of 6 and 15 years. Each island has a primary school. The secondary school is located on Vaitupu. Students board at the school during the school term, returning to their home islands each school vacation.

Required attendance at school is 10 years for males and 11 years for females (2001).[1] The adult literacy rate is 99.0% (2002).[66]

The Tuvaluan Employment Ordinance (1966) sets the minimum age for paid employment at 14 years and prohibits children under the age of 15 from performing hazardous work.[90]

El Niño and La Niña effects and the effects of climate change

Main article: Climate change in Tuvalu

Funafuti

At its highest, Tuvalu is only 4.6 metres (15 ft) above sea level, and Tuvaluan leaders have been concerned about the effects of rising sea levels for some years.[91] [92] Whether there are measurable changes in the sea level relative to the islands of Tuvalu is a contentious issue.[93] There were problems associated with the pre-1993 sea level records from Funafuti which resulted in improvements in the recording technology to provide more reliable data for analysis.[94] The degree of uncertainty as to estimates of sea level change relative to the islands of Tuvalu is reflected in the conclusions made in 2002 from the available data.[94] The 2011 report of the *Pacific Climate Change Science Program* published by the Australian Government,[95] concludes: "The sea-level rise near Tuvalu measured by satellite altimeters since 1993 is about 5 mm per year."[96]

Observable transformations over the last ten to fifteen years show Tuvaluans that there have been changes to the sea levels. These include sea water bubbling up through the porous coral rock to form pools at high tide and the flooding of low-lying areas including the airport during spring tides and king tides.[60][61][97]

As low-lying islands lacking a surrounding shallow shelf, the communities of Tuvalu are especially susceptible to changes in sea levela and undissipated storms.[98] It is estimated that a sea level rise of 20–40 centimetres (8–16 inches) in the next 100 years could make Tuvalu uninhabitable.[53][54]

The 2011 report of *Pacific Climate Change Science Program* of Australia concludes, in relation to Tuvalu, that over the course of the 21st century:

• Surface air temperatures and sea-surface temperatures are projected to continually increase (very high confidence).[96]

• Annual and seasonal mean rainfalls are projected to increase (high confidence).[96]

• The intensity and frequency of extreme heat days are projected to increase (very high confidence).[96]

• The intensity and frequency of extreme rainfall days are projected to increase (high confidence).[96]

• The incidence of drought is projected to decrease (moderate confidence).[96]

• Tropical cyclone numbers are projected to decline in the south-east Pacific Ocean basin (0–40ºS, 170ºE–

130ºW) (moderate confidence).[96]

• Ocean acidification is projected to continue (very high confidence).[96]

• Mean sea-level rise is projected to continue (very high confidence).[96]

The South Pacific Applied Geoscience Commission (SOPAC) suggests that, while Tuvalu is vulnerable to climate change, environmental problems such as population growth and poor coastal management also affect sustainable development. SOPAC ranks the country as extremely vulnerable using the Environmental Vulnerability Index.[99]

Ocean side of Funafuti atoll showing the storm dunes, the highest point on the atoll.

While some commentators have called for the relocation of Tuvalu's population to Australia, New Zealand or Kioa in Fiji, the former Prime Minister Maatia Toafa said his government did not regard rising sea levels as such a threat that the entire population would need to be evacuated.[100][101] In spite of persistent Internet rumours that New Zealand has agreed to accept an annual quota of 75 evacuees, the annual quota of 75 Tuvaluans granted work permits under the Pacific Access Category (announced in 2001) is not related to environmental concerns.[75] Employment opportunities and family reunification has been the primary motivation of Tuvaluans who obtain New Zealand work permits under the Pacific Access Category.[92]

Tuvalu experiences the effects of El Niño and La Niña caused by changes in ocean temperatures in the equatorial and central Pacific. El Niño effects increase the chances of tropical storms and cyclones, while those of La Niña increase the chances of drought.[102] Typically the islands of Tuvalu receive between 200mm to 400mm of rainfall per month. However, in 2011 a weak La Niña effect caused a drought by cooling the surface of the sea around Tuvalu. A state of emergency was declared on September 28, 2011;[103] with rationing of fresh-water on the islands of Funafuti and Nukulaelae.[104][105][106]

Households on Funafuti and Nukulaelae are restricted to two buckets of fresh water per day (40 litres).[107][108] The governments of Australia and New Zealand have responded to the fresh-water crisis by supplying temporary desalination plants,[109][110][111] and assisting in the repair of the existing desalination unit that was donated by Japan in 2006.[112] In response to the 2011 drought, Japan has funded the purchase of a 100 m³/d desalination plant and two portable 10 m³/d plants as part of its Pacific Environment Community (PEC) program.[113][114] Aid programs from the European Union[56][58] and Australia also provide water tanks as part of the longer term solution for the storage of available fresh water.[115]

History of Tuvalu

From Wikipedia, the free encyclopedia

Main article: Tuvalu

The first inhabitants of Tuvalu were Polynesians so that the origins of the people of Tuvalu is addressed in the theories regarding the spread of humans out of Southeast Asia, from Taiwan, via Melanesia and across the Pacific islands to create Polynesia.

The stories as to the ancestors of the Tuvaluans vary from island to island. On Funafuti and Vaitupu the founding ancestor is described as being from Samoa;[1] [2] whereas on Nanumea the founding ancestor is described as being from Tonga;[1] These stories can be linked to what is known about the Samoa-based Tu'i Manu'a Confederacy, ruled by the holders of the Tu'i Manu'a title, which confederacy likely included much of Western Polynesia and some outliers at the height of its power in the 10th and 11th centuries. Tuvalu is thought to have been visited by Tongans in the mid-13th century and was within Tonga's sphere of influence.[2] The extent of influence of the Tuʻi Tonga line of Tongan kings and the existence of the Tuʻi Tonga Empire which originated in the 10th century, is disputed.

Various names were given to individual islands by the captains and chartmakers on visiting European ships. In 1819 the island of Funafuti, was named Ellice's Island; the name Ellice was applied to all nine islands after the work of English hydrographer Alexander George Findlay (1812–1876).[3] The islands came under Britain's sphere of influence in the late 19th century, when the Ellice Islands were declared a British protectorate by Captain Gibson, R. N. of HMS *Curaçao* between 9th and 16 October 1892. The Ellice Islands were administered as British protectorate by a Resident Commissioner from 1892 to 1916 as part of the British Western Pacific Territories (BWPT), and later as part of the Gilbert and Ellice Islands Colony from 1916 to 1974. The United States claimed Funafuti, Nukefetau, Nukulaelae and Niulakita under the Guano Islands Act of 1856, this claim was renounced under the 1983 treaty of friendship between Tuvalu and US.[4]

In 1974, the Ellice Islanders voted for separate British dependency status as Tuvalu, separating from the Gilbert Islands which became Kiribati upon independence. Tuvalu became fully independent within the Commonwealth on October 1, 1978. On September 5, 2000, Tuvalu became the 189th member of the United Nations.

Early history

A man from the Nukufetau atoll, 1841.

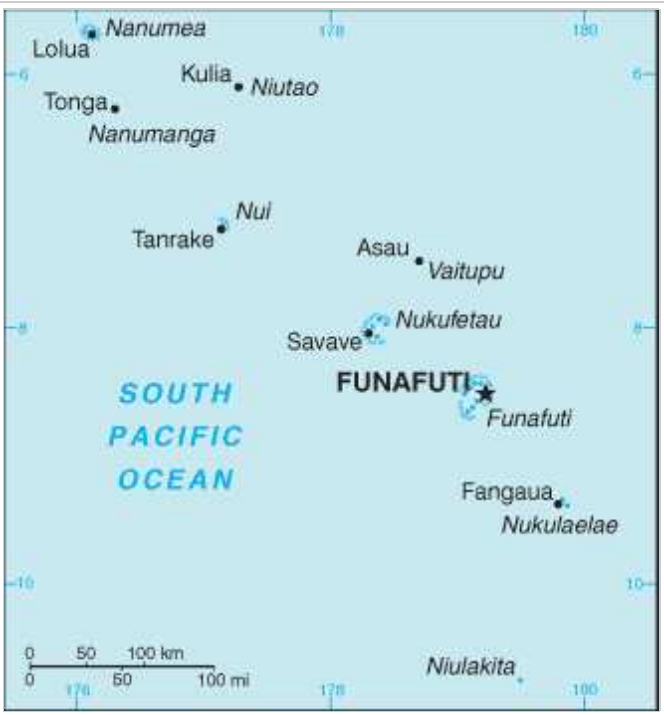
Tuvaluans are a Polynesian people who settled the islands around 3000 years ago coming from Tonga and Samoa.[5] During pre-European-contact times there was frequent canoe voyaging between the islands as Polynesian navigation skills are recognised to have allowed deliberate journeys on double-hull sailing canoes or outrigger canoes.

Eight of the nine islands of Tuvalu were inhabited; thus the name, Tuvalu, means "eight standing together" in Tuvaluan. Possible evidence of fire in the Caves of Nanumanga may indicate human occupation thousands of years before that. The pattern of settlement that is believed to have occurred is that the Polynesians spread out from the Samoan Islands into the Tuvaluan atolls, with Tuvalu providing a stepping stone to migration into the Polynesian outlier communities in Melanesia and Micronesia.[6]

Tuvalu is thought to have been visited by Tongans in the mid-13th century, although it is uncertain whether they settled permanently. It was, however, within Tonga's sphere of influence, and there were regular contacts between the two island groups.[7] Tuvalu is on the western boundary of the Polynesian Triangle so that the northern islands of Tuvalu, particularly Nui have links to Micronesians from Kiribati.[1]

Voyages by Europeans in the Pacific

Tuvalu was first sighted by Europeans in 1568 during the voyage of Álvaro de Mendaña de Neira from Spain who is understood to have encounted the island of Nui, which he named *Isla de Jesus* (Island of Jesus) but was unable to land. Keith S. Chambers and Doug Munro (1980) identify Niutao as the island that Francisco Antonio Mourelle named on May 5, 1781 thus solving what Europeans had called *The Mystery of Gran Cocal*.[8] [9] Mourelle's map and journal named the island *El Gran Cocal* ('The Great Coconut Plantation'), however the latitude and longitude was uncertain.[9]



In May 1819, Captain Arent de Peyster (or Peyter) of New York, as captain of the armed brigantine or privateer *Rebecca*, sailing under British colours,[10] while on a voyage from Valparaíso to India, passed through the southern Tuvalu waters; de Peyster sighted Nukufetau and Funafuti, which he named Ellice's Island after an English Politician, Edward Ellice, the Member of Parliament for Coventry and the owner of the Rebecca's cargo.[9] The next morning, De Peyster discovered another group of about seventeen low islands forty-three miles northwest of Funafuti, naming this group "De Peyster's Islands." It is the first name, however, that was eventually used for the whole island group.[11]

In 1820 the Russian explorer Mikhail Lazarev visited Nukufetau as commander of the *Mirny*.[9] Following 1819 whalers were roving the Pacific though visiting Tuvalu only infrequently because of the difficulties of landing ships on the atolls. No settlements were established by the whalers.[9]

Peruvian slave raiders ("blackbirders") seeking workers to mine the guano deposits on the Chincha Islands in Peru, combed the Pacific between 1862 and 1865, including the southern islands of Tuvalu.[12] The Rev. A. W. Murray,[13] the earliest European missionary in Tuvalu, reported that in 1863 about 180 people[14] were taken from Funafuti and about 200 were taken from Nukulaelae[15] as there were fewer than 100 of the 300 recorded in 1861 as living on Nukulaelae.[16] [17]

Tuvaluan man in traditional costume drawn by Alfred Agate in 1841 during the United States Exploring Expedition.

Map of Tuvalu.

Christian missionaries

Christianity first came to Tuvalu in 1861 when Elekana, a Christian deacon from Manihiki in the Cook Islands became caught in a storm and drifted for 8 weeks before landing at Nukulaelae. Once there, Elekana began proselytizing Christianity.[9]

In 1865 the Rev. A. W. Murray of the London Missionary Society - a Protestant congregationalist missionary society - arrived as the first European missionary where he too proselytized among the inhabitants of Tuvalu. By 1878 Protestantism was well established with preachers on each island.[9]

Trading firms & traders

The Sydney firms of Robert Towns and Company, J. C. Malcolm and Company, and Macdonald, Smith and Company, pioneered the coconut-oil trade in Tuvalu.[18] By the 1870s J. C. Godeffroy und Sohn of Hamburg (operating out of Samoa) began to dominate the Tuvalu copra trade, which company was in 1879 taken over by Handels-und Plantagen-Gesellschaft der Südsee-Inseln zu Hamburg (DHPG). Competition came from H. M. Ruge and Company, and from Henderson and Macfarlane of Auckland, New Zealand.[19] These trading companies engaged palagi traders who lived on the islands, some islands would have competing traders with dryer islands only have a single trader.

Changes occurred with steamships replacing sailing vessels. Over time the number of competing trading companies diminished, beginning with Ruge's bankruptcy in 1888 followed by the withdrawal of the DHPG from trading in Tuvalu in 1889/90. Henderson and Macfarlane then dominated the copra trade, operating their vessel *SS Archer* to call on islands in Fiji, Tuvalu, and Kiribati.[18] New competition came from Burns Philp, operating from what is now Kiribati, with competition from Levers Pacific Plantations from 1903 and from Captain E. F. H. Allen of the Samoa Shipping and Trading Company from 1911.[18] The numbers of palagi traders declined with the supercargo of each ship dealing directly with Tuvaluans so that by 1909 there were no resident palagi traders representing the trading firms.[18] Tuvaluans became responsible for operating trading stores on each island.

In 1892 Captain Davis of the HMS *Royalist*, reported on trading activities and traders on each of the islands visited.[20] Captain Davis identified the following traders in the Ellice Group: Edmund Duffy (Nanumea); Jack Buckland (Niutao); Harry Nitz (Vaitupu); John (also known as Jack) O'Brien (Funafuti); Alfred Restieaux and Fenisot (Nukufetau); and Martin Kleis (Nui).[21] This was the time at which the greatest number of palagi traders lived on the atolls, acting as agents for the trading companies.[18]

In the later 1890s and into first decade of the 20th century, structural changes occurred in the operation of the Pacific trading companies, with the trading companies moving from a practice of having traders resident on each island to trade with the islanders to a business operation where the supercargo (the cargo manager of a trading ship) would deal directly with the islanders when a ship would visit an island. From 1900 the numbers of palagi traders in Tuvalu declined, with the last of the palagi traders being Fred Whibley on Niutao and Alfred Restieaux on Nukufetau. However, by 1909 there were no resident palagi traders representing the trading companies,[22] although both Fred Whibley and Alfred Restieaux remained in the islands until their deaths.

Scientific expeditions & travellers

The United States Exploring Expedition under Charles Wilkes visited Funafuti, Nukufetau and Vaitupu in 1841.[23] During the visit of the expedition to Tuvalu Alfred Thomas Agate, engraver and illustrator, recorded the dress and tattoo patterns of men of Nukufetau.[24]

Woman on Funafuti, Harry Clifford Fassett (1900)

In 1890 Robert Louis Stevenson, his wife Fanny Vandegrift Stevenson, and her son Lloyd Osbourne sailed on the *Janet Nicoll*,[25] a trading steamer owned by Henderson and Macfarlane of Auckland, New Zealand, which operated between Sydney, Auckland and into the central Pacific. The *Janet Nicoll* visited Tuvalu; while Fanny records that they made landfall at Funafuti and Niutao, Jane Resture suggests that it was more likely that they visited Nukufetau rather than Funafuti.[26] An account of the voyage was written by Fanny Vandegrift Stevenson and published under the title *The Cruise of the Janet Nichol*,[27] together with photographs taken by Robert Louis Stevenson and Lloyd Osbourne.

In 1894 Count Rudolph Festetics de Tolna, his wife Eila (née Haggin)[28] and her daughter Blanche Haggin visited Funafuti aboard the yacht *Le Tolna*.[29] *Le Tolna* spent several days at Funafuti with the Count photographing men and woman on Funafuti.[30]

The boreholes on Funafuti at the site now called *David's Drill* are the result of drilling conducted by the Royal Society of London for the purpose of investigating the formation of coral reefs and whether traces of shallow water organisms could be found at depth in the coral of Pacific atolls. This investigation followed the work on the structure and distribution of coral reefs conducted by Charles Darwin in the Pacific. Drilling occurred in 1896, 1897 and 1911. Professor Edgeworth David of the University of Sydney lead the expeditions in 1896 & 1897.[31] Photographers on the expeditions recorded people, communities and scenes at Funafuti.[32]

Harry Clifford Fassett, captain's clerk and photographer, recorded people, communities and scenes at Funafuti during a visit of *USFC Albatross* when the U.S. Fish Commission were investigating the formation of coral reefs on Pacific atolls in 1900.[33]

The Pacific War & Operation Galvanic

During the Pacific War the United States Marine Corps landed on Funafuti on October 2, 1942. The Japanese had already occupied Tarawa and other islands in what is now Kiribati, A Naval Construction Battalion (Seabees) built compacted coral runways at Funafuti with satellites airfields on both Nanumea and Nukufetau. Building the runway at Funafuti involved the loss of land used for growing pulaka and taro with extensive excavation of coral from what are still known as the borrow pits. The runway continues in use today as Funafuti International Airport.

The Seabees also blasted an opening in the reef at Nanumea, which became known as the 'American Passage'.[34]

While Funafuti suffered air attacks during 1943, casualties were limited, although on one occasion on 23 April 1943, 680 people took refuge in the concrete walled, pandanus-thatched church. Fortunately Corporal B. F. Ladd, an American soldier, persuaded them to get into dugouts, as a bomb struck the building shortly after.[35]

USAAF B-24 *Liberator* bombers of the Seventh Air Force operated from Tuvalu. The atolls of Tuvalu acted as a staging post during the preparation for the Battle of Tarawa and the Battle of Makin that commenced on 20 November 1943, which was the implementation of operation 'Galvanic'.[34]

Recent history

Tuvalu became fully independent in 1978 and in 1979 signed a treaty of friendship with the United States, which recognized Tuvalu's possession of four small islands formerly claimed by the United States.[11]

Tuvalu became the 189th member of the United Nations in September 2000.[36] [37] At present, the country's Permanent Representative to the United Nations is Ambassador Afelee F. Pita.

Tuvalu, one of the world's smallest countries, has indicated that its priority within the United Nations is to emphasise "climate change and the unique vulnerabilities of Tuvalu to its adverse impacts". Other priorities are obtaining "additional development assistance from potential donor countries", widening the scope of Tuvalu's bilateral diplomatic relations, and, more generally, expressing "Tuvalu's interests and concerns".[38] The issue of climate change has featured prominently in Tuvalu's interventions.

In 2002, Governor-General Tomasi Puapua concluded his address to the United Nations General Assembly by saying:

> "Finally, Mr. President, efforts to ensure sustainable development, peace, security and longterm livelihood for the world will have no meaning to us in Tuvalu in the absence of serious actions to address the adverse and devastating effects of global warming. At no more than three meters above sea level, Tuvalu is particularly exposed to these effects. Indeed our people are already migrating to escape, and are already suffering from the consequences of what world authorities on climate change have consistently been warning us. Only two weeks ago, a period when the weather was normal and calm and at low tide, unusually big waves suddenly crashed ashore and flooded most part of the capital island.
> In the event that the situation is not reversed, where does the international community think the Tuvalu people are to hide from the onslaught of sea level rise? Taking us as environmental refugees, is not what Tuvalu is after in the long run. We want the islands of Tuvalu and our nation to remain permanently and not be submerged as a result of greed and uncontrolled consumption of industrialized countries. We want our children to grow up the way my wife and I did in our own islands and in our own culture.

> We once again appeal to the industrialized countries, particularly those who have not done so, to urgently ratify and fully implement the Kyoto Protocol, and to provide concrete support in all our adaptation efforts to cope with the effects of climate change and sea level rise. Tuvalu, having little or nothing to do with the causes, cannot be left on its own to pay the price. We must work together. May God Bless you all. May God Bless the United Nations."[39]

Addressing the Special Session of the Security Council on Energy, Climate and Security in April 2007, Ambassador Pita stated:

> "We face many threats associated with climate change. Ocean warming is changing the very nature of our island nation. Slowly our coral reefs are dying through coral bleaching, we are witnessing changes to fish stocks, and we face the increasing threat of more severe cyclones. With the highest point of four metres above sea level, the threat of severe cyclones is extremely disturbing, and severe water shortages will further threaten the livelihoods of people in many islands. Madam President, our livelihood is already threatened by sea level rise, and the implications for our long term security are very disturbing. Many have spoken about the possibility of migrating from our homeland. If this becomes a reality, then we are faced with an unprecedented threat to our nationhood. This would be an infringement on our fundamental rights to nationality and statehood as constituted under the Universal Declaration of Human Rights and other international conventions."[40]

Addressing the United Nations General Assembly in September 2008, Prime Minister Apisai Ielemia stated:

> "Climate change is, without doubt, the most serious threat to the global security and survival of mankind. It is an issue of enormous concern to a highly vulnerable small island State like Tuvalu. Here in this Great House, we now know both the science and economics of climate change. We also know the cause of climate change, and that human actions by ALL countries are urgently needed to address it. The central message of both the IPCC reports and the Sir Nicholas Stern reports to us, world leaders, is crystal clear: *unless urgent actions are done to curb greenhoses gasses emissions by shifting to a new global energy mix based on renewable energy sources, and unless timely adaptation is done, the adverse impact of climate change on all communities, will be catastrophic*."[41] (italics in original submission)

Monarchy of Tuvalu

From Wikipedia, the free encyclopedia

The **monarchy of Tuvalu** (the **Tuvaluan monarchy**) is a system of government in which a hereditary monarch is the Sovereign of Tuvalu. The present monarch of Tuvalu is Queen Elizabeth II.[1] Tuvalu shares the Sovereign with 15 other Commonwealth realms.[2] The Queen's constitutional roles are mostly delegated to the Governor-General of Tuvalu. Royal succession is governed by the English Act of Settlement of 1701, which is part of constitutional law.

In the first years of the 21st Century, the issue of abolishing the monarchy was raised by local politicians, but a constitutional referendum held on 30 April 2008 turned out 1,260 to 679 votes in favour of retaining it.[3]

International and domestic role

One of the most complicated features of the Tuvaluan monarchy is that it is a shared monarchy.

Fifty-four states are members of the Commonwealth of Nations. Sixteen of these countries are specifically Commonwealth realms who recognise, individually, the same person as their Monarch and Head of State; Tuvalu is one of these. [4] Despite sharing the same person as their respective national monarch, each of the Commonwealth realms—including Tuvalu—is sovereign and independent of the others.

Development of shared monarchy

The *Balfour Declaration* of 1926 provided the dominions the right to be considered equal to Britain, rather than subordinate; an agreement that had the result of, in theory, a shared Crown that operates independently in each realm rather than a unitary British Crown under which all the dominions were secondary. The Monarchy thus ceased to be an exclusively British institution, although it has often been called "British" since this time (in both

legal and common language) for reasons historical, legal, and of convenience. The *Royal and Parliamentary Titles Act, 1927* was the first indication of this shift in law, further elaborated in the *Statute of Westminster, 1931*.

Tuvalu achieved independence in 1978 but retained the Queen as Head of State. Under the *Statute of Westminster*, Tuvalu has a common monarchy with Britain and the other Commonwealth realms.

On all matters of the Tuvaluan State, the Monarch is advised solely by Tuvaluan ministers. 16 June remains a public holiday as the Queen's Official Birthday.

The Queen of Tuvalu and the Duke of Edinburgh have only paid one visit to Tuvalu on 26-27 October 1982. The royal couple were carried around in ceremonial litters and later served with traditional local dishes on a banquet.[5] A sheet of commemorative stamps were issued for the royal visit.

Former Prime Minister Sir Kamuta Latasi was knighted by the Queen in 2008 although he is noted for his republican leanings in Tuvaluan politics.

Title

In Tuvalu, the Queen's official title is: *Elizabeth the Second, by the Grace of God, Queen of Tuvalu and of Her other Realms and Territories, Head of the Commonwealth*.

This style communicates Tuvalu's status as an independent monarchy, highlighting the Monarch's role specifically as Queen of Tuvalu, as well as the shared aspect of the Crown throughout the realms. Typically, the Sovereign is styled "Queen of Tuvalu," and is addressed as such when in Tuvalu, or performing duties on behalf of Tuvalu abroad.

Constitutional role

The Tuvaluan constitution is made up of a variety of statutes and conventions that are either British or Tuvaluan origin, which gives Tuvalu a similar parliamentary system of government as the other Commonwealth realms.

All powers of state are constitutionally reposed in the Monarch, who is represented by the Governor General of Tuvalu — appointed by the Monarch upon the advice of the Prime Minister of Tuvalu the Monarch is informed of the Prime Minister's decision before the Governor General gives Royal Assent.

Duties

Most of the Queen's domestic duties are performed by the Governor General. The Governor-General represents the Queen on ceremonial occasions such as the opening of Parliament, the presentation of honours and military parades. Under the Constitution, he is given authority to act in some matters, for example in appointing and disciplining officers of the civil service, in proroguing Parliament. As in the other Commonwealth realms, however, the Monarch's role, and thereby the vice-regent's role, is almost entirely symbolic and cultural, acting as a symbol of the legal authority under which all governments operate, and the powers that are constitutionally hers are exercised almost wholly upon the advice of the Cabinet, made up of Ministers of the Crown. It has been said since the death of Queen Anne in 1714, the last monarch to head the British cabinet, that the monarch "reigns" but does not "rule". In exceptional circumstances, however, the Monarch or vice-regal can act against such advice based upon his or her reserve powers.

There are also a few duties which must be specifically performed by, or bills that require assent by the Queen. These include: signing the appointment papers of Governors General, the confirmation of awards of honours, and

approving any change in her title.

It is also possible that if the Governor General decided to go against the Prime Minister's or the government's advice, the Prime Minister could appeal directly to the Monarch, or even recommend that the Monarch dismiss the Governor General.

Succession

Charles, Prince of Wales, the current heir to the throne of Tuvalu

Succession to the throne is by male-preference primogeniture, and governed by the provisions of the Act of Settlement, as well as the English Bill of Rights. These documents, though originally passed by the Parliament of England, are now part of the Tuvaluan constitutional law.

This legislation lays out the rules that the Monarch cannot be a Roman Catholic, nor married to one, and must be in communion with the Church of England upon ascending the throne. As Tuvalu's laws governing succession are currently identical to those of the United Kingdom (by the *Statute of Westminster*) see Succession to the British Throne for more information.

The heir apparent is Elizabeth II's eldest son, Charles, who has no official title outside of the UK, but is accorded his UK title, Prince of Wales, as a courtesy title.

Legal role

All laws in Tuvalu are enacted with the sovereign's, or the vice-regal's signature. The granting of a signature to a bill is known as Royal Assent; it and proclamation are required for all acts of Parliament, usually granted or withheld by the Governor General. The Vice-Regals may reserve a bill for the Monarch's pleasure, that is to say, allow the Monarch to make a personal decision on the bill. The Monarch has the power to disallow a bill (within a time limit specified by the constitution).

The Sovereign is deemed the "fount of justice," and is responsible for rendering justice for all subjects. The Sovereign does not personally rule in judicial cases; instead, judicial functions are performed in his or her name. The common law holds that the Sovereign "can do no wrong"; the monarch cannot be prosecuted in his or her own courts for criminal offences. Civil lawsuits against the Crown in its public capacity (that is, lawsuits against the government) are permitted; however, lawsuits against the Monarch personally are not cognizable. The Sovereign, and by extension the Governor General, also exercises the "prerogative of mercy," and may pardon offences against the Crown. Pardons may be awarded before, during, or after a trial.

In Tuvalu the legal personality of the State is referred to as "Her Majesty the Queen in Right of Tuvalu." For example, if a lawsuit is filed against the government, the respondent is formally described as Her Majesty the Queen in Right Tuvalu. The monarch as an individual takes no more role in such an affair than in any other business of government.

Referendum of 2008

In the first years of the 21st century there was a debate about the abolition of the monarchy. Prime Minister Saufatu Sopoanga had stated in 2004 that he was in favour of replacing the Queen as Tuvalu's head of state, a view supported by popular former Prime Minister Ionatana Ionatana; Sopoanga also stated that public opinion would be evaluated first before taking any further moves.[6] Former Prime Minister Kamuta Latasi also

supported the idea.

A referendum was held in Tuvalu in 2008, giving voters the option of retaining the monarchy, or abolishing it in favour of a republic. The monarchy was retained with 1,260 votes to 679 (64.98%).[7][8] Turnout was low, with about 2000 voters of a potential 9000 taking part.

United Kingdom

From Wikipedia, the free encyclopedia

The **United Kingdom of Great Britain and Northern Ireland**[nb 5] (commonly known as the **United Kingdom**, the **UK** or **Britain**) is a sovereign state located off the north-western coast of continental Europe. The country includes the island of Great Britain, the north-eastern part of the island of Ireland and many smaller islands. Northern Ireland is the only part of the UK that shares a land border with another sovereign state—the Republic of Ireland. Apart from this land border the UK is surrounded by the Atlantic Ocean, the North Sea, the English Channel and the Irish Sea.

The United Kingdom is a unitary state governed under a constitutional monarchy and a parliamentary system, with its seat of government in the capital city of London. It is a country in its own right[10][11] and consists of four countries: England, Northern Ireland, Scotland and Wales.[12] There are three devolved national administrations, each with varying powers,[13][14] based in Belfast, Cardiff and Edinburgh, the capitals of Northern Ireland, Wales and Scotland respectively. Associated with the UK, but not constitutionally part of it, are three Crown Dependencies.[15] The United Kingdom has fourteen overseas territories.[16] These are remnants of the British Empire which, at its height in 1922, encompassed almost a quarter of the world's land surface and was the largest empire in history. British influence can still be observed in the language, culture and legal systems of many of its former territories.

The UK is a developed country and has the world's sixth-largest economy by nominal GDP and seventh-largest economy by purchasing power parity. It was the world's first industrialised country[17] and the world's foremost power during the 19th and early 20th centuries.[18] The UK remains a great power with leading economic, cultural, military, scientific and political influence.[19] It is a recognised nuclear weapons state and its military expenditure ranks third or fourth in the world.[20] The UK has been a permanent member of the United Nations Security Council since its first session in 1946; it is also a member of the Commonwealth of Nations, the Council of Europe, the European Union, the G7, the G8, the G20, NATO, the OECD and the World Trade Organization.

Etymology and terminology

See also: Name of Britain, Terminology of Great Britain, and Terminology of the British Isles

The name "United Kingdom of Great Britain and Northern Ireland" was introduced in 1927 by the Royal and Parliamentary Titles Act to reflect the granting of independence to the Irish Free State in 1922, which left Northern Ireland as the only part of the island of Ireland still within the UK.[21] Prior to this, the Acts of Union 1800, that led to the uniting the kingdoms of Great Britain and Ireland in 1801, had given the new state the name of the United Kingdom of Great Britain and Ireland. Great Britain before 1801 is occasionally referred to as the "United Kingdom of Great Britain".[22][23][24][25] However, S

Improve this page

1707 Acts of Union declare that England and Scotland are "United into One Kingdom by the Name of Great Britain".[26][27][nb 6] The term *united kingdom* is found in informal use during the 18th century to describe the new state but only became official with the union with Ireland in 1801.[28]

Although the United Kingdom, as a sovereign state, is a country, England, Scotland, Wales and Northern Ireland are also referred to as countries, whether or not they are sovereign states or have devolved or other self-government.[29][30] The British Prime Minister's website has used the phrase "countries within a country" to describe the United Kingdom.[11] With regard to Northern Ireland, the descriptive name used "can be controversial, with the choice often revealing one's political preferences."[31] Other terms used for Northern Ireland include "region" and "province".[32][33]

The United Kingdom is often referred to as *Britain*. British government sources frequently use the term as a short form for the United Kingdom, whilst media style guides generally allow its use but point out that the longer term *Great Britain* refers only to England, Scotland and Wales.[34][35][36] However, some foreign usage, particularly in the United States, uses *Great Britain* as a loose synonym for the *United Kingdom*.[37][38] Also, the United Kingdom's Olympic team competes under the name "Great Britain" or "Team GB".[39][40] *GB* and *GBR* are the standard country codes for the United Kingdom (see ISO 3166-2 and ISO 3166-1 alpha-3) and are consequently commonly used by international organisations to refer to the United Kingdom.[*citation needed*]

The adjective *British* is commonly used to refer to matters relating to the United Kingdom. Although the term has no definite legal connotation, it is used in legislation to refer to United Kingdom citizenship.[41] However, British people use a number of different terms to describe their national identity. Some may identify themselves as British only, or British *and* English, Scottish, Welsh, or Northern Irish. Others may identify themselves as only English, Scottish, Welsh or Northern Irish and not British. In Northern Ireland, some describe themselves as only Irish.[42][43][44]

Prior to 1707

Main articles: History of England, History of Wales, History of Scotland, History of Ireland, and History of the formation of the United Kingdom

Stonehenge, in Wiltshire, was erected around 2500 BC.

Settlement by anatomically modern humans of what was to become the United Kingdom occurred in waves beginning by about 30,000 years ago.[45] By the end of the region's prehistoric period, the population is thought to have belonged, in the main, to a culture termed Insular Celtic, comprising Brythonic Britain and Gaelic Ireland.[46] The Roman conquest, beginning in 43 AD, and the 400-year rule of southern Britain, was followed by an invasion by Germanic Anglo-Saxon settlers, reducing the Brythonic area mainly to what was to become Wales.[47] The region settled by the Anglo-Saxons became unified as the Kingdom of England in the 10th century.[48] Meanwhile, Gaelic-speakers in north west Britain (with connections to the north-east of Ireland and traditionally supposed to have migrated from there in the 5th century)[49][50] united with the Picts to create the Kingdom of Scotland in the 9th century.[51]

In 1066, the Normans invaded England and after its conquest, seized large parts of Wales, co

Ireland and settled in Scotland bringing to each country feudalism on the Northern French model and Norman-French culture.[52] The Norman elites greatly influenced, but eventually assimilated with, each of the local cultures.[53] Subsequent medieval English kings completed the conquest of Wales and made an ultimately unsuccessful attempt to annex Scotland. Thereafter, Scotland maintained its independence, albeit in near-constant conflict with England. The English monarchs, through inheritance of substantial territories in France and claims to the French crown, were also heavily involved in conflicts in France, most notably the Hundred Years War.[54]

The early modern period saw religious conflict resulting from the Reformation and the introduction of Protestant state churches in each country.[55] Wales was fully incorporated into the Kingdom of England,[56] and Ireland was constituted as a kingdom in personal union with the English crown.[57] In what was to become Northern Ireland, the lands of the independent Catholic Gaelic nobility were confiscated and land given to Protestant settlers from England and Scotland.[58] In 1603, the kingdoms of England, Scotland and Ireland were united in a personal union when James VI, King of Scots, inherited the crowns of England and Ireland and moved his court from Edinburgh to London; each country nevertheless remained a separate political entity and retained its separate political institutions.[59][60] In the mid-17th century, all three kingdoms were involved in a series of connected wars (including the English Civil War) which led to the temporary overthrow of the monarchy and the establishment of the short-lived unitary republic of the Commonwealth of England, Scotland and Ireland.[61][62] Although the monarchy was restored, it ensured (with the Glorious Revolution of 1688) that, unlike much of the rest of Europe, royal absolutism would not prevail. The British constitution would develop on the basis of constitutional monarchy and the parliamentary system.[63] During this period, particularly in England, the development of naval power (and the interest in voyages of discovery) led to the acquisition and settlement of overseas colonies, particularly in North America.[64][65]

Since the Acts of Union of 1707

Main article: History of the United Kingdom

On 1 May 1707 a new kingdom of Great Britain was created by the political union of the kingdoms of England and Scotland in accordance with the Treaty of Union, negotiated the previous year and ratified by the English and Scottish Parliaments passing Acts of Union.[66][67][68]

The Treaty of Union led to a single united kingdom encompassing all Great Britain.

In the 18th century, the country played an important role in developing Western ideas of the parliamentary system and in making significant contributions to literature, the arts, and science.[18] The British-led Industrial Revolution transformed the country and fuelled the growing British Empire. During this time Britain, like other great powers, was involved in colonial exploitation, including the Atlantic slave trade, although with the passing of the Slave Trade Act of 1807 the UK took a leading role in battling the trade in slaves.[69] The colonies in North America had been the main focus of British colonial activity. With their loss in the American War of Independence, imperial ambition turned elsewhere, particularly to India.[70]

In 1800, while the wars with France still raged, the Parliaments of Great Britain and Ireland each passed an Act of Union, uniting the two kingdoms and creating the United Kingdom of Great Britain and Irela

Improve this page

being on 1 January 1801.[71]

The Battle of Waterloo marked the end of the Napoleonic Wars and the start of Pax Britannica.

After the defeat of France in the Revolutionary and Napoleonic Wars (1792–1815), the UK emerged as the principal naval and economic power of the 19th century (with London the largest city in the world from about 1830 to 1930)[72] and remained a foremost power into the mid-20th century.[73] Unchallenged at sea, Britain adopted the role of global policeman, a state of affairs later known as the *Pax Britannica*.[74] It was also a period of rapid economic, colonial, and industrial growth. Britain was described as the "workshop of the world",[75] and the British Empire grew to include India, large parts of Africa, and many other territories. Alongside the formal control it exerted over its own colonies, Britain's dominant position in world trade meant that it effectively controlled the economies of many countries, such as China, Argentina and Siam.[76][77] Domestically, there was a shift to free trade and laissez-faire policies and a very significant widening of the voting franchise. The country experienced a huge population increase during the century, accompanied by rapid urbanization, causing significant social and economic stresses.[78] By the end of the century, other states began to challenge Britain's industrial dominance.[79]

The UK, along with Russia, France and (after 1917) the USA, was one of the major powers opposing the German Empire and its allies in World War I (1914–18).[80] The UK armed forces grew to over five million people[81] engaged across much of its empire and several regions of Europe, and increasingly took a major role on the Western front. The nation suffered some two and a half million casualties and finished the war with a huge national debt.[81] After the war the United Kingdom received the League of Nations mandate over former German and Ottoman colonies, and the British Empire had expanded to its greatest extent, covering a fifth of the world's land surface and a quarter of its population.[82] The rise of Irish Nationalism and disputes within Ireland over the terms of Irish Home Rule led eventually to the partition of the island in 1921,[83] and the Irish Free State became independent with Dominion status in 1922, while Northern Ireland remained part of the United Kingdom.[84] The Great Depression (1929–32) occurred when the UK had not recovered from the effects of the war, and led to hardship as well as political and social unrest.[85]

Infantry of the Royal Irish Rifles during the Battle of the Somme. More than 885,000 British soldiers lost their lives on the battlefields of World War I.

The United Kingdom was one of the Allies of World War II and an original signatory to the Declaration of the United Nations. Following the defeat of its European allies in the first year of the war, the United Kingdom continued the fight against Germany, notably in the Battle of Britain and the Battle of the Atlantic. After the victory, the UK was one of the Big Three powers that met to plan the postwar world. The war left the country financially damaged. Marshall Aid and loans from both the United States and Canada helped the UK on the road to recovery.[86]

The Labour government in the immediate post-war years initiated a radical programme of changes, with a significant impact on British society in the following decades.[87] Domestically, major industries and public utilities were nationalized, a Welfare State was established, and a comprehensive publicly funded healthcare system, the National Health Service, was created.[88] In response to the rise of local nationalism, the Labour government's own ideological sympathies and Britain's now diminished economic position, a policy of decolonisation was initiated, starting with the granting of independence to India and Pakistan in 1947.[89] Over the next t

Improve this page

Territories that were at one time part of the British Empire. Current British Overseas Territories are underlined in red.

territories of the Empire gained independence and became sovereign members of the Commonwealth of Nations.[*citation needed*]

Although the new postwar limits of Britain's political role were illustrated by the Suez Crisis of 1956, the UK nevertheless became one of the five permanent members of the United Nations Security Council and was the third country to develop a nuclear weapons arsenal (with its first atomic bomb test in 1952). The international spread of the English language also ensured the continuing international influence of its literature and culture, while from the 1960s its popular culture also found influence abroad. As a result of a shortage of workers in the 1950s, the British Government encouraged immigration from Commonwealth countries, thereby transforming Britain into a multi-ethnic society in the following decades.[90] In 1973, the UK joined the European Economic Community (EEC), and when the EEC became the European Union (EU) in 1992, it was one of the 12 founding members. From the late 1960s Northern Ireland suffered communal and paramilitary violence (sometimes affecting other parts of the UK and also the Republic of Ireland) conventionally known as the Troubles. It is usually considered to have ended with the Belfast "Good Friday" Agreement of 1998.[91][92][93]

Following a period of global economic slowdown and industrial strife in the 1970s, the Conservative Government of the 1980s initiated a radical policy of deregulation, particularly of the financial sector, flexible labour markets, the sale of state-owned companies (privatisation), and the withdrawal of subsidies to others.[94] Aided, from 1984, by the inflow of substantial North Sea oil revenues, the UK experienced a period of significant economic growth.[95] Around the end of the 20th century there were major changes to the governance of the UK with the establishment of devolved national administrations for Northern Ireland, Scotland, and Wales following pre-legislative referendums,[96] and the statutory incorporation of the European Convention on Human Rights. Domestic controversy surrounded some of Britain's overseas military deployments in the 2000s (decade), particularly in Iraq and Afghanistan.[97]

Geography

Main article: Geography of the United Kingdom

The total area of the United Kingdom is approximately 243,610 square kilometres (94,060 sq mi). The country occupies the major part of the British Isles[98] archipelago and includes the island of Great Britain, the north-eastern one-sixth of the island of Ireland and some smaller surrounding islands. It lies between the North Atlantic Ocean and the North Sea with the south-east coast coming within 35 kilometres (22 mi) of the coast of northern France, from which it is separated by the English Channel.[99] As of 1993 10% of the UK was forested, 46% used for pastures and 25% used for agriculture.[100] The Royal Greenwich Observatory in London is the defining point of the Prime Meridian.[*citation needed*]

The topography of the UK

The United Kingdom lies between latitudes 49° to 61° N, and longitudes 9° W to 2° E. Northern Ireland shares a 360-kilometre (224 mi) land boundary with the Republic of Ireland.[99] The coastline of Great Britain is 17,820 kilometres (11,073 mi) long.[101] It is connected to continental Europe by the Channel Tunnel, which at 50 kilometres (31 mi) (38 kilometres (24 mi) underwater) is the longest underwater tunnel in the world.[102]

Improve this page

England accounts for just over half of the total area of the UK, covering 130,395 square kilometres (50,350 sq mi).[103] Most of the country consists of lowland terrain,[100] with mountainous terrain north-west of the Tees-Exe line; including the Cumbrian Mountains of the Lake District, the Pennines and limestone hills of the Peak District, Exmoor and Dartmoor. The main rivers and estuaries are the Thames, Severn and the Humber. England's highest mountain is Scafell Pike (978 metres (3,209 ft)) in the Lake District. Its principal rivers are the Severn, Thames, Humber, Tees, Tyne, Tweed, Avon, Exe and Mersey.[100]

Ben Nevis, in Scotland, is the highest point in the British Isles

Scotland accounts for just under a third of the total area of the UK, covering 78,772 square kilometres (30,410 sq mi)[104] and including nearly eight hundred islands,[105] predominantly west and north of the mainland; notably the Hebrides, Orkney Islands and Shetland Islands. The topography of Scotland is distinguished by the Highland Boundary Fault—a geological rock fracture—which traverses Scotland from Arran in the west to Stonehaven in the east.[106] The faultline separates two distinctively different regions; namely the Highlands to the north and west and the lowlands to the south and east. The more rugged Highland region contains the majority of Scotland's mountainous land, including Ben Nevis which at 1,343 metres (4,406 ft) is the highest point in the British Isles.[107] Lowland areas, especially the narrow waist of land between the Firth of Clyde and the Firth of Forth known as the Central Belt, are flatter and home to most of the population including Glasgow, Scotland's largest city, and Edinburgh, its capital and political centre.[*citation needed*]

Wales accounts for less than a tenth of the total area of the UK, covering 20,779 square kilometres (8,020 sq mi).[108] Wales is mostly mountainous, though South Wales is less mountainous than North and mid Wales. The main population and industrial areas are in South Wales, consisting of the coastal cities of Cardiff, Swansea and Newport, and the South Wales Valleys to their north. The highest mountains in Wales are in Snowdonia and include Snowdon (Welsh: *Yr Wyddfa*) which, at 1,085 metres (3,560 ft), is the highest peak in Wales.[100] The 14, or possibly 15, Welsh mountains over 3,000 feet (914 m) high are known collectively as the Welsh 3000s. Wales has over 1,200 km (750 miles) of coastline. There are several islands off the Welsh mainland, the largest of which is Anglesey (*Ynys Môn*) in the northwest.

Northern Ireland accounts for just 14,160 square kilometres (5,470 sq mi) and is mostly hilly. It includes Lough Neagh which, at 388 square kilometres (150 sq mi), is the largest lake in the British Isles by area.[109] The highest peak in Northern Ireland is Slieve Donard in the Mourne Mountains at 852 metres (2,795 ft).[100]

Climate

Main article: Climate of the United Kingdom

The United Kingdom has a temperate climate, with plentiful rainfall all year round.[99] The temperature varies with the seasons seldom dropping below −11 °C (12 °F) or rising above 35 °C (95 °F).[110] The prevailing wind is from the south-west and bears frequent spells of mild and wet weather from the Atlantic Ocean,[99] although the eastern parts are mostly sheltered from this wind—as the majority of the rain falls over the western regions the eastern parts are therefore the driest.[*citation needed*] Atlantic currents, warmed by the Gulf Stream, bring mild winters; especially in the west where winters are wet and even more so over high ground. Summers are warmest in the south-east of England, being closest to the European mainland, and coolest in the north. Heavy snowfall can occur in winter and early spring on high ground, and occasionally settles to great depth away from the hills.[111]

Administrative divisions

Improve this page

Main article: Administrative geography of the United Kingdom

Administrative units of the United Kingdom

Each country of the United Kingdom has its own system of administrative and geographic demarcation, which often has origins that pre-date the formation of the United Kingdom itself. Consequently there is "no common stratum of administrative unit encompassing the United Kingdom".[112] Until the 19th century there was little change to those arrangements, but there has since been a constant evolution of role and function.[113] Change did not occur in a uniform manner and the devolution of power over local government to Scotland, Wales and Northern Ireland means that future changes are unlikely to be uniform either.[*citation needed*]

The organisation of local government in England is complex, with the distribution of functions varying according to the local arrangements. Legislation concerning local government in England is decided by the UK parliament and the Government of the United Kingdom, as England does not have a devolved parliament. The upper-tier subdivisions of England are the nine Government office regions or European Union government office regions.[114] One region, Greater London, has had a directly elected assembly and mayor since 2000 following popular support for the proposal in a referendum.[115] It was intended that other regions would also be given their own elected regional assemblies but the rejection of a proposed assembly in the North East region, by a referendum in 2004, stopped this idea in its tracks.[116] Below the region level England has either county councils and district councils or unitary authorities and London which consists of 32 London boroughs. Councillors are elected by the first-past-the-post system in single-member wards or by the multi-member plurality system in multi-member wards.[117]

Local government in Scotland is divided on a basis of 32 council areas, with wide variation in both size and population. The cities of Glasgow, Edinburgh, Aberdeen and Dundee are separate council areas as is the Highland Council which includes a third of Scotland's area but just over 200,000 people. The power invested in local authorities is administered by elected councillors, of which there are currently 1,222[118] and are each paid a part-time salary. Elections are conducted by single transferable vote in multi-member wards that elect either three or four councillors. Each council elects a Provost, or Convenor, to chair meetings of the council and to act as a figurehead for the area. Councillors are subject to a code of conduct enforced by the Standards Commission for Scotland.[119] The representative association of Scotland's local authorities is the Convention of Scottish Local Authorities (COSLA).[120]

Local government in Wales consists of 22 unitary authorities. These include the cities of Cardiff, Swansea and Newport which are unitary authorities in their own right.[121] Elections are held every four years under the first-past-the-post system.[122] The most recent elections were held in May 2008. The Welsh Local Government Association represents the interests of local authorities in Wales.[123]

Local government in Northern Ireland has, since 1973, been organised into 26 district councils, each elected by single transferable vote. Their powers are limited to services such as collecting waste, controlling dogs, and maintaining parks and cemeteries.[124] On 13 March 2008 the executive agreed on proposals to create 11 new councils and replace the present system.[125] The next local elections were postponed until 2011 to facilitate this.[126]

Dependencies

Improve this page

Main articles: British Overseas Territories and Crown Dependencies

The fourteen British Overseas Territories are indicated in red

The United Kingdom has sovereignty over seventeen territories which do not form part of the United Kingdom itself: 14 British Overseas Territories[127] and three Crown Dependencies.[*citation needed*]

The fourteen British Overseas Territories are: Anguilla; Bermuda; the British Antarctic Territory; the British Indian Ocean Territory; the British Virgin Islands; the Cayman Islands; the Falkland Islands; Gibraltar; Montserrat; Saint Helena, Ascension and Tristan da Cunha; the Turks and Caicos Islands; the Pitcairn Islands; South Georgia and the South Sandwich Islands; and the Sovereign Base Areas on Cyprus.[128] British claims in Antarctica are not universally recognised.[129] Collectively Britain's overseas territories encompass an approximate land area of 667,018 square miles (1,727,570 km^2) and a population of approximately 260,000 people.[130] They are the remnants of the British Empire and several have specifically voted to remain British territories (Bermuda in 1995 and Gibraltar in 2002).[*citation needed*]

The Crown Dependencies are British possessions of the Crown, as opposed to overseas territories of the UK.[131] They comprise the Channel Island Bailiwicks of Jersey and Guernsey in the English Channel and the Isle of Man in the Irish Sea. Being independently administered jurisdictions they do not form part of the United Kingdom or of the European Union, although the UK government manages their foreign affairs and defence and the UK Parliament has the authority to legislate on their behalf. The power to pass legislation affecting the islands ultimately rests with their own respective legislative assemblies, with the assent of the Crown (Privy Council or, in the case of the Isle of Man, in certain circumstances the Lieutenant-Governor).[132] Since 2005 each Crown dependency has had a Chief Minister as its head of government.[*citation needed*]

Politics

Main articles: Politics of the United Kingdom, Monarchy of the United Kingdom, and Elections in the United Kingdom

The United Kingdom is a unitary state under a constitutional monarchy. Queen Elizabeth II is the head of state of the UK as well as of fifteen other independent Commonwealth countries. The monarch has "the right to be consulted, the right to encourage, and the right to warn".[133] The United Kingdom has an uncodified constitution,[134] as do only three other countries in the world.[nb 7] The Constitution of the United Kingdom thus consists mostly of a collection of disparate written sources, including statutes, judge-made case law and international treaties, together with constitutional conventions. As there is no technical difference between ordinary statutes and "constitutional law" the UK Parliament can perform "constitutional reform" simply by passing Acts of Parliament and thus has the political power to change or abolish almost any written or unwritten element of the constitution. However, no Parliament can pass laws that future Parliaments cannot change.[135]

HM Queen Elizabeth II, Queen of the United Kingdom and the other Commonwealth realms

Government

The UK has a parliamentary government based on the Westminster system that has been emulated around the world—a legacy of the British Empire. The parliament of

Improve this page

the United Kingdom that meets in the Palace of Westminster has two houses; an elected House of Commons and an appointed House of Lords.[*citation needed*] Any bill passed requires Royal Assent to become law.

The position of prime minister, the UK's head of government,[136] belongs to the member of parliament who can obtain the confidence of a majority in the House of Commons, usually the current leader of the largest political party in that chamber. The prime minister and cabinet are formally appointed by the monarch to form Her Majesty's Government, though the prime minister chooses the cabinet and, by convention, HM The Queen respects the prime minister's choices.[137]

The Palace of Westminster, seat of both houses of the Parliament of the United Kingdom

The cabinet is traditionally drawn from members of the Prime Minister's party in both legislative houses, and mostly from the House of Commons, to which they are responsible. Executive power is exercised by the prime minister and cabinet, all of whom are sworn into the Privy Council of the United Kingdom, and become Ministers of the Crown. The Rt. Hon. David Cameron, leader of the Conservative Party, has been Prime Minister, First Lord of the Treasury and Minister for the Civil Service since 11 May 2010.[138] For elections to the House of Commons, the UK is currently divided into 650 constituencies[139] with each electing a single member of parliament by simple plurality. General elections are called by the monarch when the prime minister so advises. The Parliament Acts 1911 and 1949 require that a new election must be called within five years of the previous general election.[140]

The UK's three major political parties are the Conservative Party, the Labour Party and the Liberal Democrats. During the 2010 general election these three parties won 622 out of 650 seats available in the House of Commons; 621 seats at the 2010 general election[141] and 1 more at the delayed by-election in Thirsk and Malton.[142] Most of the remaining seats were won by minor parties that only contest elections in one part of the UK: the Scottish National Party (Scotland only); Plaid Cymru (Wales only); and the Democratic Unionist Party, Social Democratic and Labour Party, Ulster Unionist Party, and Sinn Féin (Northern Ireland only, though Sinn Féin also contests elections in the Republic of Ireland). In accordance with party policy no elected Sinn Féin member of parliament has ever attended the House of Commons to speak on behalf of their constituents – this is because members of parliament are required to take an oath of allegiance to the monarch. The current five Sinn Féin MPs have however, since 2002, made use of the offices and other facilities available at Westminster.[143] For elections to the European Parliament the UK currently has 72 MEPs, elected in 12 multi-member constituencies.[144]

Devolved national administrations

Main articles: Northern Ireland Executive, Scottish Government, and Welsh Government

Scotland, Wales and Northern Ireland each have their own government or executive, led by a First Minister, and a devolved unicameral legislature. England, the largest country of the United Kingdom, has no devolved executive or legislature and is administered and legislated for directly by the UK government and parliament on all issues. This situation has given rise to the so-called West Lothian question which concerns the fact that MPs from Scotland, Wales and Northern Ireland can vote, sometimes decisively,[145] on matters affecting England that are handled by devolved legislatures for their own constituencies.[146]

The Scottish Government and Parliament have wide ranging powers over any matter that has not been specifically 'reserved' to the UK parliament, including education, healthcare, Scots law and local government.[147] Following its victory at the 2007 elections the pro-independence Scottish National Party (SNP) formed a minority government with its leader, Alex Salmond, becoming First Minister of Scotland.[148] The pro-union partie

Improve this page

electoral success of the SNP by creating a Commission on Scottish Devolution[149] which reported in 2009 and recommended that additional powers should be devolved, including control of half the income tax raised in Scotland.[150] At the 2011 elections the SNP won re-election and achieved an overall majority in the Scottish parliament.[151]

The Scottish Parliament Building in Holyrood is the seat of the Scottish Parliament

The Welsh Government and the National Assembly for Wales have more limited powers than those devolved to Scotland.[152] Following the passing of the Government of Wales Act 2006 the assembly was able to legislate in devolved areas through Assembly Measures once permission to legislate on that specific matter had been granted by Westminster through a Legislative Competence Order;[153] but since May 2011 the Assembly has been able to legislate on devolved matters through Acts of the Assembly, which require no prior consent. The current Welsh Government was formed after the 2011 elections, and is a minority Labour administration lead by Carwyn Jones, who had been First Minister of a Labour/Plaid Cymru administration since December 2009.[154]

The Northern Ireland Executive and Assembly have powers closer to those already devolved to Scotland. The Northern Ireland Executive is led by a diarchy representing unionist and nationalist members of the Assembly. Currently, Peter Robinson (Democratic Unionist Party) and Martin McGuinness (Sinn Féin) are First Minister and deputy First Minister respectively.[155]

Devolution in Northern Ireland is subject to the terms of the Good Friday Agreement and the subsequent British-Irish Agreement between the United Kingdom and the Republic of Ireland. Under those agreements, the participation of members of the Northern Ireland Executive in the North/South Ministerial Council, and co-operation between Northern Ireland and the Republic of Ireland on a number of devolved policy areas, are prerequisites of devolution in Northern Ireland. The British-Irish Intergovernmental Conference was also established under the agreements, whereby "the Irish Government may put forward views and proposals" on non-devolved matters with respect to Northern Ireland. However, the United Kingdom government remains sovereign over Northern Ireland unless a majority of the people of Northern Ireland vote to form a united Ireland. [*citation needed*]

The United Kingdom does not have a codified constitution and constitutional matters are not among the powers devolved to Scotland, Wales or Northern Ireland. Under the doctrine of Parliamentary sovereignty, the UK Parliament could, in theory, therefore, abolish the Scottish Parliament, Welsh Assembly or Northern Ireland Assembly.[156][157] Indeed, in 1972, the UK Parliament unilaterally prorogued the Parliament of Northern Ireland, setting a precedent relevant to contemporary devolved institutions.[158] In practice, the circumstances in which the UK Parliament would abolish devolution given the political constraints created by referendum decisions are unclear.[159] The political constraints placed upon the UK Parliament's power to interfere with devolution in Northern Ireland are greater than in relation to Scotland and Wales, given that devolution in Northern Ireland rests upon an international agreement with the Government of Ireland.[160]

Law and criminal justice

Main article: Law of the United Kingdom

The United Kingdom does not have a single legal system, as Article 19 of the 1706 Treaty of Union provided for the continuation of Scotland's separate legal system.[161] Today the UK has three distinct systems of law: English law, Northern Ireland law and Scots law. A new Supreme Court of the United Kingdom came into

Improve this page

The Royal Courts of Justice of England and Wales

to replace the Appellate Committee of the House of Lords.[162][163] The Judicial Committee of the Privy Council, including the same members as the Supreme Court, is the highest court of appeal for several independent Commonwealth countries, the British Overseas Territories, and the Crown Dependencies.[*citation needed*]

Both English law, which applies in England and Wales, and Northern Ireland law are based on common-law principles.[164] The essence of common law is that, subject to statute, the law is developed by judges in courts, applying statute, precedent and common sense to the facts before them to give explanatory judgements of the relevant legal principles, which are reported and binding in future similar cases (*stare decisis*).[165] The courts of England and Wales are headed by the Senior Courts of England and Wales, consisting of the Court of Appeal, the High Court of Justice (for civil cases) and the Crown Court (for criminal cases). The Supreme Court is the highest court in the land for both criminal and civil appeal cases in England, Wales, and Northern Ireland and any decision it makes is binding on every other court in the same jurisdiction, often having a persuasive effect in other jurisdictions.[166]

Scots law applies in Scotland, a hybrid system based on both common-law and civil-law principles. The chief courts are the Court of Session, for civil cases,[167] and the High Court of Justiciary, for criminal cases.[168] The Supreme Court of the United Kingdom serves as the highest court of appeal for civil cases under Scots law.[169] Sheriff courts deal with most civil and criminal cases including conducting criminal trials with a jury, known as sheriff solemn court, or with a sheriff and no jury, known as sheriff summary Court.[170] The Scots legal system is unique in having three possible verdicts for a criminal trial: "guilty", "not guilty" and "*not proven*". Both "not guilty" and "not proven" result in an acquittal with no possibility of retrial.[171]

The High Court of Justiciary – the supreme criminal court of Scotland.

Crime in England and Wales increased in the period between 1981 and 1995, though since that peak there has been an overall fall of 48% in crime from 1995 to 2007/08,[172] according to crime statistics. The prison population of England and Wales has almost doubled over the same period, to over 80,000, giving England and Wales the highest rate of incarceration in Western Europe at 147 per 100,000.[173] Her Majesty's Prison Service, which reports to the Ministry of Justice, manages most of the prisons within England and Wales. Crime in Scotland fell to its lowest recorded level for 32 years in 2009/10, falling by ten percent.[174] At the same time Scotland's prison population, at over 8,000,[175] is at record levels and well above design capacity.[176] The Scottish Prison Service, which reports to the Cabinet Secretary for Justice, manages Scotland's prisons. In 2006 a report by the Surveillance Studies Network found that the UK had the highest level of mass surveillance among industrialised western nations.[177]

Foreign relations

Main article: Foreign relations of the United Kingdom

The United Kingdom is a permanent member of the United Nations Security Council, a member of the Commonwealth of Nations, G7, G8, G20, NATO, the OECD, the WTO, the Council of Europe, the OSCE, and is a member state of the European Union. The UK has a "Special Relationship" with the United States[178][179] and a close partnership with France – the "Entente cordiale" – and shares nuclear weapons techno

countries. The UK is also closely allied with the Republic of Ireland; the two countries share a Common Travel Area and many Irish citizens serve in the British Army.[180] Other close allies include other European Union and NATO members, Commonwealth nations, and Japan. Britain's global presence and influence is further amplified through its trading relations, foreign investments, official development assistance and armed forces.[181]

Military

Main article: British Armed Forces

The Type 45 destroyer, the Challenger 2 and the Eurofighter

The British Army, Royal Air Force and Royal Navy are collectively known as the British Armed Forces and officially as Her Majesty's Armed Forces. The three forces are managed by the Ministry of Defence and controlled by the Defence Council, chaired by the Secretary of State for Defence.

The British Armed Forces are among the largest and most technologically sophisticated armed forces in the world, and as of as of 2008 maintained over 20 military deployments around the globe.[182][183][184] The British Armed Forces are charged with protecting the UK and its overseas territories, promoting the UK's global security interests and supporting international peacekeeping efforts. They are active and regular participants in NATO, including the Allied Rapid Reaction Corps, as well as the Five Power Defence Arrangements, RIMPAC and other worldwide coalition operations. Overseas garrisons and facilities are maintained in Ascension Island, Belize, Brunei, Canada, Cyprus, Diego Garcia, the Falkland Islands, Germany, Gibraltar, Kenya and Qatar.[185]

According to various sources, including the Ministry of Defence, the UK has the third- or fourth-highest military expenditure in the world. Total defence spending currently accounts for around 2.3% – 2.5% of total national GDP.[186]

The Royal Navy is a prominent blue-water navy, currently one of only three world wide, with the French Navy and the United States Navy being the other two.[187] The Royal Navy is also responsible for delivering the UKs Nuclear Deterrent via the UK Trident programme and four Vanguard class submarines.

The United Kingdom Special Forces, such as the Special Air Service and Special Boat Service, provide troops trained for quick, mobile, military responses in counter-terrorism, land, maritime and amphibious operations, often where secrecy or covert tactics are required.

Recent defence policy has a stated assumption that "the most demanding operations" will be undertaken as part of a coalition.[188] Setting aside the intervention in Sierra Leone, UK military operations in Bosnia, Kosovo, Afghanistan, Iraq and, most recently, Libya, have followed this approach. The last war in which the British military fought alone was the Falklands War of 1982, in which they were victorious.

Economy

Main article: Economy of the United Kingdom

Improve this page

The Bank of England – the central bank of the United Kingdom

The UK has a partially regulated market economy.[189] Based on market exchange rates the UK is today the sixth-largest economy in the world and the third-largest in Europe after Germany and France, having fallen behind France for the first time in over a decade in 2008.[190] HM Treasury, led by the Chancellor of the Exchequer, is responsible for developing and executing the British government's public finance policy and economic policy. The Bank of England is the UK's central bank and is responsible for issuing the nation's currency, the pound sterling. Banks in Scotland and Northern Ireland retain the right to issue their own notes, subject to retaining enough Bank of England notes in reserve to cover their issue. Pound sterling is the world's third-largest reserve currency (after the U.S. Dollar and the Euro).[191] Since 1997 the Bank of England's Monetary Policy Committee, headed by the Governor of the Bank of England, has been responsible for setting interest rates at the level necessary to achieve the overall inflation target for the economy that is set by the Chancellor each year.[192]

In the final quarter of 2008 the UK economy officially entered recession for the first time since 1991.[193] Unemployment increased from 5.2% in May 2008 to 7.6% in May 2009 and by January 2011 the unemployment rate among 18 to 24-year-olds had risen from 11.9% to 20.3%, the highest since current records began in 1992.[194] Total UK government debt rose from 44.5% of GDP in December 2007 to 76.1% of GDP in December 2010.[195][196]

The UK service sector makes up around 73% of GDP.[197] London is one of the three "command centres" of the global economy (alongside New York City and Tokyo),[198] is the world's largest financial centre alongside New York,[199][200][201] and has the largest city GDP in Europe.[202] Edinburgh is also one of the largest financial centres in Europe.[203] Tourism is very important to the British economy and, with over 27 million tourists arriving in 2004, the United Kingdom is ranked as the sixth major tourist destination in the world[204] and London has the most international visitors of any city in the world.[205] The creative industries accounted for 7% GVA in 2005 and grew at an average of 6% per annum between 1997 and 2005.[206]

The Airbus A380 has wings and engines manufactured in the UK.

The Industrial Revolution started in the UK[207] with an initial concentration on the textile industry, followed by other heavy industries such as shipbuilding, coal mining, and Steelmaking.[208][209] The empire created an overseas market for British products, allowing the UK to dominate international trade in the 19th century. As other nations industrialised, coupled with economic decline after two world wars, the United Kingdom began to lose its competitive advantage and heavy industry declined, by degrees, throughout the 20th century. Manufacturing remains a significant part of the economy but accounted for only 16.7% of national output in 2003.[210]

The automotive industry is a significant part of the UK manufacturing sector and employs over 800,000 people, with a turnover of some £52 billion, generating £26.6 billion of exports.[211] The aerospace industry of the UK is the second- or third-largest national aerospace industry depending upon the method of measurement and has an annual turnover of around £20 billion.[212][213][214] The pharmaceutical industry plays an important role in the UK economy and the country has the third highest share of global pharmaceutical R&D expenditures (after the United States and Japan).[215][216]

The poverty line in the UK is commonly defined as being 60% of the median household inco[nb 8] [illegible]

Improve this page

13.5 million people, or 22% of the population, lived below this line. This is a higher level of relative poverty than all but four other EU members.[217] In the same year 4.0 million children, 31% of the total, lived in households below the poverty line after housing costs were taken into account. This is a decrease of 400,000 children since 1998–1999.[218] The UK imports 40% of its food supplies.[219]

Science and technology

Main article: Science and technology in the United Kingdom

Charles Darwin (1809–82), whose theory of evolution by natural selection is the foundation of modern biological sciences

England and Scotland were leading centres of the Scientific Revolution from the 17th century[220] and the United Kingdom led the Industrial Revolution from the 18th century,[207] and has continued to produce scientists and engineers credited with important advances.[221] Major theorists from the 17th and 18th centuries include Isaac Newton, whose laws of motion and illumination of gravity have been seen as a keystone of modern science,[222] from the 19th century Charles Darwin, whose theory of evolution by natural selection was fundamental to the development of modern biology, and James Clerk Maxwell, who formulated classical electromagnetic theory, and more recently Stephen Hawking, who has advanced major theories in the fields of cosmology, quantum gravity and the investigation of black holes.[223] Major scientific discoveries from the 18th century include hydrogen by Henry Cavendish,[224] from the 20th century penicillin by Alexander Fleming,[225] and the structure of DNA, by Francis Crick and others.[226] Major engineering projects and applications by people from the UK in the 18th century include the steam locomotive, developed by Richard Trevithick and Andrew Vivian,[227] from the 19th century the electric motor by Michael Faraday, the incandescent light bulb by Joseph Swan,[228] and the first practical telephone, patented by Alexander Graham Bell,[229] and in the 20th century the world's first working television system by John Logie Baird and others,[230] the jet engine by Frank Whittle, the basis of the modern computer by Alan Turing, and the World Wide Web by Tim Berners-Lee.[231]

The modern UK plays a leading part in the aerospace industry, with companies including Rolls-Royce playing a leading role in the aero-engine market; BAE Systems acting as Britain's largest and the Pentagon's sixth largest defence supplier, and large companies including GKN acting as major suppliers to the Airbus project.[232] Two British-based companies, GlaxoSmithKline and AstraZeneca, ranked in the top five pharmaceutical companies in the world by sales in 2009,[233] and UK companies have discovered and developed more leading medicines than any other country apart from the US.[234] The UK remains a leading centre of automotive design and production, particularly of engines, and has around 2,600 component manufacturers.[235] Scientific research and development remains important in British universities, with many establishing science parks to facilitate production and co-operation with industry.[236] Between 2004 and 2008 the UK produced 7% of the world's scientific research papers and had an 8% share of scientific citations, the third and second highest in the world (after the United States and China, and the United States, respectively).[237] Scientific journals produced in the UK include *Nature*, the *British Medical Journal* and *The Lancet*.[238]

Transport

A radial road network totals 29,145 miles (46,904 km) of main roads, 2,173 miles (3,497 km

Improve this page

Heathrow Terminal 5 building. London Heathrow Airport has the most international passenger traffic of any airport in the world.[239][240]

213,750 miles (344,000 km) of paved roads.[99] In 2009 there were a total of 34 million licensed vehicles in Great Britain.[241] The National Rail network of 10,072 route miles (16,116 km) in Great Britain and 189 route miles (303 route km) in Northern Ireland carries over 18,000 passenger and 1,000 freight trains daily.[99] Plans are now being considered to build new high-speed railway lines by 2025.[242]

In the year from October 2009 to September 2010 UK airports handled a total of 211.4 million passengers.[243] In that period the three largest airports were London Heathrow Airport (65.6 million passengers), Gatwick Airport (31.5 million passengers) and London Stansted Airport (18.9 million passengers).[243] London Heathrow Airport, located 24 kilometres (15 mi) west of the capital, has the most international passenger traffic of any airport in the world[239][240] and is the hub for the UK flag carrier British Airways, as well as BMI and Virgin Atlantic.[244]

Energy

Main article: Energy in the United Kingdom

In 2006 the UK was the world's ninth-largest consumer of energy and the 15th largest producer.[245] In 2007 the UK had a total energy output of 9.5 quadrillion Btus, of which the composition was oil (38%), natural gas (36%), coal (13%), nuclear (11%) and other renewables (2%).[246] In 2009 the UK produced 1.5 million barrels per day (bbl/d) of oil and consumed 1.7 million bbl/d.[247] Production is now in decline and the UK has been a net importer of oil since 2005.[247] As of 2010 the UK has around 3.1 billion barrels of proven crude oil reserves, the largest of any EU member state.[247]

An oil platform in the North Sea

In 2009 the UK was the 13th largest producer of natural gas in the world and the largest producer in the EU.[248] Production is now in decline and the UK has been a net importer of natural gas since 2004.[248] In 2009 the UK produced 19.7 million tons of coal and consumed 60.2 million tons.[246] In 2005 it had proven recoverable coal reserves of 171 million tons.[246] It has been estimated that identified onshore areas have the potential to produce between 7 billion tonnes and 16 billion tonnes of coal through underground coal gasification (UCG).[249] Based on current UK coal consumption, these volumes represent reserves that could last the UK between 200 and 400 years.[250] The UK is home to a number of large energy companies, including two of the six oil and gas "supermajors" – BP and Royal Dutch Shell – and BG Group.[251][252]

Demographics

Main article: Demography of the United Kingdom

A Census occurs simultaneously in all parts of the UK every ten years.[253] The Office for National Statistics is responsible for collecting data for England and Wales with the General Register Office for Scotland and the Northern Ireland Statistics and Research Agency each being responsible for censuses in their respective countries.[254] In the 2001 census the total population of the United Kingdom was 58,789,194, the third largest in the European Union, the fifth largest in the Commonwealth and the twenty-first largest in the world. By mid-2009

Improve this page

this was estimated to have grown to 61,792,000.[255] In 2008 natural population growth overtook net migration as the main contributor to population growth for the first time since 1998.[256] Between 2001 and 2008 the population increased by an average annual rate of 0.5 per cent. This compares to 0.3 per cent per year in the period 1991 to 2001 and 0.2 per cent in the decade 1981 to 1991.[256] Published in 2008 the mid-2007 population estimates revealed that, for the first time, the UK was home to more people of pensionable age than children under the age of 16.[257] It has been estimated that the number of people aged 100 or over will rise steeply to reach over 626,000 by 2080.[258]

England's population in mid-2008 was estimated to be 51.44 million.[256] It is one of the most densely populated countries in the world, with 383 people resident per square kilometre in mid-2003,[259] with a particular concentration in London and the south east.[260] The mid-2008 estimates put Scotland's population at 5.17 million, Wales at 2.99 million and Northern Ireland at 1.78 million,[256] with much lower population densities than England. Compared to England's 383 inhabitants per square kilometre (990 /sq mi) the corresponding figures were 142 /km^2 (370 /sq mi) for Wales, 125 /km^2 (320 /sq mi) for Northern Ireland and just 65 /km^2 (170 /sq mi) for Scotland in mid-2003.[259] In percentage terms Northern Ireland has had the fastest growing population of any country of the UK in each of the four years to mid-2008.[256]

In 2008 the average total fertility rate (TFR) across the UK was 1.96 children per woman.[261] Whilst a rising birth rate is contributing to current population growth it remains considerably below the 'baby boom' peak of 2.95 children per woman in 1964,[262] below the replacement rate of 2.1, but higher than the 2001 record low of 1.63.[261] In 2010, Scotland had the lowest TFR at only 1.75, followed by Wales at 1.98, England at 2.00, and Northern Ireland at 2.06.[263]

Ethnic groups

Main article: Ethnic groups in the United Kingdom

Historically, indigenous British people were thought to be descended from the various ethnic groups that settled there before the 11th century: the Celts, Romans, Anglo-Saxons, Norse and the Normans. Recent genetic studies have shown that more than 50 percent of England's gene pool contains Germanic Y chromosomes,[267] though other recent genetic analysis indicates that "about 75 per cent of the traceable ancestors of the modern British population had arrived in the British isles by about 6,200 years ago, at the start of the British Neolithic or Stone Age", and that the British broadly share a common ancestry with the Basque people.[268][269][270]

Ethnic group	Population	% of total*
White British	50,366,497	85.67%
White (other)	3,096,169	5.27%
Indian	1,053,411	1.8%
Pakistani	977,285	1.6%
White Irish	691,232	1.2%
Mixed race	677,117	1.2%
Black Caribbean	565,876	1.0%
Black African	485,277	0.8%
Bangladeshi	283,063	0.5%
Other Asian (non-Chinese)	247,644	0.4%
Chinese	247,403	0.4%
Other	230,615	0.4%
Black (others)	97,585	0.2%

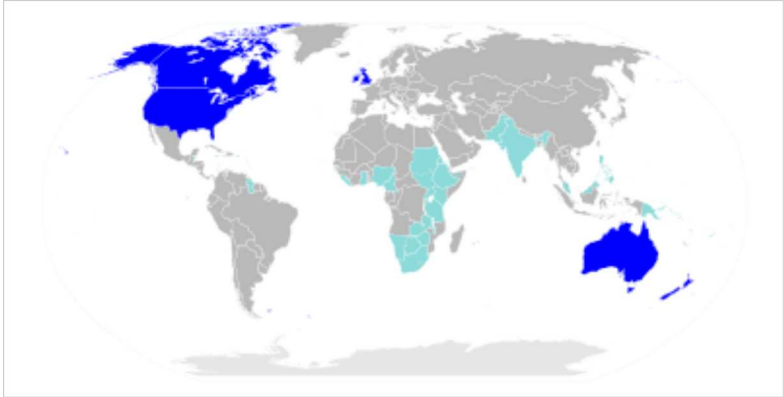
The UK has a history of small-scale non-white immigration, with Liverpool having the oldest Black population in the country dating back to

Improve this page



at least the 1730s,[271] and the oldest Chinese community in Europe, dating to the arrival of Chinese seamen in the 19th century.[272] In 1950 there were probably less than 20,000 non-white residents in Britain, almost all born overseas.[273]

Since 1945 substantial immigration from Africa, the Caribbean and South Asia has been a legacy of ties forged by the British Empire. Migration from new EU member states in Central and Eastern Europe since 2004 has resulted in growth in these population groups but, as of 2008, the trend is reversing and many of these migrants are returning home, leaving the size of these groups unknown.[274] As of 2001, 92.1% of the population identified themselves as White, leaving 7.9%[275] of the UK population identifying themselves as mixed race or of an ethnic minority.

Ethnic diversity varies significantly across the UK. 30.4% of London's population[276] and 37.4% of Leicester's[277] was estimated to be non-white as of June 2005, whereas less than 5% of the populations of North East England, Wales and the South West were from ethnic minorities according to the 2001 census.[278] As of 2011, 26.5% of primary and 22.2% of secondary pupils at state schools in England are members of an ethnic minority.[279]

Languages

Main article: Languages of the United Kingdom

The English-speaking world. Countries in dark blue have a majority of native speakers; countries where English is an official but not a majority language are shaded in light blue. English is one of the official languages of the European Union.[280] and the United Nations[281]

The UK's official language is English,[1][2] a West Germanic language descended from Old English which features a large number of borrowings from Old Norse, Norman French and Latin. The English language has spread across the world, largely because of the British Empire, and has become the international language of business as well as the most widely taught second language.[282]

Scots, a language descended from early northern Middle English, is recognised at European level, as is its regional variant in the northern counties of Ireland, Ulster Scots.[283] There are also four Celtic languages in use in the UK: Welsh, Irish, Scottish Gaelic and Cornish. In the 2001 Census over a fifth (21%) of the population of Wales said they could speak Welsh,[284] an increase from the 1991 Census (18%).[285] In addition it is estimated that about 200,000 Welsh speakers live in England.[286]

The 2001 census in Northern Ireland showed that 167,487 (10.4%) people "had some knowledge of Irish" (see Irish language in Northern Ireland), almost exclusively in the Catholic/nationalist population. Over 92,000 people in Scotland (just under 2% of the population) had some Gaelic language ability, including 72% of those living in the Outer Hebrides.[287] The number of schoolchildren being taught in Welsh, Gaelic and Irish is increasing.[288] Welsh and Scottish Gaelic are also spoken by small groups around the globe with some Gaelic still spoken in Nova Scotia, Canada (especially Cape Breton Island),[289] and Welsh in Patagonia, Argentina.[290]

Across the United Kingdom it is generally compulsory for pupils to study a second language to some extent: up to the age of 14 in England,[291] and up to age 16 in Scotland. French and German are the two

Improve this page

second languages in England and Scotland. In Wales, all pupils up to age 16 are either taught in Welsh or taught Welsh as a second language.[292]

Religion

Main article: Religion in the United Kingdom

Westminster Abbey is used for the coronation of British monarchs

Forms of Christianity have dominated religious life in what is now the United Kingdom for over 1,400 years.[293] Although a majority of citizens still identify with Christianity in many surveys, regular church attendance has fallen dramatically since the middle of the 20th century,[294] while immigration and demographic change have contributed to the growth of other faiths, most notably Islam.[295] This has led some commentators to variously describe the UK as a multi-faith,[296] secularised,[297] or post-Christian society.[298] In the 2001 census 71.6% of all respondents indicated that they were Christians, with the next largest faiths (by number of adherents) being Islam (2.8%), Hinduism (1.0%), Sikhism (0.6%), Judaism (0.5%), Buddhism (0.3%) and all other religions (0.3%).[299] 15% of respondents stated that they had no religion, with a further 7% not stating a religious preference.[300] A Tearfund survey in 2007 showed only one in ten Britons actually attend church weekly.[301]

The (Anglican) Church of England is the established church in England.[302] It retains a representation in the UK Parliament and the British monarch is its Supreme Governor.[303] In Scotland the Presbyterian Church of Scotland is recognised as the national church. It is not subject to state control, and the British monarch is an ordinary member, required to swear an oath to "maintain and preserve the Protestant Religion and Presbyterian Church Government" upon his or her accession.[304][305] The Church in Wales was disestablished in 1920, and there is no established church in Northern Ireland.[306] Although there are no UK-wide data in the 2001 census on adherence to individual Christian denominations, Ceri Peach has estimated that 62% of Christians are Anglican, 13.5% Roman Catholic, 6% Presbyterian, 3.4% Methodist with small numbers of other Protestant denominations and the Orthodox church.[307]

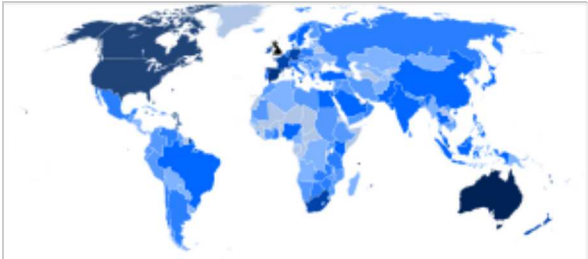
Migration

Main article: Immigration to the United Kingdom since 1922

See also: Foreign-born population of the United Kingdom

The United Kingdom has experienced successive waves of migration. The Great Famine brought a large influx of Irish immigrants.[308] Over 120,000 Polish veterans settled in Britain after World War II, unable to return home.[309] In the 20th century there was significant immigration from the colonies and newly independent former colonies, driven largely by post-World War II labour shortages. Many of these migrants came from the Caribbean and the Indian subcontinent.[310]

Estimated foreign-born population by country of birth, April 2007 – March 2008



In 2010, there were 7.0 million foreign-born residents in the UK, corresponding to 11.3% of the total population. Of these, 4.76 million (7.7%) were born outside the EU and 2.24 million (3.6%) were born in another [311]

Improve this page

The proportion of foreign-born people in the UK remains slightly below that of some other European countries,[312] although immigration is now contributing to a rising population,[313] accounting for about half of the population increase between 1991 and 2001. Analysis of Office for National Statistics data shows that 2.3 million net migrants moved to the UK in the period 1991 to 2006.[314][315] In 2008 it was predicted that migration would add 7 million to the UK population by 2031,[316] though these figures are disputed.[317] Based on the Office for National Statistics (ONS), Net migration for 12 months in 2010 jumped 21 percent to 239,000 from 2009. The immigration in 2010 was 575,000 or relatively stable since 2004, while the number of people leaving UK to live abroad for more than 12 months was only 336,000.[318]

195,046 foreign nationals became British citizens in 2010,[319] compared to 54,902 in 1999.[319][320] A record 241,192 people were granted permanent settlement rights in 2010, of whom 51 per cent were from Asia and 27 per cent from Africa.[321] 24.7 per cent of babies born in England and Wales in 2009 were born to mothers born outside the UK, according to official statistics released in 2010.[322]

At least 5.5 million British-born people are living abroad,[323][324][325] the top four destinations being Australia, Spain, the United States and Canada.[323][326] Emigration was an important feature of British society in the 19th century. Between 1815 and 1930 around 11.4 million people emigrated from Britain and 7.3 million from Ireland. Estimates show that by the end of the 20th century some 300 million people of British and Irish descent were permanently settled around the globe.[327]

Estimated number of British citizens living overseas by country, 2006

Citizens of the European Union have the right to live and work in any member state, including the UK.[328] Transitional arrangements apply to Romanians and Bulgarians whose countries joined the EU in January 2007.[329] Research conducted by the Migration Policy Institute for the Equality and Human Rights Commission suggests that, between May 2004 and September 2009, 1.5 million workers migrated from the new EU member states to the UK, two thirds of them Polish, but that many have since returned home, resulting in a net increase in the number of nationals of the new member states in the UK of some 700,000 over that period.[330][331] The late-2000s recession in the UK reduced the economic incentive for Poles to migrate to the UK,[332] with the migration becoming temporary and circular.[333] In 2009, for the first time since enlargement, more nationals of the eight central and eastern European states that had joined the EU in 2004 left the UK than arrived.[334]

The UK government is currently introducing a points-based immigration system for immigration from outside the European Economic Area that will replace existing schemes, including the Scottish Government's Fresh Talent Initiative.[335] In June 2010 the Conservative-Liberal Democrat coalition government introduced a temporary cap on immigration of those entering the UK from outside the EU, with the limit set at 24,100, in order to stop an expected rush of applications before a permanent cap is imposed in April 2011.[336] The cap has caused tension within the coalition: business secretary Vince Cable has argued that it is harming British businesses.[337]

Education

Main article: Education in the United Kingdom

See also: Education in England, Education in Northern Ireland, Education in Scotland, and Education in Wales

Improve this page

King's College, part of the University of Cambridge which was founded in 1209

Education in the United Kingdom is a devolved matter, with each country having a separate education system.

Education in England is the responsibility of the Secretary of State for Education, though the day-to-day administration and funding of state schools is the responsibility of local authorities.[338] Universally free of charge state education was introduced piecemeal between 1870 and 1944, with education becoming compulsory for all 5 to 14 year-olds in 1921.[339][340] Education is now mandatory from ages five to sixteen (15 if born in late July or August). The majority of children are educated in state-sector schools, only a small proportion of which select on the grounds of academic ability. State schools which are allowed to select pupils according to intelligence and academic ability can achieve comparable results to the most selective private schools: out of the top ten performing schools in terms of GCSE results in 2006 two were state-run grammar schools. Despite a fall in actual numbers the proportion of children in England attending private schools has risen to over 7%.[341] Over half of students at the leading universities of Cambridge and Oxford had attended state schools.[342] The universities of England include some of the top universities in the world; the University of Cambridge, University College London, the University of Oxford and Imperial College London are all ranked in the global top 10 in the 2010 QS World University Rankings, with Cambridge ranked first.[343] Trends in International Mathematics and Science Study (TIMSS) rated pupils in England 7th in the world for maths and 6th for science. The results put England's pupils ahead of other European countries, including Germany and the Scandinavian countries.[344]

Queen's University Belfast, built in 1849[345]

Education in Scotland is the responsibility of the Cabinet Secretary for Education and Lifelong Learning, with day-to-day administration and funding of state schools the responsibility of Local Authorities. Two non-departmental public bodies have key roles in Scottish education: the Scottish Qualifications Authority is responsible for the development, accreditation, assessment and certification of qualifications other than degrees which are delivered at secondary schools, post-secondary colleges of further education and other centres;[346] and Learning and Teaching Scotland provides advice, resources and staff development to the education community to promote curriculum development and create a culture of innovation, ambition and excellence.[347] Scotland first legislated for compulsory education in 1496.[348] The proportion of children in Scotland attending private schools is just over 4%, although it has been rising slowly in recent years.[349] Scottish students who attend Scottish universities pay neither tuition fees nor graduate endowment charges, as fees were abolished in 2001 and the graduate endowment scheme was abolished in 2008.[350]

Education in Northern Ireland is the responsibility of the Minister of Education and the Minister for Employment and Learning, although responsibility at a local level is administered by five education and library boards covering different geographical areas. The Council for the Curriculum, Examinations & Assessment (CCEA) is the body responsible for advising the government on what should be taught in Northern Ireland's schools, monitoring standards and awarding qualifications.[351] The Welsh Government has responsibility for education in Wales. A significant number of Welsh students are taught either wholly or largely in the Welsh language; lessons in Welsh are compulsory for all until the age of 16.[352] There are plans to increase the provision of Welsh-medium schools as part of the policy of creating a fully bilingual Wales.

Healthcare

Main article: Healthcare in the United Kingdom

The Royal Aberdeen Children's Hospital, an NHS Scotland specialist children's hospital

Healthcare in the United Kingdom is a devolved matter and each country has its own system of private and publicly funded health care, together with alternative, holistic and complementary treatments. Public healthcare is provided to all UK permanent residents and is free at the point of need, being paid for from general taxation. The World Health Organization, in 2000, ranked the provision of healthcare in the United Kingdom as fifteenth best in Europe and eighteenth in the world.[353][354]

Regulatory bodies are organised on a UK-wide basis such as the General Medical Council, the Nursing and Midwifery Council and non-governmental-based, such as the Royal Colleges. However, political and operational responsibility for healthcare lies with four national executives; healthcare in England is the responsibility of the UK Government; healthcare in Northern Ireland is the responsibility of the Northern Ireland Executive; healthcare in Scotland is the responsibility of the Scottish Government; and healthcare in Wales is the responsibility of the Welsh Assembly Government. Each National Health Service has different policies and priorities, resulting in contrasts.[355][356]

Since 1979 expenditure on healthcare has been increased significantly to bring it closer to the European Union average.[357] The UK spends around 8.4 per cent of its gross domestic product on healthcare, which is 0.5 percentage points below the Organisation for Economic Co-operation and Development average and about one percentage point below the average of the European Union.[358]

Culture

Main article: Culture of the United Kingdom

The culture of the United Kingdom has been influenced by many factors including: the nation's island status; its history as a western liberal democracy and a major power; as well as being a political union of four countries with each preserving elements of distinctive traditions, customs and symbolism. As a result of the British Empire, British influence can be observed in the language, culture and legal systems of many of its former colonies; including Australia, Canada, India, Ireland, New Zealand, South Africa and the United States.

Cinema

Main article: Cinema of the United Kingdom

The United Kingdom has had a considerable influence on the history of the cinema. The British directors Alfred Hitchcock and David Lean are among the most critically acclaimed of all-time,[359] with other important directors including Charlie Chaplin, Michael Powell, Carol Reed and Ridley Scott.[360][361][362][363] Many British actors have achieved international fame and critical success, including: Julie Andrews, Richard Burton, Michael Caine, Charlie Chaplin, Sean Connery, Vivien Leigh, David Niven, Laurence Olivier, Peter Sellers and Kate Winslet.[364][365][366][367][368][369][370][371][372][373] Some of the most commercially successful films of all time have been produced in the United Kingdom, including the two highest-grossing film franchises (*Harry Potter* and *James Bond*).[374] Ealing Studios has a claim to being the oldest continuously working film studio in the world.[375]

Improve this page

Despite a history of important and successful productions, the industry has often been characterised by a debate about its identity and the level of American and European influence. Many British films are co-productions with American producers, often using both British and American actors, and British actors feature regularly in Hollywood films. Many successful Hollywood films have been based on British people, stories or events, including *Titanic*, *The Lord of the Rings* and *Pirates of the Caribbean*.

Alfred Hitchcock

In 2009 British films grossed around $2 billion worldwide and achieved a market share of around 7% globally and 17% in the United Kingdom.[376] UK box-office takings totalled £944 million in 2009, with around 173 million admissions.[376] The British Film Institute has produced a poll ranking of what it considers to be the 100 greatest British films of all time, the BFI Top 100 British films.[377] The annual British Academy Film Awards, hosted by the British Academy of Film and Television Arts, are the British equivalent of the Oscars.[378]

Literature

Main article: British literature

'British literature' refers to literature associated with the United Kingdom, the Isle of Man and the Channel Islands as well as to literature from England, Wales and Scotland prior to the formation of the UK.[*citation needed*] Most British literature is in the English language. In 2005, some 206,000 books were published in the United Kingdom and in 2006 it was the largest publisher of books in the world.[379]

The Chandos portrait, believed to depict William Shakespeare

The English playwright and poet William Shakespeare is widely regarded as the greatest dramatist of all time,[380][381][382] and his contemporaries Christopher Marlowe and Ben Jonson have also been held in continuous high esteem. More recently the playwrights Alan Ayckbourn, Harold Pinter, Michael Frayn, Tom Stoppard and David Edgar have combined elements of surrealism, realism and radicalism.

Notable pre-modern and early-modern English writers include Geoffrey Chaucer (14th century), Thomas Malory (15th century), Sir Thomas More (16th century), and John Milton (17th century). In the 18th century Daniel Defoe (author of *Robinson Crusoe*) and Samuel Richardson were pioneers of the modern novel. In the 19th century there followed further innovation by Jane Austen, the gothic novelist Mary Shelley, children's writer Lewis Carroll, the Brontë sisters, the social campaigner Charles Dickens, the naturalist Thomas Hardy, the realist George Eliot, the visionary poet William Blake and romantic poet William Wordsworth. 20th century English writers include: science-fiction novelist H. G. Wells; the writers of children's classics Rudyard Kipling, A. A. Milne (the creator of Winnie-the-Pooh) and Enid Blyton; the controversial D. H. Lawrence; modernist Virginia Woolf; the satirist Evelyn Waugh; the prophetic novelist George Orwell; the popular novelists W. Somerset Maugham and Graham Greene; the crime writer Agatha Christie (the best-selling novelist of all time);[383] Ian Fleming (the creator of James Bond); the poets T. S. Eliot, Philip Larkin and Ted Hughes; and the fantasy writers J. R. R. Tolkien, C. S. Lewis and J. K. Rowling.

Scotland's contributions include the detective writer Arthur Conan Doyle (the creator of Sherlock Holmes), romantic literature by Sir Walter Scott, children's writer J.M. Barrie, the epic adventures of Robert Louis Stevenson and the celebrated poet Robert Burns. More recently the modernist and nationalist Hugh MacDiarmid and Neil M

Gunn contributed to the Scottish Renaissance. A more grim outlook is found in Ian Rankin's stories and the psychological horror-comedy of Iain Banks. Scotland's capital, Edinburgh, was UNESCO's first worldwide City of Literature.[384]

Britain's oldest known poem, *Y Gododdin*, was composed in *Yr Hen Ogledd* (The Old North), most likely in the late 6th century. It was written in Cumbric or Old Welsh and contains the earliest known reference to King Arthur.[385] From around the seventh century, the connection between Wales and the Old North was lost, and the focus of Welsh-language culture shifted to Wales, where Arthurian legend was further developed by Geoffrey of Monmouth.[386] Wales's most celebrated medieval poet, Dafydd ap Gwilym (fl 1320–1370), composed poetry on themes including nature, religion and especially love. He is widely regarded as one of the greatest European poets of his age.[387] Until the late 19th century the majority of Welsh literature was in Welsh and much of the prose was religious in character. Daniel Owen is credited as the first Welsh-language novelist, publishing *Rhys Lewis* in 1885. The best-known of the Anglo-Welsh poets are both Thomases. Dylan Thomas became famous on both sides of the Atlantic in the mid-20th century. The Swansea writer is remembered for his poetry – his "Do not go gentle into that good night; Rage, rage against the dying of the light." is one of the most quoted couplets of English language verse – and for his 'play for voices', *Under Milk Wood*. Influential Church in Wales 'poet-priest' and Welsh nationalist, R. S. Thomas, was nominated for the Nobel Prize in Literature in 1996. Leading Welsh novelists of the twentieth century include Richard Llewellyn and Kate Roberts. Current Welsh writers include Gillian Clarke, Mihangel Morgan, and Wiliam Owen Roberts.[*citation needed*]

Authors of other nationalities, particularly from Commonwealth countries, the Republic of Ireland and the United States, have lived and worked in the UK. Significant examples through the centuries include Jonathan Swift, Oscar Wilde, Bram Stoker, George Bernard Shaw, Joseph Conrad, T.S. Eliot, Ezra Pound and more recently British authors born abroad such as Kazuo Ishiguro and Sir Salman Rushdie.[388][389]

Media

Main article: Media of the United Kingdom

The BBC, founded in 1922, is the UK's publicly funded radio, television and Internet broadcasting corporation, and is the oldest and largest broadcaster in the world. It operates numerous television and radio stations in the UK and abroad and its domestic services are funded by the television licence.[390][391] Other major players in the UK media include ITV plc, which operates 11 of the 15 regional television broadcasters that make up the ITV Network,[392] and News Corporation, which owns a number of national newspapers through News International such as the most popular tabloid *The Sun* and the longest-established daily "broadsheet" *The Times*,[393] as well as holding a large stake in satellite broadcaster British Sky Broadcasting.[394] London dominates the media sector in the UK: national newspapers and television and radio are largely based there, although Manchester is also a significant national media centre. Edinburgh and Glasgow, and Cardiff, are important centres of newspaper and broadcasting production in Scotland and Wales respectively.[395] The UK publishing sector, including books, directories and databases, journals, magazines and business media, newspapers and news agencies, has a combined turnover of around £20 billion and employs around 167,000 people.[396]

Broadcasting House in London, headquarters of the BBC

Improve this page

In 2009 it was estimated that individuals viewed a mean of 3.75 hours of television per day and 2.81 hours of radio. In that year the main BBC public service broadcasting channels accounted for an estimated 28.4% of all television viewing; the three main independent channels accounted for 29.5% and the increasingly important other satellite and digital channels for the remaining 42.1%.[397] Sales of newspapers have fallen since the 1970s and in 2009 42% of people reported reading a daily national newspaper.[398] In 2010 82.5% of the UK population were Internet users, the highest proportion amongst the 20 countries with the largest total number of users in that year.[399]

Music

Main article: Music of the United Kingdom

See also: British rock

The Beatles are one of the most commercially successful and critically acclaimed bands in the history of music, selling over a billion records internationally.[400][401][402]

Various styles of music are popular in the UK from the indigenous folk music of England, Wales, Scotland and Northern Ireland to heavy metal. Notable composers of classical music from the United Kingdom and the countries that preceded it include William Byrd, Henry Purcell, Sir Edward Elgar, Gustav Holst, Sir Arthur Sullivan (most famous for working with librettist Sir W.S. Gilbert), Ralph Vaughan Williams and Benjamin Britten, pioneer of modern British opera. Sir Peter Maxwell Davies is one of the foremost living composers and current Master of the Queen's Music. The UK is also home to world-renowned symphonic orchestras and choruses such as the BBC Symphony Orchestra and the London Symphony Chorus. Notable conductors include Sir Simon Rattle, John Barbirolli and Sir Malcolm Sargent. Some of the notable film score composers include John Barry, Clint Mansell, Mike Oldfield, John Powell, Craig Armstrong, David Arnold, John Murphy, Monty Norman and Harry Gregson-Williams. George Frideric Handel, although born German, was a naturalised British citizen[403] and some of his best works, such as *Messiah*, were written in the English language.[404] Andrew Lloyd Webber has achieved enormous worldwide commercial success and is a prolific composer of musical theatre, works which have dominated London's West End for a number of years and have travelled to Broadway in New York.[405]

The Beatles have international sales of over one billion units and are the biggest-selling and most influential act in the history of popular music.[400][401][402][406] Other prominent British contributors to have influenced popular music over the last 50 years include Queen, Cliff Richard, the Bee Gees, Elton John, Led Zeppelin, Pink Floyd and The Rolling Stones; all of whom have world wide record sales of 200 million or more.[407][408][409][410][411][412][413] According to research by Guinness World Records eight of the ten acts with the most UK chart singles are British: Status Quo, Queen, The Rolling Stones, UB40, Depeche Mode, the Bee Gees, the Pet Shop Boys and the Manic Street Preachers.[414][415] More recent UK music acts that have had international success include Leona Lewis, Coldplay, Radiohead, Oasis, Spice Girls, Duffy, Jessie J, Muse, Adele, Gorillaz, and the late Amy Winehouse.

A number of UK cities are known for their music. Acts from Liverpool have had more UK chart number one hit singles per capita (54) than any other city worldwide.[416] Glasgow's contribution to music was recognised in 2008 when it was named a UNESCO City of Music, one of only three cities in the world to have this honour.[417]

Philosophy

Improve this page

Main article: British philosophy

Jeremy Bentham, who developed the concept of utilitarianism

The United Kingdom is famous for the tradition of 'British Empiricism', a branch of the philosophy of knowledge that states that only knowledge verified by experience is valid, and 'Scottish Philosophy', sometimes referred to as the 'Scottish School of Common Sense'.[418] The most famous philosophers of British Empiricism are John Locke, George Berkeley and David Hume; while Dugald Stewart, Thomas Reid and William Hamilton were major exponents of the Scottish "common sense" school. Two Britons are also notable for a theory of moral philosophy utilitarianism, first used by Jeremy Bentham and later by John Stuart Mill in his short work *Utilitarianism*.[419][420] Other eminent philosophers from the UK and the unions and countries that preceded it include Duns Scotus, John Lilburne, Mary Wollstonecraft, Sir Francis Bacon, Adam Smith, Thomas Hobbes, William of Ockham, Bertrand Russell and A.J. "Freddie" Ayer. Foreign-born philosophers who settled in the UK include Isaiah Berlin, Karl Marx, Karl Popper and Ludwig Wittgenstein.

Visual art

Main article: Art of the United Kingdom

J.M.W. Turner self-portrait, oil on canvas, c. 1799

The history of British visual art forms part of western art history. Major British artists include: the Romantics William Blake, John Constable, Samuel Palmer and J.M.W. Turner; the portrait painters Sir Joshua Reynolds and Lucian Freud; the landscape artists Thomas Gainsborough and L. S. Lowry; the pioneer of the Arts and Crafts Movement William Morris; the figurative painter Francis Bacon; the Pop artists Peter Blake, Richard Hamilton and David Hockney; the collaborative duo Gilbert and George; the abstract artist Howard Hodgkin; and the sculptors Antony Gormley, Anish Kapoor and Henry Moore. During the late 1980s and 1990s the Saatchi Gallery in London helped to bring to public attention a group of multi-genre artists who would become known as the "Young British Artists": Damien Hirst, Chris Ofili, Rachel Whiteread, Tracey Emin, Mark Wallinger, Steve McQueen, Sam Taylor-Wood and the Chapman Brothers are among the better-known members of this loosely affiliated movement.

The Royal Academy in London is a key organisation for the promotion of the visual arts in the United Kingdom. Major schools of art in the UK include: the six-school University of the Arts London, which includes the Central Saint Martins College of Art and Design and Chelsea College of Art and Design; Goldsmiths, University of London; the Slade School of Fine Art (part of University College London); the Glasgow School of Art; the Royal College of Art; and The Ruskin School of Drawing and Fine Art (part of the University of Oxford). The Courtauld Institute of Art is a leading centre for the teaching of the history of art. Important art galleries in the United Kingdom include the National Gallery, National Portrait Gallery, Tate Britain and Tate Modern (the most-visited modern art gallery in the world, with around 4.7 million visitors per year).[421]

Sport

Main article: Sport in the United Kingdom

Major sports, including association football, rugby league, rugby union, rowing, boxing, badminton, cricket, tennis, darts and golf, originated or were substantially developed in the United Kingdom and the states that preceded it. A 2003 poll found that football is the most popular sport in the United Kingdom.[423] In most i

Improve this page

competitions, separate teams represent England, Scotland and Wales. Northern Ireland and the Republic of Ireland usually field a single team representing all of Ireland, with notable exceptions including at the Commonwealth Games and association football. (In sporting contexts, these teams can be referred to collectively as the Home Nations.) However there are occasions where a single sports team represents the United Kingdom, including at the Olympics where the UK is represented by the Great Britain team. London was the site of the 1908 and 1948 Olympic Games, and in 2012 will become the first city to play host for a third time.

London's Wembley Stadium, one of the most expensive stadia ever built[422]

Each of the Home Nations has its own football association, national team and league system, though a few clubs play outside their country's respective systems for a variety of historical and logistical reasons. England, Scotland, Wales and Northern Ireland compete as separate countries in international competition and, as a consequence, the UK does not compete as a team in football events at the Olympic Games.[424] There are proposals to have a UK team take part in the 2012 Summer Olympics but the Scottish, Welsh and Northern Irish football associations have declined to participate, fearing that it would undermine their independent status – a fear confirmed by FIFA president Sepp Blatter.[425] England has been the most successful of the home nations winning the World Cup on home soil in 1966, although there has historically been a close-fought rivalry between England and Scotland.

Cardiff's Millennium Stadium opened for the 1999 Rugby World Cup

Cricket was invented in England. The England cricket team, controlled by the England and Wales Cricket Board,[426] is the only national team in the UK with Test status. Team members are drawn from the main county sides, and include both English and Welsh players. Cricket is distinct from football and rugby where Wales and England field separate national teams, although Wales had fielded its own team in the past. Irish and Scottish players have played for England because neither Scotland nor Ireland have Test status and have only recently started to play in One Day Internationals.[427][428] Scotland, England (and Wales), and Ireland (including Northern Ireland) have competed at the Cricket World Cup, with England reaching the finals on three occasions. There is a professional league championship in which clubs representing 17 English counties and 1 Welsh county compete.[429] Rugby league is a popular sport in some areas of the UK. It originates in Huddersfield and is generally played in Northern England.[430] A single 'Great Britain Lions' team had competed in the Rugby League World Cup and Test match games, but this changed in 2008 when England, Scotland and Ireland competed as separate nations.[431] Great Britain is still being retained as the full national team for Ashes tours against Australia, New Zealand and France. The highest form of professional rugby league in the UK and Europe is Super League where there are 11 teams from Northern England, 1 from London, 1 from Wales and 1 from France. Rugby union is organised on a separate basis for England, Scotland, Wales and Ireland, each has a top-ranked international team and were collectively known as the Home Nations. The Six Nations Championship, played between the Home Nations as well as Italy and France, is the premier international tournament in the northern hemisphere.[432] The Triple Crown is awarded to any of the Home Nations who beats the other three in that tournament.[433]

The game of lawn tennis first originated in the city of Birmingham between 1859 and 1865.[434] The Championships, Wimbledon are international tennis events held in Wimbledon in south London every summer and are regarded as the most prestigious event of the global tennis calendar. Snooker is one of the UK's popular sporting exports, with the world championships held annually in Sheffield.[435] In Northern Ireland Gaelic football and hurling are popular team sports, both in terms of participation and spectating, and Irish expatriates throughout the UK and the US also play them.[436] Shinty (or *camanachd*) is popular in the Scottish Highlands.[437]

Improve this page

Thoroughbred racing, which originated under Charles II of England as the "sport of kings", is popular throughout the UK with world-famous races including the Grand National, the Epsom Derby, Royal Ascot and the Cheltenham National Hunt Festival (including the Cheltenham Gold Cup). The UK has proved successful in the international sporting arena in rowing. Golf is the sixth most popular sport, by participation, in the UK. Although The Royal and Ancient Golf Club of St Andrews in Scotland is the sport's home course,[438] the world's oldest golf course is actually Musselburgh Links' Old Golf Course.[439]

The Wimbledon Championships, a Grand Slam tournament, is held in Wimbledon, London every June or July

The UK is closely associated with motorsport. Many teams and drivers in Formula One (F1) are based in the UK, and drivers from Britain have won more world titles than any other country. The UK hosted the very first F1 Grand Prix in 1950 at Silverstone, the current location of the British Grand Prix held each year in July. The country also hosts legs of the World Rally Championship and has its own touring car racing championship, the British Touring Car Championship (BTCC).[440]

Symbols

Main article: Symbols of the United Kingdom, the Channel Islands and the Isle of Man

The Statue of Britannia in Plymouth. Britannia is a national personification of the UK.

The flag of the United Kingdom is the Union Flag (also referred to as the Union Jack). It was first created in 1606 by the superimposition of the Flag of England on the Flag of Scotland and updated in 1801 with the addition of Saint Patrick's Flag. Wales is not represented in the Union Flag as Wales had been conquered and annexed to England prior to the formation of the United Kingdom; the possibility of redesigning the Union Flag to include representation of Wales has not been completely ruled out.[441] The national anthem of the United Kingdom is "God Save the King", with "King" replaced with "Queen" in the lyrics whenever the monarch is a woman.

Britannia is a national personification of the United Kingdom, originating from Roman Britain.[442] Britannia is symbolised as a young woman with brown or golden hair wearing a Corinthian helmet and white robes. She holds Poseidon's three-pronged trident and a shield, bearing the Union Flag. Sometimes she is depicted as riding on the back of a lion. At and since the height of the British Empire, Britannia has often been associated with maritime dominance, as in the patriotic song "Rule, Britannia!". The lion symbol is depicted behind Britannia on the British fifty pence coin and one is shown crowned on the back of the British ten pence coin. It is also used as a symbol on the non-ceremonial flag of the British Army. The bulldog is sometimes used as a symbol of the United Kingdom and has been associated with Winston Churchill's defiance of Nazi Germany.[443]

History of the British Isles

From Wikipedia, the free encyclopedia

"History of Britain" redirects here. For other uses, see History of Britain (disambiguation).

The **history of the British Isles** has witnessed intermittent periods of competition and cooperation between the people that occupy the various parts of Great Britain, Ireland, and the smaller adjacent islands, which together make up the British Isles, as well as with France, Germany, the Low Countries, Denmark, Scandinavia, etc.

Today, the British Isles contain two sovereign states: the Republic of Ireland and the United Kingdom. There are also three Crown dependencies: Guernsey, Jersey and the Isle of Man. The United Kingdom may be further broken down into the four countries of the United Kingdom: England, Northern Ireland, Scotland, and Wales. Each of these countries bears its own history, with all but Northern Ireland having been independent states at one point. The History of the formation of the United Kingdom is very complex.

Bayeux Tapestry depicting events leading to Norman conquest of England, a moment that defined much of the history of the British Isles since.

The British monarch was head of state of all of the countries of the British Isles from the Union of the Crowns in 1603 until the enactment of the Republic of Ireland Act in 1949, although the term "British Isles" was not used in 1603. Additionally, since the independence of Ireland, historians of the region often avoid the term *British Isles* due to the complexity of relations between the peoples of the archipelago (see: *Terminology of the British Isles*).

Palaeolithic and Mesolithic periods [edit]

The Palaeolithic and Mesolithic, also known as the Old and Middle Stone Ages, were characterised by a hunter-gatherer economy and a reliance on stone tool technologies.

Lower Palaeolithic

Generated by www.PDFonFly.com at 3/21/2012 4:28:08 AM
URL: http://en.wikipedia.org/wiki/History_of_the_British_Isles

The Lower Palaeolithic period in Britain saw its first inhabitation by early hominins.

One of the most prominent archaeological sites dating to this period is that of Boxgrove Quarry in West Sussex, southern England.

Upper Palaeolithic [edit]

Mesolithic [edit]

By the Mesolithic, *homo sapiens*, or modern humans, were the only hominin species to still survive in the British Isles.

Neolithic and Bronze Ages [edit]

In the British Isles, the Neolithic and Bronze Ages saw the transformation of British and Irish society and landscape. It saw the adoption of agriculture, as communities gave up their hunter-gatherer modes of existence to begin farming.

Early Neolithic [edit]

Late Neolithic and Early Bronze Age [edit]

Late Bronze Age [edit]

Iron Age [edit]

As its name suggests, the British Iron Age is also characterised by the adoption of iron, a metal which was used to produce a variety of different tools, ornaments and weapons.

Roman Britain [edit]

From 40 CE through to c.410 CE, southern Britain was a part of the Roman Empire, with archaeologists referring to this area as "Roman Britain", and this time span the "Romano-British period" or the "Roman Iron Age".

Mediaeval period [edit]

Early Mediaeval [edit]

Late Mediaeval [edit]

In 1066, William, Duke of Normandy invaded England, claiming that he was the rightful heir to the throne, and successfully defeated King Harold II at the Battle of Hastings. Proclaiming himself to be King William I, he set about solidifying his regime by appointing Normans to many of the positions of high authority, building a system of castles across the country and ordering a census of his new kingdom, the Doomsday Book.

Early modern period [edit]

18th and 19th centuries [edit]

20th and 21st centuries [edit]

1900-1950 [edit]

In 1922, the Irish Home Rule movement finally succeeded in its goals, and the U.K. government accepted the secession of the southern part of Ireland as an independent state.

As World War II broke out across Europe in 1939, the U.K. joined the Allied forces in opposition to the Axis forces of Nazi Germany and Fascist Italy, whilst the Republic of Ireland instead remained neutral throughout the conflict. At the war's end in 1945, the U.K. emerged as one of the victorious nations.

1950-1999 [edit]

Domestically, the 1960s onward saw a liberalisation of social attitudes in both the Irish Republic and the U.K., with the rise of movements such as second wave feminism and LGBT rights. Politically, the U.K. was dominated by the centre-left Labour Party, who enacted a number of social democratic reforms, such as the implementation of the National Health Service, and the right-centre right Conservative Party.

On the international stage, the second half of the 20th century was dominated by the Cold War between the Soviet Union and its socialist allies and the United States and its capitalist allies; the U.K. was a key supporter of the latter, joining the anti-Soviet military alliance NATO in 1949. During this period, the U.K. became involved in several Cold War conflicts, such as the Korean War (1950-1953), as well as unrelated conflicts such as the Falklands War (1982). In contrast, the Republic of Ireland remained neutral and avoided involvement in any foreign wars during this period.

2000-present [edit]

In the 21st century, the U.K. became a major supporter of the U.S. in their "War on Terror", and joined them in the War in

Afghanistan (2001-present) and the invasion of Iraq. The UK also took a leading role in the civilian protection campaign against Muammar Gaddafi's government in the 2011 military intervention in Libya.

Both the U.K. and the Irish Republic were affected by the global recession.

Monarchy of the United Kingdom

From Wikipedia, the free encyclopedia

The **monarchy of the United Kingdom** (commonly referred to as the **British monarchy**) is the constitutional monarchy of the United Kingdom and its overseas territories. The present monarch, Queen Elizabeth II, has reigned since 6 February 1952. She and her immediate family undertake various official, ceremonial and representational duties. As a constitutional monarch, the Queen is limited to non-partisan functions such as bestowing honours and appointing the Prime Minister. The Queen is also Commander-in-chief of the British Armed Forces. Though the ultimate executive authority over the government of the United Kingdom is still by and through the monarch's royal prerogative, these powers may only be used according to laws enacted in Parliament, and, in practice, within the constraints of convention and precedent.

Queen of the United Kingdom

MONARCHY

Royal coat of arms of the United Kingdom

Incumbent:
Elizabeth II

Style:	Her Majesty
Heir apparent:	Charles, Prince of Wales
Residence:	Buckingham Palace as officical residence
Website:	The British Monarchy (http://www.royal.gov.uk/)

The British monarchy traces its origins from the Kings of the Angles and the early Scottish Kings. By the year 1000, the kingdoms of England and Scotland had developed from the petty kingdoms of early medieval Britain. The last Anglo-Saxon monarch (Harold II) was defeated and killed in the Norman invasion of 1066 and the English monarchy passed to the Norman conquerors. In the thirteenth century, the principality of Wales was absorbed by England, and Magna Carta began the process of reducing the political powers of the monarch.

From 1603, when the Scottish King James VI inherited the English throne as James I, both kingdoms were ruled by a single monarch. From 1649 to 1660 the tradition of monarchy was broken by the republican Commonwealth of England that followed the War of the Three Kingdoms. The Act of Settlement 1701, which is still in force, excluded Roman Catholics, or those married to Catholics, from succession to the English throne. In 1707 the kingdoms of England and Scotland were merged to create the Kingdom of Great Britain and in 1801 the Kingdom of Ireland joined to create the United Kingdom of Great Britain and Ireland. The British monarch became nominal head of the vast British Empire, which covered a quarter of the world's surface at its greatest extent in 1921.

In the 1920s, five-sixths of Ireland seceded from the Union as the Irish Free State, and the Balfour Declaration recognised the evolution of the dominions of the empire into separate, self-governing countries within a Commonwealth of Nations. After the Second World War, the vast majority of British colonies and territories became independent, effectively bringing the empire to an end. George VI and his successor, Elizabeth II, adopted the title Head of the Commonwealth as a symbol of the free association of its independent member states.

The Commonwealth includes both republics and monarchies. At present fifteen other Commonwealth countries

share with the United Kingdom the same person as their monarch. The terms *British monarchy* and *British monarch* are frequently still employed in reference to the person and institution shared amongst all sixteen of the Commonwealth realms,[1][2] and to the distinct monarchies within each of these independent countries, often at variance with the different, specific, and official national titles and styles for each jurisdiction.

Constitutional role

In the uncodified Constitution of the United Kingdom, the Monarch (otherwise referred to as the Sovereign or "His/Her Majesty", abbreviated H.M.) is the Head of State. Oaths of allegiance are made to the Queen and her lawful successors.[3] *God Save the Queen* (or *God Save the King*) is the British national anthem,[4] and the monarch appears on postage stamps, coins, and banknotes.[5]

The Monarch takes little direct part in Government. The decisions to exercise sovereign powers are delegated from the Monarch, either by statute or by convention, to Ministers or officers of the Crown, or other public bodies, exclusive of the Monarch personally. Thus the acts of state done in the name of the Crown, such as Crown Appointments,[6] even if personally performed by the Monarch, such as the Queen's Speech and the State Opening of Parliament, depend upon decisions made elsewhere:

- Legislative power is exercised by the Crown in Parliament, by and with the advice and consent of

Parliament, the House of Lords and the House of Commons.

- Executive power is exercised by Her Majesty's Government, which comprises Ministers, primarily the Prime Minister and the Cabinet, which is technically a committee of the Privy Council. They have the direction of the Armed Forces of the Crown, the Civil Service and other Crown Servants such as the Diplomatic and Secret Services (the Queen receives certain foreign intelligence reports before the Prime Minister does[7]).
- Judicial power is vested in the Judiciary, who by constitution and statute[8] have judicial independence of the Government.
- The Church of England, of which the Monarch is the head, has its own legislative, judicial and executive structures.
- Powers independent of government are legally granted to other public bodies by statute or statutory instrument such as an Order in Council, Royal Commission or otherwise.
- Apart from members of parliament and local authorities, no public officers are elected.

The Sovereign's role as a constitutional monarch is largely limited to non-partisan functions, such as granting honours. This role has been recognised since the 19th century; the constitutional writer Walter Bagehot identified the monarchy in 1867 as the "dignified part" rather than the "efficient part" of government.[9] It has also been claimed that "the UK needs a head of state for the very occasional crisis."[10]

The English Bill of Rights of 1689 curtailed the monarch's governmental power.

Appointment of the Prime Minister

Whenever necessary, the Monarch is responsible for appointing a new Prime Minister (who by convention appoints and may dismiss every other Minister of the Crown, and thereby constitutes and controls the government). In accordance with unwritten constitutional conventions, the Sovereign must appoint an individual who commands the support of the House of Commons, usually the leader of the party or coalition that has a majority in that House. The Prime Minister takes office by attending the Monarch in private audience, and after Kissing Hands that appointment is immediately effective without any other formality or instrument.[11]

In a "hung parliament", in which no party or coalition holds a majority, the monarch has an increased degree of latitude in choosing the individual likely to command most support, but it would usually be the leader of the largest party.[12][13] Since 1945, there have only been two hung parliaments. The first followed the February 1974 general election when Harold Wilson was appointed Prime Minister after Edward Heath resigned the post following his failure to form a coalition. Although Wilson's Labour Party did not have a majority, they were the largest party. The second followed the May 2010 general election, in which the Conservatives (the largest party) and Liberal Democrats agreed to form the first coalition government since World War II.

Dissolution of Parliament

In 1950 the King's Private Secretary writing pseudonymously to *the Times* newspaper asserted a constitutional convention: according to the Lascelles Principles, if a minority government asked to dissolve Parliament to call an early election to strengthen its position, the monarch could

refuse, and would do so under three conditions. When Prime Minister Wilson requested a dissolution late in 1974, the Queen granted his request as Heath had already failed to form a coalition. The resulting general election gave Wilson a small majority.[14] The monarch could in theory unilaterally dismiss a Prime Minister, but a Prime Minister's term now comes to an end only by electoral defeat, death, or resignation. The last monarch to remove a Prime Minister was William IV, who dismissed Lord Melbourne in 1834.[15] The Fixed-term Parliaments Act 2011 removed the monarch's authority to dissolve Parliament.

Royal Prerogative

Main article: Royal Prerogative in the United Kingdom

Some of the government's executive authority is theoretically and nominally vested in the Sovereign and is known as the Royal Prerogative. The monarch acts within the constraints of convention and precedent, only exercising prerogative on the advice of ministers responsible to Parliament, often through the Prime Minister or Privy Council.[16] In practice, prerogative powers are only exercised on the Prime Minister's advice—the Prime Minister, and not the Sovereign, has control. The monarch holds a weekly audience with the Prime Minister. The monarch may express his or her views, but, as a constitutional ruler, must ultimately accept the decisions of the Prime Minister and the Cabinet (providing they command the support of the House). In Bagehot's words: "the Sovereign has, under a constitutional monarchy ... three rights—the right to be consulted, the right to encourage, the right to warn."[17]

Although the Royal Prerogative is extensive and parliamentary approval is not formally required for its exercise, it is limited. Many Crown prerogatives have fallen out of use or have been permanently transferred to Parliament. For example, the monarch cannot impose and collect new taxes; such an action requires the authorisation of an Act of Parliament. According to a parliamentary report, "The Crown cannot invent new prerogative powers", and Parliament can override any prerogative power by passing legislation.[18]

The Royal Prerogative includes the powers to appoint and dismiss ministers, regulate the civil service, issue passports, declare war, make peace, direct the actions of the military, and negotiate and ratify treaties, alliances, and international agreements. However, a treaty cannot alter the domestic laws of the United Kingdom; an Act of Parliament is necessary in such cases. The monarch is commander in chief of the Armed Forces (the Royal Navy, the British Army, and the Royal Air Force), accredits British High Commissioners and ambassadors, and receives diplomats from foreign states.[18]

It is the prerogative of the monarch to summon and prorogue Parliament. Each parliamentary session begins with the monarch's summons. The new parliamentary session is marked by the State Opening of Parliament, during which the Sovereign reads the Speech from the Throne in the Chamber of the House of Lords, outlining the Government's legislative agenda.[19] Prorogation usually occurs about one year after a session begins, and formally concludes the session.[20] Dissolution ends a parliamentary term, and is followed by a general election for all seats in the House of Commons. A general election is normally held five years after the previous one under the Fixed-term Parliaments Act 2011, but can be held sooner if the Prime Minister loses a motion of confidence, or if two-thirds of the members of the House of Commons vote to hold an early election.

Before a bill passed by the legislative Houses can become law, the Royal Assent (the monarch's approval) is required.[21] In theory, assent can either be granted (making the bill law) or withheld (vetoing the bill), but since 1707 assent has always been granted.[22]

The monarch has a similar relationship with the devolved governments of Scotland, Wales, and Northern Ireland. The Sovereign appoints the First Minister of Scotland on the nomination of the Scottish Parliament,[23] and the

First Minister of Wales on the nomination of the National Assembly for Wales.[24] In Scottish matters, the Sovereign acts on the advice of the Scottish Government. However, as devolution is more limited in Wales, in Welsh matters the Sovereign acts on the advice of the Prime Minister and Cabinet of the United Kingdom. The Sovereign can veto any law passed by the Northern Ireland Assembly, if it is deemed unconstitutional by the Secretary of State for Northern Ireland.[25]

The Sovereign is deemed the "fount of justice"; although the Sovereign does not personally rule in judicial cases, judicial functions are performed in his or her name. For instance, prosecutions are brought on the monarch's behalf, and courts derive their authority from the Crown. The common law holds that the Sovereign "can do no wrong"; the monarch cannot be prosecuted for criminal offences. The Crown Proceedings Act 1947 allows civil lawsuits against the Crown in its public capacity (that is, lawsuits against the government), but not lawsuits against the monarch personally. The Sovereign exercises the "prerogative of mercy", which is used to pardon convicted offenders or reduce sentences.[16][18]

The monarch is the "fount of honour", the source of all honours and dignities in the United Kingdom. The Crown creates all peerages, appoints members of the orders of chivalry, grants knighthoods and awards other honours.[26] Although peerages and most other honours are granted on the advice of the Prime Minister, some honours are within the personal gift of the Sovereign, and are not granted on ministerial advice. The monarch alone appoints members of the Order of the Garter, the Order of the Thistle, the Royal Victorian Order and the Order of Merit.[27]

History

English monarchy

See also: List of English monarchs

Following Viking raids and settlement in the ninth century, the Anglo-Saxon kingdom of Wessex emerged as the dominant English kingdom. Alfred the Great secured Wessex, achieved dominance over western Mercia, and assumed the title "King of the English".[28] His grandson Athelstan was the first king to rule over a unitary kingdom roughly corresponding to the present borders of England, though its constituent parts retained strong regional identities. The 11th century saw England become more stable, despite a number of wars with the Danes, which resulted in a Danish monarchy for one generation.[29] William, Duke of Normandy's conquest of England in 1066 was crucial in terms of both political and social change. The new monarch continued the centralisation of power begun in the Anglo-Saxon period, while the Feudal System continued to develop.[30]

The Bayeux Tapestry depicts the Norman Conquest of 1066.

William I was succeeded by two of his sons: William II, then Henry I. Henry made a controversial decision to name his daughter Matilda (his only surviving child) as his heir. Following Henry's death in 1135 one of William I's grandsons, Stephen, laid claim to the throne, and took power with the support of most of the barons. Matilda challenged his reign; as a result England descended into a period of disorder known as the Anarchy. Stephen maintained a precarious hold on power but agreed to a compromise under which Matilda's son Henry would succeed him. Henry accordingly became the first monarch of the Angevin or Plantagenet dynasty as Henry II in 1154.[31]

The reigns of most of the Angevin monarchs were marred by civil strife

and conflicts between the monarch and the nobility. Henry II faced rebellions from his own sons, the future monarchs Richard I and John. Nevertheless, Henry managed to expand his kingdom. Upon Henry's death, his elder son Richard succeeded to the throne; he was absent from England for most of his reign, as he left to fight in the Crusades. He was killed besieging a castle, and John succeeded him.

John's reign was marked by conflict with the barons, particularly over the limits of royal power. In 1215 the barons coerced the king into issuing the Magna Carta (Latin for "Great Charter") to guarantee the rights and liberties of the nobility. Soon afterwards further disagreements plunged England into a civil war known as the First Barons' War. The war came to an abrupt end after John died in 1216, leaving the Crown to his nine-year-old son Henry III.[32] Later in Henry's reign, Simon de Montfort led the barons in another rebellion, beginning the Second Barons' War. The war ended in a clear royalist victory, and in the death of many rebels, but not before the king had agreed to summon a parliament in 1265.[33]

The next monarch, Edward I ("Edward Longshanks"), was far more successful in maintaining royal power, and was responsible for the conquest of Wales. He attempted to establish English domination of Scotland. However, gains in Scotland were reversed during the reign of his successor, Edward II, who also faced conflict with the nobility.[34] Edward II was, in 1311, forced to relinquish many of his powers to a committee of baronial "ordainers"; however, military victories helped him regain control in 1322.[35] Nevertheless, in 1327 Edward was deposed and then murdered by his wife Isabella. His 14-year-old son became Edward III. Edward III claimed the French Crown, setting off the Hundred Years' War between England and France.

His campaigns conquered much French territory, but by 1374 all the gains had been lost. Edward's reign was also marked by the further development of Parliament, which came to be divided into two Houses. In 1377 Edward III died, leaving the Crown to his 10-year-old grandson Richard II. Like many of his predecessors, Richard II conflicted with the nobles by attempting to concentrate power in his own hands. In 1399, while he was campaigning in Ireland, his cousin Henry Bolingbroke seized power. Richard was deposed, imprisoned, and eventually murdered, probably by starvation, and Henry became king.[36]

Henry IV was the grandson of Edward III and the son of John of Gaunt, Duke of Lancaster; hence, his dynasty was known as the House of Lancaster. For most of his reign, Henry IV was forced to fight off plots and rebellions; his success was partly due to the military skill of his son, the future Henry V. Henry V's own reign, which began in 1413, was largely free from domestic strife, leaving the king free to pursue the Hundred Years' War in France. Although he was victorious, his sudden death in 1422 left his infant son Henry VI on the throne, and gave the French an opportunity to overthrow English rule.[37]

The unpopularity of Henry's counsellors and his belligerent consort, Margaret of Anjou, as well as his own ineffectual leadership, led to the weakening of the House of Lancaster. The Lancastrians faced a challenge from the House of York, so called because its head, a descendant of Edward III, was Richard, Duke of York. Although the Duke of York died in battle in 1460, his eldest son Edward IV led the Yorkists to victory in 1461. The Wars of the Roses, nevertheless, continued intermittently during his reign and those of his son Edward V and brother Richard III. Edward V disappeared, presumably murdered by Richard. Ultimately, the conflict culminated in success for the Lancastrian branch led by Henry Tudor, in 1485, when Richard III was killed in the Battle of Bosworth Field.[38]

Now as King Henry VII, Henry Tudor neutralised the remaining Yorkist forces, partly by marrying Elizabeth of York, a Yorkist heir. Through skill and ability, Henry re-established absolute supremacy in the realm, and the conflicts with the nobility that had plagued previous monarchs came to an end.[39] The reign of the second Tudor king, Henry VIII, was one of great political change. Religious upheaval and disputes with the Pope led the monarch to break from the Roman Catholic Church and to establish the Church of England (the Anglican

Church).[40]

Wales, which had been conquered centuries earlier but had remained a separate dominion, was annexed to England under the Laws in Wales Acts 1535–1542.[41] Henry VIII's son and successor, the young Edward VI, continued with further religious reforms but his early death in 1553 precipitated a succession crisis. He was wary of allowing his Catholic elder half-sister Mary to succeed, and therefore drew up a will designating Lady Jane Grey as his heiress. Jane's reign however lasted only nine days; with tremendous popular support, Mary deposed her, and declared herself the lawful Sovereign. Mary I pursued disastrous wars in France and attempted to return England to Roman Catholicism, in the process burning Protestants at the stake as heretics. She died in 1558, and was succeeded by her Protestant half-sister Elizabeth I. England returned to Protestantism, and continued its growth into a major world power by building its navy and exploring the New World.[42]

Scottish monarchy

See also: List of Scottish monarchs

In Scotland, as in England, monarchies emerged after the withdrawal of the Roman empire from Britain in the early fifth century. The three groups that lived in Scotland at this time were the Picts in the north east, the Britons in the south, including the Kingdom of Strathclyde, and the Gaels or Scotti (who would later give their name to Scotland), of the Irish petty kingdom of Dál Riata in the west. Kenneth MacAlpin is traditionally viewed as the first king of a united Scotland (known as Scotia to writers in Latin, or Alba to the Scots).[43] The expansion of Scottish dominions continued over the next two centuries, as other territories such as Strathclyde were absorbed.

Early Scottish monarchs did not inherit the Crown directly; instead the custom of tanistry was followed, where the monarchy alternated between different branches of the House of Alpin. As a result, however, the rival dynastic lines clashed, often violently. From 942 to 1005, seven consecutive monarchs were either murdered or killed in battle.[44] In 1005, Malcolm II ascended the throne having killed many rivals. He continued to ruthlessly eliminate opposition, and when he died in 1034 he was succeeded by his grandson, Duncan I, instead of a cousin, as had been usual. In 1040, Duncan suffered defeat in battle at the hands of Macbeth, who was killed himself in 1057 by Duncan's son Malcolm. The following year, after killing Macbeth's stepson Lulach, Malcolm ascended the throne as Malcolm III.[45]

With a further series of battles and deposings, five of Malcolm's sons as well as one of his brothers successively became king. Eventually, the Crown came to his youngest son, David. David was succeeded by his grandsons Malcolm IV, and then by William the Lion, the longest-reigning King of Scots before the Union of the Crowns.[46] William participated in a rebellion against King Henry II of England but when the rebellion failed, William was captured by the English. In exchange for his release, William was forced to acknowledge Henry as his feudal overlord. The English King Richard I agreed to terminate the arrangement in 1189, in return for a large sum of money needed for the Crusades.[47] William died in 1214, and was succeeded by his son Alexander II. Alexander II, as well as his successor Alexander III, attempted to take over the Western Isles, which were still under the overlordship of Norway. During the reign of Alexander III, Norway launched an unsuccessful invasion of Scotland; the ensuing Treaty of Perth recognised Scottish control of the Western Isles and other disputed areas.[48]

Alexander III's unexpected death in a riding accident in 1286 precipitated a major succession crisis. Scottish leaders appealed to King Edward I of England for help in determining who was the rightful heir. Edward chose Alexander's three-year-old Norwegian granddaughter, Margaret. On her way to Scotland in 1290, however, Margaret died at sea, and Edward was again asked to adjudicate between 13 rival claimants to the throne. A

court was set up and after two years of deliberation, it pronounced John Balliol to be king. However, Edward proceeded to treat Balliol as a vassal, and tried to exert influence over Scotland. In 1295, when Balliol renounced his allegiance to England, Edward I invaded. During the first ten years of the ensuing Wars of Scottish Independence, Scotland had no monarch, until Robert the Bruce declared himself king in 1306.[49]

Robert's efforts to control Scotland culminated in success, and Scottish independence was acknowledged in 1328. However, only one year later, Robert died and was succeeded by his five-year-old son, David II. On the pretext of restoring John Balliol's rightful heir, Edward Balliol, the English again invaded in 1332. During the next four years, Balliol was crowned, deposed, restored, deposed, restored, and deposed until he eventually settled in England, and David remained king for the next 35 years.[50]

David II died childless in 1371 and was succeeded by his nephew Robert II of the House of Stuart. The reigns of both Robert II and his successor, Robert III, were marked by a general decline in royal power. When Robert III died in 1406, regents had to rule the country; the monarch, Robert III's son James I, had been taken captive by the English. Having paid a large ransom, James returned to Scotland in 1424; to restore his authority, he used ruthless measures, including the execution of several of his enemies. He was assassinated by a group of nobles. James II continued his father's policies by subduing influential noblemen but he was killed in an accident at the age of thirty, and a council of regents again assumed power. James III was defeated in a battle against rebellious Scottish earls in 1488, leading to another boy-king: James IV.[51]

In 1513, James IV launched an invasion of England, attempting to take advantage of the absence of the English King Henry VIII. His forces met with disaster at Flodden Field; the King, many senior noblemen, and hundreds of soldiers were killed. As his son and successor, James V, was an infant, the government was again taken over by regents. James V led another disastrous war with the English in 1542, and his death in the same year left the Crown in the hands of his six-day-old daughter, Mary. Once again, a regency was established.

Mary, a Roman Catholic, reigned during a period of great religious upheaval in Scotland. Due to the efforts of reformers such as John Knox, a Protestant ascendancy was established. Mary caused alarm by marrying her Catholic cousin, Lord Darnley, in 1565. After Lord Darnley's assassination in 1567, Mary contracted an even more unpopular marriage with the Earl of Bothwell, who was widely suspected of Darnley's murder. The nobility rebelled against the Queen, forcing her to abdicate. She fled to England, and the Crown went to her infant son James VI, who was brought up as a Protestant. Mary was imprisoned and later executed by the English Queen Elizabeth I.[52]

Personal union and republican phase

Elizabeth's death in 1603 ended Tudor rule in England. Since she had no children, she was succeeded by the Scottish monarch James VI, who was the great-grandson of Henry VIII's older sister and hence Elizabeth's first cousin twice removed. James VI ruled in England as James I after what was known as the "Union of the Crowns". Although England and Scotland were in personal union under one monarch—James I became the first monarch to style himself "King of Great Britain" in 1604[53]—they remained separate kingdoms. James I's successor, Charles I, experienced frequent conflicts with the English Parliament related to the issue of royal and parliamentary powers, especially the power to impose taxes. He provoked opposition by ruling without Parliament from 1629 to 1640, unilaterally levying taxes, and adopting controversial religious policies (many of which were offensive to the Scottish Presbyterians and the English Puritans). In 1642, the conflict between King and Parliament reached its climax and the English Civil War began.[54]

The war culminated in the execution of the king in 1649, the overthrow of the monarchy, and the establishment of a republic known as the Commonwealth of England. In 1653, Oliver Cromwell, the most prominent military

and political leader in the nation, seized power and declared himself Lord Protector (effectively becoming a military dictator, but refusing the title of king). Cromwell ruled until his death in 1658, when he was succeeded by his son Richard. The new Lord Protector had little interest in governing; he soon resigned.[55] The lack of clear leadership led to civil and military unrest, and for a popular desire to restore the monarchy. In 1660, the monarchy was restored when Charles I's son Charles II was declared king.[56]

In 1603 James VI and I became the first monarch to rule over England, Scotland, and Ireland together.

Charles II's reign was marked by the development of the first modern political parties in England. Charles had no legitimate children, and was due to be succeeded by his Roman Catholic brother, James, Duke of York. A parliamentary effort to exclude James from the line of succession arose; the "Petitioners", who supported exclusion, became the Whig Party, whereas the "Abhorrers", who opposed exclusion, became the Tory Party. The Exclusion Bill failed; on several occasions, Charles II dissolved Parliament because he feared that the bill might pass. After the dissolution of the Parliament of 1681, Charles ruled without a Parliament until his death in 1685. When James succeeded Charles, he pursued a policy of offering religious tolerance to Roman Catholics, thereby drawing the ire of many of his Protestant subjects. Many opposed James's decisions to maintain a large standing army, to appoint Roman Catholics to high political and military offices, and to imprison Church of England clerics who challenged his policies. As a result, a group of Protestants known as the Immortal Seven invited James II's daughter Mary and her husband William of Orange to depose the king. William obliged, arriving in England on 5 November 1688 to great public support. Faced with the defection of many of his Protestant officials, James fled the realm and William and Mary (rather than James II's Catholic son) were declared joint Sovereigns of England, Scotland and Ireland.[57]

James's overthrow, known as the Glorious Revolution, was one of the most important events in the long evolution of parliamentary power. The Bill of Rights 1689 affirmed parliamentary supremacy, and declared that the English people held certain rights, including the freedom from taxes imposed without parliamentary consent. The Bill of Rights required future monarchs to be Protestants, and provided that, after any children of William and Mary, Mary's sister Anne would inherit the Crown. Mary died childless in 1694, leaving William as the sole monarch. By 1700, a political crisis arose, as all of Anne's children had died, leaving her as the only individual left in the line of succession. Parliament was afraid that the former James II or his supporters, known as Jacobites, might attempt to reclaim the throne. Parliament passed the Act of Settlement 1701, which excluded James and his Catholic relations from the succession and made William's nearest Protestant relations, the family of Sophia, Electress of Hanover, next in line to the throne after his sister-in-law Anne.[58] Soon after the passage of the Act, William III died, leaving the Crown to Anne.

After the 1707 Acts of Union

See also: List of British monarchs

After Anne's accession, the problem of the succession re-emerged. The Scottish Parliament, infuriated that the English Parliament did not consult them on the choice of Sophia's family as the next heirs, passed the Act of Security, threatening to end the personal union between England and Scotland. The Parliament of England retaliated with the Alien Act 1705, threatening to devastate the Scottish economy by restricting trade. The

Scottish and English parliaments negotiated the Act of Union 1707, under which England and Scotland were united into a single Kingdom of Great Britain, with succession under the rules prescribed by the Act of Settlement.[59]

England and Scotland were united as Great Britain under Queen Anne in 1707.

In 1714, Queen Anne was succeeded by her second cousin, and Sophia's son, George I, Elector of Hanover, who consolidated his position by defeating Jacobite rebellions in 1715 and 1719. The new monarch was less active in government than many of his British predecessors, but retained control over his German kingdoms, with which Britain was now in personal union.[60] Power shifted towards George's ministers, especially to Sir Robert Walpole, who is often considered the first Prime Minister of the United Kingdom, although the title was not then in use.[61] The next monarch, George II, witnessed the final end of the Jacobite threat in 1746, when the Catholic Stuarts were completely defeated. During the long reign of his grandson, George III, Britain's American colonies were lost, the former colonies having formed the United States of America, but British influence elsewhere in the world continued to grow, and the United Kingdom of Great Britain and Ireland was created by the Act of Union 1800.[62]

The union of Great Britain and Ireland into the United Kingdom occurred in 1801 during the reign of King George III.

From 1811 to 1820 George III suffered a severe bout of what is now believed to be porphyria, an illness rendering him incapable of ruling. His son, the future George IV, ruled in his stead as Prince Regent. During the Regency and his own reign, the power of the monarchy declined and by the time of his successor, William IV, the monarch was no longer able to effectively interfere with parliamentary power. In 1834, William dismissed the Whig Prime Minister, William Lamb, 2nd Viscount Melbourne, and appointed a Tory, Sir Robert Peel. In the ensuing elections, however, Peel lost. The King had no choice but to recall Lord Melbourne. During William IV's reign the Reform Act 1832, which reformed parliamentary representation, was passed. Together with others passed later in the century, the Act led to an expansion of the electoral franchise, and the rise of the House of Commons as the most important branch of Parliament.[63]

The final transition to a constitutional monarchy was made during the long reign of William IV's successor, Victoria. As a woman, Victoria could not rule Hanover, which only permitted succession in the male line, so the personal union of the United Kingdom and Hanover came to an end. The Victorian era was marked by great cultural change, technological progress, and the establishment of the United Kingdom as one of the world's foremost powers. In recognition of British rule over India, Victoria was declared Empress of India in 1876. However, her reign was also marked by increased support for the republican movement, due in part to Victoria's permanent mourning and lengthy period of seclusion following the death of her husband in 1861.[64]

Victoria's son, Edward VII, became the first monarch of the House of Saxe-Coburg and Gotha in 1901. In 1917, the next monarch, George V, changed "Saxe-Coburg and Gotha" to "Windsor" due to the anti-German

sympathies aroused by the First World War. George V's reign was marked by the separation of Ireland into Northern Ireland, which remained a part of the United Kingdom, and the Irish Free State, an independent nation, in 1922.[65]

Shared monarchy

During the twentieth century, the Commonwealth of Nations evolved from the British Empire. Prior to 1926, the British Crown reigned over the British Empire collectively, the Dominions and Crown colonies were subordinate to the United Kingdom. The Balfour Declaration of 1926 gave complete self-government to the Dominions, effectively creating a system whereby a single monarch operated independently in each separate Dominion. The concept was solidified by the Statute of Westminster 1931,[66] which has been likened to "a treaty among the Commonwealth countries".[67]

Map of the British Empire in 1921

Map of the Commonwealth realms today

The monarchy thus ceased to be an exclusively British institution, although it is often still referred to as "British" for legal and historical reasons and for convenience. The monarch became separately monarch of the United Kingdom, monarch of Canada, monarch of Australia, and so forth. The independent states within the Commonwealth, known as the Commonwealth realms, would share the same monarch in a relationship likened to a personal union.[68][69][70][71]

George V's death in 1936 was followed by the accession of Edward VIII, who caused a public scandal by announcing his desire to marry the divorced American, Wallis Simpson, even though the Church of England opposed the remarriage of divorcées. Accordingly, Edward announced his intention to abdicate; the Parliaments of the United Kingdom and of other Commonwealth realms granted his request. Edward VIII and any children by his new wife were excluded from the line of succession, and the Crown went to his brother, George VI.[72] George served as a rallying figure for the British people during World War II, making morale-boosting visits to the troops as well as to munitions factories and to areas bombed by Nazi Germany. After the war George VI relinquished the title "Emperor of India", when India became independent in 1947, and became "King of India" instead.[73]

At first, every member of the Commonwealth was a Commonwealth realm but when India became a republic in 1950, it would no longer share in a common monarchy. Instead, the British monarch was acknowledged as "Head of the Commonwealth" in all Commonwealth member states, whether realms or not. The position is purely ceremonial, and is not inherited by the British monarch as of right but is vested in an individual chosen by the Commonwealth Heads of Government.[74]

Monarchy in Ireland

See also: List of Irish monarchs

In the 12th century the only English pope, Adrian IV, authorised King Henry II of England to take possession of Ireland as a feudal territory nominally under papal overlordship. Celtic Christianity was not closely following Roman Catholic practices, and was accused of heretical beliefs. The pope wanted the English monarch to annex Ireland and bring the Irish church into line with Rome.[75] Around 1170, King Dermot MacMurrough of Leinster was deposed by his arch-enemy King Rory O'Connor of Connacht. Dermot escaped to England and asked Henry

for help. Henry let him use a group of Anglo-Norman aristocrats and adventurers, led by Richard de Clare, 2nd Earl of Pembroke, to help him regain his throne. Dermot and his Anglo-Norman allies succeeded and he became King of Leinster again. De Clare married Dermot's daughter, and when Dermot died in 1171, de Clare became King of Leinster.[76] Henry was afraid that de Clare would make Ireland a rival Norman state or a place of refuge for Anglo-Saxons, so he took advantage of the papal bull and invaded, forcing de Clare and the other Anglo-Norman aristocrats in Ireland and some Gaelic Irish chieftains to recognise him as their overlord.[77]

By 1541, King Henry VIII of England had broken with the Church of Rome and declared himself Supreme Head of the Church of England. The pope's grant of Ireland to the English monarch became invalid, so Henry summoned a meeting of the Irish Parliament to change his title from Lord of Ireland to King of Ireland.[78]

In 1800, the Act of Union merged the kingdom of Great Britain and the kingdom of Ireland into the United Kingdom of Great Britain and Ireland. Ireland continued to be a part of the United Kingdom until 1922, when what is now the Republic of Ireland won independence as the Irish Free State. The Irish Free State was a separate Dominion from 1922 until 1949, when the Free State became a republic and severed all ties with the monarchy, while Northern Ireland remained within the Union, thus creating the United Kingdom of Great Britain and Northern Ireland.[79]

Modern status

Today, 16 of the 53 independent states within the Commonwealth, including the United Kingdom, remain Commonwealth realms and share the same monarch. The present monarch, Elizabeth II, succeeded her father, George VI, in 1952. Like her recent predecessors, Elizabeth II continues to function as a constitutional monarch. In the 1990s, Republicanism in the United Kingdom grew, partly due to negative publicity associated with the Royal Family (for instance, immediately following the death of Diana, Princess of Wales).[80] However, recent polls show that around 70–80% of the British public support the continuation of the monarchy.[81][82][83][84]

Religious role

The sovereign is the Supreme Governor of the established Church of England. Archbishops and bishops are appointed by the monarch, on the advice of the Prime Minister, who chooses the appointee from a list of nominees prepared by a Church Commission. The Crown's role in the Church of England is titular; the most senior clergyman, the Archbishop of Canterbury, is the spiritual leader of the Church and of the worldwide Anglican Communion.[85][86] The monarch takes an oath to preserve Church of Scotland and he or she holds the power to appoint the Lord High Commissioner to the Church's General Assembly, but otherwise plays no part in its governance, and enjoys no powers over it.[87][88] The Sovereign plays no formal role in the disestablished Church in Wales or Church of Ireland.

Succession

Main articles: Succession to the British throne and Coronation of the British monarch

The relationship between the Commonwealth realms is such that any change to the laws governing succession to the shared throne requires the unanimous consent of all the realms. Succession is governed by statutes such as the Bill of Rights 1689, the Act of Settlement 1701 and the Acts of Union 1707. The rules of succession may only be changed by an Act of Parliament; it is not possible for an individual to renounce his or her right of succession. The Act of Settlement restricts the succession to the legitimate Protestant descendants of Sophia of

Hanover (1630–1714), a granddaughter of James I.

Upon the death of the Sovereign, his or her heir immediately and automatically succeeds (hence the phrase "The King is dead. Long live the King!"), and the accession of the sovereign is publicly proclaimed by an Accession Council that meets at St. James's Palace.[89] The monarch is crowned in Westminster Abbey, normally by the Archbishop of Canterbury. A coronation is not necessary for a sovereign to reign; indeed, the ceremony usually takes place many months after accession to allow sufficient time for its preparation and for a period of mourning.[90]

After an individual ascends the throne, he or she reigns until death. The only voluntary abdication, that of Edward VIII, had to be authorised by a special Act of Parliament, His Majesty's Declaration of Abdication Act 1936. The last monarch involuntarily removed from power was James VII and II, who fled into exile in 1688 during the Glorious Revolution.

Restrictions by gender and religion

See also: 2011 proposals to change the rules of royal succession in the Commonwealth realms

Succession is currently governed by male-preference cognatic primogeniture, under which sons inherit before daughters, and elder children inherit before younger ones of the same gender. However, on Friday 28 October 2011, the Prime Minister of the United Kingdom, David Cameron, announced at the Commonwealth Heads of Government Meeting in Perth that all 16 Commonwealth realms, including the United Kingdom, had unanimously agreed to abolish this rule.[91] They also agreed that future monarchs should no longer be prohibited from marrying a Catholic - a law which dates from the Act of Settlement 1701, following the Glorious Revolution of 1688. However, since the monarch is also the Supreme Governor of the Church of England, the law which prohibits a Roman Catholic from acceding to the throne - which originated as a result of the English and Scots' distrust of Roman Catholicism during the late 17th century - would remain.

Only individuals who are Protestants may inherit the Crown. Roman Catholics and spouses of Roman Catholics are prohibited from succeeding.[92][93][94] An individual thus disabled from inheriting the Crown is deemed "naturally dead" for succession purposes, and the disqualification does not extend to the individual's legitimate descendants.

Regency

Main articles: Regency Acts and Counsellor of State

The Regency Acts allow for regencies in the event of a monarch who is a minor or who is physically or mentally incapacitated. When a regency is necessary, the next qualified individual in the line of succession automatically becomes regent, unless they themselves are a minor or incapacitated. Special provisions were made for Queen Elizabeth II by the Regency Act 1953, which stated that the Duke of Edinburgh (the Queen's husband) could act as regent in these circumstances.[95]

During a temporary physical infirmity or an absence from the kingdom, the sovereign may temporarily delegate some of his or her functions to Counsellors of State, the monarch's spouse and the first four adults in the line of succession. The present Counsellors of State are: The Duke of Edinburgh, The Prince of Wales, The Duke of Cambridge, Prince Harry of Wales and The Duke of York.[96]

Finances

Main article: Finances of the British Royal Family

Parliament meets much of the sovereign's official expenditure from public funds, known as the Civil List and the Grants-in-Aid. An annual Property Services Grant-in-Aid pays for the upkeep of the royal residences, and an annual Royal Travel Grant-in-Aid pays for travel. The Civil List covers most expenses, including those for staffing, state visits, public engagements, and official entertainment. Its size is fixed by Parliament every 10 years; any money saved may be carried forward to the next 10-year period.[97] The Royal Collection, which includes artworks and the Crown Jewels, is not owned by the Sovereign personally and is held in trust,[98] as are the occupied palaces in the United Kingdom such as Buckingham Palace and Windsor Castle.[99]

Until 1760 the monarch met all official expenses from hereditary revenues, which included the profits of the Crown Estate (the royal property portfolio). King George III agreed to surrender the hereditary revenues of the Crown in return for the Civil List, and this arrangement persists until 2013. The Crown Estate is one of the largest property owners in the United Kingdom, with holdings of £7.3 billion in 2011.[100] It is held in trust, and cannot be sold or owned by the Sovereign in a private capacity.[101] In modern times, the profits surrendered from the Crown Estate have exceeded the Civil List and Grants-in-Aid.[97] For example, the Crown Estate produced £200 million for the Treasury in the financial year 2007–8, whereas reported parliamentary funding for the monarch was £40 million during the same period,[102] and republicans estimate that the real cost of the monarchy including security is between £134 and 184 million a year.[103] From 2013 until 2020, the Civil List and Grants-in-Aid are to be replaced with a single Sovereign Grant, which will be set at 15% of the revenues generated by the Crown Estate.[104]

Like the Crown Estate, the land and assets of the Duchy of Lancaster, a property portfolio valued at £383 million in 2011,[105] are held in trust. The revenues of the Duchy form part of the Privy Purse, and are used for expenses not borne by the Civil List.[106] The Duchy of Cornwall is a similar estate held in trust to meet the expenses of the monarch's eldest son.

The sovereign is subject to indirect taxes such as value added tax, and since 1993 the Queen has paid income tax and capital gains tax on personal income. The Civil List and Grants-in-Aid are not treated as income as they are solely for official expenditure.[107]

Estimates of the Queen's wealth vary, depending on whether assets owned by her personally or held in trust for the nation are included. *Forbes* magazine estimated her wealth at US$450 million in 2010,[108] but no official figure is available. In 1993, the Lord Chamberlain said estimates of £100 million were "grossly overstated".[109] Jock Colville, who was her former private secretary and a director of her bank, Coutts, estimated her wealth in 1971 at £2 million[110][111] (the equivalent of about £21 million today[112]).

Residences

Main article: List of British royal residences

The Sovereign's official residence in London is Buckingham Palace. It is the site of most state banquets, investitures, royal christenings and other ceremonies.[113] Another official residence is Windsor Castle, the largest occupied castle in the world,[114] which is used principally at weekends, Easter and during Royal Ascot, an annual race meeting that is part of the social calendar.[114] The Sovereign's official residence in Scotland is the

Palace of Holyroodhouse in Edinburgh. The monarch stays at Holyrood for at least one week each year, and when visiting Scotland on state occasions.[115]

Buckingham Palace, the monarch's principal residence

Historically, the Palace of Westminster and the Tower of London were the main residences of the English Sovereign until Henry VIII acquired the Palace of Whitehall. Whitehall was destroyed by fire in 1698, leading to a shift to St James's Palace. Although replaced as the monarch's primary London residence by Buckingham Palace in 1837, St James's is still the senior palace[116] and remains the ceremonial Royal residence. For example, foreign ambassadors are accredited to the Court of St. James's,[113][117] and the Palace is the site of the meeting of the Accession Council.[89] It is also used by other members of the Royal Family.[116]

Holyrood Palace, the monarch's official Scottish residence

Other residences include Clarence House and Kensington Palace. The palaces belong to the Crown; they are held in trust for future rulers, and cannot be sold by the monarch.[118] Sandringham House in Norfolk and Balmoral Castle in Aberdeenshire are privately owned by the Queen.[99]

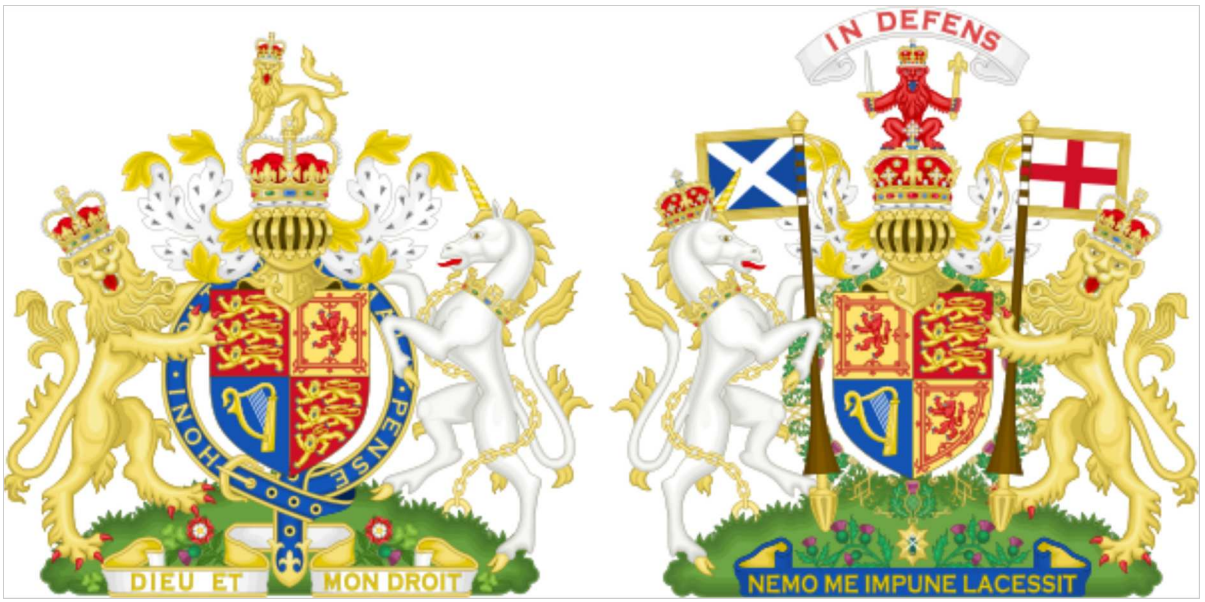
Style

Main article: Style of the British Sovereign

The present Sovereign's full style and title is "Elizabeth the Second, by the Grace of God, of the United Kingdom of Great Britain and Northern Ireland and of Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith".[119] The title "Head of the Commonwealth" is held by the Queen personally, and is not vested in the British Crown.[74] Pope Leo X first granted the title "Defender of the Faith" to King Henry VIII in 1521, rewarding him for his support of the Papacy during the early years of the Protestant Reformation, particularly for his book the Defence of the Seven Sacraments.[120] After Henry broke from the Roman Church, Pope Paul III revoked the grant, but Parliament passed a law authorising its continued use.[121]

The Sovereign is known as "His Majesty" or "Her Majesty". The form "Britannic Majesty" appears in international treaties and on passports to differentiate the British monarch from foreign rulers. The monarch chooses his or her regnal name, not necessarily his or her first name—King George VI, King Edward VII and Queen Victoria did not use their first names.

If only one monarch has used a particular name, no ordinal is used; for example, Queen Victoria is not known as "Victoria I", and ordinals are not used for English monarchs who reigned before the Norman conquest of England. The question of whether numbering for British monarchs is based on previous English or Scottish monarchs was raised in 1953 when Scottish nationalists challenged the Queen's use of "Elizabeth II", on the grounds that there had never been an "Elizabeth I" in Scotland. In *MacCormick v. Lord Advocate*, the Scottish Court of Session ruled against the plaintiffs, finding that the Queen's title was a matter of her own choice and prerogative. The Home Secretary told the House of Commons that monarchs since the Acts of Union had consistently used the higher of the English and Scottish ordinals, which in the applicable four cases has been the English ordinal.[122] The Prime Minister confirmed this practice, but noted that "neither The Queen nor her advisers could seek to bind their successors".[123] Future monarchs will apply this policy.[124]



Traditionally, the signature of the monarch includes their regnal name but not ordinal, followed by the letter *R*,

which stands for *rex* or *regina* (Latin for *king* and *queen*, respectively). The present monarch's signature is "Elizabeth R". From 1877 until 1948 reigning monarchs added the letter *I* to their signatures, for *imperator* or *imperatrix* (*emperor* or *empress* in Latin), due to their status as Emperor or Empress of India. For example, Queen Victoria signed as "Victoria RI" from 1877.

Arms

Main article: Royal coat of arms of the United Kingdom

The Royal coat of arms of the United Kingdom are "Quarterly, I and IV Gules three lions passant guardant in pale Or [for England]; II Or a lion rampant within a double tressure flory-counter-flory Gules [for Scotland]; III Azure a harp Or stringed Argent [for Ireland]". The supporters are the lion and the unicorn; the motto is "Dieu et mon droit" (French: "God and my Right"). Surrounding the shield is a representation of a Garter bearing the motto of the Chivalric order of the same name; "Honi soit qui mal y pense". (Old French: "Shame be to him who thinks evil of it"). In Scotland, the monarch uses an alternative form of the arms in which quarters I and IV represent Scotland, II England, and III Ireland. The mottoes are "In Defens" (an abbreviated form of the Scots "In My Defens God Me Defend") and the motto of the Order of the Thistle; "Nemo me impune lacessit". (Latin: "No-one provokes me with impunity"); the supporters are the unicorn and lion, who support both the escutcheon and lances, from which fly the flags of Scotland and England.

The Coat of arms of Elizabeth II in the United Kingdom. The design, in use since the accession of Queen Victoria in 1837, features the arms of England in the first and fourth quarters, Scotland in the second, and Ireland in the third. In Scotland a separate version is used (shown right) whereby the Arms of Scotland take precedence.

The monarch's official flag in the United Kingdom is the Royal Standard, which depicts the Royal Arms. It is flown only from buildings, vessels and vehicles in which the Sovereign is present.[125] The Royal Standard is never flown at half-mast because there is always a sovereign: when one dies, his or her successor becomes the sovereign instantly.[126]

The Royal Standard of the United Kingdom. The Monarch's official flag

The Royal Standard of the United Kingdom as used only in Scotland

When the monarch is not in residence, the Union Flag is flown at Buckingham Palace, Windsor Castle and Sandringham House, whereas in Scotland the Royal Standard of Scotland is flown at Holyrood Palace and Balmoral Castle.[125]

Andorra

From Wikipedia, the free encyclopedia

Andorra (/ænˈdɔrə/; Catalan pronunciation: [ənˈdorə], locally: [anˈdɔra]), officially the **Principality of Andorra** (Catalan: *Principat d'Andorra*), also called the **Principality of the Valleys of Andorra**,[9] (Catalan: *Principat de les Valls d'Andorra*), is a small landlocked country in southwestern Europe, located in the eastern Pyrenees mountains and bordered by Spain and France. It is the sixth smallest nation in Europe having an area of 468 km^2 (181 sq mi) and an estimated population of 84,082 in 2009. Its capital, Andorra la Vella, is the highest capital city in Europe, at an elevation of 1,023 metres (3,356 ft) above sea level.[10] The official language is Catalan, although Spanish, Portuguese, and French are also commonly spoken.

The Principality was formed in 1278. The role of monarch is exercised jointly by the two co-princes, the Bishop of Urgell and the current President of France (the whole state is a part of Diocese of Urgell).

Andorra is a prosperous country mainly because of its tourism industry, which services an estimated 10.2 million visitors annually,[11] and also because of its status as a tax haven. It is not a member of the European Union, but the euro is the *de facto* currency. The people of Andorra have the 4th highest human life expectancy in the world — 82 years at birth.[12]

History

Main article: History of Andorra

Tradition holds that Charles the Great (Charlemagne) granted a charter to the Andorran people in return for fighting against the Moors. Overlordship of the territory was by the Count of Urgell and eventually by the bishop of the Diocese of Urgell. In 988, Borrell II, Count of Urgell, gave the Andorran valleys to the Diocese of Urgell in exchange for land in Cerdanya.[13] Since then the Bishop of Urgell, based in Seu d'Urgell, has owned Andorra.[14]

Before 1095, Andorra did not have any type of military protection and the Bishop of Urgell, who knew that the Count of Urgell wanted to reclaim the Andorran valleys,[14] asked for help and protection from the Lord of Caboet. In 1095, the Lord of Caboet and the Bishop of Urgell signed under oath a declaration of their co-sovereignty over Andorra. Arnalda, daughter of Arnau of Caboet, married the Viscount of Castellbò and both became Viscounts of Castellbò and Cerdanya. Years later their daughter, Ermessenda,[15] married Roger Bernat II, the French Count of Foix. They became Roger Bernat II and Ermessenda I, Counts of Foix, Viscounts of Castellbò and Cerdanya, and also co-sovereigns of Andorra (shared with the Bishop of Urgell).

In the 11th century, a dispute arose between the Bishop of Urgell and the Count of Foix. The conflict was resolved in 1278 with the mediation of Aragon by the signing of the first paréage which provided that Andorra's sovereignty be shared between the count of Foix[14] (whose title would ultimately transfer to the French head of state) and the Bishop of Urgell, in Catalonia. This gave the principality its territory and political form.

Over the years, the French co-title to Andorra passed to the kings of Navarre. After Henry of Navarre became King Henry IV of France, he issued an edict in 1607 that established the head of the French state and the Bishop of Urgell as co-princes of Andorra. In 1812–13, the First French Empire annexed Catalonia and divided it in four départements, with Andorra being made part of the district of Puigcerdà (département of Sègre).

3 Spanish, French, and Portuguese are also widely spoken and understood. (See Languages of Andorra)

20th century

Andorran coat of arms at Andorran parliament.

Andorra declared war on Imperial Germany during World War I, but did not actually take part in the fighting. It remained in an official state of belligerency until 1957 as it was not included in the Treaty of Versailles.

In 1933, France occupied Andorra as a result of social unrest before elections. On July 12, 1934, adventurer Boris Skossyreff issued a proclamation in Urgell, declaring himself "Boris I, King of Andorra", simultaneously declaring war on the Bishop of Urgell. He was arrested by Spanish authorities on July 20 and ultimately expelled from Spain. From 1936 to 1940, a French detachment was garrisoned in Andorra to prevent influences of the Spanish Civil War and Franco's Spain. Francoist troops reached the Andorran border in the later stages of the war. During World War II, Andorra remained neutral and was an important smuggling route between Vichy France and Spain.

Given its relative isolation, Andorra has existed outside the mainstream of European history, with few ties to countries other than France and Spain. In recent times, however, its thriving tourist industry along with developments in transport and communications have removed the country from its isolation. Its political system was modernised in 1993, when it became a member of the United Nations and the Council of Europe.

Politics

Main article: Politics of Andorra

Andorra is a parliamentary co-principality with the President of France and the Bishop of Urgell (Catalonia, Spain), as co-princes. This peculiarity makes the President of France, in his capacity as Prince of Andorra, an elected reigning monarch, even though he is not elected by a popular vote of the Andorran people. The politics of Andorra take place in a framework of a parliamentary representative democracy, whereby the Prime Minister of Andorra is the head of government, and of a pluriform multi-party system.

The current Prime Minister is Antoni Martí of the Democrats for Andorra (DA). Executive power is exercised by the government. Legislative power is vested in both government and parliament.

The Parliament of Andorra is known as the General Council. The General Council consists of between 28 and 42 Councillors, as the members of the legislative branch are called. The Councillors serve for four-year terms and elections are held between the thirtieth and fortieth days following the dissolution of the previous Council. The Councillors can be elected on two equal constituencies.

Half are elected in equal number from each of the seven administrative parishes and the other half of the Councillors are elected from a single national constituency. 15 days after the election, the Councillors hold their inauguration. During this session, the Syndic General, who is the head of the General Council, and the Subsyndic General, his assistant, are elected. Eight days later, the Council convenes once more. During this session the Head of Government, the Prime Minister of Andorra, is chosen from among the Councillors.

Candidates for the prime-ministerial nomination can be proposed by a minimum of one-fifth of the Councillors. The Council then elects the candidate with the absolute majority of votes to be Head of Government. The Syndic General then notifies the Co-princes who in turn appoint the elected candidate as the Prime Minister of Andorra.

Casa de la Vall, Andorran Parliament.

The General Council is also responsible for proposing and passing laws. Bills may be presented to the Council as Private Members' Bills by three of the Local Parish Councils jointly or by at least one tenth of the citizens of Andorra.

The Council also approves the annual budget of the principality. The government must submit the proposed budget for parliamentary approval at least two months before the previous budget expires. If the budget is not approved by the first day of the next year, the previous budget is extended until a new one is approved. Once any bill is approved, the Syndic General is responsible for presenting it to the Co-princes so that they may sign and enact it.

If the Head of Government is not satisfied with the Council, he may request that the Co-princes dissolve the Council and order new elections. In turn, the Councillors have the power to remove the Head of Government from office. After a motion of censure is approved by at least one-fifth of the Councillors, the Council will vote and if it receives the absolute majority of votes, the Prime Minister is removed.

Law and criminal justice

The judiciary is composed of the Magistrates Court, the Criminal Law Court, the High Court of Andorra, and the Constitutional Court. The High Court of Justice is composed of five judges: one appointed by the Head of Government, one each by the Coprinces, one by the Syndic General, and one by the Judges and Magistrates. It is presided over by the member appointed by the Syndic General and the judges hold office for six-year terms.

The Magistrates and Judges are appointed by the High Court, and so is the President of the Criminal Law Court. The High Court also appoints members of the Office of the Attorney General. The Constitutional Court is responsible for interpreting the Constitution and reviewing all appeals of unconstitutionality against laws and treaties. It is composed of four judges, one appointed by each of the Coprinces and two by the General Council. They serve eight-year terms. The Court is presided over by one of the Judges on a two-year rotation so that each judge at one point will be the leader of the Court.

Foreign relations and defence

Main article: Foreign relations of Andorra

Andorra maintains a small Army, and all able-bodied men who own firearms must serve. The Army is unique in that all men are treated as officers. The Army's main responsibility is to present the national flag at ceremonies. The country also has an internal police force. Responsibility for defending Andorra rests primarily with France and Spain. Andorra is a full member of the United Nations, the OSCE, and has a special agreement with the European Union.

Geography

Main articles: Geography of Andorra and Geology of Andorra

Parishes

Main article: Parishes of Andorra

Andorra consists of seven parishes:

- Andorra la Vella
- Canillo
- Encamp
- Escaldes-Engordany
- La Massana
- Ordino
- Sant Julià de Lòria

Map of Andorra with its seven parishes labeled.

Physical geography

Topographic map of Andorra.

Due to its location in the eastern Pyrenees mountain range, Andorra consists predominantly of rugged mountains, the highest being the Coma Pedrosa at 2,942 metres (9,652 ft), and the average elevation of Andorra is 1,996 metres (6,549 ft).[16]

Scenery of Andorran mountains

These are dissected by three narrow valleys in a Y shape that combine into one as the main stream, the Gran Valira river, leaves the country for Spain (at Andorra's lowest point of 840 m/2,756 ft). Andorra's land area is 468 km^2 (181 sq mi).

Phytogeographically, Andorra belongs to the Atlantic European province of the Circumboreal Region within the Boreal Kingdom. According to the WWF, the territory of Andorra belongs to the ecoregion of Pyrenees conifer and mixed forests.

Climate

Andorra has an alpine climate and continental climate. Its higher elevation means there is, on average, more snow in winter, lower humidity, and it is slightly cooler in summer. There are, on average, 300 days per year of sunshine.

Economy

Main article: Economy of Andorra

Tourism, the mainstay of Andorra's tiny, well-to-do economy, accounts for roughly 80% of GDP. An estimated 10.2 million tourists visit annually,[11] attracted by Andorra's duty-free status and by its summer and winter resorts. Andorra's relative advantage has recently eroded as the economies of adjoining France and Spain have

been opened up, providing broader availability of goods and lower tariffs.

Caldea spa in Escaldes-Engordany, heated by natural hot spring water which is plentiful in the parish.

The banking sector, with its tax haven status, also contributes substantially to the economy. Agricultural production is limited—only 2% of the land is arable—and most food has to be imported. Some tobacco is grown locally. The principal livestock activity is domestic sheep raising. Manufacturing output consists mainly of cigarettes, cigars, and furniture. Andorra's natural resources include hydroelectric power, mineral water, timber, iron ore, and lead.[17]

Andorra is not a member of the European Union, but enjoys a special relationship with it, such as being treated as an EU member for trade in manufactured goods (no tariffs) and as a non-EU member for agricultural products. Andorra lacked a currency of its own and used both the French franc and the Spanish peseta in banking transactions until 31 December 1999, when both currencies were replaced by the EU's single currency, the euro. Coins and notes of both the franc and the peseta remained legal tender in Andorra until 31 December 2002. Andorra is negotiating to issue its own euro coins.

Andorra has one of the world's lowest unemployment rates, with the statistics on June 2009 showing almost 0% unemployment within the country.[*citation needed*]

Demography

Main article: Demographics of Andorra

View of the Ordino valley

Population

The population of Andorra is estimated to be 83,890 (July 2009).[18] The population has grown from 5,000 in 1900.

Andorran nationals are a plurality in the country (31,363);[19] other nationalities include Spaniards (27,300),[19] Portuguese (13,794),[19] French (5,213),[19] Britons (1,085)[19] and Italians.

Languages

Main article: Languages of Andorra

The town of Encamp, Andorra, as seen from the

The historic and official language is Catalan, a Romance language. The Andorran government is keen to encourage the use of Catalan. It funds a Commission for Catalan Toponymy in Andorra (Catalan: *la Comissió de Toponímia d'Andorra*), and provides free Catalan classes to assist immigrants. Andorran television and radio stations use Catalan.

Because of immigration, historical links, and close geographic

Vall dels Cortals

proximity, Spanish, Portuguese and French are also commonly spoken. Most Andorran residents can speak one or more of these, in addition to Catalan. English is less commonly spoken among the general population, though it is understood to varying degrees in the major tourist resorts. Andorra is one of only three European countries (together with France and Monaco)[20] that have never signed the Council of Europe Framework Convention on National Minorities.[21]

Religion

The population of Andorra is predominantly (90%) Roman Catholic.[22] Their patron saint is Our Lady of Meritxell. Though it is not an official state religion, the constitution acknowledges a special relationship with the Catholic Church, offering some special privileges to that group. The Muslim community is primarily made up of North African immigrants. Other Christian denominations include the Anglican Church, the Reunification Church, the New Apostolic Church, The Church of Jesus Christ of Latter-day Saints, and the Jehovah's Witnesses. There is a small community of Hindus and Bahá'ís.[23][24] Andorra also hosts a population of roughly 100 Jews (see: Andorran Jews).

Education

Schools

Children between the ages of 6 and 16 are required by law to have full-time education. Education up to secondary level is provided free of charge by the government.

There are three systems of schools – Andorran, French and Spanish – which use Catalan, French and Spanish, respectively, as the main language of instruction. Parents may choose which system their children attend. All schools are built and maintained by Andorran authorities, but teachers in the French and Spanish schools are paid for the most part by France and Spain. About 50% of Andorran children attend the French primary schools, and the rest attend Spanish or Andorran schools.

University of Andorra

The University of Andorra (UdA) is the state public university and is the only university in Andorra. It was established in 1997. The University provides first-level degrees in nursing, computer science, business administration, and educational sciences, in addition to higher professional education courses. The only two graduate schools in Andorra are the Nursing School and the School of Computer Science, the latter having a PhD programme.

Virtual Studies Centre

The geographical complexity of the country as well as the small number of students prevents the University of Andorra from developing a full academic program, and it serves principally as a centre for virtual studies, connected to Spanish and French universities. The Virtual Studies Centre (*Centre d'Estudis Virtuals*) at the University runs in the region of twenty degrees at both undergraduate and postgraduate levels in fields including tourism, law, Catalan philology, humanities, psychology, political sciences, audiovisual communication, telecommunications engineering, and East Asia studies. The Centre also runs various postgraduate programs and continuing-education courses for professionals.

Healthcare

Healthcare in Andorra is provided to all employed persons and their families by the government-run social security system, CASS (Caixa Andorrana de Seguretat Social), which is funded by employer and employee contributions in respect of salaries.[25] The cost of healthcare is covered by CASS at rates of 75% for out-patient expenses such as medicines and hospital visits, 90% for hospitalisation, and 100% for work-related accidents. The remainder of the costs may be covered by private health insurance. Other residents and tourists require full private health insurance.[25]

The main hospital, Meritxell, is in Escaldes-Engordany.[26] There are also 12 primary health care centres in various locations around the Principality.[26]

Transport

Main article: Transport in Andorra

Until the 20th century, Andorra had very limited transport links to the outside world, and development of the country was affected by its physical isolation. Even now, the nearest major airports at Toulouse and Barcelona are both three hours' drive from Andorra.

Andorra has a road network of 279 km (173 mi), of which 76 km (47 mi) is unpaved. The two main roads out of Andorra la Vella are the CG-1 to the Spanish border, and the CG-2 to the French border via the Envalira Tunnel near Pas de la Casa.[27] Bus services cover all metropolitan areas and many rural communities, with services on most major routes running half-hourly or more frequently during peak travel times. There are frequent long-distance bus services from Andorra to Barcelona and Toulouse. Bus services are mostly run by private companies, but some local ones are operated by the government.

A train at Latour-de-Carol (*La Tor de Querol*), one of the two stations serving Andorra. Andorra has no railways, although the line connecting Latour-de-Carol and Toulouse, which in turn connects to France's TGVs at Toulouse, runs within two kilometres of the Andorran border.

There are no railways, ports, or airports for fixed-wing aircraft in Andorra. There are, however, heliports in La Massana, Arinsal and Escaldes-Engordany with commercial helicopter services.[28][29] Nearby airports are located in Barcelona, Toulouse, Perpignan, Reus, and Girona. The closest public airport is Perpignan - Rivesaltes Airport, which is 160 km (99 mi) away and has short-haul services to several destinations in the United Kingdom and France. La Seu d'Urgell Airport, a small airfield 12 km (7 mi) south of Andorra currently used only by private aeroplanes, is being studied by the Catalan government as a possible future airport for public aviation services.[30]

The nearest railway station is L'Hospitalet-près-l'Andorre 10 km (6 mi) east of Andorra which is on the 1,435 mm (4 ft 8 $\frac{1}{2}$ in)-gauge line from Latour-de-Carol, (25 km/16 mi) southeast of Andorra, to Toulouse and on to Paris by the French high-speed trains. This line is operated by the SNCF. Latour-de-Carol has a scenic metre gauge trainline to Villefranche-de-Conflent, as well as the SNCF's 1,435 mm (4 ft 8 $\frac{1}{2}$ in)-gauge line connecting to Perpignan, and the RENFE's 1,668 mm (5 ft 5 $\frac{2}{3}$ in) -gauge line to Barcelona.[31][32]

Media and telecommunications

Main article: Telecommunications in Andorra

In Andorra, mobile and fixed telephone and internet services are operated exclusively by the Andorran national telecommunications company, SOM, also known as *Servei de Telecomunicacions d'Andorra* (STA). The same company also manages the technical infrastructure for national broadcasting of digital television and radio.

By the end of 2010, it is planned that every home in the country will have fiber-to-the-home for internet access at a minimum speed of 100 Mbit/s.[33]

There is only one Andorran television station, *Ràdio i Televisió d'Andorra* (RTVA). *Radio Nacional d'Andorra* operates two radio stations, *Radio Andorra* and *Andorra Música*. There are three national newspapers, *Diari d'Andorra*, *El Periòdic d'Andorra*, and *Bondia* as well as several local newspapers.

Culture

Main article: Culture of Andorra

Andorran flag on balcony, Ordino

The official and historic language is Catalan. Thus the culture is Catalan, with its own specificity.

Andorra is home to folk dances like the contrapàs and marratxa, which survive in Sant Julià de Lòria especially. Andorran folk music has similarities to the music of its neighbours, but is especially Catalan in character, especially in the presence of dances such as the sardana. Other Andorran folk dances include contrapàs in Andorra la Vella and Saint Anne's dance in Escaldes-Engordany. Andorra's national holiday is Our Lady of Meritxell Day, September 8.[17] American Folk Artist Malvina Reynolds, intrigued by its defense budget of $4.90, wrote a song "Andorra". Pete Seeger added verses, and sang "Andorra" on his 1962 album "The Bitter and the Sweet.".

See also: Music of Andorra

Sports

Andorra is famous for the practice of Winter Sports and also by Roller Hockey. Andorra usually plays in CERH Euro Cup and in FIRS Roller Hockey World Cup. In 2011, Andorra was the host country to the 2011 European League Final Eight. The country is represented in association football by the Andorra national football team. However, the team has had little success internationally because of Andorra's small population.[34]

History of Andorra

From Wikipedia, the free encyclopedia

Andorra is the last independent survivor of the Marca Hispanica, the buffer states created by Charlemagne to keep the Islamic Moors from advancing into Christian France. Tradition holds that Charlemagne granted a charter to the Andorran people in return for their fighting the Moors. In the 9th century, Charlemagne's grandson, Charles the Bald, named the Count of Urgell as overlord of Andorra. A descendant of the count later gave the lands to the Diocese of Urgell, headed by Bishop of Urgell.

Early history

In the 11th century, fearing military action by neighboring lords, the bishop placed himself under the protection of the Lord of Caboet, a Catalan nobleman. Later, the Count of Foix became heir to the Lord of Caboet through marriage, and a dispute arose between the French Count and the Catalan bishop over Andorra.

In 1278, the conflict was resolved by the signing of a pareage (*pariatges*), which provided that Andorra's sovereignty be shared between the Count of Foix and the Bishop of La Seu d'Urgell (Catalonia, Spain). The pareage, a feudal institution recognizing the principle of equality of rights shared by two rulers, gave the small state its territory and political form. In return, Andorra pays an annual tribute or *questia* to the co-rulers consisting of four hams, forty loaves of bread, and some wine. As of the year 2006, Andorra's borders have remained unchanged since 1278.[1]

Andorra was briefly annexed to the Crown of Aragon twice, in 1396 and 1512.

In 1505, Germaine of Foix married Ferdinand V of Castile, thereby bringing the lordship of Andorra under Spanish rule. On taking over the kingdom in 1519, Emperor Charles V granted the lordship of Les Valls, as it was then known, to Germaine of Foix's line in perpetuity. Henry III of Navarre, who was also count of Foix, in 1589 ascended the French throne as Henry IV, and by an edict of 1607 established the head of the French state, along with the bishop of Urgel, as co-princes of Andorra.

In 1793, the French revolutionary government refused the traditional Andorran tribute as smacking of feudalism and renounced its suzerainty, despite the wish of the Andorrans to enjoy French protection and avoid being under exclusively Spanish influence.

Andorra remained neutral during the Napoleonic Wars. Napoleon restored the co-principality in 1806 after the Andorrans petitioned him to do so. French title to the principality subsequently passed from the kings to the president of France. In the period 1812–13, the French Empire annexed Catalonia and divided it in four

departments. Andorra was also annexed and made part of the district of Puigcerdà (département of Sègre).

20th century

In 1933, France occupied Andorra as a result of social unrest before elections. On July 12, 1934, an adventurer named Boris Skossyreff issued a proclamation in Urgel, declaring himself Boris I, sovereign prince of Andorra, simultaneously declaring war on the Bishop of Urgell. He was arrested by Spanish authorities on July 20 and ultimately expelled from Spain. From 1936 to 1940, a French detachment was garrisoned in Andorra to prevent influences of the Spanish Civil War and Franco's Spain.

During World War II, Andorra remained neutral and was an important smuggling route from Spain into France. The French Resistance used Andorra as part of their route to get downed airmen out of France.

In 1943, Andorra carried out its first execution since the 19th century, that of Antoni Arenis for double fratricide by firing squad (because a trained executioner was unavailable to operate the legal method - Garrote).

In 1958, Andorra declared peace with Germany, having been forgotten on the Treaty of Versailles that ended World War I and, the conflict being extended by the lack of a peace treaty, remaining legally at war.[2]

Long an impoverished land having little contact with any nations other than adjoining France and Spain, Andorra after World War II achieved considerable prosperity through a developing tourist industry. This development, abetted by improvements in transport and communications, has tended to break down Andorra’s isolation and to bring Andorrans into the mainstream of European history. Public demands for democratic reforms led to the extension of the franchise to women in the 1970s and to the creation of new and more fully autonomous organs of government in the early 1980s.

Modern history

Andorra formally became a parliamentary democracy in May 1993 following approval of a new constitution by a popular referendum in March 1993. The new constitution retained the French and Spanish co-princes although with reduced, and narrowly defined powers. Civil rights were greatly expanded including the legalization of political parties and trade unions, and provision was made for an independent judiciary. Andorra entered into a customs union with the European Communities (now the EU) in 1991 and was admitted to the UN on 28 July 1993. The country has been seeking ways to improve its export potential and increase its economic ties with its European neighbors. The financial services sector of the economy is highly important, given Andorra’s status as a tax haven and its banking secrecy laws.

Co-Princes of Andorra

From Wikipedia, the free encyclopedia

The **Co-Princes of Andorra** are the two rulers of the Principality of Andorra, a tiny landlocked nation lying in the Pyrenees mountains between France and Spain. Founded in 1278 through a treaty between the Spanish Bishop of Urgell and the French Count of Foix, this unique monarchial arrangement has persisted through medieval times to the present day. Currently, the Bishop of Urgell and the President of France serve as Andorra's co-princes, following the transfer of the Count of Foix's claims to the Crown of France, and thence to the French Republic.

The Andorran principality has the unique distinction of being ruled by two non-Andorran sovereigns, one of whom (the French president) is the only monarch in the world to be elected by the people—though not by the people of Andorra, but rather those of France. He is also the only monarch to be the head of state of a republic at the same time.

Origin and development of the co-principality

Tradition holds that Charlemagne granted a charter to the Andorran people in return for their fighting against the Moors. The feudal overlord of this territory was at first the Count of Urgell; however in 988 the count, Borrell II, gave Andorra to the Diocese of Urgell in exchange for land in Cerdanya.[1] The Bishop of Urgell, based in Seu d'Urgell, has ruled Andorra ever since.[2]

Before 1095, Andorra did not have any type of military

protection and since the Bishop of Urgell knew that the Count of Urgell wanted to reclaim the Andorran valleys,[2] he asked for help from the Lord of Caboet. In 1095, the Lord and the Bishop signed a declaration of their co-sovereignty over Andorra. Arnalda, daughter of Arnau of Caboet, married the Viscount of Castellbò and both became Viscounts of Castellbò and Cerdanya. Their daughter, Ermessenda,[3] married Roger Bernat II, the French Count of Foix. They became Roger Bernat II and Ermessenda I, Counts of Foix, Viscounts of Castellbò and Cerdanya, and also co-sovereigns of Andorra (together with the Bishop of Urgell).

In the 11th century, a dispute arose between the Bishop of Urgell and the Count of Foix. The conflict mediated by Aragon in 1278 and led to the signing of the first paréage, which provided that Andorra's sovereignty be shared between the count[2] and the bishop. This gave the principality its territory and political form, and marked the formal commencement of Andorra's unique monarchial arrangement.

Over the years, the French co-title to Andorra passed from the Count of Foix to the kings of Navarre. After King Henry III of Navarre became King Henry IV of France, he issued an edict in 1607 establishing the King of France and the Bishop of Urgell as co-princes of Andorra. In 1812–13, the First French Empire annexed Catalonia and divided it into four départements, with Andorra forming part of the district of Puigcerdà (département of Sègre). Following the defeat of Napoleon I, this annexation was reversed and Andorra reverted to its former independence and political state. French rulers—whether king, emperor or president—would continue to serve as co-princes of Andorra to the present day.

Recent history

On July 12, 1934, Andorra's monarchial system was challenged by an adventurer named Boris Skossyreff, who issued a proclamation in Urgel declaring himself "Boris I, King of Andorra". Though initially enjoying some support within Andorra's political establishment, he was ultimately arrested by Spanish authorities on July 20 of that year after declaring war on the Bishop of Urgell (who had refused to relinquish his own claim to the principality). Skossyfreff was expelled, and was never considered to have been the Andorran monarch in any legal sense.

Prior to 1993, Andorra had no written constitution, and the exact prerogatives of the co-princes were not specifically defined in law. This changed in March of that year, when a constitution was approved by a vote of the Andorran people and signed into law by the two co-princes at the time: President François Mitterrand and Bishop Joan Martí Alanis. It clarified the continuance of the unique Andorran monarchy, and also delineated the precise role and prerogatives of the two princes. Prior to adoption of the constitution, Andorra paid in odd-numbered years a tribute of approximately $460 to the French ruler, while on even-numbered years, it paid a tribute of approximately $12 to the Spanish bishop, plus six hams, six cheeses, and six live chickens, though this medieval custom was abandoned in 1993.[4]

In 2009, French president Nicholas Sarkozy threatened to resign his title of Andorran co-prince if the principality did not change its banking laws to eliminate its longstanding status as a tax haven.[5]

Contemporary political role

The Constitution of Andorra carefully defines the exact role and prerogatives of the co-princes of Andorra today. The constitution establishes Andorra as a "parliamentary coprincipat",[6] providing for the President of France and Bishop of Urgell to serve together as the joint heads of state.[7] The constitution distinguishes between which powers they may exercise on their own (Article 46), and which require the countersignature of the head of the

Andorran government, or the approval of the Syndic General, the Andorran legislature (Article 45).

Powers the princes may exercise on their own include:[8]

- Joint exercise of the "prerogative of grace" (the power to pardon);
- Each co-prince may appoint one member of the Superior Council of Justice and one member of the Constitutional Tribunal;
- Establishment of such services as they deem necessary to fulfil their constitutional prerogatives, and appointment of individuals to fulfil these services;
- Requesting a preliminary judgment about the constitutionality of proposed laws, or of international treaties;
- Agreeing to the text of any international treaty, prior to submitting it for parliamentary approval;
- Bringing a case before the Constitutional Tribunal in the event of any conflict over the exercise of their constitutional prerogatives.

Powers the princes may exercize in conjunction with the head of government include:[9]

- Calling for elections or referendums in accordance with constitutional provisions;
- Appointing the head of government in accordance with constitutional provisions;
- Dissolve the General Council (the Andorran legislature) prior to the expiration of its current term (but not until at least one year has passed since the prior election);[10]
- Accrediting diplomatic representatives from Andorra to foreign states, and receive credentials of foreign representatives to Andorra;
- Appointing office-holders in accordance with appropriate constitutional provisions;
- Sanctioning and enacting laws in accordance with constitutional provisions;
- Granting formal consent to international treaties, once ratified by the General Council.

Each prince is granted an annual allowance by the General Council, which they may dispose of as he or she sees fit.[11] Each appoints a personal representative in Andorra,[12] and in the case of incapacitation of one of them, the constitution provides for the other prince to govern in his or her absence, with the concurrence of the Andorran head of government and/or the General Council.[13]

Certain treaties require the participation of the co-princes (or their designated representatives) in their negotiation process as well as their final approval; these are detailed in Articles 66 and 67 of the constitution.

The co-princes jointly retain the right to propose amendments to the constitution; this same right rests with the General Council.[14] They have no veto power over legislation passed by the General Council, though they do retain a veto over certain international treaties, as described above.

Joan Enric Vives Sicília

From Wikipedia, the free encyclopedia

Archbishop **Joan Enric Vives i Sicília** (born 24 July 1949) is the current Bishop of Urgell, a Roman Catholic diocese, and *ex officio* Co-Prince of Andorra. On the retirement of his predecessor Joan Martí Alanis, he succeeded as Bishop of Urgell on 12 May 2003, and hence as Co-Prince of Andorra. Born in Barcelona, he was ordained as a priest in 1974, became Auxiliary Bishop of Barcelona (and Titular Bishop of Nona) in 1993, Coadjutor Bishop of Urgell in 2001 and in 2003 succeeded as Bishop of Urgell. In March 2010, Vives i Sicília was elevated to the dignity of archbishop as a personal title.[1]

Roman Catholic Diocese of Urgell

Coordinates: 42.358°N 1.462°E

From Wikipedia, the free encyclopedia

The **Diocese of Urgell** is a Roman Catholic diocese in Catalonia, Spain, and Andorra, with origins in the fifth century AD or possibly earlier. It is based in the region of the historical Catalan county of Urgell, though it has different borders. The seat and Cathedral of bishop are situated in a town la Seu d'Urgell. The whole state of Andorra is a part of this diocese.

Map of the diocese

Among its most notable events are Bishop Felix's adoptionist revolt, the coup of Bishop Esclua and the overthrowing of the bishop by members of aristocratic families (namely Salla i Ermengol del Conflent, Eribau i Folcs dels Cardona, Guillem Guifré de Cerdanya and Ot de Pallars) between the years 981 and 1122.

Also important is the diocese's patronage of Andorra, with the bishop holding the role of *ex officio* Co-Prince of the Pyrenean Catalan-speaking nation jointly with the President of the French Republic (and formerly, the King of France). Andorra was ceded to the Bishop of Urgell by the Count Ermengol IV of Urgell in the 12th century.

Urgell Cathedral

Up to 1802, the ecclesiastical border corresponded with the royal one established under the Treaty of the Pyrenees in 1659. As such the 33 towns of the northern Cerdanya (now in France) came under the diocese's control.

Description of the Diocesan Territory

The Roman Catholic Church controls the metropolitan church of Tarragona, with its see or capital of the Seu d'Urgell (Urgell See). It contains 7630 km² and a population of 200,761 according to the 2000 census and is the largest bishopric of the eight that have a see in Catalonia. In contrast, it is the most sparsely populated. The diocese borders the bishoprics of Vic, Solsona, Lleida, Barbastro-Monzón, Toulouse, Pamiers and Perpignan. It

has been deeply linked for many years to the regions that constituted the counties of Urgell, Pallars and Cerdanya during the Middle Ages, with which it identifies and forms a historical and geographic unit maintained up to the present day. The diocese totally or partially occupies the Ripollès, Cerdanya, Alt Urgell, Segarra, Urgell, Pla d'Urgell, Noguera, Pallars Jussà, Pallars Sobirà, Alta Ribagorça and the Vall d'Aran regions.

The bishopric's jurisdiction extends to 408 parishes, although today some have a very reduced population. Almost all of the parishes come from distant times, as the very titular saints of their churches. The most common are Saint Mary (in 90 parochial churches, as well as the cathedral), Saint Peter (35), Saint Martin (29), Saint Saturninus (24), Saint Steven (23), Saint Michael (19), Saint Andrew (17), Saint Julian (12), Saint Eulalia (11), Saint Vincent and Saint Felix (10). Many churches of the bishopric, parochial or not, conserve elements of great architectural interest, and thirty-six of them are considered cultural goods of national interest in Spain.

Amongst all Catalonian bishoprics, the Diocese of Urgell has been that which has experienced the most border-related changes throughout its existence, mainly for political reasons: the loss of Ribagorça (9th century), to the benefit of the Diocese of Roda, and the cession of 144 parishes of the Berguedà, the Solsonès and a part of the Segarra, to the benefit of the new diocese of Solsona (1593-1623); later, it was necessary to adapt the territory to the borders between states, and thus in 1803, the 24 parishes of French Cerdagne, which had been ceded to France from the Treaty of the Pyrenees in 1659, also passed ecclesiastically to that country; and in 1804, the 28 from the Aran Valley, a territory circumscribed by France yet united fully to the Catalan-Aragonese territories at least since the 12th century, were annexed to the diocese of Urgell, coming from the eliminated Gascon diocese of Sant Bertran de Comenge. In 1874 the sixty-odd towns that formed the erstwhile exempt jurisdictions of Gerri, Mur, Montodó-Bonrepòs, the order of Saint John of Jerusalem and Meià were annexed to the diocese. Finally, in 1956, the diocese gained the seven parishes of the Artesa de Segre enclave and gave up the 19 of the Franja de Ponent [Western Strip] to Lleida and Barbastre, grouped into three enclaves.

Origin of the Urgell Diocese

The diocese, without excluding the possibility of a more remote origin, was already constituted at the beginning of the 6th century. The first known bishop, Saint Justus, figures among the participants of the councils of Toledo (531), Lleida and Valencia (546). His successors also took part regularly in the Toledo councils celebrated throughout the 7th century. The Episcopal succession, despite the uncertainty of names and chronology, seems to not be interrupted by the Saracen invasion of 714.

Monasticism must have been introduced into the diocese during the Visigothic period. The monasteries of Tavèrnoles, Gerri, Codinet, and Tresponts are probably anterior to the Saracen invasion. These foundations and the later ones--la Vedella, Elins, Bagà, la Portella, les Maleses, Villanega, Oveix, Bellera, el Burgal, Lavaix, Alaó, Escales, Ovarra, Taverna, Gualter, etc.--often adopted the Benedictine observance from the 9th century on, following the example of the majority of the coenobitic monasteries then extant in the Marca Hispanica. This became the norm for monastic life in the following century. These monasteries, alongside the parochial and canonical organization (the Urgell Diocese, Solsona, Cardona, Organyà, Ponts, Ager, Mur, Tremp) would greatly influence the Christianization of the country and in its human, cultural and economic development.

The canonical monasteries derived into colleges as a result of their secularization (1592), and due to their corruption, the 1851 concord eliminated them, along with the other preexisting ones (Castellbò, Guissona, Balaguer). Mur and Àger were without a doubt the most famous Catalan canonical colleges, exempt from episcopal jurisdiction

Early Middle Ages

During the pontificate of the Bishop Felix (781-799), who was accused of adoptionism by the Carolingian theologians and for this motive deposed and confined to Lyon, the city of Urgell and its church were completely destroyed by the Arabs around 793. With the founding of the Marca Hispanica, the diocese, like the others recently restored, became part of the ecclesiastical province of Narbonne until the recreation of the metropolitan see of Tarragona in 1091. The Frankish kings intervened effectively in the country's reconstruction, promoting the Reconquest laying the foundations of its government. The territory now being free, mainly, from the Moors' power, with the help of the first Catalan Counts, they promoted the construction of a new cathedral, completed in the second part of the 9th century, to which were assigned 289 towns or villages--all the northwestern area of the Pyrenees.

At the same time, the Urgell church, ruled for more than two centuries (914-1122) by members of the Counts' families, fully entered the ring of the feudal system, which allowed it to shape for itself an extensive seigniorial patrimony, which among other cities and territories included the city of Urgell, the valleys of Andorra, the Vall de la Llosa, the Vall d'Arques and the Ribera Salada, the villages of Sanaüja, Guissona, and from 1257 onwards, Tremp. This, however, forced it into a certain dependence on the superior power of the Counts. Also, the Gregorian Reform, introduced to the County of Urgell during the last years of the 11th century, preceded by the change of the Visigothic rite for the Roman rite, reduced those interventions of the laymen in ecclesiastical affairs and achieved the complete freedom of the Church in the spiritual and temporal domains. Moreover, the maintenance of those possessions originated constant tension and fighting throughout the Middle Ages with the Viscounts of Castellbó and his heirs, the Counts of Foix.

Nicolas Sarkozy

From Wikipedia, the free encyclopedia

Nicolas Sarkozy (pronounced [ni.kɔ.la saʁ.kɔ.zi] (listen), born **Nicolas Paul Stéphane Sarközy de Nagy-Bocsa**; 28 January 1955) is the 23rd and current President of the French Republic and *ex officio* Co-Prince of Andorra. He assumed the office on 16 May 2007 after defeating the Socialist Party candidate Ségolène Royal 10 days earlier.

Before his presidency, he was leader of the Union for a Popular Movement (UMP). Under Jacques Chirac's presidency he served as Minister of the Interior in Jean-Pierre Raffarin's (UMP) first two governments (from May 2002 to March 2004), then was appointed Minister of Finances in Raffarin's last government (March 2004 to May 2005) and again Minister of the Interior in Dominique de Villepin's government (2005–2007).

Sarkozy was also president of the General council of the Hauts-de-Seine department from 2004 to 2007 and mayor of Neuilly-sur-Seine, one of the wealthiest communes of France from 1983 to 2002. He was Minister of the Budget in the government of Édouard Balladur (RPR, predecessor of the UMP) during François Mitterrand's last term.

In foreign affairs, he has promised a strengthening of the entente cordiale with the United Kingdom[1] and closer cooperation with the United States.[2] During his term, he faced the late-2000s financial crisis (followed by the recession and the debt crisis caused by it) and the Arab Spring (especially in Tunisia, Libya and Syria). He also married singer-songwriter Carla Bruni on 2 February 2008 at the Élysée Palace in Paris.

Personal life

Family background

Main article: Family history of Nicolas Sarkozy

Sarkozy is the son of Pál István Ernő Sárközy de Nagy-Bócsa[3] (Hungarian: *nagybócsai Sárközy Pál* [nɒɟbo:tʃɒi ʃa:rkøzi pa:l] (listen); in some sources *Nagy-Bócsay Sárközy Pál István Ernő*),[4] a Hungarian aristocrat, and Andrée Jeanne "Dadu" Mallah (b. Paris, 12 October 1925), who is of half Greek Jewish and half French Catholic origin.[5][6] They were married at Saint-François-de-Sales, Paris XVII, on 8 February 1950 and divorced in 1959.[7]

Early life

During Sarkozy's childhood, his father allegedly refused to give his wife's family any financial help, even though he had founded his own advertising agency and had become wealthy. The family lived in a mansion owned by Sarkozy's grandfather, Benedict Mallah, in the 17th Arrondissement of

Paris. The family later moved to Neuilly-sur-Seine, one of the wealthiest communes of the Île-de-France *région* immediately west of the 17th Arrondissement just outside of Paris. According to Sarkozy, his staunchly Gaullist grandfather was more of an influence on him than his father, whom he rarely saw. Sarkozy was, accordingly, raised Catholic.[5]

Sarkozy said that being abandoned by his father shaped much of who he is today. He also has said that, in his early years, he felt inferior in relation to his wealthier and taller classmates.[8] "What made me who I am now is the sum of all the humiliations suffered during childhood", he said later.[8]

Education

Sarkozy was enrolled in the *Lycée Chaptal*, a well regarded public middle and high school in Paris's 8th arrondissement, where he failed his *sixième*. His family then sent him to the *Cours Saint-Louis de Monceau*, a private Catholic school in the 17th arrondissement, where he was reportedly a mediocre student,[9] but where he nonetheless obtained his *baccalauréat* in 1973. He enrolled at the *Université Paris X Nanterre*, where he graduated with an MA in Private law, and later with a DEA degree in Business law. Paris X Nanterre had been the starting place for the May '68 student movement and was still a stronghold of leftist students. Described as a quiet student, Sarkozy soon joined the right-wing student organization, in which he was very active. He completed his military service as a part time Air Force cleaner.[10] After graduating, he entered the *Institut d'Études Politiques de Paris*, better known as Sciences Po, (1979–1981) but failed to graduate[11] due to an insufficient command of the English language.[12] After passing the bar, he became a lawyer specializing in business and family law,[12] and was one of Silvio Berlusconi's top French advocates.[13][14][15]

Marriages

Marie-Dominique Culioli

Sarkozy married his first wife, Marie-Dominique Culioli, on 23 September 1982; her father was a pharmacist from Vico (a village north of Ajaccio, Corsica). They had two sons, Pierre (born in 1985), now a hip-hop producer,[16] and Jean (born in 1986) now a local politician in the city of Neuilly-sur-Seine where Sarkozy started his own political career. Sarkozy's best man was the prominent right-wing politician Charles Pasqua, later to become a political opponent.[17] Sarkozy divorced Culioli in 1996, after they had been separated for several years.

Cécilia Ciganer-Albéniz

As mayor of Neuilly-sur-Seine, Sarkozy met former fashion model and public relations executive Cécilia Ciganer-Albéniz (great-granddaughter of composer Isaac Albéniz and daughter of a Moldovan father), when he officiated at her wedding[18] to television host Jacques Martin. In 1988, she left her husband for Sarkozy, and divorced Martin one year later. Sarkozy married her in October 1996, with witnesses Martin Bouygues and Bernard Arnault[19] They have one son, Louis, born 23 April 1997.

Between 2002 and 2005, the couple often appeared together on public occasions, with Cécilia Sarkozy acting as the chief aide for her husband.[20] On 25 May 2005, however, the Swiss newspaper *Le Matin* revealed that she had left Sarkozy for French-Moroccan national Richard Attias, head of Publicis in New York.[21] There were other accusations of a private nature in *Le Matin*, which led to Sarkozy suing the paper.[22] In the meantime, he was said to have had an affair with a journalist of *Le Figaro*, Anne Fulda.[23]

Sarkozy and Cécilia ultimately divorced on 15 October 2007, soon after his election as President.[24]

Carla Bruni

President Barack Obama is greeted by French President Nicolas Sarkozy and his wife Carla Bruni at the G8 Summit dinner in Deauville, France, 26 May 2011.

Less than a month after separating from Cécilia, Sarkozy met Italian-born singer Carla Bruni at a dinner party, and soon entered a relationship with her.[25] They married on 2 February 2008 at the Élysée Palace in Paris.[26]

The couple has a daughter, Giulia, born on 19 October 2011.[27] It is the first time a French president has had a child while in office.[28]

Personal wealth

Sarkozy declared to the Constitutional Council a net worth of €2 million, most of the assets being in the form of life insurance policies.[29] As the French President, one of his first actions was to give himself a pay rise: his yearly salary went from €101,000 to €240,000 (to match his European/French peers).[30] He is also entitled to a mayoral pension as a former mayor of Neuilly-sur-Seine.

Member of National Assembly

Sarkozy is recognised by both the right and left's French parties as a skilled politician and striking orator.[31] His supporters within France emphasize his charisma, political innovation and willingness to "make a dramatic break" amid mounting disaffection against "politics as usual". Overall, he is considered more pro-United States and pro-Israeli than most French politicians.

Since November 2004, Sarkozy has been president of the Union pour un Mouvement Populaire (UMP), France's major right-wing political party, and he was Minister of the Interior in the government of Dominique de Villepin, with the honorific title of Minister of State, making him effectively the number three official in the French State after President Jacques Chirac and the prime minister. His ministerial responsibilities included law enforcement and working to co-ordinate relationships between the national and local governments, as well as Minister of Worship (in this role he created the CFCM, French Council of Muslim Faith). Previously, he was a deputy to the French National Assembly. He was forced to resign this position in order to accept his ministerial appointment. He previously also held several ministerial posts, including Finance Minister.

In government

Sarkozy's political career began when he was 23, when he became a city councillor in Neuilly-sur-Seine. A member of the Neo-Gaullist party RPR, he went on to be elected mayor of that town, after the death of the incumbent mayor Achille Peretti. Sarkozy had been close to Peretti, as his mother was Peretti's secretary. The senior RPR politician at the time, Charles Pasqua, wanted to become mayor, and asked Sarkozy to organize his campaign. Instead Sarkozy profited from Pasqua's short illness to propel himself into the office of mayor.[32] He was the youngest mayor of any town in France with a population of over 50,000. He served from 1983 to 2002. In 1988, he became a deputy in the National Assembly.

In 1993, Sarkozy was in the national news for personally negotiating with the "Human Bomb", a man who had taken small children hostage in a kindergarten in Neuilly.[33] The "Human Bomb" was killed after two days of talks by policemen of the RAID, who entered the school stealthily while the attacker was resting.

At the same time, from 1993 to 1995, he was Minister for the Budget and spokesman for the executive in the cabinet of Prime Minister Édouard Balladur. Throughout most of his early career, Sarkozy had been seen as a protégé of Jacques Chirac. During his tenure, he increased France's public debt more than any other French Budget Minister, by the equivalent of €200 billion (USD260 billion) (FY 1994–1996). The first two budgets he submitted to the parliament (budgets for FY1994 and FY1995) assumed a yearly budget deficit equivalent to six percent of GDP.[34] According to the Maastricht Treaty, the French yearly budget deficit may not exceed three percent of France's GDP.

In 1995, he spurned Chirac and backed Édouard Balladur for President of France. After Chirac won the election, Sarkozy lost his position as Minister for the Budget, and found himself outside the circles of power.

However, he returned after the right-wing defeat at the 1997 parliamentary election, as the number two candidate of the RPR. When the party leader Philippe Séguin resigned, in 1999, he took the leadership of the Neo-Gaullist party. But it obtained its worst result at the 1999 European Parliament election, winning 12.7% of the votes, less than the dissident Rally for France of Charles Pasqua. Sarkozy lost the RPR leadership.

In 2002, however, after his re-election as President of the French Republic (see French presidential election, 2002), Chirac appointed Sarkozy as French Minister of the Interior in the cabinet of Prime Minister Jean-Pierre Raffarin, despite Sarkozy's support of Edouard Balladur for French President in 1995.[35] Following Chirac's 14 July keynote speech on road safety, Sarkozy as interior minister pushed through new legislation leading to the mass purchase of speed cameras and a campaign to increase the awareness of dangers on the roads.

Nicolas Sarkozy speaking at the congress of his party, 28 November 2004

In the cabinet reshuffle of 30 April 2004, Sarkozy became Finance Minister. Tensions continued to build between Sarkozy and Chirac and within the UMP party, as Sarkozy's intentions of becoming head of the party after the resignation of Alain Juppé became clear.

In party elections of 10 November 2004, Sarkozy became leader of the UMP with 85% of the vote. In accordance with an agreement with Chirac, he resigned as Finance Minister. Sarkozy's ascent was marked by the division of UMP between *sarkozystes*, such as Sarkozy's "first lieutenant", Brice Hortefeux, and Chirac loyalists, such as Jean-Louis Debré.

Sarkozy was made Chevalier de la Légion d'honneur (Knight of the Legion of Honour) by President Chirac in February 2005. He was re-elected on 13 March 2005 to the National Assembly (as required by the constitution,[36] he had to resign as a deputy when he became minister in 2002).

On 31 May 2005 the main French news radio station *France Info* reported a rumour that Sarkozy was to be reappointed Minister of the Interior in the government of Dominique de Villepin without resigning from the UMP leadership. This was confirmed on 2 June 2005, when the members of the government were officially announced.

First term as Minister of the Interior

Towards the end of his first term as Minister of the Interior, in 2004, Sarkozy was the most divisive conservative politician in France, according to polls conducted at the beginning of 2004.

Sarkozy has sought to ease the sometimes tense relationships between the general French population and the Muslim community. Unlike the Catholic Church in France with their official leaders or Protestants with their umbrella organisations, the French Muslim community had a lack of structure with no group that could legitimately deal with the French government on their behalf. Sarkozy supported the foundation in May 2003 of the private non-profit Conseil français du culte musulman ("French Council of the Muslim Faith"), an organisation meant to be representative of French Muslims.[37] In addition, Sarkozy has suggested amending the 1905 law on the separation of Church and State, mostly in order to be able to finance mosques and other Muslim institutions with public funds[38] so that they are less reliant on money from outside of France. It was not followed by any concrete measure.

Minister of Finance

During his short appointment as Minister of Finance, Sarkozy was responsible for introducing a number of policies. The degree to which this reflected *libéralisme* (a hands-off approach to running the economy) or more traditional French state *dirigisme* (intervention) is controversial. He resigned the day following his election as president of the UMP.

- In September 2004, Sarkozy oversaw the reduction of the government ownership stake in France Télécom from 50.4 percent to 41 percent.[39]
- Sarkozy backed a partial nationalisation of the large engineering company Alstom decided by his predecessor when the company was exposed to bankruptcy in 2003.[40]
- In June 2004, Sarkozy reached an agreement with the major retail chains in France to concertedly lower prices on household goods by an average of two percent; the success of this measure is disputed, with studies suggesting that the decrease was close to one percent in September.[41]
- Taxes: Sarkozy avoided taking a position on the ISF (solidarity tax on wealth). This is considered an ideological symbol by many on the left and right. Some in the business world and on the liberal right, such as Alain Madelin, wanted it abolished. For Sarkozy, that would have risked being categorised by the left as a gift to the richest classes of society at a time of economic difficulties.[42]

Villepin government

Second term as Minister of the Interior

During his second term at the Ministry of the Interior, Sarkozy was initially more discreet about his ministerial activities: instead of focusing on his own topic of law and order, many of his declarations addressed wider issues,

since he was expressing his opinions as head of the UMP party.

Main article: Response to the 2005 civil unrest in France

However, the civil unrest in autumn 2005 put law enforcement in the spotlight again. Sarkozy was accused of having provoked the unrest by calling young delinquents from housing projects "rabble" *("racaille")* in Argenteuil near Paris, and controversially suggested cleansing the minority suburbs with a Kärcher. After the accidental death of two youths, which sparked the riots, Sarkozy first blamed it on "hoodlums" and gangsters. These remarks were sharply criticised by many on the left wing and by a member of his own government, Delegate Minister for Equal Opportunities Azouz Begag.[43]

After the rioting, he made a number of announcements on future policy: selection of immigrants, greater tracking of immigrants, and a reform on the 1945 ordinance government justice measures for young delinquents.

Sarkozy as Minister of the Interior with then U.S. Secretary of State Condoleezza Rice, after their bilateral meeting in Washington, D.C., 12 September 2006

UMP leader

Before he was elected President of France, Sarkozy was president of UMP, the French conservative party, elected with 85 percent of the vote. During his presidency, the number of members has significantly increased. In 2005, he supported a "yes" vote in the French referendum on the European Constitution, but the "No" vote won.

Throughout 2005, Sarkozy called for radical changes in France's economic and social policies. These calls culminated in an interview with *Le Monde* on 8 September 2005, during which he claimed that the French had been misled for 30 years by false promises.[44] Among other issues:

- he called for a simplified and "fairer" taxation system, with fewer loopholes and a maximum taxation rate (all *direct* taxes combined) at 50 percent of revenue;
- he approved measures reducing or denying social support to unemployed workers who refuse work offered to them;
- he pressed for a reduction in the budget deficit, claiming that the French state has been living off credit for some time.

Such policies are what are called in France *libéral* (that is, in favour of laissez-faire economic policies) or, with a pejorative undertone, *ultra-libéral*. Sarkozy rejects this label of *libéral* and prefers to call himself a pragmatist.

Sarkozy opened another avenue of controversy by declaring that he wanted a reform of the immigration system, with quotas designed to admit the skilled workers needed by the French economy. He also wants to reform the current French system for foreign students, saying that it enables foreign students to take open-ended curricula in order to obtain residency in France; instead, he wants to select the best students to the best curricula in France.

In early 2006, the French parliament adopted a controversial bill known as DADVSI, which reforms French copyright law. Since his party was divided on the issue, Sarkozy stepped in and organised meetings between various parties involved. Later, groups such as the Odebi League and EUCD.info alleged that Sarkozy personally and unofficially supported certain amendments to the law, which enacted strong penalties against designers of peer-to-peer systems.

Presidential campaign

Main article: French presidential election, 2007

Sarkozy was a likely candidate for the presidency in 2007; in an often-repeated comment made on television channel France 2, when asked by a journalist whether he thought about the presidential election when he shaved in the morning, Sarkozy commented, "not just when I shave".[45]

Ségolène Royal was Sarkozy's opponent during the presidential election.

On 14 January 2007, Sarkozy was chosen by the UMP to be its candidate in the 2007 presidential election. Sarkozy, who was running unopposed, won 98 percent of the votes. Of the 327,000 UMP members who could vote, 69 percent participated in the online ballot.[46]

In February 2007, Sarkozy appeared on a televised debate on TF1 where he expressed his support for affirmative action and the freedom to work overtime. Despite his opposition to same-sex marriage, he advocated civil unions and the possibility for same-sex partners to inherit under the same regime as married couples. The law was voted in July 2007.[47]

On 7 February, Sarkozy decided in favour of a projected second, non-nuclear, aircraft carrier for the national Navy (adding to the nuclear *Charles de Gaulle*), during an official visit in Toulon with Defence Minister Michèle Alliot-Marie. "This would allow permanently having an operational ship, taking into account the constraints of maintenance", he explained.[48]

On 21 March, President Jacques Chirac announced his support for Sarkozy. Chirac pointed out that Sarkozy had been chosen as presidential candidate for the ruling UMP party, and said: "So it is totally natural that I give him my vote and my support." To focus on his campaign, Sarkozy stepped down as interior minister on 26 March.[49]

Demonstrations and riots, Paris, May 6, 2007, following the election of Nicolas Sarkozy to the presidency of the French republic.

During the campaign, rival candidates had accused Sarkozy of being a "candidate for brutality" and of presenting hard-line views about France's future.[50] Opponents also accused him of courting conservative voters in policy-making in a bid to capitalise on right-wing sentiments among some communities. However, his popularity was sufficient to see him polling as the frontrunner throughout the later campaign period, consistently ahead of rival Socialist candidate, Ségolène Royal.

The first round of the presidential election was held on 22 April 2007. Sarkozy came in first with 31.18 percent of the votes, ahead of Ségolène Royal of the Socialists with 25.87 percent. In the second round, Sarkozy came out on top to win the election with 53.06 percent of the votes ahead of Ségolène Royal with 46.94 percent.[51] In his speech immediately following the announcement of the election results, Sarkozy stressed the need for France's modernisation, but also called for national unity, mentioning that Royal was in his thoughts. In that speech, he claimed "The French have chosen to break with the ideas, habits and behaviour of the past. I will restore the value of work, authority, merit and respect for the nation."

Political career

- President of the French Republic : Since 2007.
- Co-Prince of Andorra: Since 2007

Governmental functions

- Minister of Budget and government's spokesman : 1993–1995.
- Minister of Communication and government's spokesman : 1994–1995.

Electoral mandates

European Parliament

- Member of the European Parliament : July–September 1999 (Resignation). Elected in 1999.

National Assembly of France

- Member of the National Assembly of France for Hauts-de-Seine (6th constituency) : 1988–1993 (became minister in 1993) / 1995–2002 (became minister in 2002) / March–June 2005 (became minister in June 2005). Elected in 1988, reelected in 1993, 1995, 1997, 2002, 2005.

Regional Council

- Regional councillor of Île-de-France : 1983–1988 (Resignation). Elected in 1986.

General Council

- President of the General Council of Hauts-de-Seine : 2004–2007 (Resignation, became President of the French Republic in 2007).
- Vice-president of the General Council of Hauts-de-Seine : 1986–1988 (Resignation).
- General councillor of Hauts-de-Seine : 1985–1988 / 2004–2007 (Resignation, became President of the French Republic in 2007).

Municipal Council

- Mayor of Neuilly-sur-Seine : 1983–2002 (Resignation). Reelected in 1989, 1995, and 2001.
- Deputy-mayor of Neuilly-sur-Seine : 2002–2007 (Resignation).
- Municipal councillor of Neuilly-sur-Seine : 1977–2007 (Resignation). Reelected in 1983, 1989, 1995, and 2001.

Political functions

- President of the Union for a Popular Movement : 2004–2007 (resignation, became President of the French Republic in 2007). Elected in 2004.
- President of the Rally for the Republic : April–October 1999.
- General secretary of the Rally for the Republic : 1998–1999.
- Deputy general secretary of the Rally for the Republic : 1992–1993.

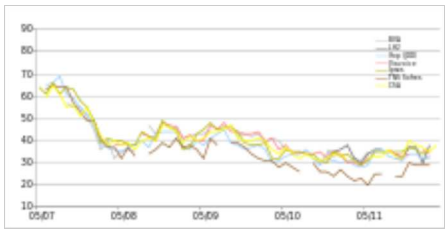
Presidency

Main article: Presidency of Nicolas Sarkozy

On 6 May 2007, Nicolas Sarkozy became the sixth person to be elected President of the Fifth Republic (which

was established in 1958), and the 23rd president in French history. He is the first French president to have been born after World War II.

The official transfer of power from Jacques Chirac took place on 16 May at 11:00 am (9:00 UTC) at the Élysée Palace, where he was given the authorization codes of the French nuclear arsenal.[52] In the afternoon, the new President flew to Berlin to meet with German Chancellor Angela Merkel.



Nicolas Sarkozy and General Jean-Louis Georgelin, Chief of the Defence Staff, reviewing troops during the Bastille Day 2008 military parade on the Champs-Élysées, Paris

Under Sarkozy's government, François Fillon replaced Dominique de Villepin as Prime Minister.[53] Sarkozy appointed Bernard Kouchner, the left-wing founder of Médecins Sans Frontières, as his foreign minister, leading to Kouchner's expulsion from the Socialist Party. In addition to Kouchner, three more Sarkozy ministers are from the left, including Eric Besson, who served as Ségolène Royal's economic adviser at the beginning of her campaign. Sarkozy also appointed seven women to form a total cabinet of 15; one, Justice Minister Rachida Dati, is the first woman of Northern African origin to serve in a French cabinet. Of the 15, two attended the elite École nationale d'administration (ENA).[54] The ministers were reorganised, with the controversial creation of a 'Ministry of Immigration, Integration, National Identity and Co-Development'—given to his right-hand man Brice Hortefeux—and of a 'Ministry of Budget, Public Accounts and Civil Administration'—handed out to Éric Wœrth, supposed to prepare the replacement of only a third of all civil servants who retire. However, after the 17 June parliamentary elections, the Cabinet has been adjusted to 15 ministers and 16 deputy ministers, totalling 31 officials.

Sarkozy greets US first lady Laura Bush in Germany, June 2007

Popularity polls

Shortly after taking office, Sarkozy began negotiations with Colombian president Álvaro Uribe and the left-wing guerrilla FARC, regarding the release of hostages held by the rebel group, especially Franco-Colombian politician Ingrid Betancourt. According to some sources, Sarkozy himself asked for Uribe to release FARC's "chancellor" Rodrigo Granda.[55] Furthermore, he announced on 24 July 2007, that French and European representatives had obtained the extradition of the Bulgarian nurses detained in Libya to their country. In exchange, he signed with Muammar Gaddafi security, health care and immigration pacts—and a $230 million (168 million euros) MILAN antitank missile sale.[56] The contract was the first made by Libya since 2004, and was negotiated with MBDA, a subsidiary of EADS. Another 128 millions euros contract would have been signed, according to Tripoli, with EADS for a TETRA radio system. The Socialist Party (PS) and the Communist Party (PCF) criticised a "state affair" and a "barter" with a "Rogue state".[57] The leader of the PS, François Hollande, requested the opening of a parliamentary investigation.[56]

On 8 June 2007, during the 33rd G8 summit in Heiligendamm, Sarkozy set a goal of reducing French CO_2 emissions by 50 percent by 2050 in order to prevent global warming. He then pushed forward Socialist Dominique Strauss-Kahn as European nominee to the International Monetary Fund (IMF).[58] Critics alleged

that Sarkozy proposed to nominate Strauss-Kahn as managing director of the IMF to deprive the Socialist Party of one of its more popular figures.[59]

In 2010, a study of Yale and Columbia universities ranked France the most respectful country of the G20 concerning the environment.[60]

The Union for a Popular Movement (UMP), Sarkozy's party, won a majority at the June 2007 legislative election, although by less than expected. In July, the UMP majority, seconded by the *Nouveau Centre*, ratified one of Sarkozy's electoral promises, which was to partially revoke the inheritance tax.[61][62] The inheritance tax formerly brought eight billion euros into state coffers.[63]

Sarkozy's UMP majority prepared a budget that reduced taxes, in particular for upper middle-class people, allegedly in an effort to boost GDP growth, but did not reduce state expenditures. He was criticised by the European Commission for doing so.

Sarkozy (at left) attending the G-8 Summit in 2009

Sarkozy broke with the custom of amnestying traffic tickets and of releasing thousands of prisoners from overcrowded jails on Bastille Day, a tradition that Napoleon had started in 1802 to commemorate the storming of the Bastille during the French Revolution.[56]

Sarkozy's government issued a decree on 7 August 2007 to generalise a voluntary biometric profiling program of travellers in airports. The program, called 'Parafes', was to use fingerprints. The new database would be interconnected with the Schengen Information System (SIS) as well as with a national database of wanted persons (FPR). The Commission nationale de l'informatique et des libertés (CNIL) protested against this new decree, opposing itself to the recording of fingerprints and to the interconnection between the SIS and the FPR.[64]

On 21 July 2008, the French parliament passed constitutional reforms which Sarkozy had made one of the key pledges of his presidential campaign. The vote was 539 to 357, one vote over the three-fifths majority required; the changes are not yet finalized. They would introduce a two-term limit for the presidency, and end the president's right of collective pardon. They would allow the president to address parliament in-session, and parliament, to set its own agenda. They would give parliament a veto over some presidential appointments, while ending government control over parliament's committee system. He has claimed that these reforms strengthen parliament, while some opposition socialist lawmakers have described it as a "consolidation of a monocracy".[65]

On 23 July 2008, parliament voted the "loi de modernisation de l'économie" (Modernization of the Economy Law) which loosened restrictions on retail prices and reduced limitations on the creation of businesses. The Government has also made changes to long-standing French work-hour regulations, allowing employers to negotiate overtime with employees and making all hours worked past the traditional French 35-hour week tax-free.[66]

However, as a result of the global financial crisis that came to a head in September 2008, Sarkozy has returned to the state interventionism of his predecessors, declaring that "laissez-faire capitalism is over" and denouncing the "dictatorship of the market". Confronted with the suggestion that he had become a socialist, he responded: "Have I become socialist? Perhaps." He has also pledged to create 100,000 state-subsidised jobs.[67] This reversion to *dirigisme* is seen as an attempt to stem the growing popularity of revolutionary socialist leader Olivier Besancenot.[68]

France wielded special international power when Sarkozy held the rotating EU Presidency from July 2008

President Nicolas Sarkozy with President of Brazil Dilma Rousseff

through December 2008. Sarkozy has publicly stated his intention to attain EU approval of a progressive energy package before the end of his EU Presidency. This energy package would clearly define climate change objectives for the EU and hold members to specific reductions in emissions. In further support of his collaborative outlook on climate change, Sarkozy has led the EU into a partnership with China.[69] On 6 December 2008, Nicolas Sarkozy, current Chairman of the European Union, met the Dalai Lama in Poland and outraged China, which has announced that it would postpone the China-EU summit indefinitely.[70] On 3 April 2009, at the NATO Summit in Strasbourg, Sarkozy announced that France would offer asylum to a former Guantanamo captive.[71][72] "We are on the path to failure if we continue to act as we have", French President Nicolas Sarkozy cautioned at the U.N. Climate Summit on 22 September 2009.[73]

Nicolas Sarkozy with cypriot opposition leader Nicos Anastasiades

On 27 February 2011, Sarkozy did for the 10th time of his presidency a government reshuffle.[74]

On 29 June 2011, he did a 11th government reshuffle, after the resignation of Christine Lagarde, who was appointed at the head of the International Monetary Fund. Five new ministers were appointed.

Middle East

On 5 January 2009, Sarkozy called for a ceasefire plan for the Gaza Strip Conflict.[75] The plan, which was jointly proposed by Sarkozy and Egyptian ex-President Hosni Mubarak envisions the continuation of the delivery of aid to Gaza and talks with Israel on border security, a key issue for Israel as it says Hamas smuggles its rockets into Gaza through the Egyptian border. Welcoming the proposal, US Secretary of State Condoleezza Rice called for a "ceasefire that can endure and that can bring real security".[76]

Involvement in Libya

Nicolas Sarkozy address the E-G8 Forum in Paris in 2011

In March 2011, after having been criticized for his unwillingness to support the Egyptian and Tunisian revolutions, and persuaded by the philosopher Bernard-Henri Levy to have France actively engage against the forces of the Libyan leader, Muammar Gaddafi, Nicolas Sarkozy was amongst the first Heads of State to demand the resignation of Gaddafi and his government, which was then fighting a civil war in Libya. On 10 March 2011, Nicolas Sarkozy welcomed to the Elysee Palace, three emissaries from the Libyan Transitory Rebel Council (CNTT), brought to him by Bernard-Henri Levy who mediated at the meeting. Nicolas Sarkozy promised them a no-fly zone would be imposed on Gaddafi's aeroplanes. He also promised them France's military assistance. On 17 March 2011, at the behest of France, resolution 1973 was adopted by the Security Council of the United Nations, permitting the creation of a "no fly" zone over Libya, and for the undertaking of "necessary measures" for the protection of the country's civilian population. On 19 March 2011, Nicolas Sarkozy officially announced the beginning of a military intervention in Libya, with France's participation. These actions of Nicolas Sarkozy were favorably received by the majority of

the French political class and public opinion.[77][78][79]

Public image

Sarkozy was named the 68th best-dressed person in the world by *Vanity Fair*, alongside David Beckham and Brad Pitt.[80] However, Sarkozy has also been named as the third worst-dressed person in the world by *GQ*,[81] a listing that has been disputed.[82] Beside publicizing, at times, and at others, refusing to publicise his ex-wife Cécilia Ciganer-Albéniz's image,[83] Sarkozy takes care of his own personal image, sometimes to the point of censorship—such as in the *Paris Match* affair, when he allegedly forced its director to resign following an article on his ex-wife and her affair with Publicis executive Richard Attias, or pressures exercised on the *Journal du dimanche*, which was preparing to publish an article concerning Ciganer-Albéniz's decision not to vote in the second round of the 2007 presidential election.[84] In its 9 August 2007 edition, *Paris Match* retouched a photo of Sarkozy in order to erase a love handle.[85][86][87] His official portrait destined for all French town halls was done by SIPA (http://www.sipa.com) photographer Philippe Warrin, better known for his paparazzi work.[88]

Former *Daily Telegraph* journalist Colin Randall has highlighted Sarkozy's tighter control of his image and frequent interventions in the media: "he censors a book, or fires the chief editor of a weekly."[88] Sarkozy is reported by Reuters to be sensitive about his height (believed to be 165 cm (5 ft 5 in)).[89] The French media have pointed out that Carla Bruni frequently wears flats when in public with him. In 2009, this was the subject of a political row, when a worker at a factory where Sarkozy gave a speech said she was asked to stand next to him because she was of a similar height (this story was corroborated by some trade union officials). The president's office called the accusation "completely absurd and grotesque", while the Socialist Party mocked his fastidious preparation.[90]

Sarkozy lost a suit against a manufacturer of Sarkozy voodoo dolls, in which he claimed that he had a right to his own image.[91]

La Conquête

The biopic *La Conquête* is a 2011 film that dramatizes Sarkozy's rise to power, with candid portrayals of Sarkozy himself, Chirac and Villepin, and that was shown at the 2011 Cannes Film Festival.[92]

Controversies

Generally, Sarkozy is strongly disliked by the Left, and is also criticised by some on the Right, most vocally by supporters of Jacques Chirac and Dominique de Villepin, such as Jean-Louis Debré.[93][94]

The magazine *Marianne* accused Sarkozy of changing opinion in an Airbus affair.[95] The communist-leaning magazine *L'Humanité* accused Sarkozy of being a populist.[96]

In 2004 Sarkozy co-authored a book, *La République, les religions, l'espérance* (*The Republic, Religions, and Hope*),[97] in which he argued that the young should not be brought up solely on secular or republican values. He advocated reducing the separation of church and state, arguing for the government subsidy of mosques in order to encourage Islamic integration into French society.[98] He opposes financing of religious institutions with funds from outside France. After meeting with Tom Cruise, Sarkozy was criticised by some for meeting with a member of the Church of Scientology, which is seen as a cult in France (see Parliamentary Commission on Cults in

France).[99] Sarkozy stated that "the roots of France are essentially Christian" at December 2007 speech in Rome. He called Islam "one of the greatest and most beautiful civilizations the world has known" at a speech in Riyadh in January 2008. Both comments drew criticism from Christians.[100]

Many on the Left have a particular distrust for Nicolas Sarkozy; specific "anti-Sarko" movements have been started

In the midst of a tense period and following the accidental death of an 11-year-old boy in the Paris suburb of La Courneuve in June 2005, Sarkozy quoted a local resident and vowed to clean the area out "with a Kärcher" (*nettoyer la cité au Kärcher*, referring to a well-known German brand of pressure-cleaning equipment), and two days before the 2005 Paris riots he referred to the criminal youth of the housing projects as *voyous* (thugs) and *racaille*, a slang term which can be translated into English as *rabble*, *scum* or *riff-raff*;[101] the French Communist Party's publication *L'Humanité* branded this language as inappropriate.[102]

In September 2005 Sarkozy was accused of pushing for a hasty inquiry into an arson attack on a police station in Pau, of which the alleged perpetrators were acquitted for lack of proof.[103] On 22 June 2005 Sarkozy told law enforcement officials that he had questioned the Minister of Justice about the future of "the judge" who had freed a man on parole who had later committed a murder.[104]

Sarkozy opposed the U.S.-led invasion of Iraq. However, he was critical of the way Jacques Chirac and his foreign minister Dominique de Villepin expressed France's opposition to the war. Talking at the French-American Foundation in Washington, D.C. on 12 September 2006, he denounced what he called the "French arrogance" and said: "It is bad manners to embarrass one's allies or sound like one is taking delight in their troubles."[105] He added: "We must never again turn our disagreements into a crisis." Jacques Chirac reportedly said in private that Sarkozy's speech was "appalling" and "a shameful act".[105]

Even though his former foreign minister Bernard Kouchner (excluded from the Socialist party after his inclusion in François Fillon's government) had been one of the few supporters in France of removal of Saddam Hussein from power, Sarkozy's stance on the war has not changed.

A few weeks before the first round of the 2007 presidential elections, Sarkozy said during an interview with philosopher Michel Onfray[106] that he thinks disorders such as paedophilia and depression have a genetic as well as social basis, saying "I don't agree with you, I'd be inclined to think that one is born a paedophile, and it is actually a problem that we do not know how to cure this disease"; he also claimed that suicides among youth were linked to genetic predispositions by stating, "I don't want to give parents a complex. It's not exclusively the parents' fault every time a youngster commits suicide." These statements were criticised by some scientists, including controversial geneticist Axel Kahn.[107][108] Sarkozy later said, "What part is innate and what part is acquired? At least let's debate it, let's not close the door to all debate."[109]

On 27 July 2007, Sarkozy delivered a speech in Senegal, written by Henri Guaino, in which he made reference to "African peasants".[110][111] The controversial remarks were widely condemned by Africans, who viewed them as racist.[111][112][113] South African president Thabo Mbeki praised Sarkozy's speech, which raised criticism by some in the South African media.[111][113]

On 23 February 2008, Sarkozy was filmed by a reporter for French newspaper *Le Parisien* having the following exchange while visiting the Paris International Agricultural Show:[114]

> While quickly crossing the hall Saturday morning, in the middle of the crowd, Sarkozy encounters a recalcitrant visitor who refuses to shake his hand. "Ah no, don't touch me!", said the man. The president retorted immediately: "Get lost, then." "You're making me dirty", yelled the man. With a frozen smile, Sarkozy says, his teeth glistening, a refined "Get lost, then, poor dumb-ass, go."[115]

This exchange has been cause for much humour and debate regarding its propriety in the French press. It should also be noted that a precise translation into English has many possible variations.[116][117][118]

On 28 August 2008, Hervé Eon, from Laval came to an anti-Sarkozy demonstration with a sign bearing the words *Casse-toi pov' con*, the exact words Sarkozy had uttered. Eon was arrested for causing offence to the presidential function and the prosecutor, who in France indirectly reports to the president, requested a fine of 1000€.[119][120] The court eventually imposed a symbolic 30€ suspended fine, which has generally been interpreted as a defeat for the prosecution side.[121] This incident was widely reported on, in particular as Sarkozy, as president of the Republic, is immune from prosecution, notably restricting Eon's rights to sue Sarkozy for defamation.[122]

On 8 November 2009, Sarkozy posted on his Facebook page a picture supposedly showing him chipping away at the Berlin Wall during its fall. However, the dates were inconsistent and the picture was proven to be fake – and later archived footage confirmed this. This news of forgery spread in France, and later evolved into a meme, "Sarkozy Was There", where Sarkozy is photoshopped into historical events.

On 5 July 2010, following its investigations on the Bettencourt affair, online newspaper Mediapart ran an article in which Claire Thibout, an ex-accountant working for Liliane Bettencourt, accused Nicolas Sarkozy and Eric Woerth of receiving illegal campaign donations in 2007, in cash.[123][124]

On 30 July 2010, Sarkozy suggested a new policy of security, and he proposed "stripping foreign-born French citizens who opted to acquire their nationality at their majority of their citizenship if they are convicted of threatening the life of a police officer or other serious crimes".[125] This policy has been criticized for example by the US newspaper *The New York Times*,[125] by Sarkozy's political opponents, including the leader of the PS, Martine Aubry,[126] and by experts of French law, including the ex-member of the Constitutional Council of France, Robert Badinter, who said that such action would be unconstitutional.[127]

Awards and honours

French honours

- Legion of Honour
  - Grand Cross (2007 — automatic when taking office)
  - Knight (2004)
- Grand Cross of the National Order of Merit (2007 — automatic when taking office)

Other countries

- Belgium: Commander of the Order of Leopold
- Bulgaria: Grand Cross of Order of Stara Planina
- Georgia: Saint George's Victory Order[128]
- Holy See: Proto-canon of the Papal Basilica of St. John Lateran (2007 - the post is held *ex officio* by the French Head of State)[129]

- Italy: Premio Mediterraneo[130]
- Spain: Knight of the Order of the Golden Fleece (2011)[131]
- Spain: Grand Cross of the Order of Charles III (2004)[132]
- United Kingdom: Honorary Knight Grand Cross of the Order of the Bath (2008)[133]

3. ^ It is the "westernised", or "internationalised", version of his Hungarian name, in which the given name is put first (whereas in Hungarian given names come last), and the French aristocratic particle "de" is used instead of the Hungarian aristocratic ending "-i". This "westernisation" of Hungarian names is frequent, particularly for people with an aristocratic name. Check for example the leader of Hungary from 1920 to 1944, whose Hungarian name is nagybányai Horthy Miklós, but who is known in English as Miklós Horthy de Nagybánya. The French name of Pál Sárközy de Nagy-Bócsa from 1948 is Paul Étienne Arnaud Sarközy de Nagy-Bocsa, where the given name Pál has been translated into Paul in French, and the acute accents on the "a" of Sarközy and the "o" of Bocsa were dropped as these letters never carry an acute accent (*accent aigu*) in French. The trema on the "o" of Sárközy was kept, probably because French typewriters allow this combination, whereas it is impossible to write "a" or "o" with an acute accent using a French typewriter.

President of France

From Wikipedia, the free encyclopedia

The **President of the French Republic** (French: *Président de la République française*) colloquially referred to in English as the **President of France**, is France's elected Head of State.

Four of France's five republics have had presidents as their heads of state, making the French presidency the oldest presidency in Europe still to exist in some form. In each of the republics' constitutions, the president's powers, functions and duties, and their relation with French governments differed.

For details about the French system of government see Government of France.

The president of France is also the ex officio Co-Prince of Andorra, Grand Master of the Légion d'honneur and the Ordre national du Mérite and honorary proto-canon of the Basilica of St. John Lateran in Rome.

The current President of the Republic is Nicolas Sarkozy, since 16 May 2007.

Incumbent
Nicolas Sarkozy
since 16 May 2007

Residence	Élysée Palace, Paris
Term length	Five years, renewable once consecutively
Inaugural holder	Louis-Napoléon Bonaparte 20 December 1848
Formation	Constitution of the Fifth Republic, 4 October 1958
Salary	21 194.52 euros/month
Website	http://www.elysee.fr/

Current presidential powers

The French Fifth Republic is a semi-presidential system. Unlike many other European presidents, the office of the French President is quite powerful. Although it is the Prime Minister of France and parliament that oversee much of the nation's actual lawmaking, the French President wields significant influence. The president holds the nation's most senior office, and outranks all other politicians.

Summary

The president's greatest power is their ability to choose the Prime Minister. However, since only the French National Assembly has the power to dismiss the Prime Minister's government, the president is forced to name a prime minister who can command the support of a majority in the assembly.

- When the majority of the Assembly has opposite political views to that of the president, this leads to political *cohabitation*. In that case, the president's power is diminished, since much of the de facto power relies on a supportive prime minister and National Assembly, and is not directly attributed to the post of president.
- When the majority of the Assembly sides with him, the President can take a more active role and may, in effect, direct government policy. The prime minister is then the personal choice of the President, and can be easily replaced if the administration becomes unpopular. This device has been used in recent years by both François Mitterrand and Jacques Chirac.

Since 2002, the mandate of the president and the Assembly are both 5 years and the two elections are close to each other. Therefore, the likelihood of a "cohabitation" is lower. Among the powers of the government:

- The president promulgates laws.
  - The president has a very limited form of suspensive veto: when presented with a law, he or she can request another reading of it by Parliament, but only once per law.
  - The president may also refer the law for review to the Constitutional Council prior to promulgation.
- The president may dissolve the French National Assembly
- The president may refer treaties or certain types of laws to popular referendum, within certain conditions, among them the agreement of the Prime minister or the parliament.
- The president is the Commander-in-Chief (CINC) of the armies.
- The president may order the use of nuclear weapons.
- The president names the Prime minister but he cannot dismiss him. He names and dismisses the other ministers, with the agreement of the Prime minister.
- The president names most officials (with the assent of the cabinet).
- The president names certain members of the Constitutional Council.
- The president receives foreign ambassadors.
- The president may grant a pardon (but not an amnesty) to convicted criminals; the president can also lessen or suppress criminal sentences. This was of crucial importance when France still operated the death penalty: criminals sentenced to death would generally request that the president commute their sentence to life imprisonment.

All decisions of the president must be countersigned by the Prime minister, except dissolving the French National Assembly.

Detailed constitutional powers

The constitutional attributions of the president are defined in Title II of the Constitution of France.

Article 5 The President of the Republic shall see that the Constitution is observed. He shall ensure, by his arbitration, the proper functioning of the public authorities and the continuity of the State. He shall be the guarantor of national independence, territorial integrity and observance of treaties.

Article 8 The President of the Republic shall appoint the Prime Minister. He shall terminate the appointment of the Prime Minister when the latter tenders the resignation of the Government. On the proposal of the Prime Minister, he shall appoint the other members of the Government and terminate their appointments.

Article 9 The President of the Republic shall preside over the Council of Ministers.

Article 10 The President of the Republic shall promulgate Acts of Parliament within fifteen days following the final adoption of an Act and its transmission to the Government. He may, before the expiry of this time limit, ask Parliament to reconsider the Act or sections of the Act. Reconsideration shall not be refused.

While the president has to sign all acts adopted by parliament into law, he cannot refuse to do so and exercise a kind of right of veto; his only power in that matter is to ask for a single reconsideration of the law by parliament and this power is subject to countersigning by the Prime minister.

Article 11 The president may submit laws to the citizens in a referendum with advice and consent of the cabinet.

Article 12 The President of the Republic may, after consulting the Prime Minister and the Presidents of the assemblies, declare the National Assembly dissolved. A general election shall take place not less than twenty days and not more than forty days after the dissolution. The National Assembly shall convene as of right on the second Thursday following its election. Should it so convene outside the period prescribed for the ordinary session, a session shall be called by right for a fifteen-day period. No further dissolution shall take place within a year following this election.

Article 13 The President of the Republic shall sign the ordinances and decrees deliberated upon in the Council of Ministers. He shall make appointments to the civil and military posts of the State. [...]

Article 14 The President of the Republic shall accredit ambassadors and envoys extraordinary to foreign powers ; foreign ambassadors and envoys extraordinary shall be accredited to him.

Article 15 The President of the Republic shall be commander-in-chief of the armed forces. He shall preside over the higher national defence councils and committees.

Article 16 Where the institutions of the Republic, the independence of the Nation, the integrity of its territory or the fulfilment of its international commitments are under serious and immediate threat, and where the proper functioning of the constitutional public authorities is interrupted, the President of the Republic shall take the measures required by these circumstances, after formally consulting the Prime Minister, the Presidents of the assemblies and the Constitutional Council. He shall inform the Nation of these measures in a message. The measures must stem from the desire to provide the constitutional public authorities, in the shortest possible time, with the means to carry out their duties. The Constitutional Council shall be consulted with regard to such measures. Parliament shall convene as of right. The National Assembly shall not be dissolved during the exercise of the emergency powers.

Article 16, allowing the president a limited form of rule by decree for a limited period of time in exceptional circumstance, has been used only once, by Charles de Gaulle during the Algerian War, from 23 April to 29 September 1961.

Article 17 The President of the Republic has the right to grant pardon.

Article 18 The President of the Republic shall communicate with the two assemblies of Parliament by means of messages, which he shall cause to be read and which shall not be the occasion for any debate. He can also give an address in front of the Congress of France in Versailles. Outside sessions, Parliament shall be convened especially for this purpose.

From 1875 to 2008, the President was prohibited from entering the houses of Parliament.

Article 19 Acts of the President of the Republic, other than those provided for under articles 8 (first paragraph), 11, 12, 16, 18, 54, 56 and 61, shall be countersigned by the Prime Minister and, where required, by the appropriate ministers.

Article 49 Para 3 allows the president to adopt a law on his authority. To this end, the prime minister goes before the lower and upper houses, reads out the bill to the legislators and closes with "the administration engages its responsibility" on the foregoing. Deprived of Gaullist party support halfway into his seven-year term spanning 1974 to 1981, Pres. Valéry Giscard d'Estaing relied heavily on this provision to stalemate Paris Mayor Jacques Chirac's attempt to bring him back under Gaullist control.

Presidential amnesties

There is a tradition of so-called "presidential amnesties", which are something of a misnomer: after the election of a president, and of a National Assembly of the same party, parliament traditionally votes a law granting amnesty for some petty crimes. This practice has been increasingly criticized, particularly because it is believed to incite people to commit traffic offences in the months preceding the election. Such an amnesty law may also authorize the president to designate individuals who have committed certain categories of crimes to be offered amnesty, if certain conditions are met. Such individual measures have been criticized for the political patronage that they allow. Still, it is argued that such amnesty laws help reduce prison overpopulation. An amnesty law was passed in 2002; none have yet been passed as of January 2008.

The difference between an amnesty and a presidential pardon is that the former clears all subsequent effects of the sentencing, as though the crime had not been committed, while pardon simply relieves the sentenced individual from part or all of the remainder of the sentence.

Criminal responsibility and impeachment

Articles 67 and 68 organize the regime of criminal responsibility of the President. They were reformed by a 2007 constitutional act,[1] in order to clarify a situation that previously resulted in legal controversies.[2]

The President of the Republic enjoys immunity during his term: he cannot be requested to testify before any jurisdiction, he cannot be prosecuted, etc. However, the statute of limitation is suspended during his term, and enquiries and prosecutions can be restarted, at the latest one month after he leaves office.

The President is irresponsible for his actions in his official capacity, except for prosecution before the International Criminal Court and impeachment. Impeachment can be pronounced by the High Court, a special court convened from both houses of Parliament on the proposal of either House, should the president have failed to discharge his duties in a way that evidently precludes the continuation of his term.

Election

Further information: Elections in France

Since a 1962 referendum, the President of France has been directly elected by universal suffrage; it was previously elected by an electoral college. Following a 2000 referendum, the length of the term was reduced from 7 to 5 years; the first election to a shorter term was held in 2002. President Chirac was first elected in 1995 and again in 2002. There was no term limit, so Chirac could have run again, but chose not to. He was succeeded by Nicolas Sarkozy on 16 May 2007. Since the constitutional law of 23 July 2008, a president cannot serve more than two consecutive terms. François Mitterrand and Jacques Chirac are the only Presidents to date who have served a full two terms (14 years for the former, 12 years for the latter).

In order to be admitted as an official candidate, potential candidates must receive signed nominations (informally known as *parrainages*, for "godfathering") from more than 500 elected officials, mostly mayors. These officials must be from at least 30 *départements* or overseas collectivities, and no more than 10% of them should be from the same *département* or collectivity.[3] Furthermore, each official may nominate only one candidate.[4]

There are approximately 45,000 elected officials that are on the list of such officials, including around 36,000 mayors.

Spending and financing of campaigns and political parties are highly regulated. There is a cap on spending, at approximately 20 million euros, and government public financing of 50% of spending if the candidate scores more than 5%. If the candidate receives less than 5% of the vote, the government funds €800,000 to the party (€150,000 paid in advance)[5] Advertising on TV is forbidden but official time is given to candidates on public TV. An independent agency regulates election and party financing.

French presidential elections are conducted via run-off voting which ensures that the elected President always obtains a majority: if no candidate receives a majority of votes in the first round of voting, the two highest-scoring candidates arrive at a run-off. After the president is elected, he goes through a solemn investiture ceremony called a "*passation des pouvoirs*" ("handing over of powers").[6]

Succession and incapacity

Upon the death or resignation of the President, the President of the Senate acts as interim president.[7] Alain Poher is the only person to have served this temporary position. The first time was in 1969 after Charles de Gaulle's resignation and a second time in 1974 after Georges Pompidou's death. It is important to note that, in this situation, the President of the Senate became an Interim President of the Republic; they do not become the new President of the Republic as elected and therefore do not have to resign from their position as President of the Senate. In spite of his title as Interim President of the Republic, Poher is regarded in France as a former President and is listed in the presidents' gallery on elysee.fr (the President's official site). This is in contrast to acting presidents from the Third Republic.

The first round of a new presidential election must be organized no sooner than twenty days and no later than thirty-five days following the vacancy of the presidency. Because fifteen days can separate the first and second rounds of a presidential election, this means that the President of the Senate can only act as President of the Republic for a maximum period of fifty days. During this period of Interim president is not allowed to dismiss the national assembly nor are they allowed to call for a referendum or initiate any constitutional changes.

If there is no acting president of the senate, the powers of the president of the republic are exercised by the "Gouvernement", meaning the Cabinet. This has been interpreted by some constitutional academics as meaning first the Prime Minister and, if he is himself not able to act, the members of the cabinet in the order of the list of the decree that nominated them. This is in fact unlikely to happen, because if the president of the Senate is not able to act, the Senate will normally name a new president of the Senate, that will act as President of the Republic.

During the Third French Republic the President of the Council of Ministers acted as President whenever office was vacant.[8]

According to article 7 of the Constitution, if the presidency becomes vacant for any reason, or if the president becomes incapacitated, upon the request of the *gouvernement*, the Constitutional Council may rule, by a majority vote.[9] that the presidency is to be temporarily assumed by the President of the Senate. If the Council rules that the incapacity is permanent, the same procedure as for the resignation is applied, as described above.

If the President cannot attend meetings, including meetings of the Council of Ministers, he can ask the Prime Minister to attend in his stead (Constitution, article 21). This clause has been applied by presidents travelling abroad, ill, or undergoing surgery.

Pay and official residences

The President of the Republic is paid a salary according to a pay grade defined in comparison to the pay grades of the most seniors members of the French Civil Service ("out of scale", *hors échelle*, those whose pay grades are known as letters and not as numeric indices). In addition he is paid a residence stipend of 3%, and a function stipend of 25% on top of the salary and residence indemnity. This gross salary and these indemnities are the same as those of the Prime Minister, and are 50% higher than the highest paid to other members of the government,[10] which is itself defined as twice the average of the highest (pay grade G) and the lowest (pay grade A1) salaries in the "out of scale" pay grades.[11] Using the 2008 "out of scale" pay grades[12] this amounts to a monthly pay of €20,963, which fits the €19,000 quoted to the press in early 2008.[13] Using the pay grades starting from 1 July 2009,[14] this amounts to a gross monthly pay of €21,131.

The salary and the residence stipend are taxable for income tax.[15]

The official residence and office of the president is the Élysée Palace in Paris. Other presidential residences include:

- the *Fort de Brégançon*, in southeastern France, is the current official presidential vacation residence;
- the *Hôtel de Marigny*; standing next to the Élysée Palace, houses foreign official guests;
- the *Château de Rambouillet* is normally open to visitors when not used for (rare) official meetings;
- the *Domaine National de Marly* is normally open to visitors when not used for (rare) official meetings;
- the *Domaine de Souzy-la-Briche* has not been used by the President since 2007, and is available for lease.[16]

Latest election

Summary of the 21–22 April and 5–6 May 2007 French presidential election results

Candidates – Parties			**1st round**		**2nd round**	
			Votes	**%**	**Votes**	**%**
Nicolas Sarkozy	Union for a Popular Movement (*Union pour un mouvement populaire*)	UMP	**11,448,663**	**31.18%**	**18,983,138**	**53.06%**

Former Presidents

Further information: List of Presidents of France

As of 2011 there were two living former Presidents:

- Valéry Giscard d'Estaing (served 1974–1981)
- Jacques Chirac (served 1995–2007)

According to French law, Former Presidents have guaranteed lifetime pension defined according to the pay grade of the Councillors of State,[17] a courtesy diplomatic passport,[18] and, according to the French Constitution (Article 56), membership of the Constitutional Council.

They also get personnel, an apartment and/or office, and other amenities, though the legal basis for these is disputed.[19] In 2008, according to an answer by the services of the Prime Minister to a question from member of the National Assembly René Dosière,[20] these facilities comprised: a security detail, a car with a chauffeur, office or housing space, maintained by the State. Two people service this space. In addition, the State funds 7 permanent collaborators.

Presidential spouse

Further information: Wife of the President of the French Republic

There is no official status or title such as 'First Lady' for the spouse of the President under the French constitution. Charity work has traditionally been the main task of French presidential spouses under the Third, Fourth and Fifth Republics.

Presidents	**Spouses**	***years***
Nicolas Sarkozy	Carla Bruni-Sarkozy Cécilia Sarkozy	February 2008– May 2007 – October 2007
Jacques Chirac	Bernadette Chirac	1995–2007

Time in office

N°	President	Length in days	Rank	Notes
21	François Mitterrand	5109	1	Served two full terms of seven years.
22	Jacques Chirac	4382	2	Served one full term of seven years and one full term of five years.
18	Charles de Gaulle	3763	3	Served one full term of seven years and resigned during second term.

N°	President	Length in days	Rank	Notes
4	Jules Grévy	3228	4	Served one full term of seven years and resigned during second term.
15	Albert François Lebrun	2983	5	Served one full term of seven years and was replaced by Philippe Pétain during second term.
8	Émile Loubet	2556	6	Served one full term of seven years.
9	Armand Fallières	2557	7	Served one full term of seven years.
10	Raymond Poincaré	2556	8	Served one full term of seven years.
13	Gaston Doumergue	2556	9	Served one full term of seven years.
16	Vincent Auriol	2557	10	Served one full term of seven years.
20	Valéry Giscard d'Estaing	2551	11	Served one full term of seven years.
5	Sadi Carnot	2396	12	Served less than one full term of seven years (assassinated).
3	Patrice de Mac-Mahon	2077	13	Served less than one full term of seven years (resigned).
17	René Coty	1818	14	Served less than one full term of seven years (end of the Fourth Republic).
23	Nicolas Sarkozy	1771[21]	15	**Incumbent.**
19	Georges Pompidou	1747	16	Served less than one full term of seven years (died in office).
7	Félix Faure	1491	17	Served less than one full term of seven years (died in office).
1	Louis-Napoléon Bonaparte	1443	18	Served less than one full term of seven years (end of the Second Republic, proclaimed himself as Emperor).
12	Alexandre Millerand	1357	19	Served less than one full term of seven years (resigned).
2	Adolphe Thiers	632	20	Served less than one full term of seven years (resigned).
14	Paul Doumer	329	21	Served less than one full term of seven years (assassinated).
11	Paul Deschanel	216	22	Served less than one full term of seven years (resigned).
6	Jean Casimir-Perier	203	23	Served less than one full term of seven years (resigned).

Interim President

1. Alain Poher (served nearly two months in 1969 and about one month in 1974)

Non-Presidential Heads of State

1. Jacques-Charles Dupont de l'Eure, Chairman of the Provisional Government and de facto head of state in 1848 : served less than three months
2. Executive Commission: joint head of state with five co-presidents in 1848 : served less than two months. François Arago was its most prominent member.

3. Louis-Eugène Cavaignac, head of government and de facto head of state in 1848 : served about six months
4. Louis Jules Trochu, President of the Government of National Defense and de facto head of state (served 4 months, September 1870 to January 1871)
5. Philippe Pétain, *Chief of State* of Vichy France: served four years (considered an illegal usurper by later governments[22])
6. Charles de Gaulle, President of the Provisional Government: served over one and a half years
7. Félix Gouin, President of the Provisional Government: served five months
8. Georges Bidault, President of the Provisional Government: served five months
9. Vincent Auriol, President of the Provisional Government: served less than a month
10. Léon Blum, President of the Provisional Government: served one month

History

Under the Third and Fourth Republic, which were parliamentary systems, the office of President of the Republic was a largely ceremonial and powerless one.

The constitution of the Fifth Republic greatly increased the President's powers. A 1962 referendum changed the constitution, so that the President would be directly elected by universal suffrage and not by the Parliament.

In 2000, a referendum shortened the presidential term from seven years to five years.

A maximum of two consecutive terms was imposed after the 2008 constitutional reform.

Belgium

From Wikipedia, the free encyclopedia

Belgium (/ˈbɛlʤəm/ *BEL-jəm*), officially the **Kingdom of Belgium**, is a federal state in Western Europe. It is a founding member of the European Union and hosts the EU's headquarters, and those of several other major international organisations such as NATO.[nb 1] Belgium covers an area of 30,528 square kilometres (11,787 sq mi), and it has a population of about 11 million people. Straddling the cultural boundary between Germanic and Latin Europe, Belgium is home to two main linguistic groups, the Dutch-speakers, mostly Flemish (about 60%), and the French-speakers, mostly Walloons (about 40%), plus a small group of German-speakers. Belgium's two largest regions are the Dutch-speaking region of Flanders in the north and the French-speaking southern region of Wallonia. The Brussels-Capital Region, officially bilingual, is a mostly French-speaking enclave within the Flemish Region.[2] A German-speaking Community exists in eastern Wallonia.[6] Belgium's linguistic diversity and related political conflicts are reflected in the political history and a complex system of government.[7][8]

Historically, Belgium, the Netherlands and Luxembourg were known as the Low Countries, which used to cover a somewhat larger area than the current Benelux group of states. The region was called Belgica in Latin because of the Roman province Gallia Belgica which covered more or less the same area. From the end of the Middle Ages until the 17th century, it was a prosperous centre of commerce and culture. From the 16th century until the Belgian Revolution in 1830, when Belgium seceded from the Netherlands, many battles between European powers were fought in the area of Belgium, causing it to be dubbed the battleground of Europe,[9] a reputation strengthened by both World Wars.

Upon its independence, Belgium participated in the Industrial Revolution[10][11] and, during the course of the 20th century, possessed a number of colonies in Africa.[12] The second half of the 20th century was marked by the rise of contrasts between the Flemish and the Francophones fuelled by language differences on the one hand and an asymmetrical economic evolution of Flanders and Wallonia on the other hand. These ongoing conflicts have caused far-reaching reforms of the formerly unitary Belgian state into a federal state and a very long political instability.[13][14][15]

History

Main article: History of Belgium

The Seventeen Provinces (orange, brown and yellow areas) and the Bishopric of Liège (green)

The name 'Belgium' is derived from *Gallia Belgica*, a Roman province in the northernmost part of Gaul that, before Roman invasion in 100 BC, was inhabited by the *Belgae*, a mix of Celtic and Germanic peoples.[16][17] A gradual immigration by Germanic Frankish tribes during the 5th century brought the area under the rule of the Merovingian kings. A gradual shift of power during the 8th century led the kingdom of the Franks to evolve into the Carolingian Empire.[18] The Treaty of Verdun in 843 divided the region into Middle and West Francia and therefore into a set of more or less independent fiefdoms which, during the Middle Ages, were vassals either of the King of France or of the Holy Roman Emperor.[18]

Many of these fiefdoms were united in the Burgundian Netherlands of the 14th and 15th centuries.[19] Emperor Charles V extended the personal union of the Seventeen Provinces in the 1540s, making it far more than a personal union by the Pragmatic Sanction of 1549 and increased his influence over the Prince-Bishopric of Liège.[20] The Eighty Years' War (1568–1648) divided the Low Countries into the northern United Provinces (*Belgica Foederata* in Latin, the "Federated Netherlands") and the Southern Netherlands (*Belgica Regia*, the "Royal Netherlands"). The latter were ruled successively by the Spanish and the Austrian Habsburgs and comprised most of modern Belgium. This was the theatre of most Franco-Spanish and Franco-Austrian wars during the 17th and 18th centuries. Following the campaigns of 1794 in the French Revolutionary Wars, the Low Countries—including territories that were never nominally under Habsburg rule, such as the Prince-Bishopric of Liège—were annexed by the French First Republic, ending Austrian rule in the region. The reunification of the Low Countries as the United Kingdom of the Netherlands occurred at the dissolution of the First French Empire in 1815.

The 1830 Belgian Revolution led to the establishment of a Catholic and bourgeois, officially French-speaking and neutral, independent Belgium under a provisional government and a national congress.[21][22] Since the installation of Leopold I as king on 21 July 1831 (which is now celebrated as Belgium's National Day[23]), Belgium has been a constitutional monarchy and parliamentary democracy, with a laicist constitution based on the Napoleonic code. Although the franchise was initially restricted, universal suffrage for men was introduced after the general strike of 1893 (with plural voting until 1919) and for women in 1949.

Episode of the Belgian Revolution of 1

The main political parties of the 19th century were the Catholic Party and the Liberal Party, with the Belgian Labour Party emerging towards the end of the 19th century. French was originally the single official language adopted by the nobility and the bourgeoisie. It progressively lost its overall importance as Dutch became recognised as well. This recognition became official in 1898 and in 1967 a Dutch version of the Constitution was legally accepted.[24]

The Berlin Conference of 1885 ceded control of the Congo Free State to King Leopold II as his private possession. From around 1900 there was growing international concern for the extreme and savage treatment of the Congolese population under Leopold II, for whom the Congo was

(1834),
by Egide Charles Gustave Wappers,
Museum of Ancient Art, Brussels

primarily a source of revenue from ivory and rubber production. In 1908 this outcry led the Belgian state to assume responsibility for the government of the colony, henceforth called the Belgian Congo.[25] Germany invaded Belgium in 1914 as part of the Schlieffen Plan and much of the Western Front fighting of World War I occurred in western parts of the country. The opening months of the war were known as the Rape of Belgium due to German atrocities. Belgium took over the German colonies of Ruanda-Urundi (modern day Rwanda and Burundi) during the war, and they were mandated to Belgium in 1924 by the League of Nations. In the aftermath of the First World War, the Prussian districts of Eupen and Malmedy were annexed by Belgium in 1925, thereby causing the presence of a German-speaking minority.

The country was again invaded by Germany in 1940 and was occupied until its liberation by the Allies in 1944. After World War II, a general strike forced king Leopold III, who many saw as collaborating with the Germans during the war, to abdicate in 1951.[*citation needed*] The Belgian Congo gained independence in 1960 during the Congo Crisis;[26] Ruanda-Urundi followed with its independence two years later. Belgium joined NATO as a founding member and formed the Benelux group of nations with the Netherlands and Luxembourg. Belgium became one of the six founding members of the European Coal and Steel Community in 1951 and of the European Atomic Energy Community and European Economic Community, established in 1957. The latter is now the European Union, for which Belgium hosts major administrations and institutions, including the European Commission, the Council of the European Union and the extraordinary and committee sessions of the European Parliament.

Politics

Main articles: Politics of Belgium and Belgian federal government

Belgium is a constitutional, popular monarchy and a parliamentary democracy. The bicameral federal parliament is composed of a Senate and a Chamber of Representatives. The former is made up of 40 directly elected politicians and 21 representatives appointed by the 3 Community parliaments, 10 co-opted senators and the children of the king, as Senators by Right who in practice do not cast their vote. The Chamber's 150 representatives are elected under a proportional voting system from 11 electoral districts. Belgium has compulsory voting and thus holds one of the highest rates of voter turnout in the world.[27]

Albert II, King of the Belgians

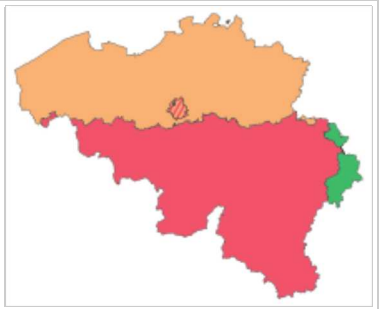
The King (currently Albert II) is the head of state, though with limited prerogatives. He appoints ministers, including a Prime Minister, that have the confidence of the Chamber of Representatives to form the federal government. The Council of Ministers is composed of no more than fifteen members. With the possible exception of the Prime Minister, the Council of Ministers is composed of an equal number of Dutch-speaking members and French-speaking members.[28] The judicial system is based on civil law and originates from the Napoleonic code. The Court of Cassation is the court of last resort, with the Court of Appeal one level below.

Belgium's political institutions are complex; most political power is organised around the need to represent the main cultural communities.[29] Since around 1970, the significant national Belgian political parties have split into distinct components that mainly represent the political and linguistic interests of these communities.[30] The major parties in each Community, though close to the political centre, belong to three main groups: Christian Democrats, Liberals, and Social Democrats.[31] Further notable parties came into being well after the middle of last century, mainly around linguistic, nationalist, or environmental themes and recently smaller ones of some specific liberal nature.[30]

Prime Minister Elio Di Rupo

A string of Christian Democrat coalition governments from 1958 was broken in 1999 after the first dioxin crisis, a major food contamination scandal.[32][33][34] A 'rainbow coalition' emerged from six parties: the Flemish and the French-speaking Liberals, Social Democrats, Greens.[35] Later, a 'purple coalition' of Liberals and Social Democrats formed after the Greens lost most of their seats in the 2003 election.[36] The government led by Prime Minister Guy Verhofstadt from 1999 to 2007 achieved a balanced budget, some tax reforms, a labour-market reform, scheduled nuclear phase-out and instigated legislation allowing more stringent war crime and more lenient soft drug usage prosecution. Restrictions on withholding euthanasia were reduced and same-sex marriage legalized. The government promoted active diplomacy in Africa[37] and opposed the invasion of Iraq.[38]

Verhofstadt's coalition fared badly in the June 2007 elections. For more than a year, the country experienced a political crisis.[39] This crisis was such that many observers speculated on a possible partition of Belgium.[13][14][15] From 21 December 2007 until 20 March 2008 the temporary

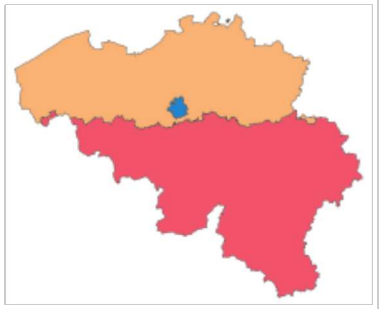


Verhofstadt III Government was in office. This coalition of the Flemish and Francophone Christian Democrats, the Flemish and Francophone Liberals together with the Francophone Social Democrats was an interim government until 20 March 2008. On that day a new government, led by Flemish Christian Democrat Yves Leterme, the actual winner of the federal elections of June 2007, was sworn in by the king. On 15 July 2008 Leterme announced the resignation of the cabinet to the king, as no progress in constitutional reforms had been made.[40] In December 2008 he once more offered his resignation to the king after a crisis surrounding the sale of Fortis to BNP Paribas.[41] At this juncture, his resignation was accepted and Christian Democratic and Flemish Herman Van Rompuy was sworn in as Prime Minister on 30 December 2008.[42]

After Herman Van Rompuy was designated the first permanent President of the European Council on 19 November 2009, he offered the resignation of his government to King Albert II on 25 November 2009. A few hours later, the new government under Prime Minister Yves Leterme was sworn in. On 22 April 2010, Leterme again offered the resignation of his cabinet to the king[43] after one of the coalition partners, the OpenVLD, withdrew from the government, and on 26 April 2010 King Albert officially accepted the resignation.[44] The Parliamentary elections in Belgium on 13 June 2010 saw the Flemish nationalist N-VA become the largest party in Flanders, and the Socialist Party PS the largest party in Wallonia.[45] Until December 2011, Belgium was governed by Leterme's caretaker government awaiting the end of the deadlocked negotiations for formation of a new government. By 30 March 2011 this set a new world record for the elapsed time without an official government, previously held by war-torn Iraq. Finally, in December 2011 the current government led by Walloon socialist Prime Ministre Elio Di Rupo was sworn in.

Communities and Regions

Main article: Communities, regions and language areas of Belgium



Following a usage which can be traced back to the Burgundian and Habsburgian courts,[46] in the 19th century it was necessary to speak French to belong to the governing upper class, and those who could only speak Dutch were effectively second-class citizens.[47] Late that century, and continuing into the 20th century, Flemish movements evolved to counter this situation.[48] While the Walloons and most Brusselers adopted French as their first language, the Flemings refused to do so and succeeded progressively in imposing Dutch as Flanders' official language.[48] Following World War II, Belgian politics became increasingly dominated by the autonomy of its two main language communities.[49] Intercommunal tensions rose and the constitution was amended to minimise the potential for conflict.[49]

Communities:
Flemish Community / Dutch language area
Flemish & French Community / bilingual language area
Wallonia-Brussels Federation / French language area
German-speaking Community / German language area

Based on the four language areas defined in 1962–63 (the Dutch, bilingual, French and German language areas), consecutive revisions of the country's constitution in 1970, 1980, 1988 and 1993 established a unique federal state with segregated political power into three levels:[50][51]

1. The federal government, based in Brussels.
2. The three language communities:
   - the Flemish Community (Dutch-speaking);
   - the Wallonia-Brussels Federation (French-speaking);
   - the German-speaking Community.
3. The three regions:
   - the Flemish Region, subdivided into five provinces;
   - the Walloon Region, subdivided into five provinces;
   - the Brussels-Capital Region.

Regions:
Flemish Region / Dutch language area
Brussels-Capital Region / bilingual language area

The constitutional language areas determine the official languages in their municipalities, as well as the geographical limits of the empowered institutions for specific matters.[52] Although this would allow for seven parliaments and governments, when the Communities and Regions were created in 1980, Flemish politicians decided to merge both.[53] Thus the Flemings just have one single institutional body of parliament and government is empowered for all except federal and specific municipal matters.[nb 2]

The overlapping boundaries of the Regions and Communities have created two notable peculiarities: the territory of the Brussels-Capital Region (which came into existence nearly a decade after the other regions) is included in both the Flemish and French Communities, and the territory of the German-speaking Community lies wholly within the Walloon Region. Conflicts about jurisdiction between the bodies are resolved by the Constitutional Court of Belgium. The

structure is intended as a compromise to allow different cultures to live together peacefully.[10]

Walloon Region / French and German language areas

The Federal State's authority includes justice, defence, federal police, social security, nuclear energy, monetary policy and public debt, and other aspects of public finances. State-owned companies include the Belgian Post Group and Belgian Railways. The Federal Government is responsible for the obligations of Belgium and its federalized institutions towards the European Union and NATO. It controls substantial parts of public health, home affairs and foreign affairs.[54] The budget—without the debt—controlled by the federal government amounts to about 50% of the national fiscal income. The federal government employs around 12% of the civil servants.[55]

Communities exercise their authority only within linguistically determined geographical boundaries, originally oriented towards the individuals of a Community's language: culture (including audiovisual media), education and the use of the relevant language. Extensions to personal matters less directly connected with language comprise health policy (curative and preventive medicine) and assistance to individuals (protection of youth, social welfare, aid to families, immigrant assistance services, and so on.).[56]

Regions have authority in fields that can be broadly associated with their territory. These include economy, employment, agriculture, water policy, housing, public works, energy, transport, the environment, town and country planning, nature conservation, credit and foreign trade. They supervise the provinces, municipalities and intercommunal utility companies.[57]

In several fields, the different levels each have their own say on specifics. With education, for instance, the autonomy of the Communities neither includes decisions about the compulsory aspect nor allows for setting minimum requirements for awarding qualifications, which remain federal matters.[54] Each level of government can be involved in scientific research and international relations associated with its powers. The treaty-making power of the Regions' and Communities' Governments is the broadest of all the Federating units of all the Federations all over the world.[58][59][60]

Geography

Main article: Geography of Belgium

Belgium shares borders with France (620 km), Germany (167 km), Luxembourg (148 km) and the Netherlands (450 km). Its total area, including surface water area, is 33,990 square kilometres; land area alone is 30,528 km^2. It lies between latitudes 49° and 53° N, and longitudes 2° and 7° E.[*citation needed*]

Polders along the Yser river

Belgium has three main geographical regions: the coastal plain in the north-west and the central plateau both belong to the Anglo-Belgian Basin; the Ardennes uplands in the south-east are part of the Hercynian orogenic belt. The Paris Basin reaches a small fourth area at Belgium's southernmost tip, Belgian Lorraine.[61]

The coastal plain consists mainly of sand dunes and polders. Further inland lies a smooth, slowly rising landscape irrigated by numerous waterways, with fertile valleys and the northeastern sandy plain of the Campine (*Kempen*). The thickly forested hills and plateaus of the Ardennes are more rugged and rocky with caves and small gorges. Extending westward into France, this area is eastwardly connected to the Eifel in Germany by the High Fens plateau, on which the Signal de Botrange forms the country's highest point at 694 metres (2,277 ft).[62][63]

The climate is maritime temperate with significant precipitation in all seasons (Köppen climate classification: *Cfb*), like most of northwest Europe.[64] The average temperature is lowest in January at 3 °C (37.4 °F) and highest in July at 18 °C (64.4 °F). The average precipitation per month varies between 54 millimetres (2.1 in) for February or April, to 78 mm (3.1 in) for July.[65] Averages for the years 2000 to 2006 show daily temperature minimums of 7 °C (44.6 °F) and maximums of 14 °C (57.2 °F) and monthly rainfall of 74 mm (2.9 in); these are about 1 °C and nearly 10 millimetres above last century's normal values, respectively.[3]

Phytogeographically, Belgium is shared between the Atlantic European and Central European provinces of the Circumboreal Region within the Boreal Kingdom.[66] According to the World Wide Fund for Nature, the territory of Belgium belongs to the ecoregion of Atlantic mixed forests.[67] Because of its high population density, its location in the centre of Western Europe and inadequate political effort, Belgium faces serious environmental problems. A 2003 report suggested Belgian natural waters (rivers and groundwater) to have the lowest water quality of the 122 countries studied.[68] In the 2006 pilot Environmental Performance Index, Belgium scored 75.9% for overall environmental performance and was ranked lowest of the EU member countries, though it was only 39th of 133 countries.[69]

Provinces of Belgium

The territory of Belgium is divided into three Regions, two of which, Flanders and Wallonia, are in turn subdivided into provinces; the third Region, Brussels, being neither a province nor a part of a province.

Region	Flag	Province	Province (Dutch name)	Province (French name)	Capital	Largest city	Area (km²)	Population	Density (per km²)
Flanders		Antwerp	**Antwerpen**	Anvers	Antwerp (Dutch: *Antwerpen*) (French: Anvers)	Antwerp (Dutch: *Antwerpen*) (French: Anvers)	2,860	1,682,683	587

Economy

Main article: Economy of Belgium

Belgium's strongly globalized economy[70] and its transportation infrastructure are integrated with the rest of Europe. Its location at the

heart of a highly industrialized region helped make it the world's 15th largest trading nation in 2007.[71][72] The economy is characterized by a highly productive work force, high GNP and high exports per capita.[73] Belgium's main imports are raw materials, machinery and equipment, chemicals, raw diamonds, pharmaceuticals, foodstuffs, transportation equipment, and oil products. Its main exports are machinery and equipment, chemicals, finished diamonds, metals and metal products, and foodstuffs.[74]

The Belgian economy is heavily service-oriented and shows a dual nature: a dynamic Flemish economy and a Walloon economy that lags behind.[10][75][nb 3] One of the founding members of the European Union, Belgium strongly supports an open economy and the extension of the powers of EU institutions to integrate member economies. Since 1922, through the Belgium-Luxembourg Economic Union, Belgium and Luxembourg have been a single trade market with customs and currency union.[76]

Steelmaking along the Meuse River at Ougrée, near Liège

Belgium was the first continental European country to undergo the Industrial Revolution, in the early 19th century.[77] Liège and Charleroi rapidly developed mining and steelmaking, which flourished until the mid-20th century in the Sambre–Meuse valley, the sillon industriel and made Belgium one of the top three most industrialized nations in the world from 1830 to 1910.[78][79] However, by the 1840s the textile industry of Flanders was in severe crisis, and the region experienced famine from 1846 to 1850.[80][81]

After World War II, Ghent and Antwerp experienced a rapid expansion of the chemical and petroleum industries. The 1973 and 1979 oil crises sent the economy into a recession; it was particularly prolonged in Wallonia, where the steel industry had become less competitive and experienced serious decline.[82] In the 1980s and 1990s, the economic centre of the country continued to shift northwards and is now concentrated in the populous Flemish Diamond area.[83]

By the end of the 1980s, Belgian macroeconomic policies had resulted in a cumulative government debt of about 120% of GDP. As of 2006, the budget was balanced and public debt was equal to 90.30% of GDP.[84] In 2005 and 2006, real GDP growth rates of 1.5% and 3.0%, respectively, were slightly above the average for the Euro area. Unemployment rates of 8.4% in 2005 and 8.2% in 2006 were close to the area average. By October 2010, this had grown to 8.5% compared to an average rate of 9.6% for the European Union as a whole (EU 27).[85][86] From 1832 until 2002, Belgium's currency was the Belgian franc. Belgium switched to the euro in 2002, with the first sets of euro coins being minted in 1999. The standard Belgian euro coins designated for circulation show the portrait of King Albert II.

Despite a 18% decrease observed from 1970 to 1999, Belgium still had in 1999 the highest rail network density within the European Union with 113.8 km/1 000 km^2. Due to the large population density in Belgium, this number corresponds to the quite low amount of 3.40% kilometers per capita in comparison to the mean EU value of 4.06%. On the other hand, the same period of time, 1970–1999, has seen a huge growth (+56%) of the motorway network. In 1999, the density of km motorways per 1000 km^2 and 1000 inhabitants amounted to 55.1 and 16.5 respectively and were significantly superior to the EU's means of 13.7 and 15.9.[87] Belgium however experiences one of the most congested traffic in Europe. In 2010, commuters to the cities of Brussels and Antwerp spent respectively 65 and 64 hours a year in traffic jams.[88] Like in most small european countries, more than 80% of the airways traffic is handled by a single airport, the Brussels Airport. The ports of Antwerp and Zeebrugge share more than 80% of Belgian maritime traffic, Antwerp being the second European harbour with a gross weight of goods handled of 115 988 000 t in 2000 after a growth of 10.9% over the preceeding five years.[87][89]

Military

Main article: Belgian Army

The Belgian Armed Forces have about 46,000 active troops. This number corresponded in 2009 to a yearly defence budget of $6 billion (11th in the EU) or 1.24% of GDP (19th in the EU).[90] They are organised into one unified structure which consists of four main components: Land Component, or the Army; Air Component, or the Air Force; Naval Component, or the Navy; Medical Component. The operational commands of the four components are subordinate to the Staff Department for Operations and Training of the Ministry of Defence, which is headed by the Assistant Chief of Staff Operations and Training, and to the Chief of Defence.[91]

The effects of World War II made collective security a priority for Belgian foreign policy. In March 1948 Belgium signed the Treaty of Brussels, and then joined NATO in 1948. However the integration of the armed forces into NATO did not begin until after the Korean War.[92]

Science and technology

Further information: Science and technology in Brussels, Science and technology in Flanders, and Science and technology in Wallonia

Gerardus Mercator

Contributions to the development of science and technology have appeared throughout the country's history. The 16th century Early Modern flourishing of Western Europe included cartographer Gerardus Mercator, anatomist Andreas Vesalius, herbalist Rembert Dodoens[93] and mathematician Simon Stevin among the most influential scientists.[94]

Chemist Ernest Solvay[95] and engineer Zenobe Gramme (École Industrielle de Liège)[96] gave their names to the Solvay process and the Gramme dynamo, respectively, in the 1860s. Bakelite was developed in 1907–1909 by Leo Baekeland. Ernest Solvay also acted as a major philantropist and gave its name to the Solvay Institute of Sociology, the Solvay Brussels School of Economics and Management and the International Solvay Institutes for Physics and Chemistry which are now part of the Université Libre de Bruxelles. In 1911, he started a series of conferences, the Solvay Conferences on Physics and Chemistry, which have had a deep impact on the evolution of quantum physics and chemistry.[97] A major contribution to fundamental science was also due to a Belgian, Georges Lemaître (Catholic University of Leuven), who is credited with proposing the Big Bang theory of the origin of the universe in 1927.[98]

Three Nobel Prizes in Physiology or Medicine were awarded to Belgians: Jules Bordet (Université Libre de Bruxelles) in 1919, Corneille Heymans (University of Ghent) in 1938 and Albert Claude (Université Libre de Bruxelles) together with Christian De Duve (Université Catholique de Louvain) in 1974. Ilya Prigogine (Université Libre de Bruxelles) was awarded the Nobel Prize in Chemistry in 1977.[99] Two Belgian mathematicians have been awarded the Fields Medal: Pierre Deligne in 1978 and Jean Bourgain in 1994.[100][101]

Demographics

Main article: Demographics of Belgium

Brussels, the capital city and largest metropolitan area of Belgium

In the beginning of 2007, nearly 92% of the population had Belgian citizenship, and other European Union member citizens account for around 6%. The prevalent foreign nationals were Italian (171,918), French (125,061), Dutch (116,970), Moroccan (80,579), Spanish (42,765), Turkish (39,419) and German (37,621).[102][103] Immigrants since 1945 and their descendents are estimated by 2008 to have formed 22% of the total population.[104] Of these 'New Belgians', 1,313,000 (56%) are of European ancestry and the 950,000 others originated from the rest of the world.[104]

Almost all of the Belgian population is urban—97% in 2004.[105] The population density of Belgium is 342 per square kilometre (886 per square mile). The most densely inhabited area is Flanders,[106] and in particular the Flemish Diamond, outlined by the Antwerp–Leuven–Brussels–Ghent agglomerations.[107] In 2007, there were 1.38 million foreign-born residents in Belgium, corresponding to 12.9% of the total population. Of these, 685 000 (6.4%) were born outside the EU and 695 000 (6.5%) were born in another EU Member State.[108]

The Ardennes have the lowest density. As of 2006, the Flemish Region had a population of about 6,078,600, with Antwerp (457,749), Ghent (230,951) and Bruges (117,251) its most populous cities; Wallonia had 3,413,978, with Charleroi (201,373), Liège (185,574) and Namur (107,178) its most populous. Brussels houses 1,018,804 in the Capital Region's 19 municipalities, two of which have over 100,000 residents.[109]

Languages

Main article: Languages of Belgium

Belgium has three official languages, which are in order of native speaker population in Belgium: Dutch, French and German. A number of non-official minority languages are spoken as well.[110] As no census exists, there are no official statistical data regarding

the distribution or usage of Belgium's three official languages or their dialects.[111] However, various criteria, including the language(s) of parents, of education, or the second-language status of foreign born, may provide suggested figures. An estimated 59% of the Belgian population speaks Dutch (often colloquially referred to as "Flemish"), and 40% of the population speaks French.[nb 4]

Bilingual signs in Brussels

Total Dutch speakers are 6.23 million, concentrated in the northern Flanders region, while French speakers comprise 3.32 million in Wallonia and an estimated 0.87 million or 85% of the officially bilingual Brussels-Capital Region.[nb 5][112] The German-speaking Community is made up of 73,000 people in the east of the Walloon Region; around 10,000 German and 60,000 Belgian nationals are speakers of German. Roughly 23,000 more German speakers live in municipalities near the official Community.[6][2]

Both Belgian Dutch and Belgian French have minor differences in vocabulary and semantic nuances from the varieties spoken respectively in the Netherlands and France. Many Flemish people still speak dialects of Dutch in their local environment. Walloon, once the main regional language of Wallonia, is now only understood and spoken occasionally, mostly by elderly people. Wallonia's dialects, along with those of Picard,[113] are not used in public life and have been replaced by French.

Education

Main article: Education in Belgium

Education is compulsory from six to 18 years of age for Belgians.[114] Among OECD countries in 2002, Belgium had the third-highest proportion of 18–21 year-olds enrolled in postsecondary education, at 42%.[115] Though an estimated 99% of the adult population is literate, concern is rising over functional illiteracy.[113][116] The Programme for International Student Assessment, coordinated by the OECD, currently ranks Belgium's education as the 19th best in the world, being significantly higher than the OECD average.[117] Education being organised separately by each, the Flemish Community scores noticeably above the French and German-speaking Communities.[118]

Mirroring the dual structure of the 19th-century Belgian political landscape, characterized by the Liberal and the Catholic parties, the educational system is segregated within a secular and a religious segment. The secular branch of schooling is controlled by the communities, the provinces, or the municipalities, while religious, mainly Catholic branch education, is organised by religious authorities, although subsidized and supervised by the communities.[119]

Religion

Main article: Religion in Belgium

Basilica of the Sacred Heart, Brussels

Since the country's independence, Roman Catholicism, counterbalanced by strong freethought movements, has had an important role in Belgium's politics.[120] However Belgium is largely a secular country as the *laicist* constitution provides for freedom of religion, and the government generally respects this right in practice. During the reigns of Albert I and Baudouin, the monarchy had a reputation of deeply rooted Catholicism.[121] Roman Catholicism has traditionally been Belgium's majority religion; being especially strong in Flanders. However, by 2009 Sunday church attendance was 5% for Belgium in total; 3% in Brussels,[122] and 5.4% in Flanders. Church attendance in 2009 in Belgium is roughly half of the Sunday church attendance in 1998 (11% for the total of Belgium in 1998).[123] Despite the 6% drop in Sunday church attendance in Belgium from 11% to 5% over this nine-year period, Catholicism nevertheless remains an important force in society.[121]

Symbolically and materially, the Roman Catholic Church remains in a favourable position.[121] Belgium has three officially recognized religions: Christianity (Catholic, Protestantism, Orthodoxy and Anglicanism), Islam and Judaism.[124] While other minority religions, such as Hinduism, do not yet have such status, Buddhism took the first steps toward legal recognition in 2007.[119][125][126] According to the *2001 Survey and Study of Religion*,[127] about 47% of the population identify themselves as belonging to the Catholic Church, while Islam is the second-largest religion at 3.5%. A 2006 inquiry in Flanders, considered to be a more religious region than Wallonia, showed that 55% considered themselves religious and that 36% believed that God created the world.[128]

A 2008 estimate found[129] that 6% of the Belgian population, about 628,751, is Muslim (98% Sunni), while a 2011 estimate claims 900,000 Muslims in the country.[130] Muslims constitute 25.5% of the population of Brussels, 4.0% of Wallonia and 3.9% of Flanders. The majority of Belgian Muslims live in the major cities, such as Antwerp, Brussels and Charleroi. The largest group of immigrants in Belgium are Moroccans, with 264,974 people. The Turks are the third-largest group, and the second-largest Muslim ethnic group, numbering 159,336.[131]

According to the Eurobarometer Poll in 2005, 43% of Belgian citizens responded that "they believe there is a God", whereas 29% answered that "they believe there is some sort of spirit or life force" and 27% that "they do not believe there is any sort of spirit, God, or life force".[132]

Health

Main article: Healthcare in Belgium

The Belgians are known to enjoy good health. Their life expectancy numbered 79.5 years in 2004. Since 1960, life expectancy has, in line with the European average, grown by two months per year. Death is in Belgium mainly due to heart and vascular disorders, neoplasms, disorders of the respiratory system and unnatural causes of death (accidents, suicide). Non-natural causes of death and cancer are the most common causes of death for females up to age 24 and males up to age 44.[133]

Healthcare in Belgium is financed through both social security contributions and taxation. Health insurance is compulsory. Health care is delivered by a mostly private system of independent medical practitioners and hospitals. Most of the time each provided service is directly paid by the patient and reimbursed later on by health insurance companies.[133] Belgian health care system is supervised and financed by the federal government, the three Communities and the three Regions, i.e. six distinct Ministries (the Flemish Community and Region have merged).[133]

Culture

Main article: Culture of Belgium

Despite its political and linguistic divisions, the region corresponding to today's Belgium has seen the flourishing of major artistic movements that have had tremendous influence on European art and culture. Nowadays, to a certain extent, cultural life is concentrated within each language Community, and a variety of barriers have made a shared cultural sphere less pronounced.[10][134][135] Since the 1970s, there are no bilingual universities in the country except the Royal Military Academy and the Antwerp Maritime Academy, no common media[136] and no single large cultural or scientific organisation in which both main communities are represented. The forces that once held the Belgians together—Roman Catholicism and economic and political opposition to the Dutch—are no longer strong.[137]

Fine arts

See also: List of Belgian painters, Architecture of Belgium, and Music of Belgium

Contributions to painting and architecture have been especially rich. The Mosan art, the Early Netherlandish,[138] the Flemish Renaissance and Baroque painting[139] and major examples of Romanesque, Gothic, Renaissance and Baroque architecture[140] are milestones in the history of art. While the 15th century's art in the Low Countries is dominated by the religious paintings of Jan van Eyck and Rogier van der Weyden, the 16th century is characterized by a broader panel of styles such as Peter Breughel's landscape paintings and Lambert Lombard's representation of the antique.[141] Though the Baroque style of Peter Paul Rubens and Anthony van Dyck flourished in the early 17th century in the Southern Netherlands,[142] it gradually declined thereafter.[143][144]

The Ghent Altarpiece: The Adoration of the Mystic Lamb (interior view), painted 1432 by van Eyck

During the 19th and 20th centuries many original romantic, expressionist and surrealist Belgian painters emerged, including James Ensor and other artists belonging to the Les XX group, Constant Permeke, Paul Delvaux and René Magritte. The avant-garde CoBrA movement appeared in the 1950s, while the sculptor Panamarenko remains a remarkable figure in contemporary art.[145][146] The multidisciplinary artist Jan Fabre and the painter Luc Tuymans are other internationally renowned figures on the contemporary art scene.

Belgian contributions to architecture also continued into the 19th and 20th centuries, including the work of Victor Horta and Henry van de Velde, who were major initiators of the Art Nouveau style.[147][148]

Interior of the Horta Museum, in Saint-Gilles, Brussels

The vocal music of the Franco-Flemish School developed in the southern part of the Low Countries and was an important contribution to Renaissance culture.[149] In the 19th and 20th centuries, there was an emergence of major violinists, such as Henri Vieuxtemps, Eugène Ysaÿe and Arthur Grumiaux, while Adolphe Sax invented the saxophone in 1846. The composer César Franck was born in Liège in 1822. Contemporary music in Belgium is also of repute. Jazz musician Toots Thielemans and singer Jacques Brel have achieved global fame. In rock/pop music, Telex, Front 242, K's Choice, Hooverphonic, Zap Mama, Soulwax and dEUS are well known. In the heavy metal scene, bands like Machiavel, Channel Zero and Enthroned have a worldwide fan-base.[150]

Belgium has produced several well-known authors, including the poet Emile Verhaeren and novelists Hendrik Conscience, Georges Simenon, Suzanne Lilar and Amélie Nothomb. The poet and playwright Maurice Maeterlinck won the Nobel Prize in literature in 1911. *The Adventures of Tintin* by Hergé is the best known of Franco-Belgian comics, but many other major authors, including Peyo (*The Smurfs*), André Franquin (*Gaston Lagaffe*), Edgar P. Jacobs and Willy Vandersteen brought the Belgian cartoon strip industry a worldwide fame.[151]

Belgian cinema has brought a number of mainly Flemish novels to life on-screen.[nb 6] Other Belgian directors include André Delvaux, Stijn Coninx, Luc and Jean-Pierre Dardenne; well-known actors include Jan Decleir and Marie Gillain; and successful films include *Man Bites Dog* and *The Alzheimer Affair*.[152] In the 1980s, Antwerp's Royal Academy of Fine Arts produced important fashion trendsetters, known as the Antwerp Six.[153]

Folklore

Further information: Folklore of the Low Countries

The Gilles of Binche, in costume, wearing wax masks

Folklore plays a major role in Belgium's cultural life: the country has a comparatively high number of processions, cavalcades, parades, 'ommegangs' and 'ducasses',[nb 7] 'kermesse' and other local festivals, nearly always with an originally religious or mythological background. The Carnival of Binche with its famous Gilles and the 'Processional Giants and Dragons' of Ath, Brussels, Dendermonde, Mechelen and Mons are recognised by UNESCO as Masterpieces of the Oral and Intangible Heritage of Humanity.[154]

Other examples are the Carnival of Aalst; the still very religious processions of the Holy Blood in Bruges, Virga Jesse Basilica in Hasselt and Basilica of Our Lady of Hanswijk in Mechelen; 15 August festival in Liège; and the Walloon festival in Namur. Originated in 1832 and revived in the 1960s, the Gentse Feesten have become a modern tradition. A major non-official holiday is the Saint Nicholas Day, a festivity for children and, in Liège, for students.[155]

Cuisine

Main article: Cuisine of Belgium

Many highly ranked Belgian restaurants can be found in the most influential restaurant guides, such as the Michelin Guide.[156] Belgium is famous for beer, chocolate, waffles and french fries. Contrary to their name, french fries also originated in Belgium. The national dishes are "steak and fries with salad", and "mussels with fries".[157][158][159]

Brands of Belgian chocolate and pralines, like Côte d'Or, Guylian, Neuhaus, Leonidas, Corné and Galler are famous, as well as independent producers such as Burie and Del Rey in Antwerp and Mary's in Brussels.[160] Belgium produces over 1100 varieties of beer.[161][162] The Trappist beer of the Abbey of Westvleteren has repeatedly been rated the world's best beer.[163][164][165] The biggest brewer in the world by volume is Anheuser-Busch InBev, based in Leuven.[166]

Sports

Main article: Sport in Belgium

Kim Clijsters was WTA Player of the Year in 2005 and 2010

Since the 1970s, sports clubs and federations are organised separately within each language community.[167] Association football is one of the most popular sports in both parts of Belgium, together with cycling, tennis, swimming and judo.[168] With five victories in the Tour de France and numerous other cycling records, Belgian Eddy Merckx is regarded as one of the greatest cyclists of all time.[169] His hour speed record (set in 1972) stood for 12 years. Jean-Marie Pfaff, a former Belgian goalkeeper, is considered one of the greatest in the history of football (soccer).[170] Belgium and The Netherlands previously hosted the UEFA European Football Championship in 2000. Belgium hosted the 1972 European Football Championships.

Brussels waffles, commonly known as Belgian waffles outside of Belgium

Kim Clijsters and Justine Henin both were Player of the Year in the Women's Tennis Association as they were ranked the number one female tennis player. The Spa-Francorchamps motor-racing circuit hosts the Formula One World Championship Belgian Grand Prix. The Belgian driver, Jacky Ickx, won eight Grands Prix and six 24 Hours of Le Mans and finished twice as runner-up in the Formula One World Championship. Belgium also has a strong reputation in motocross.[171] Sporting events annually held in Belgium include the Memorial Van Damme athletics competition, the Belgian Grand Prix Formula One, and a number of classic cycle races such as the Tour of Flanders and Liège–Bastogne–Liège. The 1920 Summer Olympics were held in Antwerp.

Notes

1. ^ Belgium is also a member of, or affiliated to, many international organisations, including ACCT, AfDB, AsDB, Australia Group, Benelux, BIS, CCC, CE, CERN, EAPC, EBRD, EIB, EMU, ESA, EU, FAO, G-10, IAEA, IBRD, ICAO, ICC, ICRM, IDA, IDB, IEA, IFAD, IFC, IFRCS, IHO, ILO, IMF, IMO, IMSO, Intelsat, Interpol, IOC, IOM, ISO, ITU, MONUC (observers), NATO, NEA, NSG, OAS (observer), OECD, OPCW, OSCE, PCA, UN, UNCTAD, UNECE, UNESCO, UNHCR, UNIDO, UNMIK, UNMOGIP, UNRWA, UNTSO, UPU, WADB (non-regional), WEU, WHO, WIPO, WMO, WTrO, ZC.
2. ^ The Constitution set out seven institutions each of which can have a parliament, government and administration. In fact there are only six such bodies because the Flemish Region merged into the Flemish Community. This single Flemish body thus exercises powers about Community matters in the bilingual area of Brussels-Capital and in the Dutch language area, while about Regional matters only in the latter.
3. ^ The richest (per capita income) of Belgium's three regions is the Flemish Region, followed by the Walloon Region and lastly the Brussels-Capital Region. The ten municipalities with the highest reported income are: Laethem-Saint-Martin, Keerbergen, Lasne, Oud-Heverlee, Hove, De Pinte, Meise, Knokke-Heist, Bierbeek."Où habitent les Belges les plus riches?" (http://trends.rnews.be/fr/economie/actualite/politique-economique/ou-habitent-les-belges-les-plus-riches/article-1194966031033.htm) . *trends.be*. 2010. http://trends.rnews.be/fr/economie/actualite/politique-economique/ou-habitent-les-belges-les-plus-riches/article-1194966031033.htm. Retrieved 15 July 2011.
4. ^ Native speakers of Dutch living in Wallonia and of French in Flanders are relatively small minorities that furthermore largely balance one another, hence counting all inhabitants of each unilingual area to the area's language can cause only insignificant inaccuracies (99% can speak the language). Dutch: Flanders' 6.079 million inhabitants and about 15% of Brussels' 1.019 million are 6.23 million or 59.3% of the 10.511 million inhabitants of Belgium (2006); German: 70,400 in the German-speaking Community (which has language facilities for its less than 5% French-speakers) and an estimated 20,000–25,000 speakers of German in the Walloon Region outside the geographical boundaries of their official Community, or 0.9%; French: in the latter area as well as mainly in the rest of Wallonia (3.414 − 0.093 = 3.321 million) and 85% of the Brussels inhabitants (0.866 million) thus 4.187 million or 39.8%; together indeed 100%.
5. ^ Flemish Academic Eric Corijn (initiator of Charta 91 (http://www.charta91.be/)), at a colloquium regarding Brussels, on 2001-12-05, states that in Brussels there is 91% of the population speaking French at home, either alone or with another language, and there is about 20% speaking Dutch at home, either alone (9%) or with French (11%)—After ponderation, the repartition can be estimated at between 85 and 90% French-speaking, and the remaining are Dutch-speaking, corresponding to the estimations based on languages chosen in Brussels by citizens for their official documents (ID, driving licenses, weddings, birth, sex, and so on); all these statistics on language are also available at Belgian Department of Justice (for weddings, birth, sex), Department of Transport (for Driving licenses), Department of Interior (for IDs), because there are no means to know *precisely* the proportions since Belgium has abolished 'official' linguistic censuses, thus official documents on language choices can only be estimations. For a web source on this topic, see e.g. General online sources: Janssens, Rudi
6. ^ Notable Belgian films based on works by Flemish authors include: *De Witte* (author Ernest Claes) movie by Jan Vanderheyden and Edith

History of Belgium

From Wikipedia, the free encyclopedia

The **history of Belgium**, from pre-history to the present day, is intertwined with the histories of its European neighbours, in particular those of the Netherlands and Luxembourg, but also Germany and France. For reasons of European politics, the name of the country is relatively new, originating in the 19th century, but the country's modern history can be traced further back under various other names such as the Austrian Netherlands, or Spanish Netherlands, covering approximately the same area. In the Middle Ages in contrast, the region of Belgium was divided differently, and connected to larger entities such as Lotharingia and the Burgundian Netherlands.

A feature of its history is the number of wars between other European powers which have included campaigns on Belgian territory, causing it to be nicknamed "The Cockpit of Europe". It is also remarkable as a European nation which contains, and is divided by, a language boundary between Latin-derived French, and Germanic Dutch and German.

Before independence

Prehistory

On Belgian territory Neanderthal fossils were discovered at Engis in 1829-30, La Naulette in 1866, Grotte de Spy in 1886, Grotte Scladina in 1993, and Veldwezelt-Hezerwater, some dating back to at least 100,000BP[1].

Flint knives discovered in Belgian caves

The earliest Neolithic farming technology of northern Europe, the so-called LBK culture, reached the east of Belgium at its furthest northwesterly stretch from its origins in southeast Europe. Its expansion stopped in the Hesbaye region of eastern Belgium around 5000 BCE. The Belgian LBK is notable for its use of defensive walls around villages, something which may or may not have been necessary because of the proximity of hunter gatherers.[2][3][4]

So-called Limburg pottery and La Hoguette pottery are styles which stretch into northwestern France and the Netherlands, but it has sometimes been argued that these technologies are the result of pottery technology spreading beyond the original LBK farming population of eastern Belgium and northeastern France, and being made by hunter gatherers.[5] A slightly later-starting Neolithic culture found in central Wallonia is the so-called "Groupe de Blicquy", which may represent an offshoot of the LBK settlers.One notable archaeological site in this region is the Neolithic flint mines of Spiennes. Farming in Belgium however failed to take permanent hold at first. The LBK and Blicquy cultures disappeared and there is a long gap before a new farming culture, the Michelsberg culture, appeared and became widespread. Hunter gatherers of the Swifterbant culture apparently remained in the sandy north of Belgium, but apparently became more and more influenced by farming and pottery technology.[3]

In the third and late fourth millennia BCE, the whole of Flanders shows relatively little evidence of human habitation. Although it is felt that there was a continuing human presence, the types of evidence available make judgement about the details very difficult.[6] The Seine-Oise-Marne culture spread into the Ardennes, and is associated with megalithic sites there (for example Wéris), but did not disperse over all of Belgium. To the north and east, in the Netherlands, a semi-sedentary culture group has been proposed to have existed, the so-called Vlaardingen-Wartburg-Stein complex, which possibly developed from the above mentioned Swifterbant and Michelsburg cultures.[7] The same pattern continues into the late Neolithic and early Bronze Age. In the last part of the Neolithic, evidence is found for the Corded Ware and Bell Beaker cultures in the south of the Netherlands, but these cultures also do not seem to have had a big impact in all of Belgium.

The population of Belgium started to increase permanently with the late Bronze age from around 1750 BC. Three possibly related European cultures arrived in sequence. First the Urnfield culture arrived (for example, tumuli are found at Ravels and Hamont-Achel in the Campine). Then, coming into the Iron Age, the Hallstatt culture, and the La Tène culture. All three of these are associated with Indo-European languages, with specifically Celtic languages being especially associated with La Tène material culture, and possibly Halstatt. This is because historical Greek and Roman records from areas where this culture settled show Celtic placenames and personal names. However it is possible in Belgium that especially in the northern areas the Hallstatt and La Tène cultures were brought by new elites, and that the main language of the population was not Celtic. From 500 BC Celtic tribes settled in the region and traded with the Mediterranean world. From c. 150 BC, the first coins came into use, under the influence of trade with the Mediterranean.

When Julius Caesar arrived in the area, as recorded in his *De Bello Gallico*, the inhabitants of Belgium and northwestern France were known as the Belgae (after whom modern Belgium is named), and they were considered to be the northern part of Gaul. The distinction between the Belgae to the North and the Gauls to the south of them, whom Caesar called Celts, is disputed. Caesar says that the Belgae were separated from the rest of Gaul by language, law and custom, but does not go into detail. It seems clear that Gaulish culture was very influential upon the Belgae. On the other hand, linguists have proposed that there is evidence that at least part of the Belgic population had previously spoken an Indo European language related to, but distinct from, Celtic and Germanic, and amongst the northern Belgae, Celtic may never have been the language of the majority. (See Belgian language and Nordwestblock.)[8]

Caesar reported that the northern Belgae, approximately in the area of modern Belgium, were less economically developed, and militarily dangerous people, similar to the people east of the Rhine river. He referred to both these groups as *Germani*. The area was still marked by dense forests, swamps and other types of wilderness. There is also less evidence of large settlements and trade. In fact, Caesar was informed that a large part of the Belgae had Germanic ancestry, and in particular the Belgae living in the area stretching from eastern Belgium to the Rhine were referred to by Caesar as the *Germani cisrhenani*. According to Tacitus, writing a generation later, these were in fact the original tribe to be

called *Germani*, and all other uses of the term extended from them.[9] Modern linguists use the word "germanic" to refer to people speaking Germanic languages and it is possible that all or part of the Belgae were Germanic in this sense. On the other hand it is not known for sure whether even the Belgian *Germani* spoke a Germanic language, and their tribal and personal names are clearly Celtic. This is in fact also true of the possibly related tribes across the Rhine from them at this time. Archaeologists have had difficulty finding evidence of the exact migrations from east of the Rhine which Caesar reports and more generally there has been skepticism about using him in this way due to the political motives of his commentaries. But there is a general impression that the Belgae were a relatively stable population going back to Urnfield times, but with a much more recently immigrated elite class who would have been of more interest to Caesar.[10]

Antiquity

Main article: Gallia Belgica

By 51BC, the Belgae were overrun by the armies of Julius Caesar, as described in his chronicle *De Bello Gallico*.

The Roman province Gallia Belgica in around 120 CE. (For a map in 58 BC, see Gallic Wars)

In this same work Julius Caesar referred to the Belgae as "the bravest of all the Gauls" (*"horum omnium fortissimi sunt belgae"*).

What is now Belgium flourished as a province of Rome. This province was much larger than the modern Belgium and included five cities: Nemetacum (Arras), Divodurum (Metz), Bagacum (Bavay), Atuatuca Tongrorum (Tongeren), Durocorturum (Reims). The northeastern corner of this province, including Tongeren and the area of the earlier *Germani*, was united with the militarized Rhine border to form a newer province known as Germania Inferior. Its cities included Ulpia Noviomagus (Nijmegen), Colonia Ulpia Trajana (Xanten) and the capital Colonia Agrippina (Cologne). These two provinces include all of modern Belgium and important parts of the Netherlands, France and Germany.[11]

Early Middle Ages

After the Roman Empire collapsed (5th century), Germanic tribes invaded the Roman province of "Gallia". One of these peoples, the Franks, eventually managed to install a new kingdom under the rule of the Merovingian Dynasty. Clovis I was the best-known king of this dynasty. He ruled from his base in northern France, but his empire included today's Belgium. He converted to Christianity. Christian scholars, mostly Irish monks, preached Christianity to the populace and started a wave of conversion (Saint Servatius, Saint Remacle, Saint Hadelin).

The Merovingians were short-lived and were succeeded by the Carolingian Dynasty. After Charles Martel countered the Moorish invasion from Spain (732 — Poitiers), the King Charlemagne (born close to Liège in Herstal or Jupille) brought a huge part of Europe under his rule and was crowned the "Emperor of the Holy Roman Empire" by the Pope Leo III (800 in Aachen).

The Vikings were defeated in 891 by Arnulf of Carinthia near Leuven. The Frankish lands were divided and reunified several times under the Merovingian and Carolingian dynasties, but eventually were firmly divided into France and the Holy Roman Empire. The parts of the County of Flanders stretching out west of the river Scheldt (Schelde in Dutch, Escaut in French) became part of France during the Middle Ages, but the remainders of the County of Flanders and the Low Countries were part of the Holy Roman Empire.

Through the early Middle Ages, the northern part of present-day Belgium (now commonly referred to as Flanders) had become an overwhelmingly Germanized and Germanic language-speaking area, whereas in the southern part people had continued to be Roman and spoke derivatives of Vulgar Latin.

As the Holy Roman Emperors lost effective control of their domains in the 11th and 12th centuries, the territory more or less corresponding to the present Belgium was divided into mostly independent feudal states:

- County of Flanders
- Marquisate of Namur
- Duchy of Brabant (see also Duke of Brabant)
- County of Hainaut
- Duchy of Limburg
- Luxembourg
- Bishopric of Liège

During the 11th and 12th centuries, the Rheno-Mosan or Mosan art movement flourished in the region moving its centre from Cologne and Trier to Liège, Maastricht and Aachen. Some masterpieces of this Romanesque art are the shrine of the Three Kings at Cologne Cathedral, the Baptismal font at St Bartholomew's Church, Liège by Renier de Huy, the Stavelot Triptych, the shrine of Saint Remacle in Stavelot, the shrine of Saint Servatius in Maastricht or, Notger's gospel in Liège.

13th-18th centuries

In this period, many cities, including Ypres, Bruges and Antwerp gained independence.[*citation needed*] The Hanseatic League stimulated trade in

the region, and the period saw the erection of many gothic cathedrals and city halls.[*citation needed*] With the decline of the Holy Roman emperors' power starting in the 13th century, the Low Countries were largely left to their own devices. The lack of imperial protection also meant that the French and English began vying for influence in the region. In 1214, King Philip II of France defeated the Count of Flanders in the Battle of Bouvines and forced his submission to the French crown. Through the remainder of the 13th century, French control over Flanders steadily increased until 1302 when an attempt at total annexation by Philip IV met a stunning defeat when Count Guy (who had the support of the guilds and craftsmen) rallied the townspeople and humiliated the French knights at the Battle of the Golden Spurs. Undaunted, Philip launched a new campaign that ended with the inconclusive Battle of Mons-en-Pévèle in 1304. The king imposed harsh peace terms on Flanders, which included ceding the important textile-making centers of Lille and Douai. Thereafter, Flanders remained a French tributary until the start of the Hundred Years War in 1337. In Brabant, skillful work by the duke of that territory and the Count of Hainaut-Holland foiled various French manipulations. Paris's influence in the Low Countries was counterbalanced by England, which maintained important ties to the coastal ports.

Flanders faced the difficult situation of being politically subservient to France, but also reliant on trade with England. Many craftsmen emigrated to England, which also came to dominate the wool-shipping business. Flemish cloth nonetheless remained a highly valued product, and it was highly dependent on English wool. Any interruption in the supply of that invariably resulted in riots and violence from the weavers' guilds. On the whole though, Flemish trade became a passive one. Flanders received imports from other areas of Europe, but itself purchased little abroad except wine from Spain and France. Bruges became a great commercial center after the Hanseatic League set up business there and the Italian banking houses followed suit.

A few towns in the Low Countries dated back to Roman times, but most had been founded from the 9th century onward. The oldest were in the Scheldt and Meuse areas, with many towns in what's now the Netherlands being much younger and only dating from the 13th century. From early on, the Low Countries began to develop as a commercial and manufacturing center. Merchants became the dominant class in the towns, with the nobility largely limited to countryside estates.

By 1433 most of the Belgian and Luxembourgian territory along with much of the rest of the Low Countries became part of Burgundy under Philip the Good. When Mary of Burgundy, granddaughter of Philip the Good married Maximilian I, the Low Countries became Habsburg territory. Their son, Philip I of Castile (Philip the Handsome) was the father of the later Charles V. The Holy Roman Empire was unified with Spain under the Habsburg Dynasty after Charles V inherited several domains.

Especially during the Burgundy period (the 15th and 16th centuries), Ypres, Ghent, Bruges, Brussels, and Antwerp took turns at being major European centers for commerce, industry (especially textiles) and art. The Flemish Primitives were a group of painters active primarily in the Southern Netherlands in the 15th and early 16th centuries (for example, Van Eyck and van der Weyden). Flemish tapestries and, in the 16th and 17th centuries, Brussels tapestry hung on the walls of castles throughout Europe. See also:

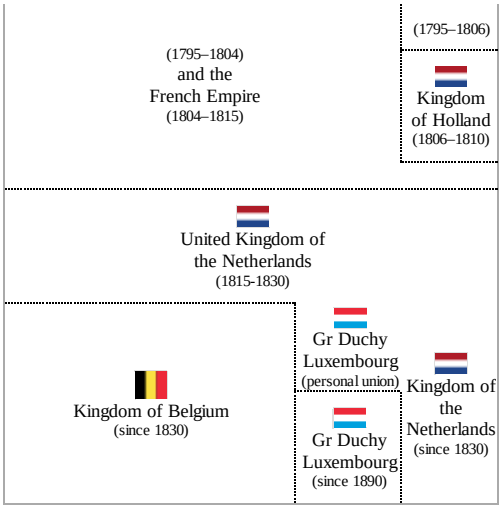
- Charles the Bold



The Seventeen Provinces, and the Bishopric of Liège in Green

The Pragmatic Sanction of 1549, issued by Charles V, established the Seventeen Provinces (or Spanish Netherlands in its broad sense) as an entity separate from the Empire and from France. This comprised all of the Netherlands, Belgium, and Luxembourg except for the lands of the Bishopric of Liège.

After the Burgundian regime in the Low Countries (1363–1477), the Southern Netherlands (whose area roughly encompassed that of present-day Belgium and Luxembourg) as well as the northern provinces (whose area roughly corresponded to that of the present-day Kingdom of the Netherlands) had dynastic links with the Austrian Habsburgs and then with Spain and the Austrian Habsburgs together. Later, as a consequence of revolt in 1567, the southern provinces became subject to Spain (1579), then to the Austrian Habsburgs (1713), to France (1795), and finally in 1815

to the Kingdom of the Netherlands. While Luxembourg remained linked to the Netherlands until 1867, Belgium's union with the Netherlands ended with the 1830 revolution. Belgian nationality is generally considered to date from this event.

The Burgundian period, from Philip II (the Bold) to Charles the Bold, was one of political prestige and economic and artistic splendour. The "Great Dukes of the West," as the Burgundian princes were called, were effectively considered national sovereigns, their domains extending from the Zuiderzee to the Somme. The urban and other textile industries, which had developed in the Belgian territories since the 12th century, became under the Burgundians the economic mainstay of northwestern Europe.

The death of Charles the Bold (1477) and the marriage of his daughter Mary to the archduke Maximilian of Austria proved fatal to the independence of the Low Countries by bringing them increasingly under the sway of the Habsburg dynasty. Mary and Maximilian's grandson Charles became king of Spain as Charles I in 1516 and Holy Roman emperor as Charles V in 1519. In Brussels on Oct. 25, 1555, Charles V abdicated the Netherlands to his son, who in January 1556 assumed the throne of Spain as Philip II.

However, the northern region now known as the Netherlands became increasingly Protestant (*i.e.* Calvinistic), while the south remained primarily Catholic. The schism resulted in the Union of Atrecht and the Union of Utrecht. When Philip II, son of Charles, ascended the Spanish throne he tried to abolish all Protestantism. Portions of the Netherlands revolted, beginning the Eighty Years' War between the Netherlands and Spain. For the conquered Southern Netherlands the war ended in 1585 with the Fall of Antwerp. This can be seen as the start of Belgium as one region. That same year, the northern Low Countries (i.e. the Netherlands proper) seized independence in the Act of Abjuration (*Plakkaat van Verlatinghe*) and started the United Provinces and the Dutch Golden Age. For them, the war lasted until 1648 (the Peace of Westphalia), when Spain recognized the independence of the Netherlands, but held onto the loyal and Catholic region of modern-day Belgium which was all that remained of the Spanish Netherlands. See also:

- Battles of the Eighty Years' War
- Infanta Isabella Clara Eugenia of Spain

While the United Provinces gained independence, the Southern Netherlands remained under the rule of Spain (1556–1713).

Rubens' Adoration of the Magii

Until 1581 the history of Belgium (except the Bishopric of Liège), the grand duchy of Luxembourg and the country the Netherlands is the same: they formed the country/region of the Netherlands or the Low Countries. In Dutch, a distinction still exists between on the one hand 'de Nederlanden' (plural, the Low Countries) and 'Nederland' (singular, the present-day state of the Netherlands) that is a consequence of this separation in the 17th century. Before 1581, the Netherlands refers to the Lowlands (De Nederlanden).

During the 17th century, Antwerp was still a major European center for commerce, industry and art. The Brueghels, Peter Paul Rubens and Van Dyck's baroque paintings were created during this period. See also:

The Belgian and Luxemburgian territories (except the Bishopric of Liège) were transferred to the Austrian Habsburgs (1713–1794) after the War of the Spanish Succession when the French Bourbon Dynasty inherited Spain at the price of abandoning many Spanish possessions. They were thus called the Austrian Netherlands from 1713 to 1794. See also:

[12]

French period

With the outbreak of the French Revolution in 1789, the Austrian Netherlands declared their independence, but were reoccupied by the Austrians within a year.

Following the Campaigns of 1794 of the French Revolutionary Wars, the Southern Netherlands were invaded and annexed by the First French Republic in 1795, ending Habsburg rule. They were divided into nine united *départements* and became an integral part of France. The Bishopric of Liège was dissolved. Its territory was divided over the *départements* Meuse-Inférieure and Ourte. Austria confirmed the loss of the Austrian

Netherlands by the Treaty of Campo Formio, in 1797.

Until the establishment of the Consulate in 1799, Catholics were heavily repressed by the French. The University of Leuven (Louvain) was closed in 1797, priests were considered criminal, and churches were plundered. During this early period of the French rule, the Belgian economy was completely paralyzed: it was forbidden to export from the port of Antwerp, heavy taxes had to be paid in gold and silver coin, while goods bought by the French were paid for with worthless assignats. During this period of systematic exploitation, about 800,000 Belgians fled the Southern Netherlands.[13] The French occupation in Belgium led to further suppression of the Dutch language across the country, including its abolition as an administrative language.[14][15] With the motto "one nation, one language", French became the only accepted language in public life, as well as in economic, political, and social affairs.[16] The measures of the successive French governments and in particular the 1798 massive conscription into the French army were particularly unpopular within the Flemish segment of the population and caused the Peasants' War.[17] The Peasants' War is often seen as the starting point of the modern Flemish movement.[18]

In 1814, Napoleon Bonaparte was forced to abdicate by the Allies and was exiled; French control of Belgium ended. However, Napoleon managed to escape from Elba and quickly returned to power during the Hundred Days in 1815. Napoleon knew that his only chance of remaining in power was to attack the existing Allied forces in Belgium before they were reinforced. He crossed the Belgian frontier with two armies and attacked the Prussians under the command of General Gebhard Leberecht von Blücher at the Battle of Ligny on June 16, 1815. Meanwhile, Ney engaged the forces of the Duke of Wellington and the Prince of Orange in the Battle of Quatre Bras on the same day.

In 1815, Napoleon's last campaign was fought out in Belgium. He attacked the Prussian and British armies then deployed in Belgium. Napoleon was finally defeated by the Duke of Wellington and Gebhard Leberecht von Blücher at Waterloo in present-day Belgium on 18 June 1815. Napoleon's strategy failed and his army was driven from the field in confusion, by a combined Allied general advance. The next morning the Battle of Wavre ended in a hollow French victory. Napoleon was forced to surrender and was exiled permanently.

The Butte du Lion overlooking the battlefield of Waterloo

King William I of the Netherlands had the Butte du Lion erected on the battlefield of Waterloo to commemorate the location where his son, William II of the Netherlands (the Prince of Orange), was knocked from his horse by a musket ball to the shoulder and as a tribute to his courage. It was completed in 1826. The younger William had fought as commander of combined Dutch and Belgian forces at the Battle of Quatre Bras and the Battle of Waterloo.

United Kingdom of the Netherlands

Main article: United Kingdom of the Netherlands

After Napoleon's defeat at Waterloo in 1815, the major victorious powers (Britain, Austria, Prussia, Russia) agreed at Congress of Vienna on reuniting the former Austrian Netherlands and the former Dutch Republic, creating the United Kingdom of the Netherlands, which was to serve as a buffer state against any future French invasions. This was under the rule of a Protestant king, namely William I of Orange. Most of the small and ecclesiastical states in the Holy Roman Empire were given to larger states at this time, and this included the Prince-Bishopric of Liège which became now formally part of the United Kingdom of the Netherlands.

Independence

Main article: Belgian Revolution

In August 1830, stirred by a performance of Auber's *La Muette de Portici* at the Brussels opera house *La Monnaie* (Dutch: *De Munt*), the Belgian Revolution broke out, and the country wrested its independence from the Dutch, aided by French intellectuals and French armed forces. The real political forces behind this were the Catholic clergy, which was against the Protestant Dutch king, William I, and the equally strong liberals, who opposed the royal authoritarianism, and the fact that the Belgians were not represented proportionally in the national assemblies. At first, the Revolution was merely a call for greater autonomy, but due to the clumsy responses of the Dutch king to the problem, and his unwillingness to meet the demands of the revolutionaries, the Revolution quickly escalated into a fight for full independence.

Episode of the Belgian Revolution of 1830, Egide Charles Gustave Wappers (1834), in the Musée d'Art Ancien, Brussels

The major European powers of the time, (Britain, Russia, Prussia, Austria) were fearful of Belgium either becoming a republic or being annexed to France, and so found a monarch invited in from the House of Saxe-Coburg and Gotha in Germany by the British. On July 21, 1831, the first king of the Belgians, Leopold of Saxe-Coburg was inaugurated. This day is still the Belgian national holiday. Even though the Belgian Revolution violated the accords made in 1815, the Belgians received the sympathy of the liberal governments of both Great Britain and France. France itself had undergone a liberal revolution that year. The other major powers of Europe – Austria and Prussia – took a much dimmer view of Belgian independence but they were disinclined to take any action, being preoccupied with the November Uprising in Poland.

The Netherlands still fought on for eight years, but in 1839, the Treaty of London (1839) was signed between the two countries. Belgium thereafter became a sovereign, independent state with a liberal constitution (constitutional monarchy). The constitution did however, limit voting rights to the haute-bourgeoisie and the clergy, if they were fully French speaking, in a country where French was not the majority language; all together less than 1% of the adult population.

By the treaty of 1839, Luxembourg did not fully join Belgium, and remained a possession of the Netherlands until different inheritance laws caused it to separate as an independent Grand Duchy. Belgium also lost Eastern Limburg, Zeeuws Vlaanderen and French Flanders (Dutch: *Frans Vlaanderen*) and Eupen, four territories which it had all claimed on historical grounds. The Netherlands retained the former two while French Flanders, which had been annexed at the time of Louis XIV remained in French possession, and Eupen remained within the German Confederation, although it would pass to Belgium after World War I as compensation for the war.

The Belgian Revolution had many causes:

- At the political level:
  - The Belgians felt significantly under-represented in the Netherlands' elected Lower Assembly.
  - The low popularity of Prince William, the later King William II, who was the representative of King William I in Brussels.
  - The treatment of the French-speaking Catholic Walloons in the Dutch dominated United Kingdom of the Netherlands.
- At the religious level:
  - The difference of religion between the Catholic Belgians and their Protestant Dutch king.
- At the economic level:
  - The Belgians had little influence over the traditional economy of trade centered in Amsterdam.
  - The Dutch were for free trade, while industries in Belgium called for the protection of tariffs.
  - Low-taxed imports from the Baltic depressed agriculture in Belgian grain-growing regions.
- At the international level:
  - French July Monarchy's support.
  - The passive agreement of the British.

From independence to World War I

Economy

The textile industry, based on cotton and flax, employed about half of the industrial workforce. Ghent was the premier industrial city in Belgium until the 1880s, when the center of growth moved to Liege, with its steel industry. [19]

Coal

By 1830 when iron and later steel became important the Belgium coal industry had long been established, and used steam-engines for pumping. The Belgian coalfield lay near the navigable River Meuse, so coal was shipped downstream to the ports and cities of the Rhine-Meuse delta. The opening of the Saint-Quentin canal allowed coal to go by barge to Paris. The Belgian coalfield outcrops over most of its area, and the highly folded nature of the seams meant that surface occurrences of the coal were very abundant. Deep mines were not required at first so there were a large number of small operations. There was a complex legal system for concessions, often multiple layers had different owners. Entrepreneurs started going deeper and deeper (thanks to the good pumping system). In 1790, the maximum depth of mines was 220 meters. By 1856, the average depth in the area west of Mons was 361, and in 1866, 437 meters and some pits had reached down 700 and 900 meters; one was 1,065 meters deep, probably the deepest coal mine in Europe at this time. Gas explosions were a serious problem, and Belgium had high fatality rates. By the late 19th century the seams were becoming exhausted and the steel industry was importing some coal from the Ruhr.[20]

Railways

Main article: Rail transport in Belgium

The small nation provided an ideal model for showing the value of the railways for speeding the Industrial Revolution. After 1830, the new nation decided to stimulate industry. It funded a simple cross-shaped system that connected the major cities, ports and mining areas, and linked to neighboring countries. Belgium thus became the railway center of the region. The system was very soundly built along British lines, so that profits and wages were low but the infrastructure necessary for rapid industrial growth was put in place. Léopold I went on to build the first railway in continental Europe in 1835, between Brussels and Mechelen. The first trains were drawn by Stephenson engines imported from Great Britain.[21]

Language battles

Friction between French-speaking (Walloons) and Dutch (Flemish) speaking Flemings has always been the central political issue of the Kingdom of Belgium. French became the official language of government after the separation from the Netherlands in 1830. Belgian cultural life was dominated by the French influence[22], reinforced by economic domination of the industrial south. In response came a new spirit of nationalism among the Flemings, who agitated for the equality of their language with French. This goal was finally achieved by a series of laws

in the 1920s and 1930s that made Flemish the language of government, education, and the courts in the northern provinces of East Flanders and West Flanders, Antwerp, Limburg, and eastern Brabant. Brussels became a bilingual national capital.[*citation needed*]

High culture

Cultural life in Belgium had long stagnated but a revival among Walloons began with the new French language literary and artistic review *La Jeune Belgique* (1881–97). World class writers in French include the great romantic and symbolist poet Maurice Maeterlinck (1862–1949, Nobel Prize 1911), dramatists Michel de Ghelderode (1898–1962) and Henri Michaux (1899–1984), and the poet and playwright Émile Verhaeren (1855–1916), one of the founders of symbolism. Inspector Maigret, the creation of Georges Simenon (1903–89), won a wide following in translation. James Ensor (1860–1949) was an influential Expressionist painter and printmaker. Félicien Rops (1833–98) won acclaim as a graphic artist, as did surrealist painters Paul Delvaux (1897–1994) and René Magritte (1898–1967). Few other Flemish artists achieved comparable international renown, and there was a tendency for Walloon artists to move to France.

Laicity and Catholicism

In the 19th century, poor politics were a bipartisan system very deeply influenced by the conflict between the Catholic parties and the secular ones.

The Congolese colony

Main articles: Congo Free State and Belgian Congo

Statue of Leopold II of Belgium in Ostend

At the Berlin Conference of 1884–1885 the Congo was attributed solely to Leopold II of Belgium, who named the territory the Congo Free State. King Leopold had been the principal shareholder in the Belgian trading company which established trading stations on the lower Congo between 1879 and 1884.[23] Power was finally transferred to Belgium in 1908 under considerable international pressure following numerous reports of gross misconduct and abuse to native labourers.

The integration of traditional economies in the Congo within the framework of the modern, capitalist economy was brilliantly executed; for example, several railroads were built through dense regions of jungle. Leopold's fortune was greatly increased through the proceeds of Congolese rubber, which had never previously been mass-produced in such surplus quantities.

Many atrocities were committed in the colony, especially while it remained in Leopold II's personal possession. The behaviour of the Belgian colonists in Congo is still a conflict-laden topic in present-day Belgium.

European exploration and administration of the Congo took place from the 1870s until the 1920s. First by Stanley who undertook his explorations mainly under the sponsorship of Leopold II, who desired what was to become the Congo as a colony. In a succession of negotiations Leopold, professing humanitarian objectives in his capacity as chairperson of the Association International Africaine, played one European rival against the other. The Congo territory was acquired formally by Leopold at the Conference of Berlin in 1885. He made the land his private, personal property and named it the Congo Free State. Congolese territory was more than 80 times as large as Belgium's.

Leopold's regime began undertaking various development projects, such as a railway that ran from the coast to Leopoldville (now Kinshasa) which took years to complete. Nearly all of these projects were aimed at increasing the capital Leopold and his associates could extract from the colony, leading to some atrocious exploitation of Africans. In the Free State, the local population was brutalized in exchange for rubber, a growing market with the development of rubber tires. The selling of the rubber made a fortune for Leopold, who built several buildings in Brussels and Ostend to honour himself and his country.

During the period between 1885 and 1908, between five and fifteen (the commonly accepted figure is about ten) million Congolese died because of exploitation and diseases. To enforce the rubber quotas, the Force Publique (FP) was called in. The FP was an army, but its aim was not to defend the country, but to terrorize the local population. The Force Publique made the practice of cutting off the limbs of the natives as a means of enforcing rubber quotas a matter of policy; this practice was disturbingly widespread. However, there were international protests particularly in Britain and the United States in 1903-04 spearheaded mainly by Edmund Dene Morel and British diplomat/Irish patriot Roger Casement, whose 1904 report on the Congo condemned the practice, as well as famous writers such as Mark Twain (who wrote King Leopold's Soliloquy) and Sir Arthur Conan Doyle. Joseph Conrad's novella *Heart of Darkness* also takes place in Congo Free State. In 1908, the Belgian parliament bowed to international pressure in order to save their last bit of prestige in Europe, forcibly adopting the Free State as a Belgian colony from the king. From then on, it became the Belgian Congo.

However political rights were not granted to the Africans until 1956 when a small group received the franchise and the economy remained relatively undeveloped despite the mineral wealth of Katanga. For 18 months from January 1, 1959 there was political uncertainty and African national feeling became more apparent with the effect that the Belgian government resolved on independence for the colony in June 1960. However the politicians relied largely on tribal rather than national support and there were constitutional disputes.[23]

Historicism and Art Nouveau

The Cinquantenaire Arch in winter

At the end of the 19th century and at the beginning of the 20th century, the historicism style dominates the urban Belgian landscape (e.g. Justice Palace of Brussels, 50th-Anniversary Park in Brussels). Nevertheless, Brussels became one of the major European cities for the development of the Art Nouveau style (e.g. Victor Horta, Henry van de Velde).

From WWI to WWII

World War I

A Belgian machine gunner on the front lines in 1918, firing a Chauchat gun.

When World War I began, Germany invaded neutral Belgium and Luxembourg as part of the Schlieffen Plan, trying to take Paris quickly and catch the French off guard by invading through neutral countries. It was this action that technically caused the British to enter the war, as they were still bound by the 1839 agreement to protect Belgium in the event of a war. To this day, the Belgians are remembered for their stubborn resistance during the early days of the war, with the army - around a tenth the size of the Germany Army - holding up the German offensive for nearly a month, giving the French and British forces time to prepare for the Marne counteroffensive later in the year the German invaders treated any resistance--such as sabotaging rail lines--as illegal and immoral, and shot the offenders and burned buildings in retaliation. The German army executed over 6,500 French and Belgian civilians between August and November 1914, usually in near-random large-scale shootings of civilians ordered by junior German officers.[24]

The Germans were stopped by the Allies at the front-line along the Yser, the Battle of the Yser. King Albert I stayed in Belgium with his troops to lead the army while the government withdrew to Le Havre, France. The Germans governed the occupied areas of Belgium through a General Governorate of Belgium, while a small area of the country remained unoccupied by the Germans.

Flanders saw some of the greatest losses of life of the First World War including the first and second battles of Ypres. Due to the hundreds of thousands of casualties, the poppies that sprang up from the battlefield and that were immortalized in the poem In Flanders Fields, have become an emblem of human life lost in war. It is perfectly normal for poppies to invade disturbed arable ground. The suffering of Flanders is still remembered by Flemish organizations during the yearly Yser pilgrimage and Wake of the Yser (the latter associated with Right wing extremists) in Diksmuide at the monument of The Yser tower.

Flemish feeling of identity and consciousness grew through the events and experiences of war. The German occupying authorities had taken several Flemish-friendly measures (see *Flamenpolitik*).

- Rape of Belgium

Between the wars

After four years of occupation, Belgium emerged ruined at the end of World War I. The king returned from Yser, the sliver of territory he controlled throughout the war, leading the victorious army and acclaimed by the population. In contrast, the government and the exiles came back discreetly, and the absence of the dead was felt strongly. Many saw themselves as victims of the occupation and sought revenge. Waves of popular violence accompanied liberation in November and December 1918 and the government responded through the judiciary punishment of

collaboration with the enemy conducted between 1919 and 1921, mainly by military and civil tribunals. Shop windows were broken and houses sacked, men were harassed, and women's heads were shaved. Manufacturers who had closed their businesses sought the severe repression of those who had pursued their activities. Journalists who had boycotted and stopped writing called for harsh treatment of the newspapers that submitted to German censorship. Many people stigmatized profiteers and demanded justice. Thus in 1918, Belgium was already confronted with the problems associated with occupation that most European countries only discovered at the end of World War II.[25]

In 1919 under the Treaty of Versailles the area of Eupen-Malmedy, along with Prussian Moresnet, was transferred from Germany to Belgium. Neutral Moresnet was transferred to Belgium as well. An opportunity was given to the population to "protest" against the transfer by signing a register, which gathered few signatures. The Vennbahn railway was also transferred to Belgium. Two former German colonies, Rwanda and Burundi, were mandated to Belgium by the League of Nations.

The first postwar Olympic Games were held in Antwerp in 1920.

After a period of alliance with France, Belgium tried to return to neutrality in the 1930s but by September 1939 war broke out in Europe and Germany invaded the Low Countries within the year.

Development of fine arts

Flemish expressionism
: The expressionism painting movement found a distinctive form in Flanders (James Ensor, Constant Permeke, Léon Spilliaert).

Belgian surrealism
: The surrealism movement has major representatives in Belgium: Paul Delvaux, René Magritte.

The Franco-Belgian comics
: The Comic strip *The Adventures of Tintin*, one of the most popular 20th century European comics, was created in 1929 by Hergé. Major Belgian representatives of this popular art movement are Edgar P. Jacobs, Jijé, Willy Vandersteen and André Franquin. **See also:** Franco-Belgian comics magazines, Franco-Belgian publishing houses.

World War II

Period of the Phony War

As the German army invaded Poland on September 1, 1939, the Belgian government announced its neutrality on September 3. On November 7, the King of Belgium made a joint public appeal with the Queen of the Netherlands, calling on all belligerents to accept mediation to terminate the war.[26]

German invasion

Invasion of Belgium by Nazi Germany (see Battle of Belgium) started on May 10, 1940 under the operational plan *Fall Gelb* and formed part of the greater Battle of France together with invasions of the Netherlands and Luxembourg. The Belgians put up a short-lived resistance and it took 18 days only before the country was subdued. Diplomatic considerations had led them to make very limited preparations for invasion and the attack was immediately successful. On 17 May 1940 the capital city Brussels fell to the Germans. The Belgian king surrendered on May 28, contrary to the advice of the Belgian government, having decided the Allied cause was lost.[27] The King remained in Belgium during the war as a German prisoner while the government went into exile and continued military action in the Allied cause.[28]

Allied liberation

Belgium was liberated late in 1944 by Allied forces, including British, Canadian, and American armies, including a small Belgian national contingent. On 3 September 1944 the Welsh Guards liberated the Belgian capital city Brussels. The Second British Army seized Antwerp on 4 of September 1944, and the First Canadian Army began conducting combat operations around the port that same month. Antwerp became a highly prized and heavily fought-over objective due to its largely intact deep-water port facilities and that French ports remained in German hands or unusable until late in 1944. The Battle of the Scheldt in October 1944 was fought primarily on Dutch soil, but with the objective of opening the waterway to Antwerp. The port city was also the main objective of German armies in December; the inability of the Allies to end the war in 1944 meant that Allied troops had to winter in Belgium, during which time the Ardennes Offensive was launched by the Germans, resulting in heavy fighting on Belgian soil that lasted into 1945.

During the war, the largest known reserves of uranium were in the Katanga (a province of the Belgian Congo). The Belgian company Union Minière du Haut Katanga provided the United States with much of the uranium required by the Manhattan Project and the early cold war (see: history of nuclear weapons).

After WWII

The royal question

Main articles: Leopold III of Belgium and General strike against Leopold III of Belgium

A dispute over King Leopold III's conduct during World War II caused civil uprisings, and eventually led to his abdication in 1951 following a state wide referendum. The dispute was caused by several facts:

- King Leopold did not want to leave the country at the time of the German invasion to maintain the independence and monarchy of Belgium.
- His contact with the Germans and his meeting with Hitler in Berchtesgaden (19 November 1940).
- His second marriage with Lilian Baels during the World War II

In Flanders they voted in favour of his return (Yes), in Wallonia against (No) (especially the provinces of Liège, Hainaut and the present-day Walloon Brabant; Namur and Luxembourg being split about 60 (Yes)/40 (No)), 58% of No in Wallonia, 70% of Yes in Flanders, 51% of No in Brussels. Although he narrowly won the referendum, the militant socialist movement in Liège, Hainaut and other urban centres incited major protests and strikes. On the other hand, during discussions inside the Liberal Party Jean Rey stated on 13 March 1950: if the Catholics considered important the majority in favour of Leopold III (57,68% in Belgium as a whole), the Walloons may also considered important their own opinion (i.e. In Wallonia only) against Leopold which had the same percentage. [29]

Because of the probability of the escalation of the conflict, Léopold III abdicated on July 16, 1951 in favour of his 20-year-old son Baudouin.

During Leopold's exile in Switzerland (1945–1950), Prince Charles of Belgium acted as the regent.

Post-war economic growth

During the period 1945–1975, Keynesian economic theory guided politicians throughout Western Europe and this was particularly influential in Belgium. After the war, the government cancelled Belgium's debts. It was during this period that the well-known Belgian highways were built. At night, their streetlights make them easily seen from space.[*citation needed*] In addition, both the economy the average standard of living rose significantly. As noted by Robert Gildea,

"Social and economic policy was designed to restore liberal capitalism tempered by social reform, as prepared for during the war. Trade unions were also involved in a price and wage policy to cut inflation and this, together with the Allied use of Antwerp as the main entry point for war supplies, produced the so-called Belgian miracle of high economic growth combined with high wages."[30]

In this sphere of economics, World War II marks a turning point. Because Flanders had been widely devastated during the war and had been largely agricultural since the Belgian uprising, it benefited most from the Marshall Plan. Its standing as an economically backward agricultural region meant that it obtained support from Belgium's membership of the European Union and its predecessors. At the same time, Wallonia experienced a slow relative decline as the products of its mines came to be less in demand. The economic balance between the two parts of the country has remained less in favour of Wallonia than it was before 1939.

European and international integration

- Belgium has been one of the foremost advocates of collective security within the framework of the Atlantic partnership (NATO). Belgium has been a member of the NATO since April 4, 1949
- Belgium is part of the Benelux since 1944.
- Belgium is one of the founding members of the European Coal and Steel Community in July, 1952 and of the European Economic Community founded on March 25, 1957 by the signing of the Treaty of Rome.
- Belgium, as part of the UN, had an infantry batallion serving in the Korean War known as Belgian United Nations Command between 1950 and 1955.

The second school war (1950–1959)

After the elections of 1950, a Christian-democrat government led Belgium. The minister of education Pierre Harmel decided to increase the subsidies for the free secondary education and approved a number of laws on free education and subsidization for education.

After the elections of 1954: A socialistic and liberal government with a new minister of education Leo Collard . Leo Collard founded a large number of National School buildings and teachers had to possess a diploma so many priests without diploma were no longer eligible.

After the elections of 1958: the School Pact(1958) made by Gaston Eyskens ended the school war and led to peace between liberals and Catholics.

The Congo crisis (1960–1965)

Main article: Congo Crisis

The Congo became independent in 1960. In this crisis, Belgium played an ambiguous role which led to the murder of Patrice Lumumba and to the establishment of Zaire.

The General strike of 1960-1961

In December 1960, a strike gripped the country, but it succeeded only in Wallonia. The movement became the 1960-1961 Winter General Strike a renardist strike. Renée C.Fox explained the affair in a few words:

> At the beginning of the 1960s (...), a major reversal in the relationship between Flanders and Wallony was taking place. Flanders had entered a vigorous, post–World War II period of industialization, and a significant percentage of the foreign capital (particularly from the United States), coming into Belgium to support new industries was being invested in Flanders. In contrast, Wallony's coal mines and time-worn steel plants and factories were in crisis. The region had lost thousands of jobs and much investment capital. A new Dutch-speaking, upwardly mobile "populist bourgeoisie" was not only becoming visible and vocal in Flemish movements but also in both the local and national policy [The strike of December 1960 against the austerity law of Gaston Eyskens] was replaced by a collective expression of the frustrations, anxieties, and grievances that Wallony was experiencing in response to its altered situation, and by the demands of the newly formed Mouvement populaire wallon for (...) regional autonomy for Wallony....[31]

The tragedy of Zwartberg

On Monday, January 31, 1966, a group of about 500 angry coal miners from the mine of Zwartberg headed towards the mine of Waterschei to convince their colleagues to join the strike in protest of the announced closure of Zwartberg. At the entrance of the Waterschei mine, a small group of gendarmes awaited them, who were cornered by the protesters. When a lorry carrying a load of mining wood passed by, the miners forced the driver to drop his load. When the miners threw wood and other objects at the gendarmes, the officer in charge ordered his men to fire into the air during a first charge. When the miners threatened the gendarmes again, the gendarmes fired at the protesters, mortally wounding Jan Latos and injuring his colleague Theo Van Hecke. Later that day, Valère Sclep died after being hit on the head by a tear gas grenade.

The news of the tragedy travelled around the world and the government decided to withdraw the gendarmes and leave the maintenance of public order to Para-Commandos. The riots continued until the unions and the management reached an agreement on February 3 of the same year.

The linguistic "wars"

Main article: Flemish movement

This Flemish resurgence has been accompanied by a corresponding shift of political power to the Flemish, who always constituted the majority of the population (around 60%). Only in 1967 was an official Dutch version of the Constitution accepted.[32]

The linguistic wars attained their climax around 1968 with the splitting of the Catholic University of Leuven into the Katholieke Universiteit Leuven and the Université Catholique de Louvain. The government of Prime Minister Paul Vanden Boeynants fell over the issue in 1968.

The rise of the federal state

Main article: State reform in Belgium

The successive linguistic wars have made the successive Belgian governments very unstable. The three major parties (Liberal -right wing-, Catholic -center- and, Socialist -left wing-) all split in two according to their French- or Dutch-speaking electorate. A language border was determined by the first Gilson Act of November 8, 1962. The boundaries of certain provinces, arrondissements and municipalities were modified (among others, Mouscron became a part of Hainaut and Voeren became a part of Limburg) and facilities for linguistic minorities were introduced in 25 municipalities. On August 2, 1963, the second Gilson Act entered into force, fixing the division of Belgium into four language areas: a Dutch, a French and a German language area, and Brussels as a bilingual area with both French and Dutch as its official languages.

In 1970, there was a first state reform,[33] which resulted in the establishment of three cultural communities: the Dutch Cultural Community, the French Cultural Community and the German Cultural Community. This reform was a response to the Flemish demand for cultural autonomy. The constitutional revision of 1970 also laid the foundations for the establishment of three Regions, which was a response to the demand of the Walloons and the French-speaking inhabitants of Brussels for economic autonomy. On February 18, 1970, Prime Minister Gaston Eyskens announces the end of "La Belgique de papa".

The second state reform took place in 1980, when the cultural communities became Communities. The Communities assumed the competencies of the cultural communities with regard to cultural matters, and became responsible for the 'matters relating to the person', such as health and youth policy. From then on, these three Communities were known as the Flemish Community, the French Community and the German-speaking Community. Two Regions were established as well in 1980: the Flemish Region and the Walloon Region. However, in Flanders it was decided in 1980 to immediately merge the institutions of the Community and the Region. Although the creation of a Brussels Region was provided for in 1970, the Brussels-Capital Region was not established until the third state reform.

During the third state reform in 1988 and 1989,[34] under Prime Minister Wilfried Martens, the Brussels-Capital Region was established with its own regional institutions, as well as Dutch and French institutions for community matters. The Brussels-Capital Region remained limited to 19 municipalities. Other changes included that the competencies of the Communities and Regions were expanded. One notable responsibility that was transferred to the Communities during the third state reform was education.

The fourth state reform, which took place in 1993 under Prime Minister Jean-Luc Dehaene, consolidated the previous state reforms and turned Belgium into a fully-fledged federal state. The first article of the Belgian Constitution was amended to read as follows, “Belgium is a Federal State which consists of Communities and Regions”. During the fourth state reform, the responsibilities of the Communities and the Regions were expanded again, their resources were increased and they were given more fiscal responsibilities. Other major changes included the direct election of the parliaments of the Communities and the Regions, the splitting up of the Province of Brabant into Flemish Brabant and Walloon Brabant, and the reformation of the Federal Parliament's bicameral system and the relations between the Federal Parliament and the Federal Government.[35] The first direct elections for the parliaments of the Communities and the Regions took place on May 21, 1995.

However, the fourth state reform was not the end of the process of federalization. In 2001, a fifth state reform took place,[36] under Prime Minister Guy Verhofstadt, with the Lambermont and the Lombard Accords. During the fifth state reform, more powers were transferred to the Communities and the Regions, with regard to agriculture, fisheries, foreign trade, development cooperation, auditing of electoral expenses and the supplementary financing of the political parties. The Regions became responsible for twelve regional taxes, and local and provincial government became a matter for the Regions. The first municipal and provincial elections under the supervision of the Regions were the 2006 municipal elections. The functioning of the Brussels institutions was also amended during the fifth state reform, which resulted among other things in a guaranteed representation of the Flemish inhabitants of Brussels in the Parliament of the Brussels-Capital Region.

The fifth state reform is the last state reform to date. However, several Flemish political parties want a sixth state reform following the 2007 general election, while the vast majority of Walloon politicians oppose this. Major issues that a sixth state reform would have to deal with include, among others, Brussels-Halle-Vilvoorde. After the 2007 elections nine months of extremely troublesome negotiations between Flemish and Walloon parties followed, resulting in the formation of the first Leterme cabinet on March 20, 2008. Decisions on further state reforms were delayed and remained a matter of considerable debate.

The fall of the Belgian economic miracle

Belgium created huge debts during times when rates were low and generated new debts to service the initial debt. Its debts amounted to about 130% of the GDP in 1992 and were reduced to about 99% in 2001 when Belgium entered the Eurozone. This drastic economic policy resulted in deep budget spending cuts, such as significant cuts to scientific research.

The Marc Dutroux Scandal

Main article: Marc Dutroux

In 1996, Belgium's political and criminal justice systems were shaken when Marc Dutroux was arrested and charged with several counts of murder and kidnapping. Many felt that local law enforcement had not acted competently enough to observe and eventually arrest Dutroux and his accomplices before they kidnapped at least six girls (Julie LeJeune & Melissa Russo, An Marchal & Eefje Lambrecks, Sabine Dardenne & Laetitia Delhez) of which they murdered four (Sabine & Laetitia being rescued just in time) and most probably some gang members. Dutroux went on trial in March 2004 and got a life sentence in prison.

Subsequent parliamentary inquiries indeed proved that the three main police forces were horribly incompetent, bureaucratic, with considerable degree of infighting. On top of that, the judicial system appeared to suffer from similar problems: bureaucracy, very poor communication with, and support for, the victims, slow procedures and many loopholes for criminals.

Following the scandal, on October 26, 1996, about 300,000 Belgians marched in Brussels to protest at the failures of the police force and judicial system in this affair. It was one of the largest demonstrations in Belgium's history and was called the "White March" (French: "*Marche Blanche*", Dutch: "*Witte Mars*").

The rise of the Green parties

The three-party (i.e. six plus some purely Flemish and Walloon parties) political systems got disturbed by the Green parties (the Dutch-speaking Agalev, now Groen!, and the French-speaking Ecolo) in the 1980s which took a lot of influence after the Marc Dutroux Scandal and the "dioxin affair", a food scandal (chickens containing dioxin levels far above the maximum allowed) which would not have had any major repercussions, had it not erupted just days before the elections.

- Political parties in Belgium

1999–present

In the 1999 Belgian general election, the government parties suffered an historical defeat due to the so-called "dioxin affair" and Jean-Luc Dehaene's reign of eight years ended. Guy Verhofstadt formed a government of Liberals, Socialists and Greens. For the first time in since 1958, Belgium had a government that did not include the Christian People's Party (*Christelijke Volkspartij*).

During the Kosovo crisis of 1999, 600 Belgian paratroopers participated in Operation Allied Harbour, a NATO operation to protect and provide assistance to the huge number of ethnic Albanian refugees in Albania and Macedonia. That same year, 1100 Belgian soldiers left for Kosovo to participate in the Kosovo Force (KFOR), a NATO-led peacekeeping force for Kosovo. In December 1999, the Belgian Federal Government announced that it would again pursue an active foreign policy, particularly in Central Africa where among others Belgium's former colony, the Democratic Republic of the Congo, is situated. As soon as there would be peace in the region, Belgium would support the reconstruction.

In July 1999, Belgium's nuclear phase-out legislation was decided by the Flemish Liberals and Democrats-led Government including the Belgian Green party, Groen!. The phase-out law calls for each of Belgium's seven reactors to close after 40 years of operation with no new reactors built subsequently. When the law was being passed, it was speculated it would be overturned again as soon as an administration without the Greens was in power.[37] After a new government was elected in 2003 without the Greens, there is still no indication the current Government will revoke the phase-out law[38] after the incident at Tihange on November 22, 2002 turned public opinion against nuclear power.[39] Christian-Democratic and Flemish in 2006 proposed reconsidering the planned phase-out and stated that it intends to bring the nuclear phase-out up again during the negotiations for forming the next government following next year's election.[40] On December 2, 2006, the Humanist Democratic Centre proposed adopting a new timetable for the phase-out.[41]

On January 1, 1999, the euro was introduced and the Belgian franc ceased to exist independently, when it became fixed at one EUR=40.3399 BEF. New notes and coins were introduced on January 1, 2002. Old coins and notes lost their legal tender status on February 28, 2002.

Belgium pursued a policy of strong anti-Iraq-war diplomacy during the Iraq crisis of 2003, and formally and officially opposed the Iraq War. The stance of Prime Minister Guy Verhofstadt was that Saddam Hussein had to leave and Iraq had to disarm, but that a solution had to be found by diplomatic means, and that military action could only be considered if that failed and only after approval by the United Nations.[42]

On January 30, 2003, Belgium became the second country in the world to legally recognize same-sex marriage. However, this law did not permit adoption by same-sex partners; and as birth within a same-sex marriage did not imply affiliation, the same-sex spouse of the biological parent had no way to become the legal parent. On December 1, 2005, a controversial proposal of the Different Socialist Party (SP.A) to permit adoption was approved by the Belgian Chamber of Representatives, thereby enabling legal co-parenting by same-sex couples.

In the 2011, the Belgian Air Force deployed six F-16 fighter jets in support of the NATO intervention in Libya in accordance with United Nations Security Council Resolution 1973.

Monarchy of Belgium

From Wikipedia, the free encyclopedia

Monarchy in Belgium is constitutional and popular in nature. The hereditary monarch, at present Albert II, is the head of state and is officially called **King of the Belgians** (Dutch: *Koning der Belgen*, French: *Roi des Belges*, German: *König der Belgier*).

Origins

When Belgium became independent in 1830 the National Congress chose a constitutional monarchy as the form of government. The Congress voted on the question on 22 November 1830, supporting monarchy by 174 votes to 13. In February 1831, the Congress nominated Louis, Duke of Nemours, the son of the French king Louis-Philippe, but international considerations deterred Louis-Philippe from accepting the honour for his son.

Following this refusal, the National Congress appointed Erasme-Louis, Baron Surlet de Chokier to be the Regent of Belgium on 25 February 1831, thus becoming the first head of state of independent Belgium. Leopold of Saxe-Coburg and Gotha was designated as King of the Belgians by the National Congress [1] and swore allegiance to the Belgian constitution in front of Sint Jacobs Church at Coudenberg Palace in Brussels on 21 July. This day has since become a national holiday for Belgium and its citizens.

A hereditary and constitutional system

As a hereditary constitutional monarchy system, the role and operation of Belgium's monarchy is governed by the Constitution. The royal office of King is designated solely for a descendent of the first King of the Belgians, Leopold I.

Since he is bound by the Constitution [2](above all other ideological and religious considerations, political opinions and debates and economic interests) the King acts as an arbiter and guardian of Belgium's unity and independence. Belgium's monarchs are inaugurated without the blessing of the Catholic Church in a purely civil swearing-in ceremony. These words

(*above all other ideological and religious considerations, political opinions and debates and economic interests*) are not written in the Belgian constitution: nevertheless, they conform with the spirit of this Constitution. There have been occurrences, however, of Belgian monarchs not always respecting this spirit.

A constitutional monarchy from the beginning

The Kingdom of Belgium was never an absolute monarchy. Nevertheless, in 1961, the historian Ramon Arango, wrote that the Belgian monarchy is not *truly constitutional*.[3]

Leopold I, Leopold II, Albert I

Leopold I of Belgium was head of Foreign Affairs *as an ancien régime monarch*, the foreign ministers having the authority to do so only as ministers of the king.[4] Leopold I quickly became one of the most important shareholders of the Société Générale de Belgique [5] In many circumstances Leopold's son, Leopold II of Belgium, publicly expressed opinion against that of the Government (on 15 August 1887, against Prime Minister Auguste Marie François Beernaert), or some MP's (again against Beernaert in 1905).[6] For Yvon Gouet this behavior was not in compliance with the parliamentary system.[7] Also, at the start of World War I, Albert I of Belgium stated he was in command of the Belgian army contrary to his Prime Minister Charles de Broqueville and, according to Raymond Fusilier, also against the Belgian Constitution [8] Luc Schepens wrote similar opinions:*"The two main casualties of World War I are the Constitution and the parliamentary regime. The king had a role out of proportion with the spirit of the Constitution"*.[9] For instance, on 17 May 1926, in a public letter, Albert stated he had faith in the Henri Jaspar government, before the Parliament passed a vote of confidence in this government.[10]

Leopold III, Baudouin I

Louis Wodon (the chef de cabinet of Leopold III from 1934 to 1940), thought the King's oath to the Constitution implied a royal position *over and above the Constitution*. He compared the King to a father, the head of a family [11] According to Arango, Leopold III of Belgium shared these views about the Belgian monarchy. In 1991, towards the end of the reign of Baudouin I, Senator Yves de Wasseige, a former member of the Belgian Constitutional Court, cited four points of democracy which the Belgian Constitution lacks: 1. the King chooses the ministers, 2. the King is able to influence the ministers when he speaks with them about bills, projects and nominations, 3. the King promulgates bills, and, 4. the King must agree to any change of the Constitution[12]

Constitutional, political and historical consequences

The Belgian monarchy was immediately a constitutional monarchy, patterned after that of the United Kingdom.[13][14] *"It should be observed that all monarchies have suffered periods of change as a result of which the power of the sovereign was reduced, but for the most part those periods occurred before the development of the system of constitutionnal monarchy and were steps leading to its establishment."*.[15] The characteristic evidence of this is in Great Britain where there was an evolution from the time when kings ruled through the agency of ministers to that time when ministers began to govern through the instrumentality of the Crown.

Unlike the British constitutional system, in Belgium *the monarchy underwent a belated evolution* which came *after* [16] *the establishment of the constitutional monarchical system* [17] because, in 1830-1831, an independent state, parliamentary system and monarchy were established simultaneously. Hans Daalder, Professor of political science at the Rijksuniversiteit Leiden wrote: *"Did such simultaneous developments not result in a possible failure to lay down the limits of the royal prerogatives with some precision - which implied that the view of the King as the Keeper of the Nation, with rights and duties of its own, retained legitimacy?"* [18]

For Raymond Fusilier, the Belgian monarchy had to be placed - at least in the beginning - between the regimes where the king rules and the regime when the king does not rule but only reigns. The Belgian monarchy is closer to the principle *the King does not rule* [19] But the Belgian kings were not only *at the head of the dignified part of the Constitution*.[20] The Belgian monarchy is not merely symbolic, because it rules as far as the King agrees with his ministers.[21] For Francis

Delpérée, to reign does not only mean to preside over ceremonies but also to take a part in the running of the State.[22] The Belgian historian Jean Stengers wrote that some foreigners believe the monarchy is indispensable to national unity. The King is but a piece over the political scene (in French literally translated: *on the chessboard*), but a piece which matters.[23]

The monarch is the result not the cause of homogeneity and consensus

Author Ramon Arango thought that the Belgian monarchy is not *truly constitutional* or is perhaps a constitutional monarchy but *whose sovereign is granted power disproportionate to that of a constitutional monarch in order that he accomplish an authoritative function, the maintenance of national unity* [24] mainly above the provincial conflicts of Wallonia and Flanders but also above other conflicts. Arango concluded by saying about the General strike against Leopold III of Belgium: *Why had the major antagonists reached such an impasse by midsummer of 1950? A modern constitutional monarch is the embodiment of historical unity and national self-identification, but he functions successfully in this capacity only if there already exists a tradition common to each of his subjects and if the people, of which he is the reflection, are whole and able to be mirrored in a single, undistorted image. The monarch, in other words, is the result, not the cause of homogeneity and consensus. The question of consensus is at the center of the royal question. For the average Belgian, the affair focused all the other issues over which there was a lack of harmony in Belgian society – the ethnic, linguistic, religious, and economic problems...* [25]

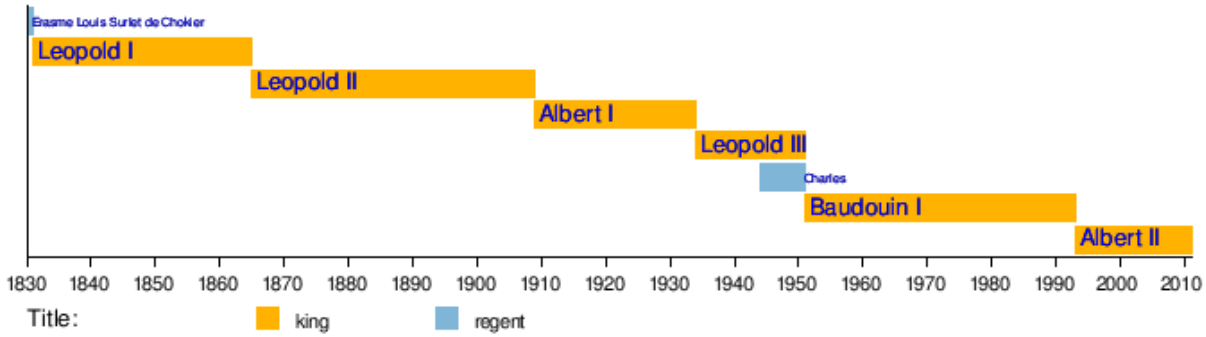
Arango is of the opinion that the inhabitants of Belgium do not share a common tradition but that throughout the centuries the Flemish and Walloons maintained separate identities. He wrote that, at the time of the Belgian revolution of 1830, they were still separate, living in separate territories from the beginning, "and even to the present".[26]

List of Kings of the Belgians

Royal Standard of King Albert II

Main article: List of Belgian monarchs

To date all have belonged to the House of Saxe-Coburg and Gotha



Title

The proper title of the Belgian monarch is **King of the Belgians** rather than "King of Belgium". The title "King of the Belgians" indicates a popular monarchy linked to the people of Belgium (i.e., a living and hereditary Head of State; yet ratified by popular will), whereas the former would indicate standard constitutional or absolute monarchy linked to territory or state. For example, in 1830, King Louis Philippe was proclaimed "King of the French" rather than "King of France". The Greek monarch was titled "King of the Hellenes", indicating a personal link with the people, not just the state. Moreover, the Latin translation of "King of Belgium" would have been *Rex Belgii*, which from 1815 was the name for the *King of the Netherlands*. Therefore, the Belgian separatists chose **Rex Belgarum**.

Belgium is the only current European monarchy that does not apply the tradition of the new monarch automatically ascending the throne upon the death or abdication of the former monarch. According to the Belgian constitution, the monarch accedes to the throne only upon taking a constitutional oath. The present king did not become monarch on 31 July 1993 (the day his brother died) but on 9 August 1993 when he took the constitutional oath.[*citation needed*] In all other European monarchies, the monarch assumes the title the moment the predecessor dies or abdicates. The Belgian constitutional oath is as follows: *"I swear to observe the Constitution and the laws of the Belgian people, to maintain the national independence and the integrity of the territory."*, which is taken in the three official languages: French, Dutch and German.

Members of the Belgian Royal Family are often known by two names: a Dutch and a French one. For example, the current heir-apparent is called 'Philippe' in French and 'Filip' in Dutch; the fifth King of the Belgians was 'Baudouin' in French and 'Boudewijn' in Dutch.

In the other official language of German monarchs are usually referred to by their French names. The same is true for English (with the exception of Leopold, where the accent is removed for the purpose of simplicity).

Constitutional role

Busts of the previous Kings of the Belgians

The Belgian monarchy symbolises and maintains a feeling of national unity by representing the country in public functions and international meetings.

In addition, the monarch has a number of responsibilities in the process of the formation of the Government. The procedure usually begins with the nomination of the "Informateur" by the monarch. After the general election the Informateur officially informs the monarch of the main political formations which may be available for governance. After this phase, the monarch can appoint another "informateur" or appoint a "Formateur", who will have the charge of forming a new government, of which he/she generally becomes the Prime Minister.

The Constitution of Belgium entrusts the monarch with federal executive powers: the appointment and dismissal of ministers, the implementation of the laws passed by the Federal Parliament, the submission of bills to the Federal Parliament and the management of international relations. The monarch sanctions and promulgates all laws passed by Parliament. In accordance with Article 106 of the Belgian Constitution, the monarch cannot act without the countersignature of the responsible minister, who in doing so assumes political responsibility. This means that federal executive power is exercised in practice by the Federal Government, which is accountable to the Chamber of Representatives in accordance with Article 101 of the Constitution.

The monarch receives the prime minister at the Palace of Brussels at least once a week, and also regularly calls other members of the government to the palace in order to discuss political matters. During these meetings, the monarch has the right to be informed of proposed governmental policies, the right to advise, and the right to warn on any matter as the monarch sees fit. The monarch also holds meetings with the leaders of all the major political parties and regular members of parliament. All of these meetings are organised by the monarch's personal political cabinet which is part of the Royal Household.

The monarch is the Commander-in-Chief of the Belgian Armed Forces and makes appointments to the higher positions. The names of the nominees are sent to the monarch by the Ministry of Defence. The monarch's military duties are carried out with the help of the Military Household which is headed by a General office. Belgians may write to the monarch when they meet difficulties with administrative powers.

The monarch is also one of the three components of the federal legislative power, in accordance with the Belgian Constitution, together with the two chambers of the Federal Parliament: the Chamber of Representatives and the Senate. All laws passed by the Federal Parliament must be signed and promulgated by the monarch.

Inviolability

Article 88 of the Belgian Constitution provides that "the King's person is inviolable, his ministers are responsible". This means that the King cannot be prosecuted, arrested or convicted of crimes, cannot be summoned to appear before a civil court and

Basilica of the Sacred Heart, Brussels is the National Basilica of Belgium.

is not accountable to the Federal Parliament. This inviolability was deemed incompatible with Article 27 of the Rome Statute of the International Criminal Court which states that official capacity shall not exempt a person from criminal responsibility under the statute.[27]

Royal Household

The King's Household (Dutch: *Het Huis van de Koning*, French: *La Maison du Roi*, German: *Das Haus des Königs*) was reorganised in 2006, and consists of seven autonomous departments and the Court's Steering Committee. Each Head of Department is responsible for his department and is accountable to the King.

The following departments currently make up the King's Household:

- the Department for Economic, Social and Cultural Affairs
- the King's Cabinet
- the King's Military Household
- the King's Civil List
- the Department for Foreign Relations
- the Department of the Protocol of the Court
- the Department of Petitions

The King's Chief of Cabinet is responsible for dealing with political and administrative matters and for maintaining the relations with the government, trade unions and industrial circles. In relation to the King, the Chief assists in keeping track of current events; informs regarding all aspects of Belgian life; proposes and prepares audiences; assists in preparing speeches and informs the King about developments in international affairs. The Chief of Cabinet is assisted by the Deputy and Legal Adviser, the Press Adviser and the Archivist. The incumbent Chief of Cabinet is Jacques van Ypersele de Strihou, who is reportedly sometimes referred to as viceroy, Richelieu or Rasputin.[28]

The Head of the King's Military Household assists the King in fulfilling his duties in the field of defence. He informs the King about all matters of security, defence policy, the views of Belgium's main partner countries and all aspects of the Belgian Armed Forces. He organises the King's contacts with the Armed Forces, advises in the fields of scientific research and police and coordinates matters with patriotic associations and former service personnel. The Military Household is also responsible for managing the Palace's computer system. The Head of the Military Household is a General Officer, currently General Jef Van den put and assisted by an adviser, currently Lieutenant-Colonel Aviator Serge Vassart. The King's Aides-de-Camp and the King's Equerries are also attached to the Military Household.

The King's Aides-de-Camp are senior officers chosen by the monarch and charged with carrying out certain tasks on his behalf, such as representing him at events. The King's Equerries are young officers who take turns prepareing the King's activities, informing him about all the aspects that may be important to him and providing any other useful services such as announcing visitors. The Equerry accompanies the King on his trips except for those of a strictly private nature.

The Intendant of the King's Civil List is responsible for managing the material, financial and human resources of the King's Household. He is assisted by the Commandant of the Royal Palaces, the Treasurer of the King's Civil List and the Civil List Adviser. The Intendant of the Civil List also advises the King in the field of energy, sciences and culture and administers the King's hunting rights. The Commandant of the Royal Palaces is mainly in charge, in close cooperation with the Chief of Protocol, of the logistic support of activities and the maintenance and cleaning of the Palaces, Castles and Residences. He is also Director of the Royal Hunts.

The Chief of Protocol is charged with organising the public engagements of the King and the Queen, such as audiences, receptions and official banquets at the Palace, as well as formal activities outside of the Palace. He is assisted by the Queen's Secretary, who is mainly responsible for proposing and preparing the Queen's audiences and visits.

The Head of the Department for Economic, Social and Cultural Affairs advises the King in the economic, social and cultural fields. He is also responsible for providing coordination between the various Households and Services and for organising and minuting the meetings of the Steering Committee. The Head of the Department for Foreign Relations informs the King of

developments in international policy, assists the King from a diplomatic viewpoint on royal visits abroad and prepares the King's audiences in the international field. He is also responsible for maintaining contacts with foreign diplomatic missions. The Head of the Department of Petitions is charged with processing petitions and requests for social aid addressed the King, the Queen or other members of the Royal Family. He is also responsible for the analysis and coordination of royal favours and activities relating to jubilees, and advises the King in the fields for which he is responsible.

For the personal protection of the King and the Royal Family, as well as for the surveillance of the royal estates, the Belgian Federal Police at all times provides a Security Detail to the Royal Palace, commanded by a Chief Police Commissioner.

There are currently two other Households at the Belgian Court: the Household of Her Majesty Queen Fabiola and the Household of Their Royal Highnesses the Duke and Duchess of Brabant. The other members of the Royal Family have a Service at their disposal.

Members of the Belgian Royal Family

Members of the Royal Family hold the title Prince (Princess) of Belgium with the style of Royal Highness. Prior to World War I they used the additional titles Prince (Princess) of Saxe-Coburg and Gotha and Duke (Duchess) of Saxony as members of the House of Wettin. The children and husband of Princess Astrid would not be entitled to these titles as they belong to a different agnatic line, the House of Habsburg-Lorraine-Este.

- Prince Philippe, Duke of Brabant (born 15 April 1960). He married, on 4 December 1999, Jonkvrouwe Mathilde d'Udekem d'Acoz, who was created HRH Princess Mathilde of Belgium a day before their marriage. She is a daughter of the late Count Patrick d'Udekem d'Acoz and his wife, Countess Anna Maria Komorowska. They have four children:
  - Princess Elisabeth of Belgium, who will inherit the throne after her father, due to a 1991 act of succession which created full cognatic primogeniture, altering the order of succession from eldest son to eldest child.
  - Prince Gabriel of Belgium
  - Prince Emmanuel of Belgium
  - Princess Eléonore of Belgium.
- Princess Astrid of Belgium (born 5 June 1962). She is the wife of His Imperial and Royal Highness Archduke Lorenz of Austria-Este, Archduke of Austria, Duke of Modena, Prince Royal of Hungary and Bohemia, whom she married on 22 September 1984 and who was created a Prince of Belgium in 1995. Princess Astrid, with her own descendants, is before her brother Laurent in the order of succession to the Belgian throne, due to the 1991 act of succession mentioned above. They have five children:
  - Prince Amedeo of Belgium, Archduke of Austria-Este
  - Princess Maria Laura of Belgium, Archduchess of Austria-Este
  - Prince Joachim of Belgium, Archduke of Austria-Este
  - Princess Luisa Maria of Belgium, Archduchess of Austria-Este
  - Princess Laetitia Maria of Belgium, Archduchess of Austria-Este
- Prince Laurent of Belgium (born 19 October 1963). He married Claire Coombs, an Anglo-Belgian former land surveyor, on 12 April 2003. She was created HRH Princess Claire of Belgium 11 days before their marriage. They have one daughter and two sons:
  - Princess Louise of Belgium
  - Prince Nicolas of Belgium
  - Prince Aymeric of Belgium

Signature	
Religion	Roman Catholicism

Full name

Albert's full name is *Albert Félix Humbert Théodore Christian Eugène Marie* in French (pronounced: [albɛʁ feliks œbɛʁ teodɔʁ kʁistjɑ̃ øʒɛn maʁi]), *Albert Felix Humbert Theodoor Christiaan Eugène Marie* in Dutch (pronounced ['ʔɑlbərt 'felɪks 'ɦʏmbərt te'jodoːr 'krɪstiːjaːn ʔøː'ʒɛːn mą'riː]), and *Albert Felix Humbert Theodor Christian Eugen Maria* in German (pronounced ['ʔalbɛʁt 'feːlɪks 'hʊmbɛʁt 'teːodoːɐ̯ 'kʁɪsʦ̍ian 'ʔɔʏgən ma'ʁiːa]).[1]

Birth

He is the second son of King Leopold III (1901–1983) and his first wife, Astrid of Sweden (1905–1935). He ascended to the throne in 1993, following the death of his older brother, King Baudouin. His godparents were Prince Felix of Luxembourg and his paternal grandmother, Queen Elisabeth of Belgium.[1] He is the first cousin of King Harald V of Norway, Princess Astrid of Norway, and Princess Ragnhild of Norway.

Biography

King Albert II with Queen Paola, and other royals and Heads of state, at the funeral of Pope John Paul II.

Prince Albert was born in Stuyvenberg Castle, Brussels. On 10 May 1940, at the time when Belgium was being invaded, Prince Albert, his elder sister Princess Joséphine-Charlotte and his elder brother Prince Baudouin, left the country for France and later Spain. The Prince and the Princess returned to Belgium on 2 August 1940. They continued their studies until 1944, either at Laeken, or at the Chateau of Ciergnon in the Ardennes. In June 1944, at the time of the Allied landings, King Leopold III, Princess Lilian – whom he married in 1941 – and the royal children were deported by the Germans to Hirschstein, Germany, and later to Strobl, Austria, where they were liberated by the American Army on 7 May 1945.

Due to the political situation in Belgium, King Leopold and his family moved to the villa "Le Reposoir" in Pregny, Switzerland, when they left Austria in October 1945 and stayed until July 1950. During that time, Prince Albert would continue his education in a secondary school in Geneva. King Leopold III, accompanied by Prince Baudouin and Prince Albert, returned to Belgium on 22 July 1950.[1]

He is the 1,292nd Knight of the Order of the Golden Fleece in Austria and the 1,191st Knight of the Order of the Golden Fleece in Spain in 1994.

Marriage and family

In 1958, Prince Albert of Liege went to the Vatican to witness the inauguration of Pope John XXIII. At a reception at the Belgian embassy, the prince met Italian Princess Paola Ruffo di Calabria. “We were both shy, so we only talked a little,” Paola said later about their first meeting. Shy but smitten, Prince Albert proposed marriage to Paola, and she accepted. Two months after their meeting, the Prince introduced his future wife to his family, and four months later to the press.

Extended royal family

Upon arriving in Brussels for the first time before her wedding, Princess Paola won over the Belgian media immediately. *"The charm and beauty of the blond princess from the south quickly captured the hearts of the Belgians"*, wrote the newspapers back then.

HRH Princess Léa
HRH Princess Marie-Christine
HRH Princess Marie-Esméralda

They wanted a marriage at the Vatican at first, a setting promoted by both families, but the Belgian government did not approve of that. They did not want to keep a fairy tale wedding from the people of Belgium, who finally had an opportunity for organizing celebrations for their Royals Family. The Pope, after some diplomatic pressure, refused them a marriage at the Vatican, saying he would understand if the couple would want to get married amidst their people.

Villa Le Reposoir in Switzerland where the family lived in the late 1940s

On 2 July 1959 he married Princess Paola Ruffo di Calabria (born 11 September 1937) in Brussels. She is the daughter of Fulco VIII, Prince Ruffo di Calabria, 6th Duke of Guardia Lombarda and his wife, Countess Luisa Gazelli di Rossana e di Sebastiano (1896–1989). Together they have three children, two sons and a daughter:

- HRH Prince Philippe of Belgium, Duke of Brabant (born 15 April 1960). On 4 December 1999, the Duke married Jonkvrouwe Mathilde d'Udekem d'Acoz (born 20 January 1973), who was created HRH Princess Mathilde of Belgium a day before their marriage. She is a daughter of the late Count Patrick d'Udekem d'Acoz and his wife, Countess Anna Maria Komorowska. The Duke and Duchess of Brabant have four children, two sons and two daughters:
  - HRH Princess Elisabeth of Belgium (born 25 October 2001), who will inherit the throne after her father.
  - HRH Prince Gabriel of Belgium (born 20 August 2003)
  - HRH Prince Emmanuel of Belgium (born 4 October 2005)
  - HRH Princess Eléonore of Belgium (born 16 April 2008)
- HI&RH Princess Astrid of Belgium, Archduchess Lorenz of Austria-Este, Duchess of Modena (born 5 June 1962). In 1984, she married HI&RH Archduke Lorenz of Austria-Este, Archduke of Austria, Prince Royal of Hungary and Bohemia (born 16 December 1955), who was created a Prince of Belgium in 1995. They have five children, two sons and three daughters:
  - HI&RH Prince Amedeo of Belgium, Archduke of Austria-Este (born 22 February 1986)
  - HI&RH Princess Maria Laura of Belgium, Archduchess of Austria-Este (born 26 August 1988)

  - HI&RH Princess Luisa Maria of Belgium, Archduchess of Austria-Este (born 11 October 1995)
  - HI&RH Princess Laetitia Maria of Belgium, Archduchess of Austria-Este (born 23 April 2003)
- HRH Prince Laurent of Belgium (born 19 October 1963). On 12 April 2003, He married Claire Coombs (born 18 January 1974), an Anglo-Belgian former real-estate agent. She was created HRH Princess Claire of Belgium 11 days before their marriage. They have three children, two sons and one daughter:
  - HRH Princess Louise of Belgium (born 6 February 2004)
  - HRH Prince Nicolas of Belgium (born 13 December 2005)
  - HRH Prince Aymeric of Belgium (born 13 December 2005)

King Albert II and Queen Paola with US President George W. Bush and First Lady Laura Bush at the Royal Palace in Brussels in 2005.

Official role

As the younger brother of King Baudouin, Prince Albert was the heir-presumptive to the throne. However his son Prince Philippe was groomed to be Baudoin's successor, once it became clear that the King would have no children to succeed him. However, on Baudouin's death (at age 62), Albert was sworn in before parliament on 9 August 1993 as the sixth King of the Belgians.[2]

As King, Albert's duties include representing Belgium at home and abroad on state visits, trade missions, and at high level international meetings as well as taking an interest in Belgian society, culture and enterprise. [3]

In 1984, he set up the Prince Albert Foundation, to promote expertise in foreign trade. [4]

The King has a constitutional role which came into play in 2010-2011 when Belgium's parliament was unable to agree on a government. When the crisis was resolved, Albert swore in the new government. [5]

In January 2012, Albert announced that the royal family would freeze their allowances and use a greater proportion of their income to maintain the royal palaces.

Ancestry

Patrilineal descent

Patrilineal descent
Albert's patriline is the line from which he is descended father to son. Patrilineal descent is the principle behind membership in royal houses, as it can be traced back through the generations – which means that if Albert II were to choose an historically accurate house name it would be Wettin, as all his male-line ancestors have been of that house. **House of Wettin** 1. Dietrich I von Wettin, c. 916 – c. 976 (top ancestor) 2. Dedo I von Wettin, c. 950 – c. 1009 3. Dietrich II, Margrave of Lower Lusatia 4. Thimo of Wettin, Count of Brehna 5. Conrad, Margrave of Meissen, maternal grandson of Otto of Nordheim, 1098–1157 6. Otto II, Margrave of Meissen, 1125–1190 7. Dietrich I, Margrave of Meissen, 1162–1221 8. Henry III, Margrave of Meissen, c. 1215–1288 9. Albert II, Margrave of Meissen, 1240–1314

10. Frederick I, Margrave of Meissen, 1257–1323
11. Frederick II, Margrave of Meissen, 1310–1349
12. Frederick III, Landgrave of Thuringia, 1332–1381
13. Frederick I, Elector of Saxony, 1370–1428
14. Frederick II, Elector of Saxony, 1412–1464
15. Ernest, Elector of Saxony, 1441–1486
16. John, Elector of Saxony, 1468–1532
17. John Frederick I, Elector of Saxony, 1503–1554
18. Johann Wilhelm, Duke of Saxe-Weimar, 1530–1573
19. John II, Duke of Saxe-Weimar, 1570–1605
20. Ernest I, Duke of Saxe-Gotha, 1601–1675
21. John Ernest IV, Duke of Saxe-Coburg-Saalfeld, 1658–1729
22. Francis Josias, Duke of Saxe-Coburg-Saalfeld, 1697–1764
23. Ernest Frederick, Duke of Saxe-Coburg-Saalfeld, 1724–1800
24. Francis, Duke of Saxe-Coburg-Saalfeld, 1750–1806
25. Leopold I of Belgium, 1790–1865
26. Prince Philippe, Count of Flanders, 1837–1905
27. Albert I of Belgium, 1875–1934
28. Leopold III of Belgium, 1901–1993

Honorary degrees

King Albert is Doctor Honoris Causa of the Catholic University of Leuven, the Saint Louis University, Baguio City, Ghent University, Free University of Brussels, the Catholic university of Mons and the Polytechnic Faculty of Mons.

Belgian coinage

In Belgium, it is common that the effigy of the ruling King is minted in the coins for circulation. As a general rule, this does not happen for the commemorative and collectors' coins. However, some very high value coins have been minted with the effigy of the King in one side, such as the commemorative 100 euro gold coin minted in 2003.

Commemorative 100 euro gold coin featuring King Albert II

House of Saxe-Coburg and Gotha

From Wikipedia, the free encyclopedia

The **House of Saxe-Coburg and Gotha** (*orig.* Haus Sachsen-Coburg und Gotha) is a German dynasty, the senior line of the Saxon House of Wettin that ruled the Ernestine duchies, including the duchy of Saxe-Coburg and Gotha.

Founded by Ernest Anton, the sixth duke of Saxe-Coburg-Saalfeld, it is also the royal house of several European monarchies, and branches currently reign in Belgium through the descendants of Leopold I, and in the Commonwealth realms through the descendants of Prince Albert. Due to anti-German sentiment in the United Kingdom during World War I, George V of the United Kingdom changed the name of his branch from Saxe-Coburg and Gotha to Windsor in 1917. The same happened in Belgium where it was changed to "*van België*" (Dutch) or "*de Belgique*" (French).

House of Saxe-Coburg and Gotha

Country	Duchy of Saxe-Coburg and Gotha, Kingdom of Belgium, Kingdom of Portugal, Kingdom of Bulgaria, United Kingdom of Great Britain and Ireland, Empire of India
Ancestral house	House of Wettin
Titles	▪ Duke of Saxe-Coburg and Gotha ▪ King of the Belgians ▪ Tsar of Bulgaria ▪ King of the United Kingdom of Great Britain and Ireland ▪ Emperor of India
Founder	Ernest I, Duke of Saxe-Coburg and Gotha
Current head	Andreas, Prince of Saxe-Coburg and Gotha
Founding	1826
Dissolution	1918

History

The first duke of Saxe-Coburg and Gotha was Ernest I, who reigned from 1826 until his death in 1844. He had previously been Duke of Saxe-Coburg-Saalfeld (as Ernest III) from 1806 until the duchy was reorganized in 1826. Ernst's younger brother Leopold became King of the Belgians in 1831, and his descendants continue to serve as Belgian head of state. Léopold's only daughter, Princess Charlotte of Belgium, was the consort of Maximilian I of Mexico, known as the Empress

Carlota of Mexico, in the 1860s. Ernst's nephew Ferdinand married Queen Maria II of Portugal, and his descendants continued to rule Portugal until that country became a republic in 1910.

Cadet branches	House of Windsor House of Koháry House of Braganza-Saxe-Coburg and Gotha

Ernst I's second son, Prince Albert (1819–1861), married Queen Victoria in 1840, and thus is the progenitor of the United Kingdom's current royal family, called Windsor since World War I.

In 1826, a cadet branch of the house inherited the Hungarian princely estate of Koháry, and converted to Roman Catholicism. Its members managed to marry an imperial princess of Brazil, an archduchess of Austria, a royal princess of "the French", a royal princess of Belgium and a royal princess of Saxony. A scion of this branch, also named Ferdinand, became Prince, and then Tsar, of Bulgaria, and his descendants continued to rule there until 1946. The current head of the House of Bulgaria, the former Tsar Simeon II who was deposed and exiled during World War II, goes by the name *Simeon Sakskoburggotski* and served as Bulgaria's prime minister from 2001 to 2005.

The ducal house consisted of all male-line descendents of John Ernest IV, Duke of Saxe-Coburg-Saalfeld legitimately born of an equal marriage, males and females (the latter until their marriage), their wives in equal and authorised marriages, and their widows until remarriage. According to the House law of the Duchy of Saxe-Coburg and Gotha the full title of the Duke was:

> *Wir, Ernst, Herzog zu Sachsen-Coburg und Gotha, Jülich, Cleve und Berg, auch Engern und Westphalen, Landgraf in Thüringen, Markgraf zu Meißen, gefürsteter Graf zu Henneberg, Graf zu der Mark und Ravensberg, Herr zu Ravenstein und Tonna usw.*
>
> We, Ernst, Duke of Saxe-Coburg and Gotha, Jülich, Cleves and Berg, also Angria and Westphalia, Landgrave in Thuringia, Margrave of Meissen, Princely Count of Henneberg, Count of the Mark and Ravensberg, Lord of Ravenstein and Tonna, et cetera.

Branches

Ducal branch

Dukes, 1826–1918

- Ernest I 1826–1844
- Ernest II 1844–1893
- Alfred 1893–1900
- Charles Edward 1900–1918

Heads of the house since 1918

- Charles Edward 1918–1954

- Friedrich Josias 1954–1998
- Andreas 1998–*present*

Although the ducal branch is eponymous with the dynasty, its head is not the genealogically or agnatically senior member of the family. In 1893 the reigning duke died childless, whereupon the throne of Saxe-Coburg and Gotha would have devolved, by male primogeniture, upon the British branch descended from Prince Albert. However, as heirs to the British throne, Albert's descendants consented and the law of the duchy ratified that the ducal throne would not be inherited by the British monarch or heir apparent. Therefore, the German duchy became a secundogeniture, hereditary among the younger princes of the British royal family who belonged to the House of Wettin, and their male-line descendants.

Instead of the future Edward VII of the United Kingdom inheriting the duchy, it was diverted to his next brother, Prince Alfred, Duke of Edinburgh and, upon the latter's death without surviving sons, to the youngest grandson of Prince Albert and Queen Victoria, Prince Charles Edward, Duke of Albany (bypassing Prince Arthur, Duke of Connaught (and his male line) who, although senior by birth to his nephew Charles Edward, preferred to remain on British soil).

The current head of the ducal branch, Andreas, Prince of Saxe-Coburg and Gotha, is therefore the descendant and German heir of Charles Edward. Should his legitimate male line become extinct, the claim to the Saxon duchy (which lost its sovereignty and independent existence in 1918) would revert to the male line of Edward VII, currently represented in chief by Prince Richard, Duke of Gloucester.

Kings of the Belgians

- Leopold I (1831–1865)
- Leopold II (1865–1909)
- Albert I (1909–1934)
- Leopold III (1934–1951)
- Baudouin (1951–1993)
- Albert II (1993–*present*)

Belgian royal house

Because of the First World War, the family name was changed to *van België*, *de Belgique* or *von Belgien* ("of Belgium"), depending upon which of the country's three official languages (Dutch, French and German) is in use. It is this family name which is used on the identity cards and in all official documents by Belgium's royalty (marriage licenses, etc.).[*citation needed*]

Kingdom of Portugal

In Portugal the former royal house is usually not distinguished from the House of Braganza

- Pedro V (1853–1861)
- Luís I (1861–1889)
- Carlos I (1889–1908)
- Manuel II (r. 1908–1910, d.1932)

Manuel II died childless in 1932. He recognised as his successor his distant cousin Duarte Nuno, Duke of Braganza, who is not a descendant of Ferdinand II, or the house of Saxe-Coburg and Gotha. Duarte Nuno and his successors, as claimants to the Portuguese throne, are therefore members of the House of Braganza, rather

than the House of Braganza-Saxe-Coburg and Gotha.

Kingdom of Bulgaria

- Ferdinand I (1887–1918)
- Boris III (1918–1943)
- Simeon II (1943–1946) In 2001, elected[1] Prime Minister of Bulgaria as Simeon Saxe-Coburg-Gotha—also known as Simeon "Sakskoburggotski" (Сакскобургготски).[2][3][4]

United Kingdom

- Edward VII (1901–1910)
- George V (1910–1936, until 1917 when the name was changed and the royal house and family were to be known as Windsor).
- Edward VIII (1936)
- George VI (1936–1952)
- Elizabeth II (1952–)

If Elizabeth II is succeeded by her child (or a child of one of her sons), the House of Saxe-Coburg and Gotha will be succeeded patrilineally by the House of Schleswig-Holstein-Sonderburg-Glücksburg, a cadet branch of the House of Oldenburg. However, by a 1960 Order in Council, her children also bear the name of Windsor and therefore the reigning dynasty will continue under that name unless changed.

According to the official website of the British monarchy, however, "the only British monarch of the House of Saxe-Coburg-Gotha was King Edward VII, who reigned for nine years. King George V replaced the German-sounding title with the name of Windsor during the First World War. The name *Saxe-Coburg-Gotha* survived in other European realms, including the former monarchies of Portugal and Bulgaria and in the Belgian royal family until 1920."[5]

Names of the British royal house

Ernest I's younger son, Prince Albert of Saxe-Coburg and Gotha, became Prince Consort to Queen Victoria, Ernest's niece through his sister Princess Victoria of Saxe-Coburg-Saalfeld. As a consequence of their marriage, *Saxe-Coburg and Gotha* became the dynasty of the British Royal Family from the accession of Edward VII in 1901 until changed to Windsor by King George V in 1917, during the United Kingdom's war with the German Empire.

Contrary to common belief, *Saxe-Coburg and Gotha* was not the *personal surname* of either Prince Albert, his wife or their descendants. Queen Victoria launched an inquiry to identify her surname. After an exhaustive search her advisors concluded that Prince Albert (and thus the Queen—by virtue of her marriage) had the surname *Wettin*.[*citation needed*]

George V changed both *Wettin* and *Saxe-Coburg and Gotha* to *Windsor* by proclamation in 1917.

In 1947 Princess Elizabeth (now Elizabeth II) married Prince Philip, Duke of Edinburgh, who also had German heritage, being descended from the House of Schleswig-Holstein-Sonderburg-Glücksburg, and whose surname since shortly before his marriage has been Mountbatten—anglicized during WWI from "*Battenberg*" of the Grand Duchy of Hesse. The Queen's marriage to Prince Philip raised the issue of the surname and dynastic name to be carried by the Queen's descendants, including future monarchs. An Order in Council in 1960 decreed that the name and dynasty of Elizabeth II would remain "Windsor", as would that of her children by the Duke of

Edinburgh (save that of any of their daughters who married). The order stipulated, however, that those of their male-line descendants who do not bear the title of prince or princess and the style of *Royal Highness* would have the surname of *Mountbatten-Windsor*. In fact, some of Elizabeth II's children have also chosen, on occasion, to use that designation on legal documents.

Genealogy

Patrilineality, descent as reckoned from father to son, has historically been the principle determining membership in reigning families, thus the dynasty to which the monarchs of the House of Saxe-Coburg-Gotha belonged genealogically through the 20th century is the House of Wettin, despite the official use of varying names by different branches of the patriline.

Descent before Conrad the Great may not be entirely accurate.[6]

House of Wettin

1. Burkhard I, Duke of Thuringia, d. 870
2. Burchard, Duke of Thuringia, 836–908
3. (possibly) Burkhard III of Grabfeldgau, 866–913
4. Dedi I, Count of Hessegau, 896–957
5. (probably) Dietrich I of Wettin, d. 976
6. (possibly) Dedo I of Wettin, 946–1009
7. Dietrich II, Margrave of Lower Lusatia, 991–1034
8. (Thimo I of Wettin, d. 1099)
9. Thimo the Brave, Count of Wettin, d. 1118?
10. Conrad, Margrave of Meissen, 1098–1157
11. Otto II, Margrave of Meissen, 1125–1190
12. Dietrich I, Margrave of Meissen, 1162–1221
13. Henry III, Margrave of Meissen, c. 1215–1288
14. Albert II, Margrave of Meissen, 1240–1314
15. Frederick I, Margrave of Meissen, 1257–1323
16. Frederick II, Margrave of Meissen, 1310–1349
17. Frederick III, Landgrave of Thuringia, 1332–1381
18. Frederick I, Elector of Saxony, 1370–1428
19. Frederick II, Elector of Saxony, 1412–1464
20. Ernest, Elector of Saxony, 1441–1486
21. John, Elector of Saxony, 1468–1532
22. John Frederick I, Elector of Saxony, 1503–1554
23. John William, Duke of Saxe-Weimar, 1530–1573
24. John II, Duke of Saxe-Weimar, 1570–1605
25. Ernest I, Duke of Saxe-Gotha, 1601–1675
26. John Ernest IV, Duke of Saxe-Coburg-Saalfeld, 1658–1729
27. Francis Josias, Duke of Saxe-Coburg-Saalfeld, 1697–1764
28. Ernest Frederick, Duke of Saxe-Coburg-Saalfeld, 1724–1800
29. Francis, Duke of Saxe-Coburg-Saalfeld, 1750–1806
30. Ernest I, Duke of Saxe-Coburg and Gotha, 1784–1844
31. Albert, Prince Consort, 1819–1861
32. Edward VII of the United Kingdom, 1841–1910
33. George V of the United Kingdom, 1865–1936
34. Prince Henry, Duke of Gloucester, 1900–1974
35. Prince Richard, Duke of Gloucester, 1944–present
